The Nation.

NEW YORK, THURSDAY, JULY 3, 1884.

The Week.

GOVERNOR CLEVELAND seems to have already a good majority of the Chicago Convention in his favor, and his strength is probably much greater than it appears to be on the surface. The Tilden influence is considered to be for him, and that of itself is sufficient to secure his nomination. There is much talk about other opponents to him than John Kelly, but none of them are brought forward. All the strong men in the party in this State—men like ex-Governor Seymour, ex-Senator Kernan, Mr. Hewitt, and Mr. Dorsheimer—say that Cleveland is the man to be nominated, and even Kelly has given his word to support him if he becomes the candidate. If the nomination goes to Cleveland, it will be the outcome of as spontaneous a movement as there has been in politics for a long time. Even his enemies do not charge that he has made any effort to get it. In a private letter which he wrote to a friend in Alabama, last week, he said:

"I feel that I now occupy in my own State a position high enough for all my ambition, and in which I have hoped that I could do some good to the people and to my party. I am seeking no other office, and think that, above all other things, the people should have their way in this matter."

There are no signs that the Democratic opposition to Cleveland's nomination is making much headway. Delegations in his favor were chosen in Arkansas and Florida, and his strength in the Convention must now be very nearly two-thirds of all the delegates. The opposition is concentrated upon no single candidate, and is merely a rallying of the dissatisfied elements about Tammany in the hope of stopping the drift toward Cleveland. This is precisely the condition of affairs which Kelly delights in. It increases his national importance, and enables him to appear in the Convention as a distinct "power." For this purpose any candidate suits him. He was for Hendricks in 1876, and for Bayard in 1880. When he is not for McDonald now, he is for Bayard—not that he cares anything about either or expects to see either nominated, but because he does not like Cleveland, and because he looms into much larger proportions as an opposing than as a harmonious element.

The appeal of the Manufacturers' League to the Democrats urges them to put in their platform resolutions asserting the following principles: First. The abolition of all duties on raw materials in order that we may compete in home and foreign markets with other manufacturing nations, not one of which taxes raw materials. Second. The adjustment of the tariff, so that manufactures approaching nearest the crude state will pay the lower rate, and manufactures that have further advanced, requiring more skill and labor, will pay the higher rate of duties. The signers call attention to the fact that in the coming election the great manufacturing States of New York, Connecticut, and Massachusetts will be doubtful. They are ripe, the address says, for tariff reform, because their manufactures are "languishing for want of cheap materials." They add that our entire tariff system is wrong; fit only to be called a "patchwork of bargains," speak most unkindly and unfeelingly about wool, and make a strong appeal for "free raw materials" and "the markets of the world." That the tariff is a "patchwork of bargains" is something that most Democrats outside of Pennsylvania and Ohio would probably not differ much about — the sentiment of the South is a unit on this subject. "Horizontal" reduction has been tried and not proved a success. The Democrats will have a good deal of difficulty in drawing a tariff to suit everybody, and the indications now are that they will not try very hard to satisfy the protectionist wing of the party.

The behavior of the Ohio Democratic Convention last week was that of a body which adopts a nominal candidate and platform as a cover for "operations" of one kind or another. It demanded the renomination of Tilden, who is not in the field, and again hoisted its ridiculous tariff platform of 1883 :

"We favor a tariff for revenue, limited to the necessities of the Government economically administered, and so adjusted in its application as to prevent unequal burdens, encourage productive industries at home, and offer a just compensation for labor, but not to create or foster monopolies."

It also demands justice to "wool," in the shape of an "equitable readjustment of the duties," and that wool should be "fully and equally favored with other industries." The entire Republican party has come out in favor of justice to wool, and there is clearly a strong minority of the Democrats on the same side. Wool could never have been singled out in this way unless it had been subjected to extraordinary outrage. There are several other industries in the country which are suffering, but their troubles are no doubt due to natural causes. It is only wool which has been persecuted. There is something innocent about an industry so full of pastoral associations, which rouses the worst passions of the depraved and leads them to continue their onslaughts upon it in defiance of public opinion.

There is some diversity of views among the members of the Republican National Committee as to the state of the campaign. Mr. Powell Clayton, of Arkansas, who is supposed to be tolerably familiar with Southern politics, delivers the frank opinion, in the columns of the *Tribune*, that it will not be safe to count on the vote of any Southern State for Blaine and Logan. "We should set out," he says, "to carry every Northern State, and do it if we can; then if we pick up a Southern State or two we shall be so much ahead." This is in refreshing contrast with the generous but somewhat vague claim of Senator Blair, of New Hampshire, whose remarks follow Mr. Clayton's in the same column, viz.: "All I can say, if I should talk all day, is that we shall elect the Republican ticket; that is all there is to be said; it is enough to say." A Committeeman from Arizona, who has been spending some time in New England, thinks that reading matter is wanted in that section to counteract the baleful influence of the Boston press. "They need documents and newspapers in Massachusetts, Vermont, and New Hampshire," he tells us. The people there are disgusted with their own newspapers, but don't know how to get any other kind. They are perishing for want of the true word. Fortunately, there is a way to supply this want. It is only necessary for the manufacturers to pay $20,000 to circulate the Philadelphia *Press* in New England. This is what they have done or are trying to do in Pennsylvania. The *Times* of Philadelphia makes light of this affair, calls it a subsidy, and intimates that its contemporary is reduced to beggary. But the *Press* insists that it is a serious matter, and that the money is coming in rapidly. Why not try the same plan for enlightening New England ?

The Blaine Campaign Committee, like everything else connected with the Blaine canvass, has been organized on the humbug basis. A rich manufacturer of Pittsburgh has been selected by Mr. Blaine himself for Chairman, although he has never had any experience in political management, and has no qualification for the place aside from a large bank account and a willingness to contribute to campaign funds. He was put up as a figure-head to show that the industrial interests of the country are rallying about Blaine to save the American protective system from the free-trade dudes who are trying to overthrow it. The active work of leadership will devolve upon an Executive Committee, of which Steve Elkins, Chauncey I. Filley, Jerome B. Chaffee, John C. New, and other experienced politicians are expected to be the controlling spirits, with Elkins in command. He has already engaged a four-story house on Fifth Avenue for a headquarters, and has begun work as the real leader under the personal instructions of Mr. Blaine himself. Of his qualifications for the place there can be no doubt. Not only was the Chicago nomination due more to his efforts than to those of anybody else, but he has a "record" for successful work which almost overshadows that achievement. Dorsey, the great "soap" distributor in the last Republican campaign, said of Elkins in a recent letter: "S. B. Elkins has probably a larger knowledge than any other person of all the Star-route matters and the money paid."

The theory of the Blaine managers appears to be that Mr. Blaine will get the following "votes": The Hebrew vote, because he spoke severely about the persecution of the Jews by Russia; the Dynamite vote, because he is down on the English; the Star-route vote, for reasons not necessary to be mentioned; the Tammany vote, because John Kelly dislikes Tilden and Cleveland; the Johnny O'Brien vote, because

Johnny O'Brien likes John Kelly; the Country vote, because the country voter is so ignorant; the Soldiers' vote, because of Logan; the Peanut vote, because it is the "Boys" who eat peanuts; the Cowboy vote, because the Cowboys like magnetism; the anti-Mexican vote, because Blaine is an annexationist; the Catholic vote, because Blaine was born a Catholic; the Congregational vote, because he is now a Congregationalist. In this way he expects to be able to dispense with the Republican vote altogether.

Bob Ingersoll has not yet succeeded in "getting his coat off" for Blaine. He talks mildly in his support, a fact which is itself ominous, for Bob is never mild about anything which really commands his sympathies. He says he thinks Blaine will be elected, but does not wish at present to express any extended opinions. "Men are liable," he adds, "to get on their ear too quick in politics. Wait till we see whom the Democrats nominate. There is this in Blaine's favor: they can't say anything worse about him than has been said." That is very doubtful support. The great point which the Blaine managers are making about the charges against him is that they are merely the usual campaign slanders. Ingersoll knocks this over by admitting that they are not new; that they have been before the public for a long time, and that they are so bad that nothing worse can be disclosed. This is so. The charges against Blaine are simply the facts in his record. He himself read the worst of them in public when he read the Mulligan letters in Congress. Anybody who will take the trouble to hunt up in the *Congressional Record* the official report of that scene, will notice that after he had read the letter in which he had said that he would not be a "deadhead in the enterprise," and that he saw various channels in which he knew he could be "useful," he made no comments whatever upon those astonishing passages. He could not explain them, and none of his defenders have ever been able to explain them.

There is considerable curiosity to know what the attitude of Wayne MacVeagh is toward Blaine and Logan. There has been no word heard from him since the nominations, which is a little singular, considering that he was an associate with Mr. Blaine in Garfield's Cabinet. The fact is recalled now that in his testimony about the Star-route prosecutions he said that his efforts to bring certain members of the ring to justice were defeated by some power which was higher and greater than his own. Mr. Merrick gave similar evidence in regard to Bosler, and he was understood in Washington as meaning that the higher power was Mr. Blaine himself. Mr. MacVeagh's opinion on this point would be very interesting. It is unfortunate for Mr. Blaine that all the members of the Star-route ring are the most enthusiastic advocates of his election as they were of his nomination, and that one of them has since the nomination been received as an honored guest in Blaine's house, and is the real manager of the Blaine campaign.

As an offset to the Republican talk about Bayard's disloyal utterances in 1861, the *Herald* publishes some very interesting extracts from the speeches of General Logan, made while he was a Democratic Congressman in 1859 and 1860. In one of these he spoke of the northern portion of Illinois as being "so blighted by the contaminating touch of abolitionism that it almost refuses to produce fruits"; of John Brown as a "traitor, thief, and scoundrel"; and in another of Seward and Lincoln as men "who have engaged, if not directly, indirectly, in murder and everything that is disreputable, dishonorable, disgraceful, and shocking to humanity," and who ought to be sent to the penitentiary, as they would be if the bill which he was advocating became a law. This is a great deal worse than anything which Bayard ever said, but it was in perfect harmony with what Logan had said in anti-slavery debates in Congress. He defended the Southern side of the question with great exuberance of language, saying that if the catching and returning of fugitive slaves by Northern Democrats was dirty work, they were willing to perform it. "I do not," he said so late as December, 1859, "consider it disgraceful to perform any work, dirty or not dirty, which is in accordance with the laws of the land and the Constitution of the country." We presume if he had spoken in Spanish or French, or even Latin, he would have defined his views less bluntly, but as they read now in plain, pioneer English, they constitute a record which would ruin any man who was running for office as a Democrat.

In the House on Tuesday Mr. Randall submitted the report of the Conference Committee on the Naval Appropriation Bill, announcing an inability to agree. The chief items of disagreement, he declared, had been the work on the new cruisers, and on the double-turreted monitors. Nothing, he added, but an instruction from the House would induce the House conferees to recede on these two points. As to the cruisers, "they had not that confidence in the manner of the construction of these cruisers that warranted a further expenditure of public money in order to duplicate them"; as to the monitors, he seemed to consider the discussion closed by the action of the last House in refusing to appropriate. Mr. Randall's refusal to agree was, after a debate in which nothing new was brought out, sustained by the House by a heavy majority.

The Republicans at Chicago put a plank in their platform insisting on a restoration of the navy to its "old-time strength and efficiency," able to protect the rights of American citizens and the interests of American commerce "in any sea," so that it may again be true that we have a navy which "takes no law from superior force." The supporters of Mr. Blaine will, during the campaign, denounce the Democrats for their vote on this question; but Mr. Randall's position is for all that a very sound one. The plans for the cruisers have never met the approval of the best experts, and it is, to say the least, an open question whether the navy would be better off with them than without them and there is no excuse for appropriating money under these circumstances. The fact that a man like "Bill" Chandler has been put at the head of the Department is not calculated to inspire confidence, and the whole administration of the navy for years has been a long record of scandals, jobs, and waste. No matter what the appropriations for construction and repair have been, no navy worth the name has been produced. This has not been solely the fault of the Administration, but there is little doubt that with an honest and efficient Administration we would get a navy. It is better to wait until we see who is going to be at the head of the Government for the next four years. The attempt of Mr. Blaine's supporters to persuade the public that what the Democrats really want is to render the navy inefficient will, we imagine, deceive very few people.

The House has passed the new Anti-Chinese Bill, and the measure is before the Senate. Facts were brought out, however, in the House debate, which seem to show that the bill of 1882 has already accomplished its object, and that no more laws are needed to make the Chinese go, or prevent them from coming; because they do not come, and are on the contrary emigrating from the United States. Mr. Hitt, of Illinois, who delivered a very good speech on the subject in the House, gave the latest official statistics as to Chinese immigration. From these it appears that from October 1, 1882, to March 31, 1884, the total number of Chinese who arrived in our ports was 455, of whom 287 were merchants, entitled as such to come here if holding passports. These figures come from the Treasury Department, and are vouched for by Mr. Nimmo. Moreover, Mr. Hitt adds, nearly all these arrivals were in the months prior to January, 1884, and the last five steamers have brought none. The explanation of this is that last fall, long before Congress met, complaint being made that some of the "merchants" got passports by means of fraud, and were really laborers, the Chinese Government took the matter up, dismissed the officer who had committed the frauds, and thus stopped even this slender rill of emigration.

It appears from a statement contained in a judicial opinion of Judge Ogden Hoffman, of San Francisco, one of the best judges on the Federal bench, that from August 6, 1882, to January 15, 1884, there were 3,415 Chinese arrivals at San Francisco, and 17,088 departures. "Not only," says the Judge, "has the flood of Chinese immigration, with which we were menaced, been stayed, but a process of departure has been going on which could not be considerably increased without serious disturbance to the established industries of the State. It is stated that the wages of Chinese laborers have advanced from $1 to $1.75 per diem; a fact of much significance if true. It is much to be regretted that the notion that the law has, through its own defects or the fault of the

courts, proved practically inoperative, has been so widely and persistently disseminated." These words were uttered by Judge Hoffman from the bench on the 31st of January last. Already, said Mr. Hitt, the prediction of industrial derangement has been fulfilled. The cigar-makers of San Francisco, for instance, over 3,000 in number, struck for wages so high that a lock-out ensued, and labor had to be imported from the Atlantic Coast. It is no longer a question whether the Chinese must go. They have gone. This seems to make further agitation of the matter absurd; but the agitators are too interested in their great reform to be satisfied with stopping the immigration of Chinese subjects. It will be remembered that the Anti-Chinese Act was passed nominally to carry out the provisions of a treaty with China, and Judges Nelson and Lowell, in Boston, held that legislation under the treaty could not be held to apply to persons over whom the Emperor of China had no jurisdiction, *e. g.*, the natives of Hong Kong, a British colony. There are about 100,000 of these people, and though they show no special desire to come here, probably preferring the milder laws of Great Britain, the agitators mean to be ready for them, should they change their minds; and accordingly the new law provides that "the provisions of this act shall apply to . . . Chinese, whether subjects of China or any other foreign Power." This is evidently intended to be very thoroughgoing, and to dispose of the whole subject, and take the Chinese out of politics entirely. There is a hint in all this for the Democratic Convention. They can either treat the matter as settled, or they can promise to pass whatever legislation the Pacific Slope demands.

The report of Mr. Slater, from the Senate Committee on Public Lands, in regard to the Northern Pacific land grant, differs from the House report on the same subject in the important particular that it raises no question as to the lands already earned by the construction of the road. The House report proposed to forfeit all lands not earned within the time when the road ought to have been completed. The Senate bill deals only with lands in Oregon and Washington Territory adjacent to the projected lines which have not been built, and by inference confirms, if confirmation is needed, the grant appertaining to the completed line. The projected but unfinished lines are two in number: one down the Columbia River, parallel with the Oregon Railway and Navigation Company's road, and the other across the Cascade Mountains, from the junction of the Snake and Columbia Rivers to Puget Sound. The lands on the Oregon line are confessedly of little value, and there is no intention on the part of the company to build that section either now or at any future time. The country on the Cascade division, with the exception of the Yakima Valley, in which a twenty-five-mile section of the road has already been built, is of a very dubious character, while the cost of building a railway through it, estimated by the engineers at $6,000,000 to $10,000,000, would be vastly in excess of the value of the lands to be earned by it.

The Boston papers have had a good deal to say lately about a letter addressed to Minister Lowell by certain Scotch bondholders of the Oregonian Railway (limited), who have complained to him that that railway was constructed with their money, and leased to the Oregon Railway and Navigation Company for a fixed rental, and that the latter company has repudiated the lease and thrown the road back on their hands after having allowed it to run down and depreciate in value to the estimated extent of $2,500,000. The reply of Mr. Lowell to the communication has not been received on this side, but it is probable that he told the petitioners that the question submitted to him was not a diplomatic but a judicial one, and that the proper tribunal to carry the case to was the Circuit Court of the United States. The bondholders of the Oregonian Railway Company are sufficiently well acquainted with our laws and institutions to know this. They know that in a similar case in England they would not appeal to Mr. Gladstone to set things to rights, but to Chief-Justice Coleridge or whatever court has legal jurisdiction of railroad leases and contracts. Therefore the move made upon Minister Lowell must be understood to have for its object some moral purpose like that of putting the officers and directors of the Oregon Railway and Navigation Company to shame, and thus bringing them to the payment of the lease money.

The Boston *Advertiser* now sets forth the case of the other side, the substance of which is that the Oregonian Railway (limited) was in its inception a blackmailing enterprise, and that the Scotch bondholders knew this fact, or could easily have learned it; that it does not earn its operating expenses; that the lease made by the Oregon Railway and Navigation Company was void from the beginning, being *ultra vires;* that the road has not been allowed to run down a dollar's worth, but is in as good condition now as when the lease was made; that the lease was an injurious one to the Oregon Railway and Navigation Company and ought to be rescinded for want of consideration. The only weak point in this line of argument is that it is not proper for the lessee company to plead *ultra vires* against itself—to go into court and allege that it had no power to do the thing which it did do. This appears to us to be a bar to the abrogation of the lease, but Mr. Charles H. Tweed, the company's counsel, thinks otherwise, and the courts will determine whether it is so or not. That the Oregonian Railway (limited) was a blackmailing enterprise is pretty well known on the Pacific Coast. It is also well known that no railroad will long continue to pay for the lease of another road more than the amount of money which the latter can earn, or the amount of damage which it can inflict as an independent concern on the former. This was undoubtedly known to the Scotch investors in the Oregonian Company's bonds at the time when they made their investments.

The ladies' gambling scare bids fair to equal in importance the lady inebriate scare. In the London press, every year powerful articles are written showing what domestic misery is entailed upon the nation whose mothers, and wives, and daughters fall victims to the demon Rum. The fact is that most ladies dislike Rum, and this is what preserves them from the demon's clutch. They are preserved, on the other hand, or most of them are, from the dangers of gambling by the fact that men do not like to gamble with them, partly because of a tradition prevalent among male betters that women when they lose do not pay. Ladies are also preserved by an additional safeguard, that as they generally lose their heads, they are, in the language of the wicked, soon "cleaned out." Consequently, it is the tradition of the sex that a lady never plays for high stakes. These facts ought to be borne in mind by the social observers who are so shocked by the presence of ladies at Sheepshead Bay, and are ready to believe the stories of their being heavy gamesters.

The tide seems to have turned in England as regards the course of trade and industry. The returns of the Board of Trade for May show an increase of exports, as compared with the same month of 1883, of £2,738,415, or 11.6 per cent. Imports during the same time show a decrease of £3,056,329, or 8.4 per cent. For the first five months of the present year the exports show a gain of about £2,500,000, and the imports a falling off of £10,500,000. The diminution in the value of imports is due largely to the decline in the prices of food products, and especially of cereals and sugar. The increase in exports is chiefly in manufactured goods, for which the foreign demand is said to be improving.

The course of domestic trade shows no sign of improvement, nor is any activity to be looked for until the condition of the crops is more fully ascertained. The outlook at this time is extremely favorable, but it is too early to make predictions. The "Presidential year" is always bad for trade, and this year happens to have peculiar drawbacks of its own, not connected with politics. These are reflected in the Wall Street markets, where securities have fallen to a point which not even the most gloomy imagination could have anticipated six months ago. Business at the Stock Exchange has fallen into the hands of "room traders" almost exclusively. There has been no time, perhaps, within the memory of the oldest inhabitant when so little business was doing by the general public. The only stocks which appear to be "sustained" are Missouri Pacific, Western Union, and Lackawanna. All the others have been left to find their own level. This is really a wholesome condition, and the only condition upon which a genuine revival can be built up. When the public become satisfied that stocks are selling for what they are worth, and not at prices fixed by interested capitalists and cliques who have loans to protect, they will come in as buyers, and not before.

SUMMARY OF THE WEEK'S NEWS.

[Wednesday, June 25, to Tuesday, July 1, 1884, inclusive.]

DOMESTIC.

The Republican National Committee met in this city on Thursday and elected B. F. Jones, a wealthy iron manufacturer, of Pittsburgh, Pa., Chairman, and Samuel Fessenden, of Connecticut, Secretary. Executive and Finance Committees were also elected.

At a meeting of the New York State Committee on the same day James D. Warren, of Buffalo, an Arthur man now supporting Blaine, was reëlected Chairman. John W. Vrooman was made Secretary. Andrew S. Draper is Chairman of the Executive Committee.

The Indiana Democratic State Convention on Wednesday nominated Colonel Gray for Governor on the first ballot, Senator Voorhees having refused the nomination. The platform instructs the delegation to vote for McDonald for President.

On the same day the Ohio Democrats adopted a resolution, amid great enthusiasm, that Tilden receive the vote of the State delegates at Chicago. A motion to adopt the unit rule was tabled. The platform contains the well-known plank "straddling" the tariff question, which has appeared in previous Democratic platforms of that and other States. Durbin Ward, John R. McLean, ex-Senator Thurman, and J. W. Mueller were elected delegates at large to Chicago. There were some signs of revolt against the dictatorship of John R. McLean, of the Cincinnati *Enquirer*. The recognition given the old leaders, such as Thurman and Ward, was significant. It means that Payne will not receive the solid Ohio vote at Chicago. Since the Convention the *Enquirer* has come out for Governor Hoadly, of Ohio, for President.

The platform of the Missouri Democrats, adopted on Wednesday, says: "We especially declare in favor of a tariff for the purpose of revenue, and that the taxing power of the Government should be thus limited, and we are opposed to all politics intended or calculated to foster monopolies at the expense of the people."

The Arkansas Democratic delegates to Chicago will be unanimous for Cleveland if he has the support of the East. The platform demands "a material reduction of the present excessive tariff duties and such a revision of the laws imposing them as will equalize the burdens and benefits derived from their levy and collection."

Efforts are making to secure an adjournment of Congress on July 5. On Monday Mr. Randall (Dem., Pa.) introduced a joint resolution providing that all appropriations for the necessary operations of the Government under existing laws which shall remain unprovided for after June 30, 1884, shall be continued and made available for the period of five days from and after that date, unless the regular appropriation bills now pending shall have been previously enacted. Passed.

The Senate on Tuesday, by a vote of 36 to 20, referred to the Committee on Finance a joint resolution introduced by Mr. Cameron, of Pennsylvania, directing the Secretary of the Treasury to redeem $10,000,000 worth of trade dollars at their face value. This practically kills trade-dollar legislation for this session.

Some excitement was caused in the House of Representatives on Friday by Mr. Valentine (Rep., Neb.) charging that Mr. McAdoo (Dem., N. J.) had violated his privilege in printing in the *Record*, as part of a speech, a newspaper article representing Senator Logan as the owner of 80,000 acres of land in New Mexico. Mr. Valentine said all the land that Logan owns is his homestead in Illinois. Mr. McAdoo defended himself, saying among other things that on principle he objected to any man's owning 80,000 acres of land. The House on Saturday laid on the table a motion to insert a modifying phrase in the *Record*, stating that the speech had not been delivered.

The majority and minority Fortification Bills were on Saturday reported from the House Committee on Appropriations. The former provides for the appropriation of $3,270,000, and the latter for $1,595,000.

In Committee of the Whole of the House of Representatives on Monday a warm debate took place on the Fortifications Appropriation Bill. Mr. Horr, of Michigan, Mr. Finerty, of Illinois, and Mr. Dorsheimer, of New York, advocated the majority report, which appropriates about $3,000,000. Mr. Holman, of Indiana, and Mr. Follett, of Ohio, advocated the more economical minority report, which is favored by Mr. Randall, the Chairman of the Appropriations Committee.

In the House on Tuesday there was a sharp debate on the report of the conferees refusing to accede to the Senate amendment to the Naval Bill providing for the appropriations for new cruisers and for continuation of the work on the double-turreted monitors. Mr. Randall said that nothing but an instruction from the House would induce the conferees to yield these points to the Senate. Mr. Calkins (Rep., Md.) spoke in favor of the amendment. The Democratic position evidently is that they will not permit the cruisers to be constructed during the campaign. By a vote of 90 to 147, the House refused to accede to the Senate amendment. Unexpectedly the House acquiesced in the Senate amendments to the Post office Appropriation Bill.

The Senate Committee on Public Lands has prepared a report declaring forfeited such of the lands granted to the Northern Pacific Railroad Company to aid in the construction of its road as are adjacent to and conterminous with the uncompleted portions of the road on the main line and branch road.

Secretary Chandler appeared on Thursday as a witness before a sub-committee of the Senate Committee on Expenditures of Public Money, and was examined in relation to the recently discovered frauds. He said frauds had been committed by means of false vouchers for goods never delivered. He said he should have removed Dr. Wales sooner but for the "pressure" to retain him, mainly from members of Congress. He added: "I am mortified and humiliated that, notwithstanding these frauds began long before I went into the Department, they have continued more or less in this Bureau since I have been over it."

Ex-Senator Kellogg at his own request appeared before the Springer Committee on Tuesday to make a statement relative to his connection with Star-routes. He said: "A number of witnesses before this Committee have been dwelling on my indictment as an offence involving bribery. There is no charge that I paid Brady any money whatever. I utterly deny telling Walsh to put one-half of a certain amount to my credit, and one-half to Brady's." He emphatically denied other charges against him in Star-route matters.

The President signed the Dingley Shipping Bill on Thursday, and it took effect on Tuesday. The Treasury officials have sent a circular embodying the bill and instructions to Collectors of Customs. The circular instructs Collectors to impose tonnage dues of three and six cents per ton at each entry on vessels from foreign ports, in lieu of the old rates. No hospital tax is to be collected. Shipping Commissioners in office at the time of the passage of the law are to continue in office until appointments are made by the Secretary of the Treasury, under whose jurisdiction these officers are hereafter to be placed. The Secretary of State will at once inform consuls of the abolition of the three months' extra wages and consular fees for services to vessels. President Arthur will issue a proclamation directing that no tax be collected on vessels in trade with Canada as soon as he receives official notice that Canada imposes no such charges.

The Secretary of the Treasury has issued a call for $10,000,000 3 per cent. bonds. The principal and accrued interest will be paid August 1.

The decrease of the public debt of the United States during June was $9,217,256, and since June 30, 1883, $101,040,971.

The Department of State at Washington has been notified that an International Educational Conference will be held at London on the 4th of August next, at which eminent British educationalists will read papers. This Government is invited to send representatives to the Conference, and to forward reports on the present condition of education.

The Rev. William B. Derrick, colored, of New York, but formerly of Albany, has declined the nomination of elector-at-large in this State on the Republican ticket. Affidavits charging him with not being an American citizen have been made, and rather than have the question arise Mr. Derrick, it is understood, has decided to withdraw.

Commencement exercises were held at Harvard, Yale, Union, Lafayette, and Hamilton on Wednesday. Harvard awarded the degree of LL.D. to James Russell Lowell, Francis James Child, Simon Newcomb, and Richard Claverhouse Jebb, of Glasgow. Professor Jebb delivered the Phi Beta Kappa oration on Thursday, his subject being "Some Ancient Organs of Public Opinion." Yale gave the degree of LL.D. to Governor Hoadly, of Ohio; Judge Nathaniel Shipman, of Hartford, class of 1848; Charles F. Southmayd, New York; Ellis H. Roberts, Utica, class of 1850. Thomas G. Bennett, a graduate of the Sheffield Scientific School, was elected to the vacant membership of the Yale College Corporation, in place of Mason Young.

The resignation of President Potter, of Union College, has been accepted, and he has been elected Bishop of Nebraska.

The Faculty of Hamilton College, with the exception of Professors North and Frink, have united in a letter to the trustees saying that the prosperity of the College is impossible under the Presidency of Dr. Darling. Professor North is a trustee and so does not appear as a signer. The matter has been referred to a special committee of the trustees.

At New London, Conn., on Thursday afternoon, Yale defeated Harvard in the eight-oar boat race, four miles straight away, by about four lengths; time, 20:31, the fastest on record; Harvard time, 20:48. On the same afternoon and course the Columbia Freshman crew won the two-mile race over Harvard; time, 9:43½; Harvard, 9:54.

Yale won the College Base-ball championship. The decisive game was played at Brooklyn on Friday, with Harvard. The score was 4 to 2.

William A. Beach, one of the most prominent lawyers of this city, died at Tarrytown on Saturday. He was seventy-five years of age.

FOREIGN.

On Saturday at 3 o'clock the Egyptian Conference met in the British Foreign Office at London. Musurus Pasha, the Turkish Ambassador to England, was present.

At the first session of the Conference of the five Powers Earl Granville briefly stated the financial proposals to be considered by the delegates. The London *Observer* believes Earl Granville's proposals have in view the reduction of the interest on the unified 4 per cent. debt and the privileged debt each to one-half the present rates; the domain loans at 5 per cent. and the Daira Sanied loans at 4 to 5 per cent. are to be left as at present. If the revenues are insufficient to pay the Daira interest, the Egyptian Treasury only is to be called upon to make up the amount, less one-half per cent.

The sinking funds belonging to the privileged and unified debts are to be suspended. The interest Egypt pays on the Suez Canal shares held by England is to be reduced from one-half to three-quarters, as may be deemed advisable. England is to advance or guarantee a loan of £8,000,000 to Egypt, this loan taking precedence of all existing loans. The proposals have also in view a reduction of taxes in Egypt to the extent of from £3,000,000 to £4,000,000. The Conference has adjourned, possibly for ten days, to allow the finance experts to examine the proposals.

It was reported from London on Tuesday that the Conference had given a favorable reception to England's financial proposals.

The Cologne *Gazette*, which frequently speaks by inspiration from Berlin, has recently published a peculiarly irritating article against England. The article baldly states that the understanding reached between England and France concerning Egyptian affairs in the Conference is undoubtedly due to their common hatred of Germany. England, the *Gazette* says, aims at leadership wherever it can be attained without assuming the burdens of the costly armaments which other Powers find necessary for the protection of their national interests. Mr. Gladstone perceives that France must be useful to England some day in the near future as a sort of shield bearer, and on this account he has manœuvred to pledge France toward British designs. In conclusion, the *Gazette* insinuates that England's hurry in calling the Egyptian Conference is due principally to her fears that Germany may reopen the question of the Dutch succession, and to her desire to secure a European partnership which may be extended to the Dutch question if it comes up.

In the House of Commons on Wednesday Sir Stafford Northcote gave notice that he intended to offer a motion of censure of the Government's Egyptian policy. The words of the motion of censure are: "That the agreement proposed between England and France would not establish good government and tranquillity in Egypt, or justify England in assuming a loan to Egypt or in guaranteeing the Egyptian debt." Mr. Arthur Arnold, Liberal member for Salford, gave notice that he would offer the following amendment to the censure motion: "That Parliament withholds the expression of an opinion regarding the negotiations with France until it knows what proposals on Egyptian finance are to be submitted to the Conference."

Sir Stafford Northcote presided at a Conservative meeting at the Carlton Club on Thursday. He urged the party to support the motion of censure. Some of those present dissented. The meeting, however, finally united in favor of immediate action.

In the House of Commons on Monday Mr. Gladstone moved that the vote of censure of the Government's Egyptian policy be given precedence of all other business. This motion was defeated by a vote of 190 to 148. The rejection of the motion was wholly unexpected. Mr. Gladstone and his colleagues in the Government voted with the Conservatives in order to allow the debate on the vote of censure to take place as soon as possible. The Parnellites and a majority of the Liberals opposed the motion. Three motions to adjourn were made by the Conservatives, but were rejected.

At a large meeting of Conservative peers, held at the residence of the Marquis of Salisbury on Tuesday, it was unanimously decided to support the Earl of Carnarvon's motion censuring the Government's Egyptian policy. The question of taking a division on the motion will depend, however, on Earl Granville's reply. The policy to be pursued toward the Franchise Bill was left to the party leaders for further consideration.

In the House of Commons, on Thursday evening, Mr. Gladstone said that the Government had tried its best to avoid a conflict with the House of Lords on the Franchise Bill, but should a conflict arise, while he would greatly regret it, he had no doubt of the issue. This statement was received with tremendous cheers, and is considered very significant. Should the Lords reject the bill, the Government will not end the present session of Parliament at once, but will carry several measures before the adjournment for the autumn session.

The Franchise Bill was ordered to a third reading in the House of Commons on Thursday by a unanimous vote.

The fall of Berber is officially confirmed. It was surprised by the rebels at daybreak, May 26, and, after much fighting, Hussein Pasha Khalifa, Governor of Berber, surrendered. A massacre of the inhabitants followed. The women and children were spared, and a few men escaped.

A report has reached Cairo by way of Wady Halfa that El Mahdi made an attack upon Khartum recently, and was repulsed with heavy loss.

Tz-zedin, the Under Governor of Dongola, arrived at Wady Halfa on Wednesday with twenty men. He reports that Dongola was tranquil.

Earl Granville on Saturday received a despatch from General Gordon, giving assurances of his health and safety. The date of the despatch is unknown.

Mr. Clifford Lloyd, recently Under Secretary of the Interior in Egypt, has written a long letter to the London *Times*, in which he gives a graphic description of the horrors of the Egyptian prisons, the corruption of the Mudirs, and the anti-English intrigues of the officials at Cairo.

The Cobden Club dinner in London on Saturday night was a very successful affair. Lord Carlingford presided. Dr. Smith, of Sioux City, Iowa, was an honored guest of the evening.

In the French Chamber of Deputies on Monday, Prime Minister Ferry opposed the amendment defining the revisable points in the Constitution without binding the Chamber to limit its action to these points, on the ground that the Government proposals for the revision were an essential part of the programme of the Ministry, who would be unable to continue in office if they lacked the confidence of the Chamber. The Chamber then rejected the amendment by a vote of 290 to 235. On Tuesday the Chamber adopted the first clause of the bill for the revision of the Constitution, which affirms the expediency of that action. The Government has practically agreed to an amendment which will make members of former reigning families ineligible to the Presidency.

Prime Minister Ferry stated in the French Chamber of Deputies, on Thursday, that M. Patenotre had been ordered to proceed to Pekin and demand satisfaction for the Chinese violation of the treaty. He said, also, that Admiral Courbet had gone northward with the ships under his command to support the French demands. The Chinese Legation assured Prime Minister Ferry that the Chinese Government is entirely innocent of the attack upon the French troops. It is believed France will now demand a heavy indemnity of China.

Despatches from Hanoi, received on Thursday, state that 4,000 Chinese regulars, who were provided with artillery, entrenched themselves at Lang-son, in violation of the treaty, and attacked the French forces on June 23 as they were on the march, killing ten and wounding thirty-three. General Negrier at once set out with reinforcements. General Millot telegraphed that the French troops numbered 700 men and were on their way to Lang-son. Though so greatly outnumbered, they routed the Chinese. The fighting continued for two days. Among those lost by the French were two officers.

A French Cabinet Council was immediately held, and General Millot was ordered to suspend the departure of the troops from Tonquin.

Hostilities against Lang-son in Tonquin have been resumed by the French. The French Government has decided on vigorous action.

Prince Victor Napoleon has written a letter in explanation of his present position. He says he has profound respect for his father, Prince Jerome Napoleon (Plon Plon), but he was obliged to leave the paternal roof, since he had a right to think for himself. His only line of conduct was the one enjoined by Napoleon I. and Napoleon III. He will maintain intact his great inheritance. He cannot consent to take part in acts contrary to his political opinions, and is resolved to withdraw from all compromising connections. Prince Jerome asserts that Prince Victor has brought odium upon himself as a dishonorable breaker of pledges.

There were eight deaths from cholera at Toulon, France, on Wednesday. Post-mortem examinations seem to prove it Asiatic. There were two deaths from cholera at Marseilles on Friday, and a panic ensued among the inhabitants.

Special reports in regard to the cholera in France give a greater number of deaths than the official returns report, and the truthfulness of the latter is distrusted. The number of victims at Toulon is believed to be eight to ten daily. There were five deaths at Marseilles on Sunday night. Captain Bellot, of the navy, was driven to despair when his wife was seized with the cholera, and committed suicide. M. Rochard, Chief of the French Naval Health Department, declares that the cholera was not brought to France by any transport returning with troops from the East

During a discussion of Germany's colonial policy on Thursday in the Reichstag, Prince Bismarck incidentally said: "I would remind the House that some time ago an outbreak and second war with France were generally expected, and that the inclination therefor existed everywhere. Nevertheless, you must bear witness that I did not allow it to come to pass. The different governments of France since 1870 have maintained confidence in Germany. Our relations with France are as confidential and amicable as with any other country. There exists complete trust in reciprocal treatment and in our mutual honor. I am pleased at having an opportunity for mentioning this fact."

In the Spanish Chamber of Deputies on Monday, Señor Valdosera introduced a bill providing for an improvement of the situation of affairs in Cuba. The principal clauses of the bill proper propose a reduction of the export and an increase of the import duties on sugar, and direct that Spain shall negotiate new treaties of commerce in Cuba's interest with foreign nations. Other clauses effect economies in the Cuban budget, and provide for the conversion of the Cuban debt. In the Senate Señor Cánovas del Castillo, the Prime Minister, stated that Spain had absolutely no intention of selling Cuba. The Prime Minister and Minister of Foreign Affairs on the same day held an important interview with Mr. John W. Foster, the American Minister, who has just returned to Spain from Washington. The Spanish Ministers showed a desire to arrive at an equitable commercial arrangement. Mr. Foster assured them that America was animated with amicable views regarding trade with Cuba. He declared that America had no desire to annex Cuba now nor at any future time. He thought, however, that something must be done for Cuba quickly. Mexico was already importing sugar into America free. Unless Cuba and the English West India Islands secured equal terms, it was evident that their best market was lost.

A panic prevails among the Jews in the towns of Western Russia on account of Christian hatred and threats.

TAMMANY IN NATIONAL CONVENTIONS.

It is conceded on all sides that the only obstacle to Cleveland's nomination by the Democrats is the opposition of Tammany Hall. If John Kelly were to say that he is in favor of him and that he would do all in his power to secure his election, the probabilities are that Cleveland would be nominated by acclamation. But Kelly does not say that. On the contrary, he is disseminating as widely as possible his view that Cleveland is a weak candidate, who, if nominated, would not be able to carry New York. He has said this with so much emphasis during the past few days that many Democratic leaders in Washington and elsewhere are afraid he may mean something by it, and Cleveland's strength is said to have been somewhat diminished in consequence.

There is nothing new in this attitude of Tammany. It took the same position in 1876 and again in 1880, and Democrats who remember what the outcome was in those years ought to be able to look upon Kelly's talk with entire indifference now. When Tilden was a candidate in 1876, with an almost solid New York delegation behind him, Kelly went to St. Louis, with the usual special train of 150 "braves," and made a systematic and most persistent effort to defeat Tilden's nomination. He opened a headquarters and hung out a placard with this inscription: "The city of New York, the largest Democratic city in the Union, is uncompromisingly opposed to the nomination of Samuel J. Tilden for the Presidency, because he cannot carry the State of New York." He claimed also that although the New York delegation was instructed to vote as a unit for Tilden, it was in reality about equally divided between him and other candidates, and that seventeen members of it were unalterably opposed to him. He visited the delegations from other States and laid this statement before them. As a final effort, he distributed a circular, signed by nearly 100 New York Democrats, many of them men of high authority in the party, in which protest was made against the "folly of nominating a man who, we are perfectly convinced, cannot carry New York." The list of signers was really a formidable one, including such men as August Belmont, ex-Governor Hoffman, S. S. Cox, Chief-Justice Church, Amasa J. Parker, Horatio Seymour, jr., and J. V. L. Pruyn. A few of the signers are in sympathy with Kelly's present opposition, but he can muster nothing like so impressive an array of disciples now as he had then. When Tilden's name had been put in nomination, Kelly mounted the platform, and amid great confusion announced himself for Hendricks, saying that seventeen of the New York delegates were of the same mind, and that Tilden could not carry the State. The Convention disregarded all these appeals and nominated Tilden. In the election he carried New York State by over 32,000 majority, and New York city by nearly 54,000 majority.

In 1880 much the same programme was followed again. It was not known whether or not Mr. Tilden would accept a renomination, but an overwhelming majority of the delegates were known to be in his favor. Kelly appeared at the Convention with his special train and his protests, and opposed Tilden vigorously on the old grounds until his letter of withdrawal was read. When General Hancock had been nominated, Kelly was called for, and mounted the platform amid tremendous applause. He assured the Convention that in nominating Hancock they had reunited the gallant Democracy of New York; that after contending for five years he was sure that the anti-Tammany gentlemen of the New York delegation would agree with him that past differences should be buried; that in his opinion whoever made any allusion hereafter to the differences which had existed among the New York Democracy should be branded as a traitor to the party; and concluded by pledging Tammany to do everything in its power to elect the ticket. After him Col. Fellows, as the leader of the anti-Tammany wing of the party, appeared on the platform, when he and Kelly shook hands in the presence of the Convention, while the delegates shouted like mad and the band played "Auld Lang Syne." In November Hancock's majority in New York city was only 41,285, nearly 13,000 less than Tilden's, and Garfield carried the State by a majority over all of nearly 6,000, and a plurality over Hancock of 21,000.

It was charged in 1880 that Kelly "traded off" Hancock in the city, but the figures do not afford convincing evidence of that view. Hancock had 10,000 more votes in the city than the Democratic candidate for Judge of the Court of Appeals, who was voted for at the same time, and 21,000 more than the Democratic candidate for Mayor. The most obvious explanation of the discrepancy between the vote for Hancock and that cast for Tilden is that the latter commanded the support of the Independent voters and business classes generally, while Hancock did not. These two elements are of great importance in the city vote. Kelly's following is also an important element when it is wielded in a solid mass; but to wield it in a mass against a Democratic candidate is an impossibility unless Tammany has a decided grievance upon which to base a revolt. It has no grievance whatever this year, and if Cleveland is the candidate Tammany will be as powerless to defeat him as it was to injure Tilden in 1876.

MR. BLAINE'S VERACITY.

A striking feature of the Blaine investigation of 1876 was the contradiction in testimony between himself and James Mulligan as to the facts of a certain interview which took place the day previous to the giving of the testimony. Mulligan testified that Mr. Blaine came to him at his hotel and asked him (Mulligan) if he had certain private letters of his (Blaine's) to Warren Fisher, to which Mulligan replied that he had; that Blaine asked Mulligan to deliver them to him, which Mulligan refused to do; that Blaine asked what Mulligan intended to do with the letters, and he replied that he intended to keep them for his own protection; that he had seen a statement in the Washington *Star* that the Blaine party were going to break Mulligan down, and that he intended to publish the letters if his testimony were impeached or impugned; that Mr. Blaine "prayed, almost went on his knees, and implored me to think of his six children and his wife, and said that if the Committee should get hold of this communication it would ruin him forever; . . . that he even contemplated suicide, and asked me if I wanted to see his children left in that state"; also that he asked Mulligan if he would not like to have a consulship abroad, etc. The next day Mr. Blaine denied under oath all of the foregoing testimony, but admitted that he had obtained possession of the letters from Mulligan on a promise or understanding that he would give them back to him, and that he had violated the promise. Several witnesses were examined as to Mulligan's reputation for truth and veracity, and the testimony was unanimous that it was perfectly good. Warren Fisher, who endeavored to shield Mr. Blaine as much as possible, testified: "His (Mulligan's) character is of the best. I would say that it is as good as or perhaps better than that of any man I ever knew." This estimate of Mulligan was corroborated, so far as Mr. Fisher was concerned, by the fact that he (Fisher) intrusted to Mulligan the settlement of his entire business with Mr. Blaine, extending over several years and involving nearly or quite $200,000 in money and bonds. Even Mr. Blaine, while contradicting Mulligan as to the offer of a consulship, said: "I would not say that Mr. Mulligan falsifies; I do not want to say that at all," implying that Mulligan had merely misunderstood him.

When an issue of veracity is raised between two witnesses to the same subject matter it becomes important to ascertain which of the two is better entitled to belief. If it can be shown that one of them has already been convicted of untruth, the presumption will remain in favor of the other. Some days after the contradictory testimony of Blaine and Mulligan had been given, the letters to Warren Fisher were extorted from Mr. Blaine by overwhelming public opinion, and then it became known that Mr. Blaine had made two glaring misstatements as to essential facts in the case. In a speech delivered in the House of Representatives on the 24th of April, 1876, which he afterward asked permission to embody in his sworn testimony before the Committee, he had stated that the Little Rock and Fort Smith Railroad derived its life, franchise, and value wholly from the State of Arkansas, and that he (Blaine) bought his bonds at the same rate that others paid, and that he never received any as a gratuity. Both these statements were proved to be false by his own letters to Fisher. We quote the following paragraphs from his speech in the House, which will be found on page 2725 of the *Congressional Record* for that year:

"In common with hundreds of other people in New England and other parts of the country, I bought some of these bonds—not a very large amount—*paying for them at pre-*

cisely the same rate that others paid. I never heard and do not believe that the Little Rock Company, which I know is controlled by highly honorable men, *ever parted with a bond to any person except at the regular price fixed for their sale.* The enterprise, though apparently very promising, proved unsuccessful, as so many similar projects did about the same time. I lost a considerable sum of money (over $20,000) by my investment, and I presume New England made a net loss of $2,000,000 in completing that road for Arkansas, as she has lost over one hundred millions by similar ventures west and south within the last twelve years. In addition to my investment in the bonds, I united with others in raising some money for the company when it met its first financial troubles. Proceedings are now pending in the United States Circuit Court in Arkansas to which I am a party of record, for the reimbursement of the money so advanced. All the bonds which I ever purchased I continued to hold; and when the company was reorganized in 1874, I exchanged them for stock and bonds in the new concern, which I still own. My whole connection with the road has been open as the day. If there had been anything to conceal about it I should never have touched it. Wherever concealment is desirable, avoidance is advisable, and I do not know any better test to apply to the honor and fairness of a business transaction.

. . . . . .

"In the seven intervening years since the Little Rock and Fort Smith bonds were placed on the market, I know few investments that have not been more affected by the legislation of Congress. But this case does not require to be shielded by any such comparisons or citations, for I repeat that the Little Rock Road *derived all it had from the State of Arkansas,* and not from Congress. It was in the discretion of Congress to give or withhold from the State, but it was solely in the discretion of the State to give or withhold from the Little Rock Railroad Company.

. . . . . .

"Third, that instead of receiving bonds of the Little Rock and Fort Smith Road as a gratuity, I *never had one except at the regular market price,* and that instead of making a large fortune out of that company I have incurred a severe pecuniary loss from my investment in its securities, which I still retain. And out of such affairs as this grows the popular gossip of large fortunes amassed in Congress."

The evidence that the Little Rock and Fort Smith Railroad did not derive its value wholly from the State of Arkansas, but derived its then existing value from Congress, and especially from Mr. Blaine, is best shown by the following letters to Fisher, taken from the Mulligan budget:

(Personal.)

AUGUSTA, Me., Oct. 4, 1869.

MY DEAR SIR: I spoke to you a short time ago about a point of interest to your railroad company that occurred at the last session of Congress.

It was on the last night of the session, when the bill renewing the land grant to the State of Arkansas for the Little Rock Road was reached, and Julian, of Indiana, Chairman of the Public Lands Committee, and, by right, entitled to the floor, attempted to put on the bill, as an amendment, the Frémont-El Paso scheme—a scheme probably well known to Mr. Caldwell. The House was thin and the lobby in the Frémont interest had the thing all set up, and Julian's amendment was likely to prevail if brought to a vote. Roots and the other members from Arkansas who were doing their best for their own bill (to which there seemed to be no objection) were in despair, for it was well known that the Senate was hostile to the Frémont scheme, and if the Arkansas bill had gone back to the Senate with Julian's amendment, the whole thing would have gone on the table and slept the sleep of death.

In this dilemma Roots came to me to know what on earth he could do under the rules; for he said it was vital to his constituents that the bill should pass. I told him that Julian's amendment was entirely out of order because not germane; but he had not sufficient confidence in his knowledge of the rules to make the point, but he said General Logan was opposed to the Frémont scheme, and would probably make the point. I sent my page to General Logan with the suggestion, and he at once made the point.

I could not do otherwise than sustain it; and so the bill was freed from the mischievous amendment moved by Julian, and at once passed without objection.

At that time I had never seen Mr. Caldwell, but you can tell him that, without knowing it, I did him a great favor.

Sincerely yours, J. G. BLAINE.

W. FISHER, JR., ESQ.,
24 India Street, Boston.

AUGUSTA, October 4, 1869.

MY DEAR MR. FISHER: Find enclosed contracts of the parties named in my letter of yesterday. The remaining contracts will be completed as rapidly as circumstances will permit.

I enclose you a part of the *Congressional Globe* of April 9, containing the point to which I referred at some length in my previous letter of to-day.

You will find it of interest to read it over and see what a narrow escape your bill made on that last night of the session. Of course it was my plain duty to make the ruling when the point was once raised. If the Arkansas men had not, however, happened to come to me when at their wits' end and in despair, the bill would undoubtedly have been lost, or at least postponed for a year. I thought the point would interest both you and Caldwell, although occurring before either of you engaged in the enterprise.

I beg you to understand that I thoroughly appreciate the courtesy with which you have treated me in this railroad matter; but your conduct toward me in business matters has always been marked by unbounded liberality in past years, and of course I have naturally come to expect the same of you now. You urge me to make as much as I fairly can out of the arrangement into which we have entered. It is natural that I should do my utmost to this end. I am bothered only by one thing, and that is a definite and expressed arrangement with Mr. Caldwell. I am anxious to acquire the interest he has promised me, but I do not get a definite understanding with him as I have with you.

I shall be in Boston in a few days, and shall then have an opportunity to talk the matter over fully with you. I am disposed to think that whatever I do with Mr. Caldwell must really be done through you. Kind regards to Mrs. Fisher. Sincerely,

W. F., JR., ESQ. J. G. BLAINE.

The evidence that he did not buy his Little Rock and Fort Smith bonds at the same price that others paid for them, that in fact he never bought any, but received a large sum in bonds and cash as a gratuity or commission, was produced in such a variety of ways that neither Mr. Blaine nor any of his apologists ever afterward attempted to deny it. In the first place, Mulligan produced a memorandum book in Blaine's handwriting, showing that he (Blaine) was to receive from Fisher $130,000 of land-grant bonds, and $32,500 of first-mortgage bonds, besides $15,150 in money. Mulligan testified that Blaine did receive all these bonds, except $36,000, which were still due him, and Blaine in one of his letters spoke of $20,000 more as due him from Caldwell.

As between Mulligan and Blaine the issue of veracity would seem to be no longer open to doubt.

NEWSPAPER PRIVILEGE.

THE decision of the Massachusetts Supreme Court in the Cowley case will be a surprise to most people in New York, whether lawyers or laymen. The suit was brought to recover damages for the publication of an alleged libel concerning plaintiff in the Boston *Herald.* The alleged libel consisted in publishing a petition for plaintiff's removal from the bar before any action had been taken or hearing had in the matter. At the trial the Court ruled, at the defendants' request, that the article in question was a privileged communication, and ordered a verdict for them. Plaintiff excepted, and the full court has now sustained his exceptions, and holds that a newspaper is not protected in publishing such *ex-parte* statements as those contained in the petition for the plaintiff's removal.

The Court says that a newspaper has a right only to make "fair reports" of judicial proceedings. In Massachusetts all proceedings are begun by filing the first paper in court, and the proprietors of the *Herald* undoubtedly supposed that publishing a petition which had been so filed was no more than publishing a report of the opening speech of a lawyer in a jury trial. But the Massachusetts judges say that this is not so.

"It is desirable that the trial of causes should take place under the public eye, not because the controversies of one citizen with another are of public concern, but because it is of the highest moment that those who administer justice should always act under the sense of public responsibility, and that every citizen should be able to satisfy himself with his own eyes as to the mode in which a public duty is performed. If these are not the only grounds upon which fair reports of judicial proceedings are privileged, all will agree that they are not the least important ones. And it is clear that they have no application whatever to the contents of preliminary written statements of a claim or charge. They do not constitute a proceeding in open court. Knowledge of them throws no light upon the administration of justice. Both form and contents depend wholly on the will of a private individual, who may not be even an officer of the court. It would be carrying privilege further than we feel prepared to carry it, to say that by the easy means of entitling and filing it in a cause a sufficient foundation might be laid for scattering any libel broadcast with impunity, and we waive consideration of the tendency of a publication like the present to create prejudice and interfere with a fair trial."

The precise question in this case could hardly arise in New York or any State which has adopted the New York code of procedure; for under this code proceedings are not begun by filing a paper in court, but by serving it upon the defendant. But with such a system the rule of the Massachusetts judges would be still more applicable. If it is libellous to publish a judicial record, it must be still more libellous to publish a paper which is not on record at all, and is not accessible to the public, except by favor of the parties. A complaint or answer, for instance,

in New York is a paper which is not in charge of a court, or of any public officer. It is not, as a rule, until after judgment that the papers in a suit are filed in the clerk's office.

Nevertheless, it is the universal custom of newspapers in this State and elsewhere, to publish abstracts of pleadings in suits likely to be of general interest. They publish them, too, as a matter of business, and the more libellous they are in tone, the more likely they are to get into print. Whether such publication serves any useful purpose (except to the newspaper) may perhaps be doubted; but it is not probable that the practice will be abandoned. The difficulty with the Massachusetts decision is that the distinction between the practice of publishing reports of trials, full as all such reports generally are of scandal and libel, and the publication of a petition or complaint as a matter of news, is not appreciable to the ordinary mind. A jury once convinced that a newspaper had published it without malice would be unlikely to give any substantial damages, and the rule of law would therefore be worthless to the person libelled.

The true limit of newspaper privilege, it seems to us, ought to be set by the circumstances of each case. A petition for the removal of a man from the bar is a matter of such general public interest that it is difficult to understand what the objection to its publication can be. Would it be libellous to publish the fact that such a petition had been filed or served? On the other hand, the publication of an ordinary complaint, say in a divorce suit, might be very outrageous. Practically we presume that this would be the effect of the Massachusetts rule, as interpreted by Massachusetts juries.

THE ANTIQUE PRESS.

Professor Jebb, of Glasgow, delivered an oration on Thursday at the Phi Beta Kappa meeting at Harvard in which he made some interesting suggestions as to a very old subject —the effect of the Press in producing public opinion. The illustration which he selected—that of General Gordon—is a very striking one. A year ago, he said, Gordon's name was familiar only to a small class of the English-reading public. That it would become in a few short months a talisman for political parties to conjure with, and that the fate of the English Ministry would be believed by millions of people to hang upon his life, was what no one could have anticipated. It is plain, too, that but for the Press, this sudden increase of Gordon's importance would have been utterly impossible. It was the popularization of the facts of his career through countless books, magazines, and newspapers that made him the hero of the hour, and this without any effort on his own part, notoriety being apparently what he cares least about. But for the Press he would have been to-day simply an English envoy in Africa, about whose mission to Khartum the world would have known only what the English Ministry chose to let it know, and this would have probably been very little. But as it is, every fact in his career, every line in his countenance, every hint, suggestion, or fancy of his friends or enemies as to his mission, its purpose, its means of execution, and its probable result, has been "news." The Press has converted a secret piece of delicate diplomacy, about which little or nothing is known, into what we should call a "live" political issue, through the romantic, sensational interest it has been enabled to throw around the life and person of the man who has undertaken it.

Professor Jebb dwelt principally upon the absence in the antique world of any such machinery. National opinion in it meant originally merely the opinion of the King; and his manifestoes and announcements, if in a certain sense journalistic in character, were, we must say, open to the criticism that they confounded two distinct functions of the Press, now, as an evolutionist would say, entirely differentiated. As an instance of antique journalism Professor Jebb gives the proclamation of that eminent and able monarch, Artakhshatrá, whom we take to be our old friend Artaxerxes:

"He came up with chariots. He said that he was my first cousin. He lied. I impaled him. I am Artakhshatrá. I flayed his uncles, his brothers, and his cousins. I am the King, the son of Daryavush. I crucified 2,000 of the principal inhabitants. I am the shining one, the great and the good."

Artakhshatrá evidently knew nothing of the distinction between the editorial and news departments. The fact that the rival king came up with chariots, stated his alleged relationship, received in reply the lie direct, accompanied by impalement, was at the time obviously news; so was the flaying of his uncles, his brothers, and his cousins. The self-laudatory references designed to attract attention to himself and his father and his shining moral qualities belonged, on the other hand, to the editorial columns. Nowadays the former of these would not be hastily buried in the body of an article, but would appear under proper "news heads," and be published in double-leaded type, considerably expanded, with a few necessary details about the chariots, and the more striking incidents connected with the crucifixion, flaying, and impalement, and other casualties.

We have not space to follow Professor Jebb, as we could wish, through other branches of his interesting comparison, and can only refer to one—that of wit and humor—which, in the antique world, was entirely in the hands of the dramatists or satirists. Aristophanes, for instance, did for the Athenians, not what Harrigan and Hart do for New York, or what Gilbert and Sullivan do for London, so much as what the ubiquitous "funny man" and caricaturist do for us. A thousand papers do for us what one man did for Athens. And then Aristophanes had no news department at all.

It is really—and the fact is often overlooked —the extraordinary development of "news" which gives the Press a large part of the power originally imagined to come from argument or exhortation. What news does for the public is to enable it to watch the progress of a campaign, or a series of political or social events, like spectators at a theatre, and the love of a story or a play is one of the deepest-seated passions in the human heart. People watch Gordon now for the finale—the fall of the curtain in Egypt or in England—and the fact that they are watching is what enables the countless newspapers that play the part of the antique chorus to publish the drama and get the attention of the audience to their comments at the same time. Artakhshatrá was forced to resort to much cruder methods.

THE YALE AND HARVARD BOAT RACE.

New London, June 26, 1884.

When Mr. Robt. J. Cook stood at the bow of the University boat at the end of the race in 1883 and watched the Harvard eight cross the line many lengths ahead of one of the finest looking crews that ever manned a shell, he smiled with grim satisfaction and declared that the phantom stroke, which for two years had stood between Yale and victory, had been laid at last. The strength of a settled conviction that there was, after all, but one way in which to row a boat enabled Yale veterans at the oar to draw a certain amount of consolation from the overwhelming defeat of last year; for they felt assured that at last any remaining doubts as to the radical defects of the professional stroke would have to give way in the face of such a defeat coming to a crew of "veterans" and "giants" at the hands of rivals who had had scarcely a month of steady practice in the positions at which they rowed the race of that year.

A month's careful coaching of four members of the crew who had enough patriotism and self-denial to give up a part of their vacation to a study of the right principles of rowing under the tuition of Captain Cook on the waters of the Schuylkill, at Philadelphia, opened their eyes to the fact that for two years or more Yale had been gradually slipping away from the high standard of oarsmanship which it had taken so much patience, skill, and money to attain. Shortly after the opening of the fall term last year Mr. Cook attended at New Haven, and continued the lessons which he had begun during the summer. From that time on, and all through the long winter months, the men who had undertaken to train for the crew worked with an energy, faithfulness, and dogged pluck highly to be commended in the face of the defeats of the past and the hard course before them. The result of this year's race may be fairly taken as the legitimate fruit of courageous persistence in the teeth of defeat and as the honest reward of honest work.

At Harvard, on the other hand, the exceptional good luck of two successive years seemed to receive a sudden check. Beginning the year with an almost positive assurance of the ability to pit against their rival seven out of eight of the crew which won so brilliantly in 1883, one piece of misfortune after another happened to interrupt the work of the crew and interfere with the steady progress of preparation for the race of 1884. To begin with, their captain was, early in the season, forced to resign his position and his seat in the boat. Then it was found that Mr. Perkins, the victorious stroke of the preceding year, who succeeded to the captaincy, was too heavy, as he thought, for his old thwart, and moreover that there was no one upon whom he could count with enough confidence to follow him in setting the stroke for the starboard side. At first it was thought that Mr. Curtis, who stroked the eight with such credit in 1881 and 1882, and who, as a member of the law school, was still in the university and eligible for a place in the boat, would come back and pick up an oar once more for the honor of his college; but the renewal of an old strain

which had caused him to withdraw from the boat a year ago forced him once more to give up. The result of the class races furnished what was believed to be a solution of the difficulty in the person of Mr. Bryant, stroke of the senior crew, who carried his men to victory over the other class eights upon the Beacon course with so much dash and energy that he seemed to be a suitable person to set the pace for the university eight. The result of the race with Columbia a week ago, however, proved that the placing of the men in the Harvard boat was still imperfect. The few graduates of Harvard who watched that race saw with dismay a crew of mere lads, whose short preparation had prevented their attaining anything more than mediocre form, come up upon the big fellows from Cambridge at a critical point in the race, not very far from the finish, and hold them manfully up to the last half mile. But for the poor form which the Harvard men displayed in that race, it would have been hard to believe that it had been pulled upon its merits, and that the winners had not purposely allowed their opponents to row them an apparently close contest for the sake of deceiving their more dreaded opponents who watched them so keenly from the Yale launch. Indeed, for a day or two afterward there were not a few of the spectators who claimed that the thing was a walk-over for the Cambridge men, who had cleverly concealed their real strength. Old oars, however, shook their heads at this theory, and insisted that no crew could hold itself in and let another eight come so close to it upon the last few hundred yards of a four-mile race, when the catching of a single "crab" or the slipping of a seat would be enough to reverse in a few seconds so short a lead, and turn victory into defeat. This opinion obtained substantial sanction when two days after the race important changes were made in the Harvard boat. Two men went off the eight and the two substitutes were brought in. But a still more striking change, and one that seemed very hazardous at so late an hour, was decided upon by the Harvard authorities. Stroke and No. 7 were made to change places, Mr. Perkins going back to his old place of a year ago. The wisdom of this rearrangement, dangerous as it seemed, showed itself in the race to-day. Harvard exhibited a remarkable improvement over her form of last week, and it is generally believed that but for this change, unfortunately demanded by the exigencies of the situation, the four lengths that separated the two boats to-day would have been multiplied fourfold.

With New London's usual good luck, the heavy storm cleared away just at the right time, and with the wind blowing down the course and the river running like a mill-race from the rainfall of the preceding forty-eight hours, the Thames was never in better condition for the eights. Mr. William Bradford, of New York, sometime member of the First Trinity eight, of Cambridge, England, and an exponent of the somewhat graceful style of rowing at one time in vogue there, had been agreed upon as referee, and long before the water seemed to the uninitiated smooth enough for racing, his experienced eye told him that the condition of the river was far better than it appeared, and was improving every minute. With commendable foresight, he called the crews promptly into line, and was able to send them off with but little delay. Yale got away the quicker, both crews dashing to their work at thirty-nine strokes to the first minute, and before a quarter of a mile had been rowed the nose of her shell had been pushed twenty feet ahead. At the half mile she had dropped her pace a single stroke, Harvard falling to thirty-seven and passing the flag half a length behind her. For the next half mile the relative positions of the boats did not change, Yale gaining slightly, perhaps, still rowing at thirty-eight, while Harvard's stroke fell to thirty-five, and the shells shot by the mile flag with Yale almost a length ahead, Harvard following three seconds later. From this point the steady swing of the Cambridge men seemed to tell, and they gradually drew up on the leaders. At the mile and a half post, with a stroke of thirty-four to Yale's thirty-nine, Harvard had won back all but a few feet of her lost ground, and at the two-mile the lead changed and over half way down the course Harvard's nose showed to the front and passed the two-mile flag two seconds or nearly a length ahead, while the wearers of the crimson on the water and aboard the observation train shouted their delight and assured each other that never before in the history of American eight-oared racing had the crew which led at this point been headed at the finish. And their confidence seemed well founded. As Harvard gathered herself and picked up the stroke with something of her old-time dash and vigor, Yale seemed to show a corresponding lack of energy, and for a moment looked like going to pieces. Either from excitement or eel-grass, that nightmare of Yale oarsmen, one of the waist men in the New Haven boat caught a tremendous "crab," and for a moment it seemed as though he had wrenched the outrigger from the side of the shell. But he recovered himself wonderfully, and in the fraction of a second picked up the stroke, and the boat once more moved up on Harvard's quarter, and began to cut down the lead. Before three miles had been rowed the lead had once more changed. As the water grew fresher from the breeze the marked superiority of the Yale shell showed itself. Harvard was miserably "boated," and while Yale rode high and dry, her nose, the cross-bar on her rudder, and a yard or two of rudder lines alternately dipped below the surface, and at times ploughed the water a foot high. But nothing could have changed the result. The race was over at the end of the third mile, when Yale led by four seconds, rowing at thirty-nine to Harvard's thirty-seven. From this point on the lead was gradually increased, Harvard rowing raggedly for half a mile, but "bracing" for the last half and pulling well. Both eights "picked her up" for a final spurt on the last quarter mile, Yale crossing the finish with a lead of seventeen seconds, or nearly four lengths between her stern and Harvard's bow. The time, 20.31, is by fourteen seconds the best on record.

The race marks an era in college rowing. The day of experiments is over. For the first time in the history of American eight-oared racing the onlooker saw two well-matched crews rowing the same sort of stroke, and the one that rowed it the better won. We may at last look forward each year to a contest where both eights will strive to realize the same ideal in a way that will make the processions of years ago an impossibility. G. W. G.

THE APPROACH OF ANOTHER CRISIS.

LONDON, June 19.

THE present session, if it has fortunately lacked the stormy "scenes" which marked the sessions of 1881 and 1882, has been full of trouble for the Government. It opened with a resolution of censure on them for their policy in the Sudan; it saw another and more serious peril raised by the debate on the position of General Gordon five or six weeks ago; and now a third struggle seems to lie before them in the vote of censure which the Tory party proposes to move upon the scheme for the settlement of Egypt which they have been discussing with France, and are to lay before Parliament on Monday next.

For the last eight months, ever since the revolt of the Sudanese showed that English troops could not be immediately withdrawn from Egypt, it has been plain that some new departure must be made. The provisional condition of things was becoming intolerable. The administration of the country, in spite of the presence of English officials, and the beautiful schemes for local self-government which Lord Dufferin had suggested, was going from bad to worse. To effect any substantial improvement, it would have been necessary to displace the native officials and effect a complete reorganization; but this was what the English Government felt bound to abstain from, partly because it would have been inconsistent with their professed desire for self-government by Mohammedans, partly because it would have obliged them to remain in the country for an indefinite time and practically amounted to the establishment of a protectorate. The efforts made to carry out reforms by putting a few Englishmen into places of command broke down when Mr. Clifford Lloyd, after having irritated the native authorities through an energy untempered by discretion, resigned and retired. Meanwhile the Egyptian treasury was becoming surely and steadily depleted. It has to face not only the interest on the debt—a debt out of all proportion to the real wealth of the country—but also the support of the English troops who maintain order in the country, and the payment of the enormous sum awarded as indemnity to those whose property was destroyed at Alexandria after the bombardment of the forts in July, 1882. That sum was grossly in excess of the real losses; still it has been awarded and must be paid. Egypt is practically bankrupt. If she were an independent country she would have to repudiate. But she is not an independent country. She is bound to the payment of the interest on her public debt by international treaty engagements which the courts established under those engagements have authority to enforce against her. And she is, in point of fact, under the control of England, so that whatever she does appears to the world to be done by England.

In this position, the English Ministry have the traditional three courses open to them. One is to retire forthwith, washing their hands of the whole concern. The objections to this line are that it would stultify all the past conduct of England, and would leave the door open for any other Power—that is to say, for France—to walk in. Whether France would walk in is another question; but if a large party in England think and fear that she would, it is almost the same as if it were known that she would. Therefore, hardly any one proposes this line. The second course is boldly to tell the bondholders that they must consent to a reduction of the interest because the country can no longer afford to pay it in full, and to follow out this decided step by taking hold of the administration, pushing native authorities aside so far as may be necessary to introduce sufficient reforms, and letting it be understood that the occupation will continue until the condition of the people and the revenues of the state have been substantially and permanently improved. This is the course which most people in England would prefer, not merely because it wears the appearance of energy and courage, but because it gives some prospect of making our past anxieties and efforts bear useful fruit. The objection to it is that it would overthrow a number of international engagements to which we were parties; would be at variance with pledges the Ministry have given; would excite the jealous hostility of France; would remove to an indefi-

nite distance the prospect of that retirement from the Nile Valley which the Government have always declared—and, we may believe, conscientiously declared—to be the chief aim of their policy.

There remains a third course, or rather group of similar courses, intermediate between these two, which, while differing in minor details, agree in recognizing the diplomatic engagements which regulate Egypt, and in placing England and her occupation of Egypt under the control of the European Powers. This is the course which the Government have decided on. Admitting the rights of the other Powers, they conceived that the requisite financial readjustment could only be effected by a Conference of those Powers. They issued invitations to such a Conference. France, in replying, urged that the Conference must not be limited to finance. This led to an interchange of communications, and it is the provisional agreement, if one may so call it, based on these communications, which Mr. Gladstone has now to lay before Parliament. It is awaited with uneasiness by the Ministerialists, with hope by the Opposition, with eagerness by all parties. Its terms have to some extent oozed out, but as they will be fully before you before this letter can reach America, I need not state what is here believed. It is expected that the debate which the Tory leaders will forthwith demand will follow immediately, so that the decisive vote may be taken within a fortnight from now.

Public opinion, which was excited in London on the subject a fortnight ago, has for the moment become quieter, because every one is in an attitude of expectation. Doubtful as the prospects of the Government are, the impression gains ground that the ship which carries their fortunes, heavily though she has been laboring for the last few months, will weather the storm. The County Franchise Bill has now all but passed the House of Commons, and has been supported on all important divisions by majorities fully sustained in point of size. The Government have bound themselves to bring in next session a Redistribution-of-Seats Bill, and to use every effort to run it promptly through. Thus a prospect is opened up of getting this troublesome question of Parliamentary reform soon disposed of. The Liberals welcome that prospect, because they think it will strengthen them. Even the Tories are not so very averse, because some of them do not fear democratic constituencies, while all of them, fearing an election held on the new franchise with the existing distribution of seats, are glad to believe that redistribution will quickly follow and give them back a good deal of the strength which the Franchise Bill threatens to take away. There is therefore a strong feeling among the Liberals that it will be a pity to lose the whole results of this Parliamentary reform by a defeat of the Ministry, which would involve an immediate dissolution and dropping of the bill. The House of Lords does not like the bill (that so-called democratic Toryism which exerts some influence among Conservatives in the Commons not existing at all in the Upper House), and desires to throw it out. The Government, of course, wish that if it is to perish the onus of rejecting it should rest with the House of Lords, because this will give the Liberal party a good election cry. Hence the game of the Ministry is to send the bill up to the Lords at the earliest possible moment, and obtain a decision there upon it before a vote (which may prove adverse) has been taken on the Egyptian agreement in the House of Commons. And, conversely, the game of the Tories is to bring on the Egyptian debate and division in the Commons before the second reading of the Franchise Bill in the Upper House arrives, so that if the Government dissolve Parliament they may be forced to dissolve it upon the Egyptian issue, which will be a disagreeable one for them. The problem is complicated by the fact that each party is supreme in one of the Houses. The Ministry may, if they choose, postpone a little the taking of the Egyptian debate in the Commons. Lord Salisbury may postpone, and for a longer time, the taking of the Franchise Bill in the Lords. If he succeeds in deferring it till the Government have either been beaten or saved by a narrow majority in the Commons, his party will reject the bill with much lighter hearts.

Meanwhile the attitude of the Liberal party is one of much discomfort. They avoid speaking about Egypt in public as much as they can, and when they do speak they confine themselves to the safe general reflections that one must not pronounce on the agreement till it is published; that the whole question is a thorny one; that England must at all hazards avoid any appearance of aggression, and adhere to all her international engagements; that the Cabinet is composed of able men, good men, just men; that the Opposition leaders are restless and reckless, are still, in fact, to use the current political slang of 1880, "impenitent Jingoes." Lord Salisbury has lately been imprudent enough to make this line of argument easier by delivering a speech in the West of England whose burden was that empires must decay when they cease to grow, and that upon the sword the Empire of Britain must be held. The number of Liberal members of the House of Commons who desire to support Mr. Gladstone if they can, but fear that the terms of the agreement may be too bitter to swallow, is considerable, and when added to the number of those who secretly detest him and seek an occasion for overthrowing him, and to the Parnellite members, equally opposed to every government, makes up a total large enough to turn the scale against the Ministry. Doubtless many of this first class will rally at the last moment to the party banner. But the Cabinet themselves think the position serious, and rely less upon the House of Commons than upon the country. They think that the loyalty of the great towns and of Scotland is unshaken, knowing (what is true) that foreign affairs excite little interest there, and believing (which is more uncertain) that even moderate men of the upper classes will prefer their caution or timidity to the record of an Opposition, which, as it does not propound any alternative policy in Egypt, can appeal only to its character, and to those very imperialistic principles which were condemned in the more experienced hands of Lord Beaconsfield. Y.

Correspondence.

A BUSINESS VIEW.

To the Editor of The Nation:

Sir: It has been strangely reserved for a business man of this city to find the true basis of a rational and patriotic support of Blaine, for which a great many editors and voters, East and West, have been somewhat hysterically groping ever since the Convention. The gentleman in question is, as might be expected, a product of combined Eastern and Western influences, a man of intelligence, education, successful in business, and serious beyond all suspicion in his political and economic views. He is an admirer of Blaine's foreign policy, and wants a President who can "control Congress" and force England to buy our silver; but these arguments, after all, are but incidental to the main proposition, which is (in substantially his own language) that "a man who has shown that he knows how to make money for himself will know how to make money for his country, and that is what we need in a President."

This simple suggestion, I apprehend, will satisfy the moral and intellectual yearnings not only of the Republicans who are already inclined to support the ticket, but of the dudes and pharisees as well, and we shall owe to a Chicago thinker the unspeakable blessing of a truly harmonious campaign in the interest of our national prosperity.

Very solemnly yours,

Maccabæus.

Chicago, June 27, 1884.

A THIRD PARTY.

To the Editor of The Nation:

Sir: It is to be expected that party lines will be much broken up by the coming election. If the nomination of Governor Cleveland would draw the votes of many Independents, it could hardly fail, on the other hand, to send many Democrats, particularly among the Irish, over to Blaine. If the Democrats make a worse nomination, a host of "anxious and aimless" will be cast adrift. I have lately attended several Independent meetings, and have noticed, especially among the young men, a strong feeling that neither of the present parties has any distinct principles, and an intense desire for a new party which should stimulate their enthusiasm and their efforts. But I have not heard the faintest suggestion of any practical basis for such a party beyond general appeals to virtue and principle. It would be idle to name a third candidate without any cause for him to represent. No man of weight would accept such a nomination. It would mean failure for the present and nothing at all for the future.

What is the material of which parties are composed? Of course, the people of the country. First, there is a comparatively small number of men of intelligence and culture, of property and leisure, who may be assumed to desire good government and to bestow some thought on the means of obtaining it. Next, there is what I regard as a large majority, composed of professionals, trades-people, farmers, and workmen, sober and industrious, neither very good nor very bad, occupied with getting a living, open to a certain amount of generous sentiment, but with no time or ability to study complex details or abstractions. If a simple question of right or wrong, to be answered with yes or no, was presented to them, or some great leader of proved integrity and ability, they would turn out in solid masses. Failing these they remain stolid and apathetic, disintegrated, and a ready prey for a small force, if compact and under rigid discipline. Then there is a large minority of the idle and dissolute, the restless and discontented, ready to hurrah for any bauble, and to follow in mass any demagogue who promises them excitement and perhaps plunder. Now it is this class alone in the country which has any effective organization. The first class are interested in tariff and civil service reform, in finance and foreign immigration, but they differ so much that there may be said to be almost as many opinions as men, and they cannot come to any working agreement. *A fortiori*, therefore, they have no influence over the second class, waiting to be led and ready to respond to good leadership, but as helpless as a flock of sheep running round and round in a circle without any object or purpose. The third class are the constituents of Butler and Blaine, and resemble the same sheep headed by a reso-

lute old ram, and taking the walls and ditches with a rush.

Can anything be more grotesquely absurd than a white plume connected with James G. Blaine? Yet it will play a very effective part in the campaign. Mr. Blaine represents no principles at all. He represents himself. But he has a solid and determined band of henchmen, who are busily engaged in devising stage tricks with a view to playing upon the nation what they have already played upon the Chicago Convention; while the mass of sober citizens stand staring at each other and seeing no choice except between, it may be, Butler and Blaine, with the alternative of an empty name. Human nature has not changed since the rabble of Rome threw up their caps for Cæsar, or the factions divided upon red and blue at the Byzantine games. The only change is in the question whether, under representative institutions, the same human nature can be made to work differently.

It is useless to try to make a party upon tariff reform, because nobody can agree as to what is meant by it; it involves no personality, and cannot be represented by popular symbols. But is it equally useless to demand that the tariff shall be taken out of the committee-rooms and the clutches of the lobby, and placed in the hands of the chief financial officer of the Government, who shall treat it in public discussion on the floor of Congress, so that by a process of evolution we may arrive at a man competent at once to settle the tariff question and to wear honorably a white plume, and thus combine the efforts of those who desire either element? Is it equally useless to demand that the President, solemnly elected by a whole nation, instead of having a platform made for him by an impersonal and irresponsible committee, and having nothing more to do with the platform or the committee than he has with the succession to the papacy, should make his own platform, and should have some voice, through his chosen officials, in carrying it out, so that the position may become an object of public competition to able and honorable men? The future of the United States must inevitably take one of two roads—the one, old and well worn, leading through anarchy and demagogism to military despotism; the other to the most glorious goal of popular government, strong individual leadership combined with full responsibility to public opinion. Is there nothing in that to form the basis of a third party? G. B.

Boston, June 30, 1884.

THE OBLIGATION OF NEUTRALS.

To the Editor of The Nation:

Sir: In your issue of June 5, under the head of "Notes," I find the following quotation from Bynkerschoek: "The common law of nations does not impose upon a neutral state any obligation to prohibit the agents of a foreign Power which is at war with another foreign Power from enlisting men within its territory." Bynkerschoek was born in 1673, and wrote in 1737, a century and a half ago. Such a statement of the law of nations is not surprising when we take into consideration the time when it was written. But the writer of the note referred to seems to be under the impression that Bynkerschoek's statement is a correct exposition of the law as it stands at the present time, for he follows it with the declaration that it is the "international doctrine accepted by the English Government." We think the writer would not have fallen into greater error had he quoted Bynkerschoek's statement that the use of poisoned weapons was not prohibited by the law of nations, and added that this was the doctrine recognized at the present time.

In Holland's 'Elements of Jurisprudence' (Oxford, 1882), that writer, in speaking of the duties of neutrals, at page 304, says: "The state is bound to a positive interference with the acts both of its own subjects and of aliens, so as to prevent belligerent acts, or *enlistments*, or perhaps the equipment of war-ships, taking place within its territory, and generally to prevent its territory from being used as a base of operations by either belligerent." The latest American authority, like the latest English authorities, lays down the rule in the same way. Mr. Wharton, who writes in 1884, says: "It is, however, a breach of neutrality for a neutral sovereign to permit within his domains recruiting by one of the belligerents; and any attempt of a belligerent thus to recruit by enlistment of soldiers should be promptly resisted" (Wharton's Comm. on American Law, §247).

Again, in 'Hall's International Law' (Oxford, 1880), at page 522, the same doctrine is asserted as follows:

"The principle that it is incumbent on the neutral sovereign to prohibit the levy of bodies of men within his dominions for the service of a belligerent, which was gradually becoming authoritative during the eighteenth century, is now fully recognized as the foundation of a duty. . . . It is scarcely an exception from the general prohibition to make levies in a neutral state that a belligerent ship entering a neutral port with a crew reduced from whatever cause to a number less than that necessary to her safe navigation may take on board a sufficient number of men to enable her to reach a port of her own country. In doing this, and no more, she does not become capable of being used as an engine of war, and consequently does nothing which the neutral state is bound to prevent as inconsistent with its neutrality."

If Bynkerschoek's statement of the law on this subject is the doctrine of the English Government at the present time, the latest English writers on the law of nations seem to be strangely ignorant of the fact.

There would seem to be no doubt as to the rule. As to instances in which the English may have permitted the rule to be violated and refused redress, I have only this to say, that England was guilty of a flagrant violation of international obligations, as imposed by the law of nations, in the matter of the *Alabama;* that in that case she emphatically and repeatedly denied that she had violated those obligations, and refused to make reparation. The declarations of her diplomatists in the matter of the *Alabama* were untrue in fact. In the same way the similar declaration of a few of her public men, that the enlistment of troops in London to aid Garibaldi in Italy did not constitute a violation of international law, was untrue in fact. In the one case we had the power to force the matter to a settlement. In the other case the power of the Pope to do the same thing was wanting; but the right was the same and was equally violated.

The foreign enlistment acts are simply affirmations, by the municipal law, of obligations imposed by international law. They point out the manner in which the subjects of the country may be punished who are guilty of the violation of the obligations of neutrality.

The first neutrality act was not adopted until 1794; but in 1793 instructions issued by our Government to the collectors of customs declared "that the original arming and equipping of vessels in the ports of the United States by any of the belligerent parties for military service, offensive or defensive, is deemed unlawful." If it was unlawful, it must have been such because of international and not because of municipal law. Again, Chancellor Kent, in his Commentaries, vol. i., p. 123, marg., declares: "Congress have repeatedly, by statute, made suitable provision for the support and due observance of similar rules of neutrality, and given sanction to the principle of them, as being founded in the universal law of nations."

The instances cited from Bernard cannot be examined in this article without extending it beyond the proper limits. They do not alter the fact that the law is as stated by Holland, Hall, and all recent writers on this subject.

Henry Wade Rogers.

Ann Arbor, Mich., June, 1884.

[Professor Rogers seems to labor under the singular misapprehension of supposing that in our note on M. Bernard we were expounding the general requirements of international law on the subject of neutrality; whereas we were simply giving the author's account of the traditional policy of the English Government. What we said was that the doctrine of Bynkerschoek, in regard to the obligations of a neutral state, "is the international doctrine accepted by the English Government." The question is simply one of fact as to the usages of the English Government, not at all a question as to the opinions of writers on international law. The writers whom Mr. Rogers quotes are expounding the law as it is now generally accepted; but everybody knows that a particular doctrine of international law is binding only as an "imperfect obligation" upon a nation that has not accepted it. The English Government has not accepted the doctrines quoted; and to refer to those doctrines as proof of the Governmental policy is much like quoting the theories of Professor Sumner and Mr. David A. Wells for the purpose of showing the traditional policy of our own Government on the subject of tariff. M. Bernard distinctly points out the fact that while the English publicists have generally inclined to insist upon a rigid obligation of neutrals, the English Government, on the contrary, has uniformly taken the opposite ground. The question was not, What is international law on the subject? but, What has been the usage of the English Government on the subject? As an answer to this question much of Mr. Rogers's letter seems to us irrelevant.—Ed. Nation.]

Notes.

A limited edition of the works of Alexander Hamilton, under the editorship of Henry Cabot Lodge, is in preparation by G. P. Putnam's Sons.

An edition of the complete works of Edgar Allan Poe is announced, by A. J. Armstrong & Co. The edition is to be in six 8vo volumes, from new plates, and will contain Mr. R. H. Stoddard's 'Life of Poe,' and a new essay by him on Poe's genius.

A new illustrated periodical, devoted to the interests of the young people of the Chautauqua Union, is announced by D. Lothrop & Co., Boston. The first number will be issued in July.

The subjects in the current issue of Mr. Foster's *Monthly Reference Lists* are "The Dominion of Canada," from its early settlement to the present time, and "The Administrations of Taylor and Fillmore," being No. 11 of the series on United States History since 1789.

The 'List of Books Published under More Than One Title,' by Mr. J. L. Whitney, of the

Boston Public Library, which was noticed by us on its first publication as deserving to earn for its author the gratitude of all book-buyers, has been published by F. Leypoldt, New York, in a very convenient form, with a preface, an index, and, of course, with additions, for such a list is unfortunately always an increasing one. It now includes upward of nine hundred titles, the notes upon them being in several cases signed with easily-identifiable initials; for those which are unsigned Mr. Whitney presumably holds himself responsible. Acknowledgment is made for the coöperation of others, of whom Mr. Hutcheson, of the Library of Congress, and Mr. Edmands, of the Mercantile Library at Philadelphia, seem to have been most active. The work of preventing publishers from imposing on the public, however, should be the business of the trade, which ought to protect its own integrity by its accredited organs; for, after all, it is doubtful whether any vigilance on the part of a few men can make the reissue of old books under new names unprofitable, since their report does not necessarily reach any large proportion of the buyers. This consideration does not lessen the thanks due to Mr. Whitney and his associates for their work, which will at any rate tend to discourage this form of imposture.

We have received the Catalogue of the Officers and Students of the venerable Dummer Academy, Byfield, Mass., founded in 1763, which, after a period of decadence, is trying to regain its old rank as one of the principal schools of eastern Massachusetts. The catalogue contains the names, honors, etc., of all the students since the Academy was opened—2,182 in all, under 17 principals. To one familiar with the old family names and local history of the neighboring counties, the list is a very interesting and instructive one, and especially illustrates the usefulness of this institution at the end of the last and beginning of the present century. Within the last year some signs of renewed prosperity have been shown in the way of a few gifts (one of $10,000), and of repairs, a change in the principalship, etc.; but the funds are, on the modern scale, ridiculously inadequate. In spite of the large number of high schools in the immediate neighborhood, the increase of endowed schools is really a pressing and growing need; and hence it is the more desirable that an Academy with so long and honorable traditions to lend it the charm of age should be placed upon a firm and sound basis.

The Society for Political Education has issued as No. 12 of its Economic Tracts, a well-deserved tribute to its late President, under the title, 'The Work of a Social Teacher, Being a Memorial of Richard L. Dugdale,' by Edward M. Shepherd. This is in every way an admirable sketch of a practical and self-devoted philanthropist, whose career should prove instructive to many whose instincts for good are not less, but whose power of initiative needs strengthening, and whose administrative faculty needs direction.

At a recent meeting of the Massachusetts Historical Society much interest was excited by the exhibition of a photographic copy of a colonial map lately discovered by Mr. Henry F. Waters, the London agent of the New England Historic-Genealogical Society. This map locates the settlements at Boston, Charlestown, Dorchester, Roxbury, Salem, etc., the roads between them, the outlying Indian tribes, and even some of the houses of the colonists. It is believed to have been made by Governor Winthrop himself between 1632 and 1635.

The principle of appeal to the Christian consciousness as the main authority for religious truth, established by Schleiermacher in the beginning of this century, which has been slowly making its way into the thought of America, where it has been accepted in variously modified forms, is applied in a genial and earnest way to the general Church Creed by Mr. Chas. R. Baker, Rector of the Church of the Messiah, Brooklyn, in his 'Apostles' Creed Tested by Experience' (New York: Thomas Whittaker), in which he takes the affirmations of the Creed one by one, and finds that they have their justification and ground in the instinct of the religious soul. Mr. Baker's broad conception of truth and catholic view of the Church is accompanied by devoutness and spiritual fervor. His book will give pleasure to those who wish for the disappearance of sect life, and the establishment of the free, spiritual, catholic Church.

Mr. Henry W. Lucy, the chief of the Parliamentary staff of the London *Daily News*, has just returned from a trip round the world as the special correspondent of that paper. A series of articles descriptive chiefly of his American experiences has already been published in it, and another series, dealing with his travels in the East, is about to appear in the New York Sunday *Tribune*, under the title "In Elder Worlds." The two will afterward be published in a volume to be called 'East by West.' Mr. Lucy struck out a new route for himself, and since he had opportunities beyond the reach of the ordinary traveller—he succeeded, for instance, in interviewing the reticent exiled Arabi, in Ceylon—his book is likely to be a readable one.

The sixteenth volume of Professor Arber's 'English Scholar's Library' will be of especial interest to Americans. It will contain all the works of Capt. John Smith, now first collected, and will make a book of 1,120 pages with six maps. Professor Arber's address is 1 Montague Road, Birmingham, and the price is 12s. 6d.

The charge made by the Comte de Broglie, in the *Revue des Deux Mondes*, that the editors of the Berlin Royal Academy's edition of the 'Political Correspondence of Frederick the Great' have eliminated from that work all passages having reference to Voltaire's political relations with the King, is sharply replied to by them in a card in the *Literarisches Centralblatt*. The registers of the several volumes afford sufficient refutation of the imputation, showing that no less than five out of the ten volumes have something concerning Voltaire. The editors, J. G. Droysen, Max Duncker, and H. von Sybel, state that, where occasion has required omission of anything in the letters having reference to Voltaire, foot-notes have been given indicating where the matter is fully treated in the Academy's edition of the 'Œuvres de Frédéric le Grand.'

In response to a demand from archæologists, the essential results, for the interests of archæological and historical study, of the excavations at Olympia from 1875 to 1881, which have been reported in their progressive stages in "Die Ausgrabungen zu Olympia," have been embodied in a single volume containing thirty-eight folio pages of letter-press and forty plates, under the title 'Die Funde von Olympia' (Berlin, Wasmuth).

—The article of most novelty in the *Century* for July is what purports to be a true account of the origin and history of the Kuklux Klan, written by a clergyman of the Southern Presbyterian Church, who, although not a member of the order, claims to have authentic sources of information. The Klan, according to this narrative, was the creation of a set of idle young fellows in Pulaski, Tenn., who sought amusement and occupation in forming a club of a very old pattern, to wit: one officered by "a Grand Cyclops," "a Grand Magi," "a Grand Turk," etc., etc., holding its meetings in lonely haunts, having for its serious business the tomfooleries of old-time secret initiations, clothing its members in a grotesque regalia of the "antique and horrible" fashion, and maintaining its interest by virtue of such diversions within itself and of the mystifications concerning it which overspread the public in its neighborhood. These young men, we are told, though unoccupied, were "of good character and good habits," and to this is added the truly surprising intelligence that none were admitted to the Klan who were "addicted to the use of intoxicants." This Klan was founded in June, 1866, and quickly spread over the country; within a year it appeared that the superstitious feelings of the negroes were so affected by it that it could be made an instrument to govern them and to check their white leaders, and for this purpose it was used. The order was now reconstructed: a "Wizard," "Dragon," "Titan," "Giant," etc., became officers; the "Invisible Empire" was subdivided into "realms," "dominions," "provinces," and "dens." But now, unfortunately, "the movement, which had been characterized in the main by prudence and discretion," began to take on a violent and ungovernable character, probably owing to less careful exclusion of men "addicted to the use of intoxicants"; and the consequence was that the attention of the national and State governments was called to it, and the opposition became so vigorous that the chiefs thought best to disband it, and did so early in 1869.

—The substance of this seems to be that a harum-scarum club, accidentally spread over the disorganized Southern States, was found to be an effective vigilance committee ready formed, and was so used. Of the civilization of the country, and of the standards of these "wise and prudent" young men of "good habits," this paper furnishes a very striking illustration, which is made more effective, indeed, by the unconsciousness of its author regarding the way in which men in general will look on such matters. It should be said that an editorial note is added in "Topics of the Times" to express condemnation of the methods of the Kuklux as involving the substitution of irresponsible mob law for organized government, and the constant danger of unchecked brutality, license, and malice on the part of individuals. Other articles of interest are Mr. Escott's eulogistic notice of John Bright, and Mr. Smalley's lucid account of the United States Pension Office and its doings. Of the poetry, the "Choral Ode to the North River" reaches such an extreme ambitious inanity and long-drawn-out artifice as to deserve mention. The best of the *Century's* illustrations are, as often happens, by Harry Fenn, who has rarely, if ever, done anything happier than the drawings for the "Scenes of Hawthorne's Romances." The frontispiece, a portrait (from a photograph) of John Bright, suggests the very narrow limitations of the camera for permanent art work, for nothing can be worse than the attitude of the figure in this, or better as an illustration of what nature may be brought to without violation of fact in the way of utter inferiority to the truth which may be given by art.

—*Lippincott's* for July is a repertory of summer stories, with several travel-sketches by way of relief. Frank Bellew's "Recollections of Ralph Waldo Emerson" is a somewhat more valet-like sketch than his friends have felt free to give, and belongs to the region of literary gossip; the picture of him urging a plunge in Walden Pond, with the delight of drying off in the sun afterward, and, again, of his running full-speed through a thunder-shower to get an umbrella for his young guest, and the frequency

of his "hearty" laughter, are refreshing just now when we find in most reminiscences of Emerson only the biography of a staid and saintly sage. The anecdote that, had he known his congratulatory letter to Walt Whitman was to be published, he would have "enlarged the *but* very much—enlarged the *but*," is noticeable. The illustrated article, "New Jersey," is principally architectural in interest.

—The ninth volume of Gardiner's 'History of England,' in its revised edition, reaches the middle of 1641, and includes the death of Strafford; while the entire history of the Long Parliament is contained in the last volume of the earlier edition. The space thus gained will, we suppose, be devoted to an index of the entire work. The preface, which is taken almost without change from the original one, would not lead one to expect so considerable changes as have actually been made. The only new points to which attention is called are some extracts from unpublished letters of Wentworth at the time of the First Bishops' War, the assignment, "without any doubt, of the authorship of the petition of the twelve peers to Pym and St. John," and the determination, "in opposition to my former opinion, who were the personages with whom Henrietta Maria held secret interviews in February, 1641"—these persons being Bedford and Pym. The changes, however, seem to have been more than this, and to have consisted largely in expansion; for example, chapters 5 to 9 of vol. i. of "The Fall of the Monarchy" are now made into seven chapters. As in some of the earlier volumes, we regret the loss of some portions of the original preface: that introducing the volume in question being one of the most interesting of the whole. These two closing volumes, as was rightly said in the preface, are the central events of the long struggle—"If I have judged rightly the first fourteen months of the Long Parliament, I am likely to judge rightly the future course of the parties which then came into collision. If I have erred seriously here, I am not likely to find anything worth saying hereafter." It seems especially a pity to miss the remarks upon the change in public sentiment since the time when he began his labors, "some twenty-two [now twenty-four] years ago":

> "Macaulay and Forster were then in possession of the field. The worship of the Puritans was in the ascendant, and to suggest that it was possible to make out a reasonable case for Bacon and Strafford was regarded as eccentric. All this is changed now. Few are to be found to say a good word for Puritanism, and the mistakes of the Long Parliament are revealed with an unsparing hand. A dislike of agitation and disturbance has in some quarters taken the place of a dislike of arbitrary power, whilst reverence for culture has often left little room for reverence for liberty."

—A very interesting portrait of Dr. Johnson and the Thrales is drawn in an unpublished letter of Baretti's which has lately seen the light in the *Nuova Antologia*. It will be remembered that Giuseppe Baretti was the distinguished Secretary of the Royal Academy of Painting, the intimate friend of Johnson, Garrick, and others, and the author of numerous meritorious works, among which were his famous Dictionary and Grammar of the Italian Language. In 1776 he was selected by Thrale to be his guide and companion during a journey which the Thrales, accompanied by Doctor Johnson, contemplated making to France and Italy. Baretti's particular employment, however, was the instruction of that *angelo di bambina, la mia Esteruccia*, as he called her, the gifted and charming daughter of his patrons. The journey was unfortunately interfered with by the death of Thrale's only son, but while it was in active preparation Baretti wrote a long and minute letter to one of his brothers, giving an account of the intending visitors and begging his kinsman to make all possible efforts to render their visit as agreeable as possible. A few details gathered from this letter (written, by the way, in most beautiful Italian, of which Baretti was a veritable master) may not be unwelcome to our readers. Thrale is described as a fine, handsome man, a *gentiluomo a prima vista*, of unrivalled good humor and simple tastes. Mrs. Thrale is wonderfully vivacious, and speaks French and Italian fluently *o bene o male*. Though she, too, is gay and good-humored, she is a huge bigot, easily offended by the least lack of respect for religion and morality; therefore Baretti's brother is urgently besought to have, among other books for the delectation of the visitors, a Latin Bible, for Mme. Thrale understands Latin, too, *molto bene*. Both husband and wife take the greatest delight in agriculture and in—chickens, and the favorite society of the lady when she is in the country is found among her numerous hens, turkeys, geese, and ducks, not to mention an intimate acquaintance with the mysteries of butter and cheese, the administering of potions to the sick *contadini, eccetera, eccetera*. As for "la mia Esteruccia," who is only twelve years of age, she is an angel in every respect, and her teacher wishes her "seven thousand times more blessings than he has ever wished to anybody else."

—Doctor Johnson then comes in for a brief but incisive character delineation: he is *un vecchiaco gigante* both in body and in mind, always abstracted, absent-minded, fierce, punctilious, filthy, full of *brutti vezzi*, continually twisting his torso as he sits ruminating like an ox; in fine, an *animale suino*, possessing more science than any man in the kingdom, feared and respected by all even more than he is loved. He cannot speak a word of French or Italian, though he is an admirable critic of the former and knows almost as much Italian as Baretti himself; but Latin he speaks with the "fury of a Cicero" (this passage has been printed by Custodi, vol. i., p. 81). Baretti would be perfectly happy if only some priest or friar could be found to converse with him in this language with some facility, or throw a sop to Cerberus and quiet his *elefantesco procedere* while the others are amusing themselves. There are several others of these entertaining letters giving episodes in the life of Baretti in London. One of these episodes was the homicidal insertion of a pen-knife into the intestines of a man who had assaulted Baretti in the street, from the consequences of which he was cleared with some difficulty by the testimony of Doctor Johnson and others.

—While French and English playwrights have been letting the public into the secrets of their craft much in the same way as conjurers explain to their audiences the methods of their tricks, a distinguished man of letters in another field has come forward with a serious and admirable discussion of his own special pursuit, and with advice which cannot fail to be really helpful to his younger fellow-workers. Mr. Walter Besant's lecture on "The Art of Fiction" (London: Chatto & Windus), recently delivered at the Royal Institution, is an argument for the recognition of fiction as one of the fine arts, and —this being admitted—an attempt to formulate the rules and laws of its practice as such. He begins by advancing certain propositions which, though not new and not likely to be disputed, have never yet, he says, been so generally received as to form a part of the national mind. They are: "1st. That fiction is an art in every way worthy to be called the sister and the equal of the arts of painting, sculpture, music, and poetry; that is to say, her field is as boundless, her possibilities as vast, her excellences as worthy of admiration, as may be claimed for any of her sister arts. 2d. That it is an art which, like them, is governed and directed by general laws; and that these laws may be laid down and taught with as much precision and exactness as the laws of harmony, perspective, and proportion. 3d. That, like the other fine arts, fiction is so far removed from the mere mechanical arts, that no laws or rules whatever can teach it to those who have not already been endowed with the natural and necessary gifts." No one in his cultivated audience would be likely, Mr. Besant thought, to refuse to admit the truth of these propositions; but many cultivated people and the whole world at large would be either amused or shocked at the corollaries which spring from them—namely, that Thackeray, if he be considered a master of the art of fiction, is to be placed beside Raphael and Mozart, and that fiction must have its text-books and its position as part of a university curriculum; and further, that distinguished writers of fiction should receive distinctions and national honors similar to those bestowed upon the masters of other arts—to say nothing of the academy in which they might associate themselves.

—The fundamental idea of this part of Mr. Besant's lecture is contained in the following complaint: "In the modern craze which exists for every kind of art—so that we meet everywhere, in every household, amateur actors, painters, etchers, sculptors, modellers, musicians, and singers, all of them serious and earnest in their aims—amateur novelists alone regard their art as one which is learned by intuition." Mr. Besant's argument is based upon the assumption that this is clearly and fatally wrong, and so far as concerns the novelists who write without any adequate educational qualifications, and with whose works the libraries are flooded, he is upon safe ground. Such help and instruction as can be given, and which is of the greatest value to the beginner and full of suggestion to the most experienced, Mr. Besant's lecture contains in a delightful form. The affectionate reverence with which he approaches his art; the pride with which he points out that it is the oldest, the most widespread, the most popular, and the most influential of all, and that its field is nothing less than the whole of humanity; his uncompromising support of conscious moral purpose in fiction, and his discriminating analysis and statement of the rules and principles which should guide those who practise it, will tend to raise the standard of novel-writers and novel-readers wherever his lecture is read, and such an elevation of standard is one of the reforms most needed in modern literature. Such work as this lecture and his labors on behalf of the new Society of Authors —of which he writes to the *Times* that "it is our purpose, no less than our hope, to become a great and powerful incorporation"—indicate Mr. Besant as the most appropriate person to be first called P. R. A. F. when the novelist's art has won the national recognition to which he aspires, in a Royal Academy of Fiction.

—It is generally stated, in the history of Parliamentary institutions, that the cities—the "Tiers État"—regularly formed an estate of the realm along with the nobles and the clergy. Their presence, by representatives, is certain; the precise amount of power exercised by them is a matter of dispute. In respect to the Germanic Diet, the question has been lately investigated by P. Brülcke, in 'Die Entwickelung der Reichsstandschaft der Städte' (Hamburg, 1881), reviewed by Sohm in the January number of the *Revue Historique*. Brülcke shows that before the fifteenth century the delegates from the cities were present at the Diet merely for the purpose of

obtaining information, and with no power to take part in its deliberations or actions: as a rule the resolutions of the Diet were taken exclusively by the Princes and the Lords. In matters which concerned the cities directly, and in which, therefore, they appeared as an immediate party, there was an apparent exception to the rule; but, in fact, these are not deliberations of the Diet as such, but negotiations between the Diet and the cities. According to Brülcke, it was not until the Peace of Westphalia (1648) that the cities came to be fully recognized as an estate of the realm.

—We have received from Prof. Paul Fredericq, of the University of Liége, two collections of theses, the fruit of his method of instruction in history—'Travaux du cours pratique d'histoire nationale,' as they are entitled. Both of these "fascicules" are upon the history of the Netherlands in the sixteenth century, and they contain eight dissertations, besides the general introductions of the editor—one of which, "De l'enseignement supérieur de l'histoire en Belgique," forms a useful companion to his studies upon instruction in history in Germany and France. Of the eight essays, two are by Professor Fredericq himself, being expansions and continuations of previously published essays; these are upon the Calvinistic schools of Ghent, and the renewal of an old treaty of alliance between Flanders and Brabant. This event, taking place in 1578, "may be considered as a timid and abortive preliminary" to that decisive act, the "Union of Utrecht," in the following year. Another paper is by Prof. Eugene Hubert, a former pupil of the school, and author of a valuable work upon the condition of the Protestants in Belgium, which we noticed some months ago (*Nation*, No. 906); this is a chronological list of 114 documents, extending from 1429 to 1566 (the year before the Duke of Alva's appointment as Governor), upon heresies and the Inquisition. The other dissertations are upon the birth of Margaret of Parma; the edicts of the Prince-Bishops of Liége touching heresy; Gerard de Groesbeck, Bishop of Liége during the administration of Don John of Austria; Fray Lorenço, secret agent of Philip II.; and the Inquisitors of the Netherlands. Most of these subjects, it will be seen, touch directly upon the religious controversies of the sixteenth century.

—The reported discovery of a lost *opus postumum* of Immanuel Kant, which a few months ago went the rounds of the newspapers, has afforded some amusement to those students of the philosopher who had long been aware of the existence of the work. Immediately after Kant's death, in 1804, the announcement of an unpublished manuscript, the work of the last years of his life, was made by his literary executors. It was variously described as "the system of pure philosophy in its entirety," and a treatise on "the transition from metaphysics to physics." Professor Schultz, of Königsberg, whom Kant had declared to be "the best interpreter of my works after myself," was intrusted with its editing, but he advised against its publication; and Wasianski, Kant's former pupil and amanuensis, who for the last fourteen years of his life had been his constant companion, thus recorded his opinion of the work: "The effort which it cost Kant hastened his physical exhaustion. He considered it his most important work, but this judgment was probably in great part due to his weakness." At all events the work, which undoubtedly was planned and written during the period of Kant's physical and intellectual decay, though well known to exist in the possession of a relative of the philosopher, and mentioned in philosophical literature, was never published. Professor Kuno Fischer, of Heidelberg, in the third edition of his 'History of Modern Philosophy,' published in 1882, spoke of it as justly considered of doubtful value. Some chapters were then being published in the *Altpreussische Monatschrift*, by Professor Reicke, of Königsberg, in whose hands the manuscript had been since 1864. It was reserved to Pastor Krause, of Hamburg, suddenly to petition the Prussian Minister of Worship and Education for the publication, at the public expense, of the "weightiest and most important of all the works of Kant." Upon the Minister's refusal, Herr Krause brought out, at his own expense, an opus entitled "Immanuel Kant for the first time defended against Kuno Fischer in the light of Kant's principal work hitherto considered lost." The gauntlet thus thrown down is now promptly taken up by Professor Fischer. In two extensive articles in the Munich *Allgemeine Zeitung* he goes minutely into the history of the manuscript, fortifying his charges of endless repetition and prolixity by various extracts, and ridiculing, in a very effective manner, the pretentious attempt of Herr Krause to link his name with that of Kant. The work thus dragged to light will probably henceforth take its place in Kant literature, to be discussed and ranked on its own merits; the controversy concerning it is, at its present stage, enjoyable from the raciness of Professor Fischer's style, which recalls the two most famous models of polemical writing in German literature—Lessing's "Anti-Götze," and his letters against Klotz. The resemblance is probably not unintentional on the part of Professor Fischer. Pastor Krause inevitably suggests Pastor Götze, and the relations of Krause to Fischer correspond in some respects closely to those held by Klotz towards Lessing, both culprits having at one period of their lives presented works of their own, with professions of great humility, to the masters who subsequently became their unmerciful judges.

—No European visitor ever left the shores of the United States in a more amiable mood, with pleasanter impressions of the country's condition and anticipations of its future, or with more cordial thankfulness for attentions received, than Prof. Joseph Szabó, of the University of Buda-Pesth, who made a brief scientific tour on this continent in 1882. Nor was it possible for a traveller to make better use of a short time, if we may judge from the mass of interesting and well-digested matter, in great part derived from personal inspection and inquiry, which he laid before the Natural Science Association of the Hungarian capital in two discourses on his tour. They form the forty-first number of the Association's "Collection of Popular Science Lectures." Professor Szabó came as the invited guest of the American Association for the Advancement of Science, to attend its Convention in Montreal; but before going to Canada he had seen Philadelphia, Washington, St. Louis, Salt Lake City, San Francisco, Virginia City, Denver, Chicago, and Niagara, and from the Convention he returned to New York *via* Ottawa, Albany, and Boston. All Professor Szabó's remarks are in a highly sympathetic vein, although he is far from being a blind admirer; and it is pleasant to know that his tribute of admiration, being in a language which is understood by so few natives of this continent, is not meant as incense in return for American hospitality. His intercourse with American scientists is the most warmly remembered feature of his brief stay in this country, and he approvingly cites Sir William Thomson's declaration that he had seen in America much that is indicative of "the truest scientific spirit and devotion, the originality, the inventiveness, the patient persevering, the thoroughness of work, the appreciativeness, and the generous open-mindedness and sympathy, from which great things of science come." The second lecture comprises outlines of the physical, ethnographical, and intellectual conditions of the United States. An appendix gives a list of all Hungarian works on America—a short list, indeed.

—Hitherto all Italian libraries have been under the control of the Ministry of Education, not a general supervision but one extending down to the minutest details. The natural result of centralization has followed. There has been no initiative, no invention, no progress. At least, that is what one of the librarians who is a warm admirer of American library ideas asserts. But a late law on the higher instruction will release a whole class of libraries from this hampering bondage. The Italian universities are to have full autonomy, and their museums, and cabinets, and libraries will be given into their own charge. The University councils can appoint the officials, make the regulations, and decide on the character of the catalogues and other helps offered to those who use the library. The result will be worth watching. It may be doubted whether an academic council is any better fitted to carry on a library than a Minister of Education. The library staff may find itself as much hampered by a body of men near at hand as by a single autocrat at the capital. It is a mistake to put libraries under a Minister of Education, unless, indeed, there be a special bureau of libraries with considerable independence; it would be an equal mistake for an educational body to take the detailed control of a single library. Perhaps this will not be done in Italy. The University Senate will probably delegate its powers in this matter to a library council, of which at least the chiefs of the library staff will be members. Then it will remain to be seen what effect the change will have on the life of the libraries. Centralization is an evil chiefly because the man at the centre so often lacks the capacity to select the best men to serve under him, and to call forth their enthusiasm and inventiveness, and does not know how to give their individuality free scope while directing it to one general end. Entire absence of central control, on the other hand, may prevent coöperation by destroying all uniformity of process and even leading to great diversity of aim; and while it forces one library which falls into good hands, may let others drop far in the rear. The immediate future of the emancipated Italian libraries will, therefore, depend entirely upon the character of those who have them in charge; but if a few enthusiasts who have been preaching reform to the brethren for some years past are able to imbue them with a little of their own feeling, the ultimate result may be a spirit of friendly competition such as we see in this country, which will find opportunity of action in the new liberty.

—"The Redwoods of California" is the title of a brochure issued by the California Redwood Company of San Francisco and this city. The subject is an interesting one for many reasons. The redwood forest, which stretches in a narrow interrupted belt along the California coast from the Bay of Monterey to the borders of Oregon, is one of the most wonderful developments of plant life known to men. The redwood tree itself, with its still more wonderful relative, the great *Sequoia* of the Sierra Nevada, is the representative of a peculiar type once widely spread through the northern hemisphere, and now confined exclusively to the western rim of this continent. In individual stature the redwood among trees only yields to its Sierra relative and to some of the Australian *Eucalypti;* while, considered as a mass of timber

the redwood forest far surpasses any other in the amount of material it contains to the square mile. This great body of easily-worked and durable timber, generally accessible from the numerous small harbors of the California coast, has played an important part in the development and growth of the Pacific States. China, Australia, Northern Mexico, the Pacific States of South America, and the Islands of the Pacific draw from it their best and nearest supplies of soft lumber. These forests should long supply the whole region west of the Rocky Mountains with building material, and replace to a considerable extent the lessening white pine of the East along the Atlantic seaboard and in the prairie States. The redwood forests, however, in spite of their almost incredible resources, their vigor of growth, and powers of reproduction, are fast going the way of all American forests. Not a small portion of the most easily reached trees have already perished, and before the children now in the schools of California have passed middle life the redwood forests, under existing systems of management, will, as important sources of lumber supply, have disappeared forever.

—It is a suggestive fact that, of the ten instructive photographs which illustrate the 'Redwoods of California,' nine represent more or less directly the destruction of these forests, or various contrivances for their destruction. Not less suggestive is the statement here made that—

"Not only is every available appliance used for getting out timber in the quickest and easiest manner, but the brand is frequently applied for the purpose of clearing away the rubbish and dense tangled undergrowth which would render logging well-nigh impossible. While these brush fires do not affect the timber (for it is practically fire-proof), they must retard the growth of seedlings, and injure, if not kill outright, the tender shoots just putting up from the ground. Little or no effort is made to preserve the trees too small for present use—trees of one, two, or three feet diameter. If they stand in the way, clear them out; if they happen to be crushed under a falling tree, no matter—there are enough and to spare for present needs."

The redwood forests are doomed, just as surely as the white-pine forests of the East are doomed. When they have perished, the United States will have lost the greatest and most valuable supply of building material with which any country has been blessed. There is a good deal of suggestive and instructive reading in this little publication of the California Redwood Company, for any one interested in the forests of the country and their productive capacity. The information it conveys is generally accurate, although, as is usually the case in such publications, the estimates of amounts of standing timber will probably be found considerably too large. The estimates of redwood available for use made by the Census Office, although somewhat distasteful to the Californian spirit of exaggeration, are probably more nearly correct.

—Medical books that vary in design as well as in excellence find their way to our table. Of the purer professional type, for instance, are two well-printed companion octavos, one 'A Year-Book of Therapeutics,' the other of 'Surgery' (G. P. Putnam's Sons), each for 1883, compiled by Drs. Amidon and Knight respectively. These are admirable summaries of the work done and the progress made in those branches of medical science last year. 'What is to be Done: An Emergency Hand-Book' (Boston: Lee & Shepard), seems not worth the shelf-room that even its small bulk would require. 'Catarrh, Sore Throat, and Hoarseness,' by Dr. J. M. W. Kitchen (G. P. Putnam's Sons), is a popular talk upon those affections from the standpoint of a specialist who would warn the public against empirics. The teaching is correct, but the illustrations of laryngoscopic apparatus detract a little from the tone. In other words, there is a suggestion *ad captandum vulgus*. 'Female Hygiene and Female Diseases' (Lancaster, Pa.: The Lancaster Publishing Co), we take to be an ingenious advertisement of the author that probably falls within the lines of medical ethics, but is neither entertaining nor profitable to the community at large. In 'Brain Exhaustion' (D. Appleton & Co.), Dr. J. L. Corning discusses an important and complicated problem. Because it is important, and is treated seriously by one who has "views," and, better, some experience, it deserves consideration by those interested in such studies. But the following sentence (p. 149) is an indication that a certain amount of chaff must be winnowed: "Universities should not, as a rule, be harbingers of intellectual exotics; but rather from out their portals should go a savor of a kind to season the mentality of a whole nation."

—The recent legislation that requires the elements of physiology and hygiene, with particular reference to the influence upon man of alcohol and narcotics, to be taught in the public schools of New York, has led to the preparation of new text-books having these topics in especial view. Two such are 'Hygienic Physiology Abridged,' by J. D. Steele (A. S. Barnes & Co), and 'Lessons on the Human Body,' by Orestes M. Brands (Leach, Shewell & Sanborn). The latter shows want of care, or possibly of special knowledge. For instance, the normal adult pulse-rate is given (p. 89) as 60; pressure on the carotid, it is said (p. 84), will cause death by apoplexy; the artery supplying blood to the stomach is called the coronary (p. 52). It hardly seems worth while to burden children with the names of blood vessels, but if it is attempted they should at least be taught correctly. There are other lapses from absolute accuracy, and the arrangement is rather uninviting. Mr. Steele's little volume is attractive in style and is well arranged, and its teaching in the main is correct. The only marked error we have noticed is "a light will vitiate as much air as a dozen persons" (p. 57). In fact, gas requires about 5,000 feet of fresh air per burner an hour, unless the products of combustion are specially carried off; but this is not true of candles or of oil, light for light. If the somewhat sensational frontispiece is excepted, nearly all the illustrations are excellent, and are real aids. A junior scholar who masters this 'Abridgment' will have a valuable stock of elementary physiological knowledge.

—But the special object of both books is to set forth the influence of alcohol upon the human body. It is too often the case, in enthusiastic advocacy, that a strong cause is weakened by the introduction of untenable claims. Now, while the physical and moral evils that follow the excessive, or, indeed, the ordinary use of alcohol, can hardly be exaggerated, it is certain that neither author has stated the case in the most impartial, which is to say the most effective, way. A sufficiently strong indictment can at any time be drawn against this most harmful agent, without resorting to any doubtful charge. Mr. Brands defines a food (p. 209) to be that which makes good the waste of bodily particles, and then (p. 210) denies that quality to alcohol *because* it contains no nitrogen. But neither does starch, sugar, fat, or water contain nitrogen. It is still an open question how far alcohol is an alimentary principle, although there is no question whatever that it is a most pernicious agent as commonly used; and the affirmatives of both these positions are perfectly reconcilable without recourse to such reasoning, if it is reasoning, as that first cited. Again, speaking of surgical operations upon habitual drinkers, he says (p. 208): "They can never undergo even the most trifling operation with the security of the temperate. *They almost invariably die under it.*" (Our italics.) Now, a generalization like that will lead a thinking child, who constantly sees that it is untrue, to doubt the truth of the other statements that he cannot directly test. So Steele (p. 108), after referring to the coagulation of pepsin and albumen by alcohol, remarks that "anything that interferes with nature's plan of getting our food ready for our use must be injurious." Here is a *suppressio veri* that, when exposed, reacts upon the author and upon the doctrine. It is probable that alcohol, judiciously used, checks retrograde metamorphosis of the tissues, and it is also probable that it may assist some forms of imperfect digestion. An impartial presentation of the subject should recognize these probabilities. But, as a whole, alcohol is a vile fountain of unnumbered woes; and the more completely its hidden and far-reaching sources of ruin are exposed and appreciated, the sooner will come the physical and the moral redemption of the world.

—The death of Giovanni Prati removes a picturesque and remarkable figure from the arena of Italian poetry and politics. Born just seventy years ago at Dascindo, Prati, like so many other poets, began his career with the study of law, though "forensic disciplines" had no power to attract and bind him permanently. His youth abounded in strange vicissitudes and fantastic adventures, like that of so many illustrious Italians who came into the world on the eve of the preparations for the national revival. His "Edmenegarda," his "Canti lirici," his sonnets, ballads, and "Nuovi Canti" appeared at a time when Italy was inundated with imitators of Manzoni; their shrill and slender reed-strains piped on every hill, and the air vibrated with the echoes of a new and, as it proved, ultimately innocuous *batracho machia*. Prati, however, had little in common with Manzoni or the "Manzoniani," except that both started in the spirit of the Romantic school. Prati, it has been epigrammatically said, though he was born a "romantico" for the generation of 1840, died a "classico" for the generation of 1884. There are whisperings of Byron in his "Rodolfo," "Ariberto," and "Armando," whisperings of Heine in his "Satan and the Graces"; but as old age gathered about him he became enamored of classical studies and left behind him, in his "Psyche and Isis," many beautiful notes of his studies in this field. Though he was not strictly a political poet, he dreamt dreams and had presages of what was about to happen in his native land, chief among which is his poetic prediction of the glorious destinies that awaited the dynasty of Savoy. His deep, reverent, and constant affection for Victor Emanuel was one of the leading characteristics of his life. Prati shared with Manzoni and Verdi the honorary dignity of Senator, conferred by a grateful country on her distinguished literary and artistic representatives. His happy, affluent, and honored life—the early storms passed—gives the lie anew to the "legend of the unfortunate poet in these times of Poets-Senators of the Realm."

HAWEIS'S MUSICAL MEMORIES.

My Musical Memories. By H. R. Haweis. Funk & Wagnalls. 1884. Pp. 283.

A PERUSAL of the latest work by the author of 'Music and Morals' and 'American Humorists' leads to the conviction that he has, in the present case, chosen his title with less reference to strict accuracy than to the prevailing mania for

alliterative titles and headlines, as was to be expected of so great an admirer of Wagner as Mr. Haweis professes to be. The first fifty pages are concerned with his early life and recollections, but even here he confesses that he regards his own doings only as the peg on which he has chosen to hang his thoughts. A few of the biographical facts confided to the reader are that he was a very weakly child and not expected to live; that he was a prodigy on the violin, and, before his theological career, frequently appeared in public; that at one time in his life he wrote quantities of dismal poetry and inflated essays; and that he made a sacrifice and no longer played "to any real purpose" when he entered the Church, which he did not wish to do in the character of "a fiddling parson." It must be confessed that this would have appeared an incongruous combination, even to those who consider art as sacred as religion. A clergyman at a stately organ, or even with a doleful violoncello between his knees, may be an edifying spectacle; but the wild and frantic gesticulations of a fiddler could only be properly associated with Talmage.

Violinists will find a number of useful hints in Mr. Haweis's account of his experiences with his teachers, and in the chapter on "Old Violins." A strong protest is uttered against the practice of giving to beginners small instruments, thus accustoming them to intervals which it is very difficult subsequently to unlearn. At seven or eight a child can stretch most of the ordinary intervals on a regular violin, and fatigue is not to be considered; for, according to Joachim, one of the most important things is the art to make the fingers ache. "With some abominable torture-passages," says the author, "invented for me by that morose Pole, Lapinski, I took a vicious pleasure in making my fingers ache, and an intense delight in discovering the magical effects of the torture upon my execution." The personality of a teacher, he thinks, has much to do with the success of a pupil, who can learn more in a week from one who is sympathetic than from another, equally good, in a month. As every musician seems to regard the kind of instrument he has chosen as the queen of all instruments, Mr. Haweis takes pains to point out the special advantages of the violin: "It possesses *accent*, combined with *sustained and modified tone*. The piano has accent, but little sustained and no modified tone; the organ has accent, and sustained but only in a very imperfect sense modified tone; the violin possesses in perfection all three," and is "equal to the human voice in sensibility and expression, and far superior to it in compass, execution, variety, and durability." Darwin says somewhere that the brain of an ant is one of the most marvellous atoms of matter in nature. Among the works of human skill and ingenuity, an old Italian violin occupies perhaps a corresponding place. It is "as light as a feather and as strong as a horse," and is made up of three or four score pieces of wood, so closely joined that a microscope is sometimes required to discover the seams. Hard and soft wood of different kinds was used, and the old makers knew by experience precisely what were the acoustic qualities of each piece selected. Rare specimens of wood were especially treasured, and by a certain stain the same pine-beam may be discovered not only in the violins of one but of several artisan-artists. At the present day a regular trade has sprung up in spurious old violins, but a connoisseur is not easily deceived, for he judges by the eye as well as the ear:

"At first all fiddle-heads look alike, as do all pug dogs or all negroes; and, indeed, England, Wales, Italy, Holland, and most other countries have their general faces. So have violins, but a practised eye sees the difference at a glance. Look for half an hour every day at a late Joseph Guarnerius, an early Nicholas Amati, and a grand-pattern Stradivarius, and you will be surprised that you could ever have confounded their forms. What is called the 'throwing' of the scroll betrays the master's style like handwriting, and he lays down his type in every curve, groove, and outline. . . . These subtleties are like the painter's touch: they can hardly be imitated so as to deceive one who has mastered the individual work of the great makers."

A chapter on Paganini appropriately follows that on old violins. This instrument had reached the height of its development long before Paganini appeared; but he was the first to reveal all its possibilities. The professors themselves stood with their mouths wide open at his extraordinary powers of execution, which no one since has equalled. It is now well known wherein lay the secret of some of his tricks—in the use of harmonics both open and stopped; in altering the manner of tuning his violin; in the way of plucking the strings and producing guitar-like accompaniments; and in the diabolic elasticity of his fingers and his bow. It is doubtful if Paganini could produce the same effect on musicians of the present day as he did on his contemporaries. Many of his tricks were mere claptrap, calculated to astonish rather than to give genuine æsthetic pleasure; and his own compositions, which he played almost exclusively, are commonplace in everything except difficulty of execution. Nevertheless, the charm exercised by him was immense, as may be seen, for instance, by the impulse he gave Liszt to develop in a similar manner the resources of the piano. In this he succeeded, although it is a great injustice to Chopin to say, as Mr. Haweis does in a chapter on Liszt, that the latter created the modern piano-forte school. This essay on Liszt is apparently made up of literary "memories" based on a perusal of Ramann's biography, to which, however, no reference is made.

About one-half of Mr. Haweis's musical memories seem to be associated with Richard Wagner and his Bayreuth dramas. The Nibelung Tetralogy and "Parsifal" are described in an interesting and intelligent manner, the analyses being interspersed with gossip about the Bayreuth festivals. The account of "Parsifal" is particularly full and readable, and skeleton outlines of the four Nibelung dramas are appended, which contain all the essential features of the plots in the fewest possible words. A good word is spoken for "Rienzi," which, although vastly inferior to the later works, yet, in Mr. Haweis's opinion, "compares favorably in pure melody and sensational effects with any of the current operas." It is a work that would seem especially adapted for such a vast structure as our Metropolitan Opera House, where it ought to receive a trial next season. Mr. Haweis is one of the clearest and most convincing of writers on Wagner, and he fully deserved, for his disinterested labors, the embrace of the composer, who once saluted him on both cheeks in the orthodox continental style and exclaimed, "Ach, mein lieber Herr Haweis, was haben sie denn schön über mich geschrieben!" ("Oh, my dear Mr. Haweis, how beautifully you have written about me.") He shows in eloquent style how the function of the Greek chorus is in Wagner's dramas assumed by the orchestra. This and all the other essential points of Wagner's theory are made so clear that the laziest readers can understand them without difficulty. In one point our author contradicts himself. On page 144 we are told that it is Beethoven's glory to have carried the art of music to its extreme limits of development; whereas on p. 269 we read that Wagner "marks firmly and broadly enough the greatest stride in musical development made since Beethoven." The latter opinion is the correct one. Music has made much progress since Beethoven, who has been surpassed in the art of instrumentation by Wagner and Berlioz; in naturalness of general form by the great romanticists; in melody by Schubert and Chopin; and, especially, in freedom of modulation and dramatic definiteness by Wagner and Chopin, the two most unique and original musical minds since Bach.

Wagner's personal character is placed in a favorable light by Mr. Haweis, who points out many of those little traits that showed his kind-heartedness toward all who did not deliberately and persistently insult him *more Germanico*. Among these traits were his love of animals and of nature, and the practical jokes and eccentricities by which he occasionally gave proof of that perennial childhood which, according to Schopenhauer, is inseparable from true genius. The account of Wagner's last days is, in its simplicity, as touching as any chapter by a great novelist; and nothing is more so than the words of the late master's gondolier, who exclaimed: "Ah, to think that only yesterday I rowed him in this gondola—the good, noble, great man, who never said an unkind word to any of us, although he was so ill!" Those who are continually talking about Wagner's egotism are advised to read p. 177, where Mr. Haweis, with much humor, explains how the world, after allowing Wagner for a score of years and more to believe in himself all alone, finally came to tell him that he was one of the greatest musicians that ever lived:

"'Bah!' says Wagner, 'I told you that forty years ago; I can do without you now!' 'Oh, fie! what a vain man!' says your offended aristocrat. I never thought Richard Wagner vain. I knew him to be irritable—so are other people, who only resemble him in that. I knew him to be impatient of interruption—so is your banking clerk when stopped in the middle of a column of figures. I knew him to be proud—so are many who have nothing to be proud of. And from the first moment that I heard—now twenty years ago—the prelude to 'Lohengrin,' and read a few of his letters on art, I also knew Richard Wagner to be the greatest composer and the most impressive art-personality then in the world."

Twenty years ago most of Mr. Haweis's countrymen considered Wagner a charlatan, and said so in very plain language. The very same journals—the leading newspapers—that then could hardly find terms bitter enough to express their scorn, are to-day devoting column after column to description and praise of his works. Mr. Haweis could have made a very piquant and funny chapter, if he had added some selections from these journals of twenty years ago and of to-day, printed in parallel columns.

It was to be expected that the author of 'Music and Morals' would take this opportunity of favoring the world with a new essay on the relations between music and our spiritual life. The second chapter is headed "Hearing Music," and begins with a discussion of the question, "Would you rather be blind or deaf?" A musician would naturally decide in favor of the ear, as does Mr. Haweis. But he does not seem to be aware that a century ago even Kant, who knew nothing about music, voted the same way: "We see many blind people," he says in his 'Anthropologie,' "who are talkative, social, and gay at table; but a person who has lost his hearing you will hardly ever find otherwise than morose, suspicious, and discontented in company: he sees in the faces of his companions the expression of all sorts of feelings, or at least interests, and vainly torments himself with attempts to guess their meaning, and is, therefore, in the midst of company, condemned to solitude." If we go to the root of

the matter, the reason of this phenomenon will probably be found to lie in this—that the greatest plague in the world is *ennui*, and *ennui* is simply the absence of emotion. We can *see* many things without an emotion, but what we *hear* is almost always accompanied by a distinct undertone of feeling. A recent writer bids us to "reflect upon the various ways in which a man who hears an astounding statement can exclaim 'Indeed!'—the horror, incredulity, sarcasm, indifference, the multiplicity of meanings, in short, that may be suggested by that one exclamation." It is in such emotional elements in language that music had its origin, according to Herbert Spencer; and although Darwin insists, on the contrary, that music preceded language, this disputed question of origin does not affect the existence in modern speech of those musical elements in language which lend the chief interest to conversation. They enable the hearer, as Spencer remarks, "not only to *understand* the state of mind they accompany, but to *partake* of that state. In short, they are the chief media of *sympathy*, . . . the basis of all the higher affections." In the chapter now under consideration, Mr. Haweis takes up a special branch of this general question, which, if not new, as he imagines, is at least treated in a novel fashion by him. He insists that "want of interest and excitement, stagnation of the emotional life, or the fatigue of overwrought emotion lies at the root of half the ill-health of our young men and women." Music, he thinks, can break up that stagnation, and a plea is made, accordingly, for a new vocation—that of a Musical Healer: a fair young maiden, say, who might convert an ornamental accomplishment into a useful art by visiting all sorts of nervous patients and refreshing them with music, the emotional character of which is carefully considered and adjusted to each special case. Mr. Haweis has great faith in "music as a therapeutic," and exclaims rapturously that "the future mission of music for the million is the Discipline of the Emotions." On this subject he becomes eloquent, and gives interesting details which we must leave the reader to find in the book itself, which may be bought for a trifle, and should be in the hands of every one who cares for the divine art.

THE RIVER CONGO.

The River Congo, from its Mouth to Bólóbó; with a general Description of the Natural History and Anthropology of its Western Basin. By H. H. Johnston. With three etchings and over seventy other illustrations, and two maps of the Congo, etc., by the author. Second edition. London: S. Low; New York: Scribner & Welford. 1884. 8vo, pp. xvii.–470.

THE work of Stanley and the International Association in opening Central Africa to civilization within the past five years can best be shown by way of contrast. When he finished his adventurous voyage down the Congo in 1877 the furthest European station was only eighty miles from the sea. Above that point the river was practically unknown and inaccessible from the hostility of the natives. Now, according to this latest account, "there is a distance of over 700 miles secured to civilization, and offering no greater risks to the traveller than those attributable to the elements, or to the ordinary contrarieties of tropical rivers." Beyond the furthest station at that time there are now two small towns and over thirty trading-stations, while three steamers and a small fleet of lighters and canoes ply on the waters of the upper river. "There was not a single missionary on the Congo before 1879. Now there are three flourishing missions, the Livingstone, the Baptist, and the Roman Catholic, with many stations between Stanley Pool and the sea." The work has been accomplished chiefly by peaceful means, and in these regions, so recently filled with natives bitterly hostile to the white man, Stanley is looked up to as the "great umpire," while "the native chiefs are his active coadjutors."

Mr. Johnston's experience in his voyage of 500 miles or more up the river fully bears out this statement in regard to the changed attitude of the people. Though accompanied by only three attendants besides his porters while on the upper river, he was not only unmolested, but everywhere, save in two instances, was welcomed with unmistakable sincerity. While he has no thrilling adventures to narrate, nor even an accident more important than the blowing down of his tent in a storm, yet his graphic descriptions of life upon the river are full of interest. He is a close and careful observer of nature, and hence his contributions to our scanty knowledge of the fauna of that region give his book a considerable scientific value. If we are not mistaken, his is the first account by a naturalist of this river above Stanley Pool.

The Congo differs from other great African rivers in that it has no delta, though there are indications that it is gradually forcing its way to the sea to the north of its present outlet. At its mouth is Banana Point, a flourishing settlement, "where space is as valuable as in some civilized cities." Of the three factories established here, "that belonging to the Dutch Company is by far the largest and most important," employing about forty whites and three or four hundred blacks. The most valuable among the natives come from Sierra Leone and the Liberian coast, and are engaged for fixed times. The others are from the interior, and in most cases, we gather from Mr. Johnston's somewhat guarded statements, are slaves under the guise of apprentices.

"If a native in these countries steals from a white man he is compelled to become his slave, unless his people are prepared to pay a large indemnity. Naturally, in nine cases out of ten, they do not care to do so, so the unhappy 'nigger' who has been caught stealing a handful of tobacco or a piece of cloth (perhaps spread out as a bait) becomes the slave of the white man he has robbed."

In addition to this means of obtaining cheap labor, the native chiefs "apprentice or sell their superfluous subjects for an important consideration in gin, cloth, or guns." It should be added that these laborers are kindly treated, and often have their wives and children with them.

The banks of the lower Congo offer a rich hunting ground for the naturalist, the magnificent vegetable growth of the forest and the mangrove swamps being the home of innumerable birds, insects, and flowers. An orchid, which grows in groups of forty or fifty together, "shoots up often to the height of six feet from the ground, bearing such a head of red-mauve, golden-centred blossoms as scarcely any flower in the world can equal for beauty and delicacy of form." Large game, with the exception of a few antelopes, is rarely to be found near the river, and the villages are very few in number. Crocodiles, however, are numerous and very dangerous. At Vivi, 120 miles from the mouth, the head of navigation, the river bursts through the hills which separate the central table-land of Africa from the coast. Mr. Johnston reached this place, which is the first important station of the International Association, just as Stanley was holding a "palaver of honor" with some neighboring chiefs, who had come to welcome him back after his visit to Europe in 1882:

"Here he was, seated on his camp chair, his pipe in his mouth, and a semicircle of grinning kinglets squatting in front of him, some of them smoking long-stemmed, little-bowled pipes in complacent silence, and others putting many questions to 'Bula Matade' ('The Rock Breaker,' Stanley's Congo name) as to his recent journey to Europe, and receiving his replies with expressions of incredulous wonder, tapping their open mouths with their hands."

Station life at Vivi is pictured in attractive and apparently truthful colors. The white settlement crowns the summit of a high hill, from which there is a beautiful view of the river, and just below is the "scrupulously clean" native town, with several hundred inhabitants, some of whose compounds "are really very pretty and bright, with their tiny plantations and flocks of chickens and Muscovy ducks." It seems rather singular, in a land of such wonderful fertility, that the greatest obstacle with which Stanley has to contend is the scarcity of food. This arises from the fact that the natives raise only just enough to supply their own wants. Accordingly, laying out gardens and planting manioc and bananas precedes house-building in establishing new stations. Mr. Johnston calls attention to the curious fact that the cultivated plants of this region "should in a great measure be introductions from America." The pineapple has spread along the trade routes far into the interior simply through the rooting of the top leaves, which are thrown away by the natives after the fruit is eaten. In some places they formed "an almost impenetrable hedge on each side of the narrow path," and for the time were the chief food of the natives and their domestic animals.

Stanley Pool is about 236 miles from Vivi, and for two-thirds of the distance the river is unnavigable on account of the rapids. This part of the journey has therefore to be done on foot. The traveller's party consisted of himself, sixteen native porters, and three Zanzibaris lent him by Mr. Stanley, who appears to have taken a warm interest in the plans of the young naturalist. Of these men he speaks in the highest terms, and it is evident that at the end of the journey a strong attachment subsisted between them. They "were to me more than servants: they were friends and confidants, who . . . watched over my interests, never robbed me of a penny's worth nor told me an untruth." A large proportion of the force of 2,000 men which Stanley has consists of Zanzibaris, whose Arab blood has given them a manliness and stability of character beyond that of the finest negro races.

Just before the Congo leaps down the first of the long series of rapids by which it descends from the central African plateau to the sea, it expands into a lake twenty-five miles long and sixteen broad, dotted with islands, and surrounded by mountains from 1,000 to 3,000 feet in height. This is Stanley Pool, and near its western outlet is Leopoldville, the most important station of the International Association and the headquarters of Stanley himself. Mr. Johnston prophesies for it a great future, and thinks it "is destined to be the great Empire City of central Africa." He says confidently: "It will one day be the terminus of a railway from the coast, and the starting point of a river journey half across Africa." And his confidence has some reason, since from it 5,000 miles of navigable water, leading north, south, and east into the heart of the continent, are accessible; but as yet there are few signs of the realization of these hopes, little more than a foothold having been obtained thus far in the country. Still, they are upheld by such experienced observers as Maj.-Gen. Sir Frederick Goldsmid and Mr. Delmar Morgan, who last fall made an official visit to the Congo, during which the latter ascended the river as far as Stanley Pool. In an address made before the

Royal Geographical Society in February, 1884, Sir Frederick Goldsmid said:

"With regard to the trade on the Congo, he did not think that as yet there had been any palpable increase in the imports and exports, but this result could hardly be expected so soon. He had little doubt that when more stations had been formed, and the aims and objects of the Association were more clearly understood, the whole would in time become centres, as it were, of traffic, and a great impetus would be given to commerce and the march of civilization." [Proceedings of the Royal Geographical Society, April, 1884.]

From Leopoldville our traveller ascended the river in a whale-boat some two hundred miles to Bólóbó, at the time of his visit the furthest station, though in January, 1884, others had been founded far beyond it. Here the population is very dense, there being "an almost continued series of villages on the east bank," occupying nearly every available spot. This region seems to have escaped the blighting influences of the slave trade, which has almost depopulated the country on the lower river, so that there is hardly a village to be seen upon its banks. The natives are a finer race of men than the coast negroes—kindly, intelligent, and singularly free from "vexatious superstitions." His experience is that

"the more we advance into the interior along the Congo, the higher in social science the natives seem to stand. The houses, their furniture, decoration, and orderly comfort; the utensils, the pottery, and the work in metal—all seem to undergo a material improvement and development in proportion as we leave the coast behind us."

The closing chapters, constituting about a third of the book, are devoted to the natural history of the country, and contain descriptions, often admirably illustrated from his drawings, of plants, insects, birds, and animals collected or observed by him. He saw several herds of elephants on the upper river, where they are not hunted by the natives. The ivory brought to the coast comes from the far interior. The hippopotami are very numerous, and often troublesome. Of snakes, which are "decidedly rare," he saw but three specimens; and he adds: "It is quite possible to voyage right up the Congo and return to Europe without the glimpse of a serpent." On the other hand, Mr. Delmar Morgan speaks of halting at a place on the river "where the Zanzibaris could be seen chasing snakes, with which the place swarmed." Mr. Johnston ends his modest and interesting account of his travels, which has already reached the third edition, with "a short glossary of the four languages spoken on the western Congo, from the equator to the sea." Though young, as certain infelicities of style and matter here and there show, he has won for himself a by no means insignificant place among African travellers. To a remarkable fitness in constitution for withstanding the dangers of the climate, he joins a temperament and address admirably adapted to win the confidence of the natives. As attention has recently been called to the almost certainly fatal effect of the climate of the Congo upon the white man, it may be proper to close this notice with Mr. Johnston's experience on this point:

"These fleeting touches of fever, rarely lasting more than a few hours, and scarcely worthy to be chronicled, were the only form of indisposition I ever had during my sixteen months passed in the Dark Continent."

RECENT NOVELS.

The Surgeon's Stories. Times of Frederick I. By L. Topelius. Translated from the original Swedish. Chicago: Jansen, McClurg & Co. 1884.

The Usurper. An Episode in Japanese History. By Judith Gautier. From the French by Abby Langdon Alger. Boston: Roberts Brothers.

Armine. By Christian Reid. New York: Catholic Publication Society Co.

In the West Countrie. By May Crommelin. Harper's Franklin Square Library.

But a Philistine. By Virginia F. Townsend. Boston: Lee & Shepard.

Barbara Thayer. By Annie Jenness Miller. Boston: Lee & Shepard.

Eustis. By Robert A. Birt. Boston: James R. Osgood & Co.

At Daybreak. By A. Stirling. Boston: James R. Osgood & Co.

Sapho. Mœurs Parisiennes. Par Alphonse Daudet. Paris: Charpentier; New York: F. W. Christern.

Lise Fleuron. Par Georges Ohnet. Paris: Paul Ollendorff; New York: F. W. Christern.

THE "Surgeon's Stories" afford a very good example of the old-fashioned historical novel, and from them the reader can gather very agreeably a good and accurate knowledge of the general facts of Swedish history during the last three centuries. No description of an historian, for example, could impress so strongly upon the imagination the devastations and demoralization of a long war as the picture here presented, and particularly the incidental allusions to the general disturbance in business and industry. The general idea of the series, which tells the fortunes of two rival Finnish families, generation after generation, the same names and, in part, the same characters appearing in successive volumes, adds much to the interest of the series. When these fictitious characters are brought in contact with really historical personages, a new question arises—how far a novelist has the right to ascribe acts and words to real persons, and, what is more, attribute motives to them which may have been wholly at variance with their real characters. Again, we are not always certain what is historical and what not. Count Horn is a well-known historical personage; but how with Count Bertelsköld, who is represented to have succeeded him for a few days as Prime Minister in 1739? We have not been able to find out whether there ever was such a person. The translation is good, but with some inelegances. "Equally as" (p. 31) is newspaper English; "hitch" for "harness" (p. 101) is colloquial; "whom he supposed was to be found in this cave" (p. 209) is bad grammar; "we would be acting cruelly" (p. 325) is a form of speech which it is useless, perhaps, to resist any longer. On page 109 we find mention of August II. and Gustaf III.; why not then Karl XII. and Fredrik I.? The Latinized forms *Augustus, Adolphus,* and *Gustavus* are the accepted English forms.

'The Usurper' is a very feeble attempt at an historical novel. The "episode" took place in 1615, when Iyeyasu, the founder of the Tokugawa line of sho-guns, or military rulers, had pacified Japan by carrying out the policy of Hideyoshi. Around Hideyori, the son of Hideyoshi gathered the opponents of Iyeyasu, and in the battle and siege of the castle of Osaka Hideyori lost his life. Henceforth, Iyeyasu —unquestionably one of the ablest men in the history of Japan—was left free to carry out his policy of unifying the nation, perfecting feudalism, and of making impossible a return of the civil wars, from which the country had suffered for nearly three hundred years. The author of the story before us, selecting one of the most dramatic periods of Japanese history, ought to have given us at least a readable narrative; but the plot is next to nothing, and the analysis of character has been made chiefly from the study of fans, vases, and old brocade. We have looked carefully through the thirty-one chapters to discover a Japanese man or woman, but instead see only French ladies and gentlemen dressed in clothes imported from Kioto, with some lay-figures in the background, scissored out of ice-cream napkins or paper umbrellas, or possibly whittled out of tea-trays, the wood of which "can't stand the climate." There is scarcely one chapter in the book which could not have been written after studying a lacquer cabinet, visiting a crockery store, or conning a map of Nipon. Indeed, it may be said that geography is the best part of the book, being up to the best French maps, gazetteers, and Aimé Humbert's 'Le Japon Illustré,' which the author has evidently searched with diligence. Yet why did not the translator consult some one of the score or so of fresh books on Japan, and give us recognizable names instead of the mess of words which the author sets into her mosaic work in their French, Italian, Swiss, English, multiform and amorphous spelling? Who can recognize Iyeyasu in Hieyas, *howo* in Fou-an, and Loo when there is no *l* in Japanese? The abundant anachronisms and absurdities of statement might be passed over, were any genius, or even evidences of earnest study of the native mind, character, or background, manifested. The work is not even clever; yet it bears marks of industry of a certain kind, and will satisfy those whose studies of Japanese life extend no further than to the flamboyant designs on a parasol or glove-box. Instead of pronouncing judgment on 'The Usurper,' the critic might do well simply to invite the reader to compare it with that book by Théophile Gautier himself, 'The Story of a Mummy,' as a reproduction of a life remote both in time and place. The Egyptian tale is, in a word, life itself. The archæologist may take such exception as he pleases to the details, but the strong thrill of human passion is felt through it all. The Japanese story is only a series of sketches so disconnected that to make out the characters requires a laborious attention that will not be given to a book meant for entertainment. The descriptions are hard and cold, an inventory rather than an artistic picture. The writer's study of Japan has not availed to teach her that essential trait of Japanese art, the suggestion of a complete whole from a few cunningly selected parts. The English version has the unusual merit of not reading like a translation.

Now that the novel has become the people's "guide, philosopher, and friend" beyond the rivalry of any other form of literature, it is quite in the natural order of things to find 'Armine' a proclamation of papal infallibility and of the everlasting truth of Romish dogma. The mere story is insignificant; the author has meant that it should be. Her pen is held by religious zeal, and every page glows with the old-time fervor of the propagandist. As with a lawyer's brief, an answer would be the only satisfactory criticism. An opponent equipped with the author's command of burning eloquence, her cunning in *ex-parte* presentation of history, and her sincerity—for one may be disingenuous and yet so ignorant or ardent as to be absolutely sincere—might vindicate the victims of "three centuries of error" and answer M. d'Antignac when he blandly asks, "What man of culture outside of the Catholic Church has faith now?" This M. d'Antignac is the eloquent exponent of the doctrine *credo quia impossibile*. Although he lies forever on a sick-bed and looks out over the wickedness of Paris and the waters of the Seine, he is figuratively a mighty bowler, and the pins set up to exhibit his skill are Armine, the

daughter of a French Communist, and some wealthy but imperfectly instructed Americans seeking "to know." His love for the game is passionate and his hand is always in. Unfortunately for admirers of a spirited contest, the author has not seen fit to match against him Duchesne, the spokesman of the proletariat, a man endowed with splendid intellectual force and genuine enthusiasm. It would have been interesting to hear his views on the epithets "eternal," "universal," applied to the Roman Catholic faith. He would not have denied either the age or the sublime repose of Notre-Dame of Paris, but he might have remembered that the Pyramids, for instance, have some majesty and some antiquity, and that these qualities are not, as far as we know, attributable to any sacred essence transmitted straight from Heaven by a "saintly Roman Pontiff." Had he been inclined to prop up socialism with Christian precedent and authority, he might have cited a few facts concerning the primitive Christian communities. Indeed, many fine opportunities are lost through the early death of Duchesne, crying, "Vive l'humanité." He dies and D'Antignac bowls his sweet little daughter into the order of St. Vincent de Paul. He bowls two of the inquiring Americans into matrimony and a declaration of faith. And still he lies there, looking out upon the Seine, dreaming dreams of revived papal splendor and power, and uttering as profound truths deductions not drawn from the literature mentioned in the Index Expurgatorius.

If any amateur philologist expects fresh fields of investigation behind the title 'In the West Countrie,' he will be disappointed. Nobody utters a word of Cornish, or any other uncouth dialect, which, however beautiful or valuable to the serious mind, is simply madness to the "average reader." The people talk easy English, and the things they do are very easy things to understand. It is a tale of love and treachery, prosperity and adversity, with a just measure of final bliss. It is told in the first person by the heroine, who, perhaps through praiseworthy diffidence, has not made it quite clear why she should be a heroine at all. Nor does she know enough about story-telling to carry a crowd of people successfully through many vicissitudes, and at the same time keep each individuality distinct. There is an air of doubt, of uncertainty, and of difficulty both in management and expression. She strives toward passion and real pathos, but she is not swift, bold, or wise enough to reach them; nevertheless, she feels and inspires sympathy for generous impulses and affection and fine patience, and she is not without appreciation of the funny side of dismal circumstances.

'But a Philistine' is an example of both pretension and affectation. The pretension is, after the fashion of the hour, to psychological insight; the affectation breathes steadily from the author's own lips, and at intervals from the lips of every character. The chief infliction (and she is in fact the story) is a young person from Boston, who for two hundred pages scrutinizes her mental state, probes her inner consciousness, and weighs every atom of her complex organism; and all this pother is over the question whether she may or can marry the Philistine, or whether she must not, under any temptation! The Philistine is a gentleman of the State of Maine, "great on 'Change." He "scents commercial crises afar off," and has a "settled conviction that he can read the subtlest of womankind." Mistaken Philistine! What avails paltry prescience in stocks before the possibilities of a woman who skips down from a cherry tree on a step-ladder, "so lightly and gracefully that one with any fancy could hardly fail to think of a hamadryad floating down from the tree"? Where is comfort in "settled convictions," when your need is to fathom a woman with a "subconsciousness"—a woman who, in studying you, gains a new light on Herbert Spencer's "Special adjustment to one kind of work involves more or less non-adjustment to others"? But let it not be supposed that the author has written such nonsense with any suspicion that it is nonsense. She has a strong moral intention, and she believes the situation to be one of the gravest. We have no objection to a moral purpose in a story, and if the work should save one soul from death, we would willingly see a million souls who have no need to be saved, or who don't want to be saved, bored unspeakably. But there are certain questions, considered ethical questions, which are too trifling for protracted public discussion, and edifying to nobody. We have no positive antipathy for a young woman who takes herself perpetually *au grand sérieux*, providing that she does it in private and at a distance. But we disapprove of her yearnings and burnings set forth at length in doubtful English for the delectation chiefly of other young women, all of whom may not see that from a natural point of view they are ridiculous, and from a literary point of view idle and worthless.

In 'Barbara Thayer' the pretension and affectation are similar and almost equal. Here is yet another "perfect type of glorious young womanhood" straining painfully at mental high notes. As a story it is much better than 'But a Philistine.' Some of the talk is bright and approaches naturalness. At times, when the author remembers that exaggeration is not synonymous with strength, there is dramatic force in the situations and real human passion in the characters. The action is swift, indeed, breathless. We hardly know what Barbara's "glorious career" is to be before we find her posing as a reader (qualified at the Boston School of Oratory), "standing for a moment silent while the subtle, magnetic power of her dramatic soul thrilled the atmosphere like an electric current and held the people spell-bound by its witchery." We have no notion that she has overcome her dislike for General Laurens (another man with a little vanity about "fathoming a woman's soul with a single glance") until we find her in an agony of love for him. We hardly believe that Laurens is fairly on with the new love before we are confronted with a wronged and constant old love. Here there is a grave moral question, and Barbara's decision is consistent both with her own traditions and with the judgment of all brave and honest women. It is an admirable action, but before the author can draw a thoroughly admirable character she must learn that a girl acutely "conscious" that things appeal to her "consciousness" is artificial, and that artificiality is vulgarity. Before she can write an enjoyable story, she must abandon her scientific idol of the moment long enough to describe a pretty woman in less nauseating phrase than, "The blood that coursed through her veins was rich, and free from every taint of morbid matter."

In 'Eustis' there is nothing to attract, and nothing but a pervading vapidity to repel. The descriptions of Southern life have no flavor of originality: the heroes are a susceptible and prosy pair, and the conduct of the heroines is so irrational as to baffle understanding. By comparison, 'At Daybreak' seems a work of genius; it is indeed a wholesome, easy-going story. The Danish-American element lends it the attraction of novelty, and there is artistic instinct in the selection of the interesting in character and event, and in the adaptation of one to the other. If less had been attempted—if there were fewer comparatively isolated episodes, entertaining, indeed, in themselves, but destructive of continuity—the result would have been more satisfactory, and 'At Daybreak' might have been pronounced exceptionally good. But half the beauty of little Betty's devotion is missed through long separation between her fortunes and Axel's. If the two characters had been developed through closer contact with each other, both would have gained in interest. Trustful patience is a fine quality, but to impress us in love we must feel the passion behind it, and to win it full credit in fiction the passion should be converted into action. Evangeline's silent trust and splendid endurance might have been forgotten if she had sat down and waited for Gabriel.

It was with surprise that we received M. Daudet's 'L'Évangéliste,' as a study of religious fanaticism did not seem to be exactly within the province of a Parisian novelist. In 'Sapho' M. Daudet returns again to the class of subjects with which we are wont to associate his name. As 'L'Évangéliste' was better adapted for reading in New York than in Paris, and, indeed, as it was more profitable reading in New York than in Paris, so 'Sapho' is more appropriate to Parisian readers than to New Yorkers. In fact, it is the chief fault of the book that it too exactly performs the promise of its sub title, and that it is a study exclusively of Parisian manners. The moral of it is calculated precisely for the meridian of Paris. That M. Daudet himself thinks so is evident from his dedication: "Pour mes fils—quand ils auront vingt ans." What M. Daudet intends for his Parisian sons when they come to twenty years may not be read with impunity by American youth of less than that age. Perhaps it had best not be read by the American lady of any age—for 'Sapho' is a study of physical passion, ignoble in detail and wholly without elevation. The title of the book as originally announced was 'Le Collage,' and this slang phrase more precisely describes the story than the present title, the mere nickname of the heroine. The subject is one which has been handled by French novelists and dramatists fifty times before—notably in the 'Faux Ménages' of M. Pailleron. It is the story of a *liaison*, beginning in thoughtless pleasure and ending sadly enough. Merely as a story 'Sapho' is told with all M. Daudet's old skill: it has a directness as simple as that of 'L'Évangéliste,' and it has far more of his old charm than had that painful study from life. The little groups of pleasant people that M. Daudet excels in drawing are here more closely related to the action than in the 'Nabab,' or in 'Numa Roumestan.' Aunt Divonne is one of M. Daudet's most charming women; and Sapho herself is a splendid success as a piece of literary art. She is real, she is feminine, and she is emphatically Parisian. As is usual in M. Daudet's books, there are portraits of persons under which any one conversant with the contemporary gossip of Paris is tempted to write real names, but they are fewer than in the author's other novels.

'Lise Fleuron' is M. Ohnet's fourth novel, and as it began with an edition of nearly sixty thousand, its success is not likely to be less than its predecessors. It is said that M. Ohnet's first novel, 'Serge Panine,' was a play before it was a novel, and it is certain that it succeeded amply both in the library and on the stage. So has M. Ohnet's second novel, 'Le Maître de Forges.' So, no doubt, will his third, 'La Comtesse Sarah,' which we shall doubtless see on the stage before long. But 'Lise Fleuron' will not lend itself to dramatization, and it is not likely to be turned into a play either by M. Ohnet himself or by any brother novelist of British birth who may lie in wait for it, as did Mr. Robert Buchanan when 'Le Maître de Forges' ap-

peared. In default of seeing his story on the stage, M. Ohnet has made it a story of the stage. Lise Fleuron is a sister of M. Halévy's Criquette, of Mme. Gréville's Rose Rozier, and of M. Cadol's Rose, and she is like them all. In English plays and in English novels, a poor but virtuous ballet girl proves her innocence by supporting a drunken father. In French plays and in French novels, a young and beautiful actress is accepted as virtuous if she confine herself to one lover, and if she dies in the last act or the last chapter amid the flowing tears of all her friends. And Lise Fleuron, like Criquette and Rose, does her duty in this respect. She has one lover, a sorry fellow, a gambler and a speculator; and she dies with all the luxury of pathos M. Ohnet has at his disposal. Except in the 'Troisième Dessous' of M. Jules Claretie, and in a novel of M. Edgar Monteil, we do not know where one can get a fuller or a more exact idea of the behind-the-scenes life of Paris than in this book of M. Ohnet's. Although most of the characters in the story are as familiar and as well worn as the characters in M. Ohnet's other stories, 'Lise Fleuron' gives evidence of a faculty of observation which a perusal of the earlier novels might not lead one to credit M. Ohnet with.

Biogen, a Speculation on the Origin and Nature of Life. By Prof. Elliott Coues. Second edition. Boston: Estes & Lauriat. 1884. 12mo, pp. 66.

It is not easy to characterize this lively essay in the few lines which we propose to devote to it. It consists of an address delivered to the Philosophical Society of Washington, handsomely reprinted in a primer form, with a preface and appendix. The preface is witty if not altogether dignified and wise; and—forewarned by the title—it is hardly reasonable to complain of the appendix because "a speculation" is purely speculative and is too discursive to be severely logical. The address itself, in our judgment, is fairly effective in its destructive portion, and in its constructive portion neither illegitimate nor truly scientific. It appears that a retiring President of the Philosophical Society at Washington had declared, in an old-fashioned way, that "there are whole groups of phenomena, characteristic of living beings and peculiar to them, which cannot be intelligently explained as the mere resultants of the chemical and physical forces of the universe," and which were, therefore, referred "to the operations of a vital principle." Whereupon the representatives of a newer school of science contended that this idea was now quite antiquated and effete; that life is a result of the molecular aggregation of matter, is an appropriate activity of the more highly compounded molecules. Here is the monistic set against the dualistic view. Our author now takes his turn, and, being pugnaciously dualistic, contends that this chemico-physical theory of life is unscientific in the sense that it is unwarranted by the facts and is incapable of accounting for them; that, at least, it can have no firm standing-ground until it can "satisfactorily explain the difference between, for example, a live amœba and a dead one." He makes much of the point that this theory postulates abiogenesis, *i. e.*, spontaneous generation, while men of science almost unanimously reject it. We do not understand him to allow that the rehabilitation of abiogenesis, or any probability of its occurrence at some time or other, would render untenable his thesis that life is the cause rather than the consequence of organization. Doubtless he would still maintain that life came to the matter rather than came out of it. It suffices for his polemic to show that the theory he opposes is not congruous with the facts as we now understand them, and gives no real help to their explanation. He who regards it just as probable that the recompounding of protein-bodies should result in a new form, possessing the quality of spontaneous movement, as that the addition of a molecule of oxygen should convert hydrides into alcohols, obviously mixes up discrete things and reasons illegitimately. We observe that Professor Coues speaks of "a vital principle," nowhere (except accidentally, as we suppose) of "vital force," not confounding, therefore, what he means with what the physicists mean by force. Let us presume, therefore, that he conceives of vitality as that which directs physical force to ends. At least, that would be our definition.

Glancing at the constructive part of Professor Coues's essay, we come upon a curious antithesis between his view of the relation of life to matter and that of his monistic opponents. The latter conceive of vitality as a result of matter when molecularly much compounded, and suppose that the more complex the molecular composition the easier the explanation of the vital phenomena. The former, who has to conceive of spirit or mind in association with matter, has the idea that the more attenuated and ethereal the matter the nearer he is to comprehending the junction. In his conception, matter in its most dissociated state, such as that conceived to fill interstellar space, may be capable of "thrilling to a thought," as does the luminiferous æther to solar radiation; and this is the gist of 'Biogen.' Biogen is his name for "spirit in combination with the minimum of matter necessary to its manifestation," and with this hypothetical solder he would "establish a connection between mind and matter"; as if one could any more comprehend the action of mind upon dilute than upon gross matter. Although this style of speculation brings no gain either to science or philosophy, neither this nor any part of the essay strikes us as being open to the charge of resting the doctrine of intelligent will (rather than mindless energy) behind phenomena upon the impossibility of spontaneous generation, or upon the mysteriousness of the beginnings of living things. Altogether it seems to fall in with the sounder view, which "regards the world as through and through rational, and for that very reason does not suppose phenomena to be more divine merely because we cannot explain them by any general rules of experience." South's witty comment upon the foolish people who, as Isaiah describes, used a part of a tree for fire-wood and of the residue made an idol for worship—"as if there were more divinity in one end of a stick than the other"—may in these days be turned against the theologians. But many of them and most of the theistic naturalists have learned the lesson it teaches. A few were wise enough to learn it early. Still the evidence of mind in nature is much more telling in some parts than in others; and insistence upon these need not imply that belief hangs by a chain the strength of which is only that of its weakest link.

BOOKS OF THE WEEK.

Allbut, R. The Tourist's Handbook of Switzerland. T. Nelson & Sons. $1.50.
Beard, Dr. G. M. Sexual Neurasthenia: its Hygiene, Causes, Symptoms, and Treatment. With a Chapter on Diet for the Nervous. E. B. Treat. $2.
Chase, Eliza B. Over the Border. Acadia, the Home of "Evangeline." Illustrated. Boston: J. R. Osgood & Co. $1.50.
Craik, Georgiana M. Godfrey Helstone. A Novel. Harper's Franklin Square Library. 20 cents.
Cullcott, Lady. Little Arthur's History of England. New edition. Illustrated. Thomas Y. Crowell & Co. $1.25.
Fawcett, E. Tinkling Cymbals: a Novel. Boston: J. R. Osgood & Co. $1.50.
Gaidoz, H. et Lébillot. Blason Populaire de la France. Paris: Léopold Cerf.
Holtzendorf. Lehrbuch des internationalen Privatrechts mit besonderer Berücksichtigung der Englischen Gerichtspraxis. Von John Westlake. Deutsche Ausgabe, nach der zweiten Englischen Auflage besorgt. Berlin: Carl Habel. 1884.
Landau, Dr. Marcus. Rom, Wien, Neapel, während des Spanischen Erbfolgekrieges. Leipzig: Wilhelm Friedrich. 1885.
Scudder, M. L., jr. The Labor-Value Fallacy. Chicago: Jansen, McClurg & Co. 50 cents.
The Isle of Wight: its History, Topography, and Antiquities. Thomas Nelson & Sons. $1.50.
Theuriet, André. Le Mariage de Gérard. New York: Wm. R. Jenkins.
Topelius, Z. The Surgeon's Stories. Times of Alchemy. Chicago: Jansen, McClurg & Co. $1.25.
Wilbrandt, A. Fridolin's Mystic Marriage. W. S. Gottsberger.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & Co., N. Y.

Henry Holt & Co.

HAVE JUST READY:

LIFE OF JOHN KALB. Major-General in the Revolutionary Army. By Friedrich Kapp. 12mo, $1.75.

*THE MISTRESS OF IBICH-*stein. By Fr. Henkel. Translated by S. E. Boggs. 16mo, Leisure Hour Series, $1.00; Leisure Moment Series, 30 cents.

Johns Hopkins University,
BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

Handbooks of Science.

By arrangement with the publishers of *Science*, Messrs. Lee & Shepard beg leave to announce a series of reprints, in book form, of notable contributions to that journal. Each volume will be carefully edited or revised by its author, and will be complete by itself. First volume now ready.

WHIRLWINDS, CYCLONES, and Tornadoes. By William M. Davis, Harvard University. Maps and illustrations. Cloth, 50 cents.

*** "This little book is really a full treatise on meteorology, and deserves to be a college textbook. It is the best general view of the science in the English language."—*N. Y. Nation.*

*** "Explains the subject so as to command attention."—*Philadelphia Times.*

Sold at all bookstores, or mailed on receipt of price by the publishers,

LEE & SHEPARD, Boston.

Portrait of R. W. Emerson,

Engraved by Schoff, from Rowse's drawing in the possession of Prof. Norton.

To meet the demand for a less expensive grade of this superb portrait, the Publisher begs to announce the issue of *unsigned proofs*, on *India paper, price* $5.00. A few Artist's proofs can be had at $10.00 each.

J. EASTMAN CHASE,
7 Hamilton Place, Boston.

DAVIS'S DIAMOND HAMS.

1841. *CINCINNATI.* *1841.*

PARK & TILFORD,
New York.

NEW CATALOGUE OF BOOKS ON History, Philosophy, Politics, Social Sciences, Religions, Travels, etc., Old and New, in English and Foreign Languages, will be sent on application, as well as separate catalogues on AMERICANA and SCIENCES. Address,
LEON & BROTHER, Booksellers,
5th Avenue Hotel, Place 3,
Corner 5th Ave. and 23d St., N. Y. City.

The Nation.

NEW YORK, THURSDAY, JULY 10, 1884.

The Week.

THE most severe thing which can be said of the late session of Congress is that it was almost entirely barren of important legislation. It is soundly berated by the Republican party journals for doing nothing, but that is after all not so grievous a fault as doing something harmful. If it did not have the courage for enacting some much needed legislation, it refrained from enacting any that can be called injurious, and it stood manfully in the way of some which was positively bad. Its failure to do anything with the tariff was not unexpected, and the Republicans ought to be the last persons to complain of it, for they are going to make their Presidential campaign on the basis that the industrial interests of the country ought not to be disturbed by tariff changes. It would have been a most desirable thing to have the House agree with the Senate in passing a bill providing new regulations for the electoral count and the Presidential succession, but the eve of a Presidential election is not the time most favorable for legislation of that sort. The Republicans had a fine opportunity to make the needed changes when they had a majority in both branches of Congress, but they failed to improve it.

The most valuable work of the session was the passage of the Dingley Shipping Bill, and the refusal to grant the mysterious Nicaraguan appropriation and the $2,000,000 for the construction of new cruisers for the navy. There was a natural suspicion among the Democrats that these appropriations might in some way have an important influence on the campaign, and there was certainly no risk in letting them wait till the next session. Of the other appropriation bills it can only be said that they are about the same as usual. They were passed with the usual rush at the end, but there are no charges that they are extravagant or contain any noticeably outrageous "jobs." Indeed, with all its dilatoriness and lack of courage, the late session has left a record singularly free from scandals, and the results of its work will be searched in vain for "big grabs" or "jobs" out of which to make campaign thunder. In intellectual calibre the majority was palpably weak, and the record of its daily debates has been very dreary reading; but even in this respect it does not compare unfavorably with its immediate predecessor, which chose Keifer for its leader, and which by unanimous consent was pronounced at its end to have had in him a fair representative, both in ability and moral tone. There has been nothing in the session just closed to compare with the odium of Keifer's career, rounded off as it was at the close by his shameful act of taking a few thousand dollars from one of the official stenographers and giving it to his nephew, who had done nothing to earn it.

The hollowness and insincerity of the Democratic opposition to Governor Cleveland is well exhibited in the frequent references made to his veto of the Five-Cent-Fare Bill. At a meeting of so-called workingmen in Buffalo on Wednesday, anti-Cleveland resolutions were passed, based in part upon this grievance. The workingmen of Buffalo, it should be remarked, have no more interest in five-cent fares on the elevated railroads of New York than they have in the fares on Parliamentary trains in England. But they voted that a great wrong had been done, and this, we believe, is John Kelly's opinion, although he does not push it to extremes in Jay Gould's presence. The Five-Cent-Fare Bill was passed in the teeth of a charter which says that no such bill shall be passed until it shall have been ascertained that the elevated roads are earning more than a certain amount of money on the capital actually invested in them. No such fact had been ascertained. The last previous examination made by public authority showed that they were not earning the stipulated amount. Under these circumstances Governor Cleveland vetoed the bill, as it was his clear duty to do. Probably the Buffalo workingmen who passed this resolution exercise their industry most effectively in the saloons of that laborious place.

The Massachusetts Independents are organizing the opposition to Blaine with a thoroughness and energy which may show the Blaine leaders that they must begin their campaign on the supposition that Massachusetts is a doubtful State. The Secretary of the Boston Independent Committee says that they have already on their lists over 5,000 names of men who will not vote for Blaine, and he estimates that these names represent a bolting force of 15,000 or 20,000 voters. This is not an improbable estimate. In Massachusetts, as well as in other States, the number of Republicans who are willing to sign a pledge to oppose their party's ticket bears only a small proportion to the number who will refuse to vote the ticket, while saying nothing about their course. It was this silent vote which rolled up Cleveland's tremendous majority in 1882, and it is the unknown possibilities of it this year that is weighing so heavily upon the spirits of the Blaine boomers. The Massachusetts Independents intend to increase it as much as possible by thorough organization and systematic work, and will extend their labors to all parts of the State. Ex-Mayor Prince said in Chicago on Friday that enough had been done already to insure the electoral vote of the State to either Cleveland, Bayard, or McDonald, and it may be that he is not far from right.

There are rumors that efforts are making to have one of the old "pastors" withdrawn from further service in the Blaine campaign. The offender is the Rev. T. H. Ecob, now of Albany but formerly of Augusta. He began very well, but his enthusiasm carried him too far. In his first letter he drew a beautiful picture of the "noble old South Church of Augusta," with the Blaine pews filled every Sunday with the members of the Blaine family and anybody else who happened to be its guest. In his second letter, however, Mr. Ecob undertook to vindicate Mr. Blaine from the charge of having been a Catholic in his youth, and in his zeal he made this astounding observation: "If, as a little child, he took his mother's hand and walked with her to church, why, there is a good Protestant day of judgment coming which will, no doubt, purify as by fire the touch of that mother's hand. Some of the city papers, and many of the country papers, will please take note of this fact: Mr. Blaine is not a Catholic, but a straight-out New England orthodox Congregationalist." It is feared now that this will make trouble with the Irish Catholic vote, which was coming over so rapidly to Blaine, and Mr. Ecob and the other old pastors are besought to withhold any further testimonials for the present, as the Blaine managers do not desire to raise the "religious issue." It is strange that they could not have seen the folly of raising such an issue at the start. It has no place in a campaign, and we believe it is a fact that it has invariably got the candidate and his friends starting it into trouble. Mr. Blaine's friends have nobody to blame except themselves for precipitating it into their remarkable canvass. They hailed it joyfully as a fine contribution to the grand humbug platform upon which they are hoping to win success.

In answer to several correspondents who desire information as to where Blaine's letters of June 29, July 2, and October 4, 1869, and the report of the Investigating Committee can be found, we reply that the letters in question were published in the *Nation* of May 1 and in *Harper's Weekly* of May 10 in full, and that the report of the House Committee of 1876 contains the other evidence. The latter is now scarce, but will probably become plentiful when the canvass finally opens. The letters have not appeared and will not appear in any Blaine paper, and no explanation of them will probably ever be offered by any supporter of that gentleman. The course his friends take with regard to them—and we think wisely take—is to refer to them in a vague way as "stale slanders," or "exploded calumnies." Some of the bolder ones are not only "almost ready to deny their existence," but do deny it. This is really for them the simplest and easiest way of dealing with them, and it is an old way. When some of the late Fernando Wood's rascalities were exposed during his last canvass for the Mayoralty in this city, he met them by pronouncing them boldly "an eternal lie against humanity." This was a good stroke, and brought thunders of applause from the meeting he was addressing, for nothing can be worse than an eternal lie against humanity. By close adherence to this policy, in fact, all charges against every member of the human family could be successfully met, and the race, for the first time in its history, made to present a spotless appearance.

General Logan has defended himself successfully against the heinous accusation of being the owner of 80,000 acres of land, and has partially, if not wholly, rebutted the charge that he attempted, or helped others in an attempt to deprive the Zuñi Indians of their springs and water courses. The *Herald*, in whose columns the charge was recently, though not originally, made, considers the defence unsatisfactory, and hints that General Logan has not even yet desisted from the endeavor to despoil the Zuñis. The admitted facts in the case are that the official survey of the Zuñi reservation did not include the springs, although they really belonged to it, and that Captain Tucker, General Logan's son-in-law, entered the land on which they were situated, as he had the legal right to do, and that General Logan gave him assistance, as he had the right to do. The mistake in the survey was discovered and ultimately rectified. General Logan admits that he defended Captain Tucker's claims after the mistake was discovered. But as the rights of all the claimants were a matter of dispute, General Logan certainly had the right to his own opinion; and if he had it while the question was open, he has it now. As the Zuñis have got their survey rectified, the accusation against General Logan will not count for much in the campaign.

In the House on Saturday night Mr. Burnes, of Missouri, reported from the Conference Committee on the Diplomatic and Consular Appropriation Bill a continued disagreement on the "Nicaraguan waterway" appropriation of $250,000. He undertook to give the House an explanation of the reasons for objecting to the item, and came nearer doing so than anybody else has done. He did not altogether succeed, for the simple reason that he tried to give the reasons without giving all the facts. Certain rights, he said, had been obtained by certain American citizens to construct a canal across the Isthmus; but the precise nature of these he does not appear—so far as the despatches inform us—to have described. The citizens were to have done the work by October 24 next; hence the necessity for haste. Like other citizens, they were "moving on with bright and brilliant prospects," when suddenly they were overtaken by "misfortune"—not disease or death or loss of friends so much as pecuniary trouble or lack of funds. Up to this point everything is comparatively plain sailing. They had got a concession on certain terms; they had failed to comply with the terms; they were in trouble. Now, like a flash came "the suggestion" to the Appropriations Committee that the concession was an "immensely valuable thing"; that it might be made the "great prize to be drawn from the diplomatic lottery of this great American Republic." The suggestion first was that it would be an "advantageous trade" for the Government to give a good round sum to the American gentlemen for their rights. To this proposition the Appropriations Committee at once replied, Millions for defence, but not one cent for a job, or words to that effect.

Then the suggestion suddenly changed its form, and it was proposed that the negotiation should not be with the gentlemen, but with "another government." It now appeared, however, or was "conceded," as Mr. Burnes puts it, that "a portion of the gentlemen interested in the original concession were citizens of the State in which the work was to be done, and that whatever contract might be made and whatever money might be expended would be made with and paid to the gentlemen in that State. Following close on the heels of the $250,000 was to come either $1,200,000 or a 'good round sum.' Then, if all this were not child's play, it meant $75,000,000 for the experiment of building a canal, or, according to other engineers, $300,000,000." A warm discussion ensued, and the House refused to recede from the disagreement. The sum and substance of the story as far as can be made out is that Mr. Frelinghuysen has not succeeded in persuading the House that the appropriation does not cover a job or gratuity of some kind. A secret appropriation of money, to be used by the Administration at its discretion, may at times be a good thing, but it is something which no Administration can expect to get unless it has the confidence of the House. The debate throws little or no light on the canal question.

It was not to be expected that the Democratic majority in the House would vote some millions of dollars to be expended in naval architecture under the auspices of Secretary Chandler during a Presidential campaign. Probably in any other year measures for the reconstruction or improvement of the navy would receive more favorable consideration, but it is not in human nature to put weapons in the hands of an enemy to knock out one's own brains with. It is the fixed belief of the Democrats that if Chandler had $2,000,000 to expend on ships he would easily raise all the funds needed for the campaign without levying assessments on department clerks and other officials. This belief may be entirely erroneous, but Chandler's reputation is of that shady sort which is well calculated to inflame the imagination of the other side in politics, and to impel them to put every possible curb and check upon him. His career as a "visiting statesman" in Florida in 1876 was of itself sufficient to alarm the suspicions of every Democrat, and to put them on their guard in every direction. The failure of the appropriation is due not to the indifference of the Democratic party to the naval defences of the country, but to their distrust of Chandler as a managing politician.

The Porter case abounds in curious incidents. The President's veto of the bill restoring him to the army on constitutional grounds, which was overruled in the House, has been sustained in the Senate by a tie vote, we presume also, in the case of many Senators, on constitutional grounds. What is curious about this is, that a reference to the Army Register shows that Congress and the President have in no less than ten other cases concurred in doing the very thing which the President now says Congress has no right to do, and which he thinks it would be improper for him to do—that is, in restoring to his rank in the service an officer wrongfully dismissed by sentence of court-martial. These cases are those of Surgeon-General Hammond, Capt. Geo. A. Armes, Lieut. Edward R. Clarke, Major Joseph B. Collins, Capt. James B. Sinclair, Capt. P. W. Stanhope, Capt. Thomas B. Hunt, Major N. H McLean, Lieut. Lowell A. Chamberlain, Capt. George T. Olmsted. They may be found in the Army Register, and they are, taken in connection with the President's veto, and the votes of many of the Senators, rather odd reading. What the veto ought to have contained, was simply this: "For various reasons, political and other, which I intend to keep to myself, I do not wish to restore Fitz John Porter to his rank in the army, and I am not going to do it. It has been suggested in some quarters that Congress has no constitutional right to authorize or direct me to do it; but this, everybody knows, is mere buncombe."

The President's entire argument is disposed of by the case of Surgeon-General Hammond, mentioned above. This officer, the head of an important bureau, was dismissed in due form by sentence of court-martial August 18, 1864. An act of Congress, approved March 15, 1878, in its first section authorized the President to review the proceedings of that court-martial, and to annul and set aside its findings and sentence if, upon review, he should deem it right and proper so to do. The second section, in the event of the findings and sentence thus being set aside, further authorized the President to place General Hammond upon the retired list (without pay or allowances), and on August 27, 1879, he was restored to the army, and his name was placed on the retired list, where it yet remains. Without judging of the merits of General Hammond's restoration, the legal conditions seem to include all the points, and more, that General Porter's case presents. In the face of such precedents the President's objections have no logical value.

The riotous and threatening demonstrations which are taking place in various parts of the country on the part of railroad hands whose wages are withheld by their employers in order that the latter may meet what they choose to regard as more pressing demands, call for severe animadversion if not for legislative interposition. Railroad officials have no more right to levy a forced loan on their employees in order to meet their mortgage interest than they have to draw a check on a bank where they have no funds. The latter proceeding would be vastly less hurtful to society, because it would involve no breach of the peace. Withholding the wages of laboring men who have families to support always leads to great suffering, and in cases where the laborers are foreigners, little acquainted with our laws and language, the provocation to riot and bloodshed and pillage is very great. A few days since a tale came over the wires from Wisconsin, showing how two or three hundred men had walked from a distant station two days through heat and dust, begging food along the road, in order to present their appeal for what was justly due them to the head office of a railroad company. Other cases of outrage and suffering nearer home

are of frequent occurrence. The law ought to provide that in all cases wages of operatives shall take precedence of every other claim against a railroad or other corporation; and this for a variety of reasons which prevail in Mechanics' Lien Laws and in the laws regulating the assignment of bankrupt estates. A railroad company which is under the necessity of borrowing money from its brakemen, and trackmen, and freight-handlers in sums of ten or twenty dollars each, without their consent, ought to go into a receiver's hands at once and not be permitted to expose innocent communities and passengers to the risks of public disorder through such shifty financiering.

An underground railroad has been discovered leading from British Columbia to Washington Territory, adapted to the conveyance of Chinese laborers into the United States, contrary to law. A newspaper published on or near the line of travel, called the Modisto *Strawhuck* or *Sawbuck*, speaks from "positive knowledge," saying that the business of "running" Chinese into the United States is a well-organized branch of industry, and that "white men" are making money out of it. The nefarious traffic is carried on principally in the night. Small sailing craft start from Victoria laden with Chinese, and under favoring winds and darkness run past Port Townsend and land their cargo anywhere along the coast. It would require at least 500 men to guard the line, says the editor. The Collector of Port Townsend, he adds, is not to blame, because he has not the force at his disposal to intercept the smugglers. Evidently, Congress has not done its whole duty. The "further legislation" called for by the Republican platform ought to embrace a law modelled on the Fugitive Slave Act of 1850, with liberal rewards to informers and double fees for conviction, and conferring power on United States marshals to summon all good citizens to join in the chase.

Harvard College has apparently made its refusal to make Governor Butler an LL.D. a rule for future observance, for it has passed over Governor Robinson also, who, like Butler, has been forced to content himself with an Amherst degree. If so, the rule is certainly a wise one. The way in which honorary degrees are lavished by American colleges on all sorts of people has done much to bring even legitimate university honors into contempt. Every honor in this country, where there is no such thing as hereditary honor, ought to mean as nearly as possible what it professes to mean on its face. Degrees which imply on their face the possession of some kind of learning, when given to any one, no matter how meritorious on other grounds, who has no learning at all, are a sham, and there is, or ought to be, no place in American colleges for sham. Calling a man a Doctor of Laws because he has been elected Governor or President ought with us to be as absurd as calling him a Doctor of Medicine, or Music, or Divinity, or a Great Chemist. The absurdity is of course all the greater when the honor is bestowed on a man who makes sport of university education, and professes to believe that a man is better without it.

The defeat of Mr. Gladstone's Franchise Bill by the House of Lords is probably the greatest surprise which has taken place in British politics since the overthow of Beaconsfield in 1880. It was thought not unlikely when the bill was first introduced in April last, but the tide of opinion in its favor throughout the country has since run so high, and all Conservative attempts to impede its progress in the Commons have met with such ignominious defeat, that the public had apparently settled down into the belief that the Lords would not dare to resist it, if only for fear of making the very existence of the Upper House one of the issues at a general election, in case of dissolution. The real ground of resistance is of course the old and natural fear that it will result in the loss of the counties to the land-holding class, of which they have been the stronghold since the destruction of the family boroughs in 1832. The ostensible reason is, however, the refusal of the Ministry to accompany or precede it by a measure redistributing the seats, or, as we should say, of reapportionment. The Conservative contention is that power should not, under the English Constitution, be handed over to mere numbers; that is, interests and classes should be fairly represented in the Government, and that this should be provided for by creating new constituencies, or distributing the representatives in such a way that the land, for instance, apart from population or personal property, should retain at least some of its old weight.

The probabilities are now that though Mr. Gladstone is unwilling to dissolve Parliament, he will be compelled to do so. The condition of the Egyptian question looks better for this purpose than it did two months ago. The public is tired of it, and does not look on Gordon's position as so romantic as it seemed at first. Moreover, "the red herring theory" has taken a strong hold of the working-class mind, meaning the belief that the Egyptian question is "a red herring drawn across the tail," to divert public attention from domestic reform, an ancient Tory trick which Blaine is trying to introduce into the United States, and the defeat of the bill by the Lords will confirm this impression. At the general election the constitution of the House of Lords will become one of the burning questions. There have been numerous signs of late that this was impending. In fact, there is some reason to believe that the majority of the Peers have been expecting it for some time. The active ones, who like to legislate, are quite prepared for any change which will give the House more weight with the country and raise the importance of the debates. The lazy, indolent ones, who constitute the bulk of the members, are, on the other hand, indifferent about the fate of a body which has lost its prestige, and attendance on which involves the loss of a good deal of amusement. In fact, the House now represents more than anything else what is called the "party of pleasure" in England—that is, the large body of the idle rich of both sexes, to whom yachting, hunting, pigeon-shooting, racing, deer-stalking, lawn tennis, and coaching are the chief interests of life.

The triennial elections to the Hungarian Diet have been held, and the result is a new decisive victory of the Cabinet of Coloman Tisza, and of the Liberal party, which supports it. This result was, in fact, never doubtful, though the election contests were carried on in various parts of the country with a fury generally characteristic only of struggles the issue of which depends upon the vote of a few districts. In this instance the wild animosity which was productive of scandalous and even bloody outrages, was originally only on the side of the turbulent radical minority which calls itself the Extreme Left, or Independence party, and it was the fury of exasperated weakness. The anti-Semitic craze was another source of ungovernable irritation. The supporters of the Government candidates were, of course, not overscrupulous in their choice of means for repelling insult and violence. There have been elected: Liberals, 231; Independents, 73; members of the Moderate Opposition, 59; Anti-Semites, 17; Nationalists (Slavs, Rumans, and Saxons), 16; no-party men, 10. The Liberals will thus have a majority in the next Diet over all their opponents combined of about fifty, which almost exactly corresponds to the general result of the elections in the summer of 1881. The difference in regard to the Conservative Opposition, the Nationalists, and the no-party men is insignificant; the Independents alone have lost a number of seats, most of which have probably been won by Anti-Semites—that is, by candidates who exchanged the banner of anti-Austrian irreconcilables for that of Jew-baiters.

What deep thought or high political aim caused the Emperor William to resolve on the resuscitation of the Prussian Council of State seems still to be a kind of secret. The composition of the Council, however, as decreed by the royal rescripts of June 18, clearly shows that its character is to be intensely conservative. The seventy-one members of this Prussian Sanhedrim, of which the Crown Prince has been made the President, Prince Bismarck the Vice-President, and Von Möller the State Secretary, include about forty Government officials and officers, about a dozen noble landed proprietors, two Evangelical clergymen, and two Catholic prelates—the Bishops of Fulda and Ermeland—and almost all the rest are manufacturers, merchants, or local officials of known conservative sentiment. The leaders in the late ultra-loyal manifestations of the National Liberal party—Miquel, Bennigsen, and Becker—and with them Professor Gneist, have been appointed Councillors, but not a single member of the new German Liberal fusion party has been granted a seat. And thus, while the Burgomasters of Cologne and Frankfort have been selected, the capital and the next largest city of the kingdom, Breslau, have been snubbed in the persons of their chief magistrates.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 2, to TUESDAY, July 8, 1884, inclusive.]

DOMESTIC.

THE political feature of the week is the National Democratic Convention at Chicago. Delegates and other politicians began to arrive in that city on Friday and Saturday in great numbers. John Kelly, with 600 Tammany followers, was among the number. When General Butler arrived he was received with bands of music and much cheap display. No significant work was done until Monday. On that day the New York delegation went into executive session at the Palmer House, in order to decide how the delegation should vote in the Convention. Tammany held a preliminary meeting at which they decided to fight Cleveland to the last, both in the caucus and Convention. An informal ballot of the New York delegation resulted: Cleveland, 47; Flower, 22; scattering, 3. The formal ballot gave Cleveland 47. The other votes went to Slocum. In the evening the delegation voted in favor of Cleveland 49 to 23. In the afternoon the National Committee decided on Governor Hubbard, of Texas, for temporary Chairman of the Convention.

Kelly made an effort on Monday night and Tuesday morning to divert the Southern vote from Cleveland to Bayard. Senators Hampton, Lamar, Gordon, and Ransom worked for this end, but with no marked effect. A little before midnight of Monday a conference was held between Senator Barnum, Smith Weed, Mr. Manning, and others of the Cleveland leaders, at which the latest returns from the State delegations were canvassed, with results declared to be very satisfactory. Without Ohio and Pennsylvania they figured up 450 votes as the minimum of their strength on the first ballot.

In reply to a query whether he would accept the nomination under any circumstances, Mr. Tilden on Monday night telegraphed to Chairman Barnum: "Your inquiry was explicitly answered in the negative by my letter of June 10 to Mr. Manning."

At 11 o'clock on Tuesday morning, the visiting organizations formed in front of the Palmer House and paraded to the Convention hall. About half an hour later the first delegation entered the hall. At noon the vast building was crowded. The arrival of the California delegation occasioned the first outburst of applause in the body of the audience. The presence of distinguished leaders among the delegates did not appear to be observed by the crowd, and there was no applause to mark their arrival until the familiar features of Senator Thurman, of Ohio, were discerned, when a mighty cheer arose. At 12:40 P. M. (Chicago time) the Convention was called to order by ex-Senator Barnum, Chairman of the National Democratic Committee. Prayer was offered by the Rev. Dr. D. C. Marquis, of the Northwestern Theological Seminary. Richard D. Hubbard, of Texas, was unanimously elected temporary Chairman. In his speech he advised the party to nominate men whose names would be in themselves a platform, and urged united support for whoever was nominated. A resolution was presented that States cannot change their vote during the roll call. Mr. Grady (Tammany), of New York, presented an amendment that the chairman of a delegation shall, when a poll is called, give expression to individual votes. This was a movement to break the unit rule. Mr. Grady, Judge Cochran, of N. Y., and John Kelly spoke in its favor. Senator Jacobs, of N. Y., and Colonel Fellows spoke against it. After an exciting debate the motion was lost by 332 ayes to 463 noes. This was Tammany's first rebuff. The original motion was then passed, and the Convention soon after adjourned to meet at 11 o'clock on Wednesday morning. Col. W. F. Vilas, of Wisconsin, will be presented for permanent President. The friends of Cleveland feel confident of his nomination on an early ballot. It will require two-thirds of the 802 votes in the Convention to nominate.

President Arthur on Wednesday vetoed the bill restoring Fitz-John Porter to the rank in the army of the United States held by him at the time of his dismissal by the sentence of the court-martial. In his veto message he said: "As Congress has no power under the Constitution to nominate and appoint an officer, and cannot lawfully impose on the President the duty of nominating and appointing to office any particular individual of its own selection, this bill, if it can fairly be construed as requiring the President to make the nomination and, by and with the advice and consent of the Senate, the appointment which it authorizes, is in manifest violation of the Constitution." If the bill is mere advice to the President it can serve no useful purpose in the statute book. He also objects to the bill as setting aside the deliberate sentence of a distinguished and properly constituted court-martial, and adds: "It seems to me that the proposed legislation would establish a dangerous precedent, calculated to imperil in no small measure the binding force and effect of the judgments of various tribunals established under our Constitution and laws." The message was based on an opinion prepared by Attorney-General Brewster. As soon as the message had been read in the House the bill was at once passed over the veto by a vote of 168 to 78. Sixteen Republicans aided the Democrats in passing it. In the Senate on Thursday morning a motion to pass the bill over the veto failed by a tie vote of 27 to 27. Three Republicans, Messrs. Cameron (Pa.), Hoar, and Sewell, voted in the affirmative. Opinions differ as to the political effect of the veto. Friends of Porter believe it will hurt the Republican ticket in New Jersey. His opponents say it will give the ticket greater strength among the Western soldiers.

The Senate on Wednesday finished the Sundry Civil Appropriation Bill. Most of the amendments proposed by the Senate Committee were adopted, the most important of these being the striking out of the provision changing the compensation of United States marshals from fees to salaries. The Senate ultimately was compelled to recede from this amendment, the House refusing to yield.

On Thursday the Senate passed the House bill further restricting the importation of Chinese labor. There were only twelve negative votes. The House Fortifications Bill, with a number of amendments increasing the sum total, was passed on Thursday without debate.

The President on Friday sent a long list of nominations to the Senate, the most important of which are the following: John A. Kasson, to be Minister to Germany. Alphonso Taft, to be Minister to Russia. John M. Francis, to be Minister to Austria-Hungary. Lewis Richmond, of Rhode Island, to be Minister to Portugal. Samuel H. M. Byers, to be Consul-General at Rome, Italy. Ramon O. Williams, to be Consul-General at Havana. Ward McAllister, jr., of California, to be United States Judge for the District of Alaska. Frank Sperry, of New York, to be Associate Justice Supreme Court of Dakota. Seward Smith, of Iowa, to be Associate Justice Supreme Court of Dakota. George Turner, of Alabama, to be Associate Justice Supreme Court of Washington Territory. John Jarrett, of Pennsylvania, to be Commissioner of Labor. The Senate confirmed the first four on Saturday. Owing to objection to Mr. Sperry's youth, ex-Senator W. H. Francis, of New Jersey, was substituted for him.

On Friday evening the Senate postponed consideration of the Postal Telegraph Bill until December. On Saturday the same action was taken in regard to a bill establishing a commission to regulate inter-State commerce.

Senator Logan on Saturday, on a question of privilege in the Senate, made an elaborate denial, accompanied by documentary proofs, that he had accumulated 80,000 acres of land, and that he went to New Mexico and, under cover of his brother-in-law, tried to preëmpt the most valuable land lying along her streams, part of which was in the Zuñi reservation. These are the charges made in an undelivered speech printed in the *Congressional Record* of June 27.

The House of Representatives on Wednesday agreed, by a vote of 150 to 91, to substitute the minority Fortification Bill (Mr. Randall's) for the bill reported by the majority of the Committee on Appropriations. The bill was then passed. It appropriates $595,000 as against about four millions recommended by the majority report. The Senate amendments to the River and Harbor Bill were non-concurred in. The report of a committee which investigated the charges of lobbying against William H. English was presented. It found no custom or usage which would justify the conclusion that he had abused the privileges of the House. A minority report found him guilty of lobbying and flagrant violation of the House privileges. The whole matter was laid upon the table.

The Conference Committee in charge of the Consular and Diplomatic Appropriations Bill concluded consideration of that measure on Friday. With the exception of the Senate amendment appropriating $250,000 for the Nicaraguan waterway project, an agreement was reached. The House conferees refused to agree to that feature of the bill.

The River and Harbor Bill, as agreed upon by the Conference Committee and finally passed by both houses on Friday night, appropriates $13,909,200.

Both the Senate and the House of Representatives remained in session until after 7 o'clock on Sunday morning, and then took a recess until 3 P. M. Early on Monday morning another recess was taken until 10 A. M. The Conference Committee on the Sundry Civil Appropriation Bill agreed, the House conferees having yielded to the Senate amendment striking out Mr. Springer's proposition to pay United States marshals salaries instead of fees. The report was accepted. The Senate conferees on the Consular and Diplomatic Bill brought in a report in favor of giving up the amendment appropriating $250,000 for the Nicaraguan Canal scheme. The Senate voted by a large majority to recede from the amendment. The conferees from the two houses despaired of reaching an agreement on the Naval Bill, and the only way out of the difficulty was to submit a bill providing temporarily for the support of the navy until December 31, 1884, by extending last year's appropriation. About $2,000,000 is appropriated by the bill for continuing work on the three new steel cruisers and one despatch boat. No money is appropriated for continuing work on the double-turreted monitors. The House passed the bill, but the Senate amended it to continue work on the monitor *Monadnoc*, which the House would not agree to.

At 10 o'clock on Monday morning both houses again met. In the Senate there was a warm political debate over a motion to recede from the Senate amendment in regard to the *Monadnoc*, but it was finally agreed to. This removed the last point of disagreement between the two houses, and when it was announced to the House, that body speedily passed the original bill. The House then proceeded to work in earnest, taking up the private Pension Bills, which had passed the Senate, and passing them as fast as the clerk could read the titles. A resolution was passed by both houses for a final adjournment at 2 P. M., but at the request of the Senate the hour was afterward changed to 3 P. M. The Senate spent several hours in executive session. Congress adjourned at that hour with the usual short speeches by the presiding officers.

Attorney-General Brewster was examined on Thursday by the Springer Committee relative to the trial of the Star-route cases. He testified as to a number of quarrels among the Government counsel, and also that he several times reduced the bills of Mr. George Bliss, which he thought excessive. John A. Walsh was refused a hearing on Saturday by the Committee.

The Illinois Democrats on Wednesday nominated Carter Harrison, Mayor of Chicago, for Governor. The tariff plank in the platform is the same as that adopted by the National Democratic Convention of 1876 at St. Louis, when Tilden was nominated for President. Mr. Morrison heads the list of the delegates-at-large to the National Convention.

The celebration of July 4th throughout the country was uneventful. A soldiers' monument was unveiled at Buffalo. In this city the usual meeting was held in Tammany Hall, S. S. Cox, John Kelly, and others making speeches. The bronze copy of Houdon's statue of Washington, erected in Riverside Park by subscriptions of pupils in the public schools, was formally unveiled. The veterans of 1812 had their annual dinner. The New York Society of the Cincinnati held their annual meeting at Delmonico's.

The schedules of U. S. Grant, Ferdinand Ward, U. S. Grant, jr., and James D. Fish, comprising the firm of Grant & Ward, bankers and brokers, who recently made an assignment for the benefit of creditors, were filed on Monday in the Court of Common Pleas of this city. They show as follows: Liabilities, $16,792,647 72; nominal assets, $27,139,098 56; actual assets, $67,174 30.

The inter-collegiate four-oared boat race was won at Saratoga on Monday by the University of Pennsylvania, Cornell second, only two feet behind, Princeton third, Columbia fourth. Bowdoin was out of the race through a mishap.

FOREIGN.

El Hazar, the authoritative Mohammedan university at Cairo, after a secret conclave, has pronounced in favor of El Mahdi's religious claims. El Hazar had hitherto denied El Mahdi's pretensions. This decision, it is believed, will have an important influence on the Senussi and other tribes.

It was rumored on Wednesday that 12,000 Arabs had attacked and captured Debbeh. It is said that 3,000 of the garrison and inhabitants were killed. The Mudir of Dongola and a number of officers have gone in the direction of Debbeh, with what object is not known.

It was reported in London on Friday that letters had been received in Cairo from Khartum stating that the place had been captured during the latter part of May; that there had been no massacre, as most of the Europeans had turned Mohammedans, and that General Gordon was allowed the freedom of the Mahdi's camp at Khartum. Later despatches do not confirm the report fully, although advices from Catholic missionaries favor its truth. Rumors are being circulated in Cairo that toward the end of the Feast of Ramadan there will be a rising in that city. Advices from Berber and Dongola are very conflicting and are mostly rumors. On Friday the Governor of Dongola telegraphed from Debbeh that he had fought a great battle with the rebels, and killed 4,000 of their number, himself losing 2,000 men. The news was not believed. Later on the same day the Governor telegraphed asking for arms, ammunition, and horses.

The British gunboat *Condor* left Suakim for Akik on Sunday to shell the Arabs who are cutting off the water supply of the friendly tribes.

A despatch to the London *Times*, dated Saturday, from Dongola, said: "The Mudir of Dongola has achieved a brilliant victory over the rebels at Debbeh. The enemy was routed with a loss of 2,000 killed. We now consider ourselves saved."

There were rumors in Suakim on Monday that General Gordon had been murdered by his soldiers at Khartum and that the Mahdi held the city.

The latest Sudan rumor is that the troops and population are evacuating Dongola.

The Egyptian Conference will meet again within a week. The financial assistants of the foreign delegates are meanwhile actively engaged in examining the English financial proposals, and the Ambassadors are conferring together.

The London *News* on Thursday said that M. Waddington, the French Ambassador to England, had been summoned to Paris in connection with obstacles said to be in the way of the Egyptian Conference. This may greatly delay a final agreement on the Egyptian question.

In the House of Lords, on Friday, the Deceased Wife's Sister Bill passed its first reading.

In the House of Lords on Tuesday evening Lord Cairns's amendment to the Franchise Bill postponing the extension of the franchise until a redistribution scheme is concluded was adopted by a vote of 205 to 146.

The Pan-Presbyterian Council at Belfast, Ireland, concluded its work at a late hour on Thursday night. Principal Cairns, of Edinburgh, delivered the farewell address. The Council will meet in London in 1888. A Presbyterian reunion was held in Belfast on Friday, when a committee was appointed to effect a union of the Irish and Scotch Presbyterian Churches. President Arthur sent the following reply to a greeting from them: "Coming from a kindred ancestry, the kind greetings of Irish and Scotch assembled at Belfast to-day are especially pleasing and are very cordially reciprocated."

It was reported on Wednesday that France would demand $100,000,000 of China as indemnity for the violation of the Franco-Chinese treaty at Lang-son. The Shanghai correspondent of the London *Times* telegraphed on Thursday as follows: "A war is threatened between France and China. An influential party in China are instigating it. Prominent officials, are resolved to repudiate the recent Franco-Chinese negotiations."

Li Fong Pao, the Chinese Minister in France, had a conference with Prime Minister Ferry on Saturday. He disavowed any hostile intention on the part of China in the affair at Lang-son. That affair, he declared, was entirely without Li Hung Chang's knowledge.

At a recent interview Prime Minister Ferry told Li Fong Pao, the Chinese Minister to France, that he held China directly responsible for the Lang-son affair, and that measures would be taken to obtain prompt redress. Prime Minister Ferry telegraphed on Monday to the French Minister at Pekin, instructing him to demand from China a war indemnity of 250,000,000 francs. He has also telegraphed to Admiral Courbet ordering him to seize the Fou-Tcheou-Fou arsenal as a guarantee for payment of the indemnity.

Advices from Toulon stated that five cases of cholera had been cured there by inhaling pure oxygen. The effect of this is immediate, and consists in restoring warmth to the system and making the pulse normal. Its extended use has not proved very satisfactory. There were rumors on Wednesday of three cholera cases in Paris, but they were not confirmed. Six thousand people have fled from Marseilles. It was believed on Saturday that the cholera had reached its maxium of intensity, but that it will linger until September. Doctor Koch, the German expert, has arrived at Toulon.

There were ten deaths from cholera at Toulon on Monday evening and fourteen at Marseilles. The panic is increasing. The migration from Paris to the seaside is unexampled.

Dr. Koch, on Monday, reported that the cholera in Toulon is Asiatic from the extreme East. He found the same microbes there as were found in Egypt and India. He says: "The cholera will reach Germany. It will go everywhere. Having a centre like Toulon it must spread."

It is currently reported that a meeting will soon take place at Dantzic between the Emperor William of Germany and the Czar of Russia.

The American colony in Berlin celebrated the Fourth of July with a banquet and ball. In Paris the formal presentation of the Bartholdi statue of "Liberty Enlightening the World" by the French Government to the United States took place in the Gauthier workshop. Mr. L. P. Morton, United States Minister to France, received the statue in the name of his Government. Count de Lesseps made a speech full of friendly sentiments toward America.

The Spanish Commissioners have prepared their report on the condition of Cuba, and will soon return to Spain. The report is signed by only three of the five. The plan proposed to relieve Spain from insurrection and bankruptcy in Cuba is that Germany be asked to consent to take the administration of Cuba for twenty-five years, the island remaining nominally Spanish, and that country receiving annually 100,000,000 marks. At the end of the twenty-five years the Spanish people, having lost interest in Cuba, would, it is argued, willingly cede it to the United States for a good round sum. The two other Commissioners will make a minority report. The Spanish Minister at Washington pronounces this story absurd and false.

As a result of the conference held by the Cáceres and Iglesias Commissioners, General Iglesias has resigned the Presidency of Peru, and convoked a general election for President and Vice-President of the Republic, also for Senators and Deputies of the new Congress. General Iglesias has withdrawn his forces from the Provinces and concentrated them at Lima. The Chilians have begun their final evacuation of Peruvian territory. Cáceres remains in possession of the central provinces.

Doctor Cervera, President of the State of Panama, has been impeached by the Superior Court for bribery. The Court named General Ruiz, Second Vice-President, for President. Cervera refused to vacate the office, and was surrounded by 150 armed friends and police. There were some fears of a revolution. Cervera is very unpopular. The Attorney-General on Sunday declared the impeachment null and void, and Cervera was officially gazetted President. The public was not satisfied, and disturbances occurred. The troops in the garrison were under arms all night. On Monday General Ibanez, commander of the garrison, assumed power. Later in the day Doctor Jovan was sworn in as President. Dr. Cervera on Tuesday was conditionally allowed to retain office.

General Francis Edward Todleben, the famous Russian engineer, is dead. He was born in 1818, and was educated at the School of Engineering, at St. Petersburg. In 1853 and 1854 he served with distinction in the campaign on the Danube, and at the outbreak of the Crimean war in the latter year he was ordered to Sebastopol. To his genius in developing the inchoate works at Sebastopol, and in improvising defensive expedients adapted to the peculiar circumstances, is attributed the long successful defence by which the place resisted for 349 days the efforts of the allied armies. As a reward for his services at Sebastopol the young engineer was rapidly promoted from the rank of Colonel to Major-General, and was made General-Adjutant to the Emperor of Russia. In 1869 he attained the rank of General. In 1877 he was the director of the operations against Osman Pasha before Plevna. He was the author of an important work on the defence of Sebastopol.

THE CHICAGO CONVENTION.

THE Chicago Convention assembled at noon on Tuesday, and the indications at this writing are that Governor Cleveland will receive its nomination for the Presidency. His strength increases every hour, according to all accounts, and the agreement of the New York delegation by a nearly unanimous vote to present his name is likely to secure his nomination very early in the balloting. There is no other candidate who has any following worth mentioning, except Bayard, and he is practically barred out of the Convention now, as he was in 1876 and in 1880, by the almost unanimous belief of the delegates that his nomination would be unwise because of his Southern citizenship and sympathies. With Bayard out of the way, no other rival candidate seems to have strength enough to give his friends even a hope of success.

The situation is very similar to that in St. Louis in 1876 when Mr. Tilden was nominated. Then as now the demand for one candidate was so strong that all other candidates were left with only a handful of supporters. As we have previously pointed out, the opposition to Tilden in his own party was much more formidable than the present opposition to Cleveland, and was based on precisely the same ground—inability to carry New York. In spite of it Tilden was nominated and did carry New York. He entered the Convention with about the same following which Cleveland is believed to have now. The whole number of delegates was then 738, and 492 were necessary for a nomination. Six candidates were voted for on the first ballot. Tilden received 417 votes, Hendricks 140, Hancock 75, William Allen 56, Bayard 33, and Joel Parker 18. Tilden was nominated on the second ballot, but not until changes were made in the vote as first cast. When the roll for the second ballot was ended he lacked 25 votes of the necessary two-thirds, but before the result was announced Iowa changed her vote, adding four to his column. Illinois imitated her by adding two. This started a stampede, and when the vote was finally announced his total was 535. But the other candidates were not deserted. Hendricks had 60; Hancock 59; Allen 54; Bayard 11; Parker 18; Thurman 7. The nomination was made unanimous, but it was by no means secured without hard work.

In 1880 there were nine candidates who received votes on the first ballot. No one of them had a commanding lead. Hancock had the largest number, 171, but that was less than a quarter of the whole Convention, and 321 less than two-thirds. The other candidates were supported as follows: Bayard, 153½; Payne, 81; Thurman, 68½; Field, 65; Morrison, 62; Hendricks, 50½; Tilden, 38; Seymour, 8; scattering, 31. On that ballot New York cast 70 votes for Payne. When the result was announced an adjournment was made till the next day. When the Convention reassembled, a statement was made from the platform that the New York delegation had dropped Mr. Payne and would cast its solid vote for Mr. Randall. It was hoped that this would secure his nomination, but the division of the Pennsylvania delegation between its two favorite sons, Hancock 32 and Randall 25, made such a result impossible, even if Randall had had a much larger following than he did. The second ballot resulted in much the same way as that of 1876. At first there was no nomination. Hancock had 319, Randall 129½, Bayard 113, Field 65½, Thurman 50, Hendricks 31, English 19, Tilden 6, scattering 3. Before the result was announced, Wisconsin changed her 20 votes to Hancock, New Jersey followed suit, and when Pennsylvania cast hers solid for him the stampede was started, and when the count was finally completed Hancock had 705 votes—nearly the whole Convention—Hendricks holding 30, Bayard 2, and Tilden 1. Hancock was nominated much more nearly by acclamation than Tilden was, and his selection was greeted with much greater unanimity and enthusiasm by his party. There was no split anywhere, and Tammany formally pledged its support. Yet Tilden carried New York by over 32,000 majority and Hancock lost it by 21,000 votes.

The platform of the Convention of 1876 was a very long and elaborate document, and contained many declarations which are of interest now. Reform was its permeating sentiment, and a great deal of space was devoted to specifying ways by which it could be brought about. The tariff was denounced as a "masterpiece of injustice, inequality, and false pretence," yielding a "dwindling, not a yearly rising revenue," and impoverishing many industries to subsidize a few. A demand was made that "all custom-house taxation shall be only for revenue." Reform was called for "to correct the errors of treaties and diplomacy which have stripped our fellow-citizens of foreign birth and kindred race, recrossing the Atlantic, of the shield of American citizenship and have exposed our brethren of the Pacific coast to the incursions of a race not sprung from the same great parent stock." This seems to have been the origin of that "American policy" which is now the great issue of the Blaine campaign. There was a direct allusion to Blaine's public services in the same platform, when toward the close a stirring appeal for a change of governing parties was opened with the remark that the "annals of this Republic show a late Speaker of the House of Representatives marketing his rulings as a presiding officer." That would be a forcible plank for this year's platform.

MR. BREWSTER'S TESTIMONY.

THE testimony of Mr. Brewster, the Attorney-General, before the House Committee, touching the conduct of the Star-route trials, is another most interesting chapter in the history of this extraordinary case. The principal figure in Mr. Brewster's narrative is, as might have been expected, again Colonel George Bliss, one of the counsel for the prosecution, who was brought on from New York at enormous expense—something like $50,000 in all. Mr. Brewster says that Bliss's bargain for $100 or $150 a day—we forget now which it was—was not exorbitant if the trial had only lasted as long as it was expected to last in the beginning. But it lasted two or three times as long, and all attempts to get Bliss to make a reduction in his fees in consideration of this fact were useless. On many other matters he displayed a spirit of concession, but on this he was firm as adamant. Had he resisted the attempts of Monsignor Capel to convert him to the Catholic Church with half the energy with which he resisted the Attorney-General's attempts to get him to cut down his charges, we feel sure he would be still at this hour one of the brightest ornaments of Protestantism.

But all this is an old story. What was really new in Mr. Brewster's testimony was a letter he received from Mr. Bliss, advising him to "consult Secretary Chandler on the political view of it"—*i. e.*, as to the using of Price as a witness. Walsh, who was a distrusted Government witness, had made the charge that a "member of the Cabinet had a conference with Mr. Bliss." This Mr. Bliss stoutly denied. Secretary Chandler, although no name was given, also volunteered a stout denial of it, and Mr. Brewster cautioned him about allowing Walsh, whom he characterized as "a shameless kind of person," to become acquainted with the correspondence. Nevertheless, Mr. Brewster subsequently got a letter from Walsh "showing knowledge of the letters to Secretary Chandler and from Mr. Bliss." Of course the only construction which one can put on this is that both Bliss and Chandler were really in communication with Walsh, and it appeared plainly enough from Bliss's letter to Mr. Brewster that he, for some reason or other, did not want to have Price examined. The inference is, therefore, very strong that when he advised consulting with Secretary Chandler he knew what kind of advice the Secretary was likely to give. No wonder that Mr. Brewster "was not pleased" with the letter and made no reply to it. To have consulted with anybody as to the political bearings of any step in the prosecution, with the view of allowing his official action to be influenced thereby, would have been a violation of his sworn duty as a prosecuting officer, and it would probably have been difficult to find in the United States a person whom it would have been less proper to consult for any such purpose than Secretary Chandler. It must be added that, for reasons very similar, as now appears plainly enough—every day more plainly—the employment of Bliss in any case which had political bearings, or in which politicians were likely to take an interest, was also very ill-advised. He and Chandler are very striking and instructive products of that system of party warfare known as the spoils system. The system cannot work long, even in the freest and most publicly conducted government, without producing the class of politicians to which they both belong, to whom the party is not only far more than the Government, but something which it is well to allow knaves to serve at the public expense.

There has been no more striking and scandalous failure of justice in our day than the break-down of the prosecution in the Star-route cases. The further we get away from it, the worse and the more extraordinary it will look. The fact that high officers of the Government should have been found engaged

in a conspiracy with outside rogues to swindle the Treasury is bad enough, but it is not an unprecedented thing. The inability of the Government to bring them to justice in its own capital, or to find competent lawyers who could be trusted to prosecute them in dead earnest is, we believe, without example. Bliss, who was brought on from New York to bear the brunt of the work, is able, acute, and industrious, but he is so saturated with what he calls "politics" that it was useless to expect him to push through a six months' trial, no matter how highly paid he was, without engaging in an occasional bit of political intrigue, and having an occasional spree in some kind of secret crookedness. He never passed six months before without this sort of diversion, and probably never concluded a prosecution which had any political bearing whatever, without seeing what he could get out of it for the party or himself as an active party manager. He is really not to blame for the whole affair; it is the "system," as people say now, which is at fault. The "system" produced him, and to prevent the multiplication of his kind it is the system which must be reformed.

THE VETO OF THE PORTER BILL.

THE President's veto of the bill restoring Fitz John Porter to the army, as well as the opinion of the Attorney-General, on which it is based, carefully avoids going into the merits of the case. The terms of the bill are as follows: "That the President be and is hereby authorized to nominate and by and with the advice and consent of the Senate to appoint Fitz-John Porter, late a Major-General United States Volunteers, and Brevet-Brigadier General and Colonel in the army, to the position of Colonel in the army of the United States, of the same grade held by him at the time of his dismissal from the army by sentence of court-martial, promulgated January 27, 1863," etc.

The President's first objection to this is that it creates a new office to be filled only by the appointment of a particular person designated in the act. This, he maintains, is either "unnecessary or ineffective," or else it involves "an encroachment by the legislative branch of the Government on the authority of the Executive." "As Congress has no power under the Constitution to nominate and appoint an officer, and cannot lawfully impose on the President the duty of nominating and appointing to office any particular individual of its own selection, this bill, if it can fairly be construed as requiring the President to make the nomination, and by and with the advice and consent of the Senate the appointment which it authorizes, is in manifest violation of the Constitution. If such be not a just interpretation, it must be regarded as a mere enactment of advice and counsel, which lacks in the very nature of things the force of positive law, and can serve no useful purpose ont he statute books."

Neither the President nor the Attorney-General points out the precise clause of the Constitution which the act violates; and the argument as to the violation of the Constitution appears to us to be somewhat sophistical. The act of itself accomplishes nothing; it merely *authorizes* the President, if he sees fit, to send in a particular name to the Senate for a particular purpose, and gives the Senate power, if it sees fit, to refuse the appointment. The bill does not bind him in any way. Had he signed it and new and important evidence against General Porter been brought subsequently to his knowledge, would he not have been obliged to refuse to act under it? Acts directing an executive officer to perform a duty almost invariably use some mandatory words like "shall" or "is directed to," and the object of Congress in simply giving the President authority in the premises was probably to obviate the very objections he now raises.

His next reason is that the judgment of the court-martial which cashiered Porter was, like any final judgment of a court, conclusive. There is no doubt about this, and nobody has ever questioned it. But, he adds, "It follows, accordingly, that when a lawfully constituted court-martial has duly declared its findings and its sentence, and the same have been duly approved, neither the President nor the Congress has any power to set them aside." This is going, to say the least, very far. If a sentence of a court-martial is absolutely irreversible, it would have to be carried out, even if it involved the execution of a perfectly innocent man, no matter what evidence might come to the knowledge of the Government. Finally,

"a conclusion at variance with these findings has been reached after investigation by a board consisting of three officers of the army. This board was not created in pursuance of any statutory authority, and was powerless to compel the attendance of witnesses or to pronounce a judgment which could be lawfully enforced. The officers who composed it, in their report to the Secretary of War, dated March 19, 1879, state that in their opinion, 'justice requires . . . such action as may be necessary to annul and set aside the findings and sentence of the court-martial in the case of Major-Gen. Fitz-John Porter, and to restore him to the positions of which their sentence deprived him; such restoration to take effect from the date of his dismissal from the service.' The provisions of the bill now under consideration are avowedly based on the assumption that the findings of the court-martial have been discovered to be erroneous. But it will be borne in mind that the investigation which is claimed to have resulted in this discovery was made many years after the event to which these findings related, and under circumstances that made it impossible to reproduce the evidence on which they were based. It seems to me that the proposed legislation would establish a dangerous precedent, calculated to imperil in no small measure the binding force and effect of the judgments of various tribunals established under our Constitution and laws."

It is very true that as a general rule it would be dangerous to reopen inquiries of this sort; but the argument arising from the length of time applies to one side as well as the other. If it is extremely difficult after this lapse of time to reproduce the evidence for the Government, it is equally difficult for General Porter to reproduce his evidence; and this seems to be no argument for perpetuating an alleged injustice. The main question is whether, taking this and all other difficulties into consideration, it is apparent that an injustice has been done. This was the question before the Board of Inquiry, and they answered it in the affirmative. Under these circumstances was not the President bound to take it as proved that the conclusions of the Board were right?

But curiously enough, the President in his concluding paragraph takes all the force out of what he says on the subject of the Advisory Board, by reminding Congress that he has already pardoned General Porter:

"I have already, in the exercise of the pardoning power with which the President is vested, remitted the continuing penalty that made it impossible for Fitz-John Porter to hold an office of trust or profit under the Government of the United States. But I am unwilling to give my sanction to any legislation which shall practically annul and set at naught the solemn and deliberate conclusions of the tribunal by which he was convicted, and of the President by whom its findings were examined and approved."

The distinction between giving sanction to "legislation" which shall set at naught these solemn and deliberate conclusions, and setting at naught one of the most solemn of them all—the determination of the penalty—by the exercise of the pardoning power, seems very slight. If the conclusions of the court-martial were sound, General Porter was not excessively punished. He was court-martialled for betraying an army on the eve of battle. The only reason for pardoning him was the findings of the Advisory Board that he never did anything of this kind, and it is these very findings that the President now slights.

THE POOR EGYPTIANS.

WHAT the Conference over Egyptian affairs, which is to resume its sittings in a few days, and is now the most prominent topic of European politics, has really to consider is whether the interest on the Egyptian debt is to be reduced or not. This is all the French care about, and they make no secret of it. If the incomes of the French creditors are not reduced, they do not much mind how long the British occupation lasts or what character it takes on. The plan of a joint occupation they acknowledge to be no longer possible. England has got Egypt and may keep it, but only on condition that she shall make the Egyptians pay up.

Can the Egyptians pay up? The French financiers, led by M. Leroy-Beaulieu, insist with much angry vehemence that they can, and must. The debt charges amount in all to about $22,000,000 annually, of which a portion only, say $15,000,000, is raised by taxation. The rest comes from territorial domains formerly the private property of the Khedive, but now the property of the state, and from the receipts of state railroads. Under "the Joint Control," composed of English and French financiers, this sum was not only raised, but there was a handsome surplus, and the Englishmen who examined the Egyptian resources, and who included such men as Rivers Wilson and Goschen, reported that they were amply sufficient to meet all the burdens imposed on the people. But it was raised by a rigidity in tax collecting and a liberality in the use of the cowhide on the taxpayer, and

by a sternness of control over the native officials, which finally resulted in Arabi Pasha's rebellion and the bombardment of Alexandria. The truth is that the real limit of national resources, in the matter of taxpaying, as we all know, is not to be found by footing up the products of the soil and the number of the people, but by finding out how much the people are willing to pay under such methods of compulsion as they are used to. The paying capacity of all civilized countries is measured by their creditors in this way. When the United States or any State of the Union owes money, the value of the debt is got at not by an examination of the natural wealth of the country, but by finding out what portion of their substance the people are likely to be willing to surrender to their accustomed tax gatherers for the purpose of paying interest on loans. The value of the Egyptian debt has, however, been computed on the theory that the state of mind of the taxpayer was not an element which needed to be taken into account at all, and that taxes could be levied on the basis of the gross product of the soil.

After the defeat of Arabi the English took all but full control of the finances, and have been gradually ousting the native officials from the higher places, and putting Englishmen in their places. They have, too, been honestly trying to improve the administration and to put a stop to cruel and unusual modes of extorting taxes from the peasantry. They have consequently greatly reduced the powers of the local mudirs or governors, of the village sheikhs, and of the police. They have prohibited the use of the *kurbash* or cowhide on the delinquent taxpayer's person, and have in short been trying to civilize the Egyptian financial administration from top to bottom. The result is, it is now announced that the Egyptian finances are greatly embarrassed. The money does not come in as of old. The provinces are overrun by brigands, and the peasantry are waiting for the Mahdi. In fact, under the new English system Egypt cannot meet her liabilities. The English administrators are consequently disposed to ask for a further reduction in the interest on the debt, and as the bondholders are largely Frenchmen, the suggestion is met in Paris with the greatest bitterness. Frenchmen hold, it is estimated, about $160,000,000 of the Egyptian debt, and as they ask no favor from their own creditors, are not disposed to accord any to the Egyptians, and are apparently quite ready, if necessary, to restore the old régime and collect the arrears by copious applications of a stout whip to the prostrate taxpayer's back. They do not put it exactly in this way, of course. They propose that England shall relinquish the $1,000,000 a year she receives as interest on the money Disraeli put some years ago into the Khedive's Suez Canal shares, and that England and France jointly shall guarantee a handsome loan at 3½ per cent., with which the existing floating debt could be paid off, and also what is called "the privileged debt," which comprises about half the whole, and is so called because the interest of 5 per cent. is secured on pledges of specified portions of the revenue. In this way a considerable reduction in the debt charge would be made, and the most pressing obligations got rid of altogether, and the French bondholders would have their bonds all but guaranteed by one of the best securities in the world. What the Egyptians think about all this, nobody knows.

GEORGE SAND'S CORRESPONDENCE.

PARIS, June 19.

THE fifth volume of the correspondence of Mme. George Sand, which has just appeared, begins in the year 1864. We find her at that date at Nohant, ill, but working nevertheless as usual, very busy with her children and grandchildren, very much occupied with the peasants of her neighborhood, and paying their doctor's and apothecary's bills when one of them is sick. "The peasant here," she writes to Rodrigues, a Saint-Simonian friend, "is not in the lowest misery: he has a house, a little field, and his day's wages; but if he falls ill he is lost. . . . There is not the slightest industry in our country districts. The communal funds pay for the remedies and the doctors only when the paupers are in question, and they are not numerous. But the peasants who are comfortable, as we say, are always on the edge of poverty if I don't interfere; and some respectable peasants never ask for any help, and only receive it in secret. Our provincial bourgeois are not bad people: they render services, sometimes they give their time; but to loose the purse-strings is a very hard thing in our Berry, and when one has given ten sous he takes a long breath. The provinces of our central France are truly abandoned: it is the country of sleep and of death." Mme Sand was very generous; she did not know how to keep money. She says to Rodrigues in 1864 that she has made about 500,000 francs by her industry, and that it has all been given away to her children and to the poor.

There is much talk presently about the relations of Prince Napoleon and his son Victor. Here is an account of Mme. Sand's first interview with this young Prince. She writes to her son Maurice (in 1864): "I went to see Prince Napoleon yesterday morning, and asked to see his son. The child arrived, with a lady in a little Scotch woollen gown. I had hardly given a look at her, when I saw that it was the Princess Clotilde in person who had herself brought me the child very amiably. He is very handsome, with a timid and melancholy air. He has more of his mother than of his father. He is very nice, and as obedient as a girl." She was then in Paris, for the representation of her piece "Mademoiselle La Quintinie" at the Odéon. The Emperor and the Empress, Princess Mathilde, Prince Napoleon, were at the first representation: "all Paris" was there. The Quartier Latin was much excited, and after the representation the students escorted Mme. Sand, screaming, "*Vive* George Sand! down with the Clericals!" The play was directed against clericalism and the Jesuits. It made much noise then, but is now completely forgotten; political allusions made all its success, and this sort of success is ephemeral. Mme. Sand paid some debts with the proceeds of the piece. She left Nohant, where her style of life was too expensive, and established herself very modestly at Palaiseau, a village in Seine-et-Oise, near Paris. Her son Maurice lost a young child; it was a great blow to her: "That child was all my dream, all my fortune. . . . I cry in walking, in sleeping, in working." Her kindness to her son Maurice is truly touching: she had given him Nohant and wished him to reside there, while she lived more than modestly at Palaiseau, working from morning to night. I find a few lines on the "woman's question" in one of her letters written at Palaiseau. "I think as you do," she says to M. de Pompéry, "on the part which reason and nature impose on woman. The women who pretend that they would have time to be deputies and to educate their children have not educated them themselves: otherwise, they would know that it is impossible. Many excellent women, good mothers besides, are obliged, for the sake of their work, to confide their little ones to strangers; but this is a vice of a social state which at every moment misapprehends and contradicts nature. A woman may well, at a given time, by a sort of inspiration, fill a social and political part; but she cannot permanently accept a function which deprives her of her natural mission, which is domestic love. People have often said that I am backward in my ideal of progress, and it is quite true that in the matter of progress imagination can admit everything; but will the heart ever change? I do not think so. I see woman forever the slave of her own heart. I have often written this, and I persist in thinking it."

Mme. Sand had become if not reconciled at least resigned to the Imperial system; she felt almost enthusiasm for Prince Napoleon, and for his ideas; she had no antipathy toward the Emperor; and when Napoleon III. published his 'Life of Cæsar,' she reviewed the book in a provincial paper; in a letter she said: "The book will have no success. It shows a cold, concise talent, without any real depth, and, in a literary sense, it can only interest those of the craft; still all are not like myself, who am a little pantheistic in art, and who like all possible styles, the exuberant ones and those which are not exuberant at all. . . . As for the great public, it cares not for error or truth, it wants to be astonished and amused. It will find nothing spicy enough in the Imperial book; it will not buy it." The prophecy was just; many copies were distributed by the Emperor himself; and I believe that the remaining copies are still at the publishers'. "Fortunately," said Mme. Sand, "the publishers had nothing to pay to the author; they would have made a very bad bargain."

Mme. Sand had a great friendship for Flaubert. I have spoken lately of the letters addressed to her by the author of 'Madame Bovary'; we have now the answers, and it must be said that many of them are charming. They both were much enamored with country scenes, and in pictures of nature Mme. Sand was truly inimitable. On her return from Croisset, the country place of Flaubert, near Rouen, Mme. Sand writes to him from Palaiseau:

"Here I am all alone in my little house; meadows, woods, apple trees are to be found here as in Normandy; no great river, with its shrieking steam whistles and its infernal towing chain; a little rivulet which goes silently under the willows; a stillness—ah, but it seems as if one were in the depths of a virgin forest; nothing speaks except the little fount which jets incessant diamonds in the moonlight. The flies which were asleep in the corners of my room wake up, warmed by my fire. They come near my lamp, they are seized with a mad gayety, they buzz, they jump, they laugh; but the hour of death has come, and, in the midst of the dance, they fall stone-dead. It is over—good-by to the ballet."

Her advice to Flaubert is always good; she comforts him, she cheers him up, she is full of a vigorous and healthy sympathy. Alexandre Dumas also asks her often for advice, and she speaks to him as she would to a son. It is curious, is it not, to see a woman becoming a sort of literary director of two men, and men of great merit? It is evident that she had more affection for Flaubert; she treats him as she would a great child. "At a distance," she writes, "I can tell you how much I love you without fear *de ra-*

bâcher. You are one of the few who have remained impressionable, sincere, in love with art, not corrupted by ambition, not blinded by success. One day she writes to him: "Sainte-Beuve, though he loves you, maintains that you are horribly vicious. Perhaps he sees you with dirty eyes, like a certain botanist who says that a certain flower is of a dirty yellow. The observation shocked me so much that I wrote on the margin of his book: 'It is you who have dirty eyes.'"

Flaubert was always repeating the famous "Odi profanum vulgus" of Horace. He affected to despise popularity. Mme. Sand told him on this subject: "I have heard you say, 'I only write for ten or twelve people.' We say in conversation many things which are the result of a momentary impression; but you were not the only one who said this: it was the opinion of the Monday [this is an allusion to the Monday dinners of Flaubert, Sainte-Beuve, Taine, etc.]. I protested inwardly. The twelve persons for whom you claim to write are as good as you, or better than you. No, you ought to write for all the world, for all the uninitiated. If you are not understood, you must resign yourself and go to work again; if you are understood, you must rejoice and continue. In that is all the secret of our persevering work, and of our love of art. What is art without hearts and minds that can receive it? a sun which would send forth no rays, and would give life to nothing." These few lines, written, as we see, *au courant de la plume*, seem to me a masterpiece of criticism. The writer or the artist who pretends to work for a dozen people only makes a confession of weakness and of vanity.

In 1867 there were some constitutional changes in France, and the Empire tried or pretended to make itself more liberal. Mme. Sand was no more what she had once been. She wrote to Alexandre Dumas: "What do you think of this crowning of the Napoleonic edifice? It seems to me to be a vain attempt. People know so little how to use liberty in France, that they will hasten to make an ill use of the little liberty which is given to us; then we shall be told, 'You see, it is your fault.' . . . It is perhaps too late; you cannot make citizens with a stroke of the pen, after you have so well corrupted them during fifteen years." These were almost prophetic words; the Empire could not, if it had really wished, change itself into a constitutional and liberal régime.

Though she always worked hard, Mme. Sand was always poor. "So you have money difficulties," she says to Flaubert. "I don't know what it is, since I have nothing more in the world. [She had disposed of all her land for her children.] I live from day to day, like a workingman; when I shall no more be able to do my day's work, I shall be shipped to the other world, and then I shall need nothing more." She really felt the want of money only when she was seized with a desire to make a journey, and could not do it. She had returned to Nohant, but she was now staying with her son. She felt always happier in the country than in Paris: "I am a peasant, physically and morally. Born in the country, I never could change, and when I was younger the literary world became impossible to me. I felt in it as on a sea; I lost all personality, and had an immense desire to find myself alone or among primitive people. Our peasants at that time were not very different from savages; now they are more civilized, and I am less savage. Never mind. I have still much pleasure in seeing people without *esprit*, who can be understood without effort and heard without astonishment." She became more and more foreign to the affairs of the political world. "All revolutions," said she, "are brutal and irrational. I don't know what has become of the republican ideas. I have lost the thread of this labyrinth of dreams, for many years. My ideal will always be 'liberty, equality, fraternity.' But when, how, by whom will it be somewhat realized? I don't know. What I know is that one hears coming out from everything—from the earth and from the trees, from the houses and from the clouds—the cry, 'Enough of this!'"

This was written in 1868, two years before the war of 1870, two years before the fall of the Empire. This fifth volume brings us to the very eve of a most momentous revolution. It is full of fine pages; the next one will be even more interesting. Mme. Sand saw the clouds gathering, but nobody could say when and where the storm would break.

GERMANY REVISITED.

BERLIN, June, 1884.

I HAVE often tried to account for the charm which Germany possesses for English-speaking travellers, but can discover no better explanation than the presence of that all-pervading quality which the natives call *Gemüthlichkeit*, and which should not be disparaged because they attach to it a disproportionate importance. I have heard it maintained that the filth and beggars which are an inevitable part of the foreground of an Italian landscape are essential to its picturesqueness; it may be so, but I am inclined to regard this as a matter of taste, since I, at least, prefer landscapes in which these features are absent. In France, however, we find the same neatness, thrift, and honesty; the French cities are at least equally interesting with the German; French men and women are brighter and have better manners, and there are parts of France fully as beautiful as any parts of Germany. It is true, facilities for travel are much less frequently found, but this is an effect rather than a cause, since railways and good inns follow, rather than lead, the pioneers of travel. *Gemüthlichkeit* is untranslatable, but the idea may, perhaps, be conveyed by saying that the stranger feels more at home in Germany than elsewhere, and this in spite of the many and serious defects of German social life, which, in my opinion, are not exaggerated in such books as 'German Home Life' and 'Saxon Studies.' German literature, again, is far more local in its character than is French, or, for that matter, English; and is more or less familiar to us (though often filtered into very prosy English) from our youth.

When steamboats were first introduced upon the Rhine, a British traveller complained that the country, already over-travelled, was now sure to be rendered unendurable to the persons "of taste and cultivation." But though the steamers have increased a hundred-fold in number and in size, while passenger-trains rumble by hourly on either side, though Byron's castled crags are all tunnelled, and Paul Fleming would be far less at home when he stopped for the night than was Rip van Winkle on *his* return, the river is as beautiful as ever, though I fear the appreciation of it is hardly as great as in old days, since the vast majority are content with the very imperfect views obtained from the deck of the steamer or from the saloon-cars of the railways. The villages are not materially changed from the time when Birket Foster drew the illustrations to 'Hyperion,' but the red-tiled roofs are rapidly yielding to the soberer slates, and the restored castles are not, perhaps, quite so picturesque as were the ruins. To my mind, the side valleys of the Rhine, such as the Mosel and the Lahn, are more attractive than the main river. Not that anything can "spoil" the Rhine, but it sometimes presents the appearance of a fine animal caged and exhibited at so much a head. In Switzerland, everything is on so grand a scale that the inclined railway on the Rigi, for instance, is overlooked; but a similar triumph of engineering is painfully conspicuous on the Drachenfels, and I found the rails being laid for another to the fine Germania monument on the Niederwald. The ruins, too, are generally more interesting—the French having here been less careful, in 1689 and 1790, to destroy everything thoroughly—and the heavily wooded, closely enveloping heights, especially of the Lahn, through which I have just come, being more beautiful than the vine-clad banks of the greater river. I may here remark, in passing, that those who wish to see the castle of Heidelberg in the character which it has borne for two hundred years, of the most extensive and picturesque ruin in Europe, would better hurry, as on this visit I found the Renaissance wing covered with scaffolding to accommodate the architects who are figuring the cost of a restoration.

I passed a week at Ems, which, I believe, is medicinally the most important of German baths, but which, though only half an hour distant from the Rhine, is little visited by Americans. It is none the less a charming spot, with excellent hotels and very reasonable charges. Its immediate surroundings are prettier than those of Baden, and the many historically-interesting and exceedingly picturesque old towns of the Lahn Valley, such as Nassau and Limburg, are within easy reach. Till 1872 there were gaming-tables as at Baden, and the really fine structure called the Kursaal is a reminder of that wicked period. Contrary to expectation, Baden is a more popular resort than it was in the heyday of gambling; but the play was there a far more important feature in the life of the place than it was at Ems, and the scent of the roses is still very perceptible in the garish and gaudy decorations of the Kursaal, offensive originally from their loudness, and now additionally ugly from their shabbiness. I think the beauty of Baden has been, relatively at least, overrated. It is pretty, and the drives and walks in the neighborhood are charming; yet it is equalled, if not excelled, in these respects by a dozen other places in the Schwarzwald, while it has the (to me) considerable disadvantage of being itself a large town, while at Ems the visitor sees nothing but a river, lined on either side with hotels and handsome villas, relieved by the high, forest-covered hills usual in German scenery. Yet Ems, no more than Baden, is a typical German "Sommerfrische." I have had considerable experience of these resorts, all the way from famous places like those just mentioned to (outside of Germany) absolutely unknown spots in Thüringen and Schlesien. The most perfect specimen I have found is Badenweiler, a little cluster of hotels and villas just off the railway midway between Freiburg and Basel. It is on high ground, just on the edge of the Black Forest, and the windows of all the houses look across the wide and fertile valley of the upper Rhine to "the blue Alsatian mountains" familiar in popular German poetry. Yet the situation, though good, is not exceptionally so; the attraction is largely due to the skill with which the natural advantages are turned to the best account. To begin with, there are the usual constituents of a German watering place—hills, forest, a ruined castle, a mineral spring ("with Roman remains"), a Kursaal, and an orchestra. The last named may be termed accidental or immaterial advantages; the real difference between this and the American resort of the same rank consists in the manner and degree in which, both literally and figuratively, the way has been smoothed for the

visitor. As at Baden, and indeed everywhere else in this part of Germany, one can walk many miles through the forest over foot-paths as carefully graded and bridged as any highway, with guideboards at every crossing, and with a frequent succession of vistas so contrived that, though the view is the same, the effect is ever different. From whatever direction one returns to the village, one sees no ugly outbuildings, or back yards, or straight, shadeless street, but everywhere the most perfect neatness, and the exquisite foliage, not only of the trees but of the ever-present holly and ivy.

I have been curious to see whether the impressions of German life with which I left the country would be found lasting or the contrary on revisiting it. I can't say that I see anything in a new light, but I may be allowed, in closing, to mention a subject whose importance, indeed, we Americans admit, but which we are apt to judge, I think, one-sidedly. This is the importance in Germany, and, indeed, in all continental countries, of the army. Our economists, as well as our Jefferson Bricks, are never tired of telling us how wretched in this respect are the victims of European tyranny. They point out how the elders are ground down with taxation, and the younger men forced to waste three of their best years in idleness. In the opinions of the economists at least, I think, a stay in Germany would cause some change, in view of the advantages derived by the common people from their military training. Compare, for instance, a dirty, clumsy, stupid peasant lad with a soldier a year or two older, and mark the difference. I do not say that garrison life can make the short tall, or the heavy-witted bright, but physically it teaches them cleanliness, order, and the use of their limbs; and morally it lifts them out of the primitive ruts, gives them a wider mental horizon. And the best of it is, that, so far as I can learn, neither they nor the middle class (who practically are required to serve only one year) feel that they undergo any hardship. I do not find, for instance, that the enormous emigration is at all caused by bad government, but solely by the same causes which have driven to the West the agricultural youth of New England—the redundancy of population and the opportunity of getting a better living.

W. M. G.

Correspondence.

THE EIGHT-HOUR LAW AND THE REPUBLICAN PLATFORM.

To the Editor of The Nation:

Sir: I read the *Nation* with great satisfaction because it intends to state things as they are. But the statement of the first article on page 540, concerning the eight-hour law, is entirely untrue. In no way does it "forbid anybody to work more than eight hours." It simply limits work to be done for the United States Government to eight hours, and it is just as beneficent for them as it is for other employees of the United States to work but six hours. It would be well to understand the "short hour" movement at least, for if anything was done with a true-hearted purpose that law was so passed, and such will its effect be. I send you this note merely as a protest, being satisfied that nothing I can write for print would find any place in your columns. Jesse H. Jones.

North Abingdon, Mass., July 1, 1884.

[Mr. Jones evidently misconceives us. What we said was this:

"Labor is to be made artificially scarcer in two ways: first, by excluding foreign laborers, and second, by forbidding anybody to work more than eight hours. *If the enforcement of the eight-hour law does not mean this it is a sham.* Probably the framers of the resolution considered it a sham and adopted it knowing that it could not be enforced."

We were perfectly well aware that "the enforcement of the eight-hour law" taken by itself means simply knocking off work in the Government shops at the end of eight hours, and paying the price of ten hours' labor for it. But this we say is a sham to everybody except the handful of men in the Government employ, and is a fraud upon the taxpayers besides. It was intended to hold out a delusive expectation to laborers generally, and not to a small aristocracy of laborers in the Government workshops, that the Republican party had some mysterious and occult power to shorten the hours of labor without shortening the earnings of laborers, and would exercise that power. If the phrase "forbidding anybody to work more than eight hours" is inapt, we will change it to the form here indicated, which does not alter the character of the platform as "sham," and does not relieve it of its communistic taint.—Ed. Nation.]

STUDENTS OF THE UNIVERSITY OF WISCONSIN.

To the Editor of The Nation:

Sir: The following slip, from a New York paper, has just been sent to me: "Dr. Bascom, the President of the Wisconsin State University, gives a terrible report about that institution. He declares that a large number of the young men sent to Madison become dissipated and are ruined. Rowdyism and drunkenness prevail among the students at a rate that is alarming." I do not know from what paper it was taken, but it was probably copied in good faith, and with a recklessness as to the authority for its statements which deserves censure. As for the person who wrote the paragraph, he knew—or had the means of knowing—that it was a lie. So far is it from the truth that President Bascom never loses an opportunity of saying that our students are an exceptionally well-behaved and orderly body of young men and women.

The facts in the case are as follows: An organization known as the Law and Order League has for some months been engaged—and in the issue very successfully—in endeavoring to procure the enforcement of the provisions of the excise law regulating the saloons, which were constantly and openly violated. In support of this, and especially in view of the law which forbids the sale of liquor to minors, Dr. Bascom, on the 28th of March last, addressed a letter to the *Wisconsin State Journal*, from which I quote all the passages upon which the above-quoted scandal is based. The letter is too long to give in full. The passages are as follows: "Madison is not as safe a place as it might readily be, as it ought to be, for young men." "To one-half or two-thirds of the students of the University it is a matter of no moment that they are met at every turn by saloons that entirely disregard the laws which were made as safeguards to their years of inexperience. To another portion it is a fact of fatal significance." "In many cases the young men in attendance at the University are injured; in some cases they are ruined." "The State pays large sums of money to sustain the University. The city of Madison, by the open and constant violation of law, misleads a portion of these students, educated at the public expense, and not only baffles so far the generosity of the State, but puts in its place a most evil and disgraceful result." "Certainly the city of Madison ought not to put in their way unnecessary and illegal temptations, nor ought it to be indifferent to the fact that this thing is habitually done, and results from time to time in the ruin of young men sent here to be educated. There are some who, through their own fault and our fault, have occasion to curse the hour in which they saw the beautiful city of Madison." It is only fair to add the following extract: "The students have rarely given any occasion for criticism."

Is it easy to believe that out of these expressions has grown the outrageous scandal quoted above? William F. Allen,

Professor in the University of Wisconsin.

Madison, July 3.

[We believe there is little doubt that the construction put on Dr. Bascom's letter originated with Keyes, the Wisconsin "boss," who will rule the State as a Blaine man, if his chief be elected. Keyes, who is a profane and ignorant blatherskite, was appointed one of the Regents of the University by a Republican Governor, with the almost avowed object of "getting even" with the President, and having him removed from office—an extraordinary thing, but one more illustration of the state of things in the Republican party, which has produced the Blaine nomination, and made Elkins and Chaffee the leading managers of his canvass.—Ed. Nation.]

ARCHÆOLOGY AND THE TURKISH OFFICIALS.

To the Editor of The Nation:

Sir: I wish to add a few brief remarks to the sharp and able paragraph in your number of May 29, relating to the conduct of Turkish officials in the partition of archæological discoveries made at Assos. No later than June, 1883, having been directly informed by Baltazzi Bey, commissary to the Turkish Government, of the arrangement agreed upon between himself and the American delegates, I immediately wrote in the *Revue Archéologique* (1883, ii., p. 263) to protest against the terms of that arrangement, and insist upon the highly deplorable results which it involved for archæology at large. My chief theme was the following, which I can do no better than to repeat here. The excavations at Assos were begun with a firman, issued at a time when the Turkish law about antiquities, promulgated in 1874, was still in vigor. Now, that law, the French text of which may be found in the *Ottoman Codes* of Nicolaïdes, expressly specifies that *indivisible discoveries shall not be divided, but valued*, and that the Porte will accept for its share two-thirds of the entire estimate. Again, the archaic frieze of the Doric temple in Assos, an important part of which was found by the American mission, must certainly be styled *indivisible;* and the best proof that the Turkish Government understands a frieze to form an indivisible whole, is that M. Benndorf was allowed, in 1882, to carry away the entire series of reliefs from the Mausoleum of Göl-Bagtché in Lycia, a telegram from Constantinople having ordered, in answer to his inquiries, that "indivisible antiquities should not be divided." I urged, in consequence, that it was the right and duty of the Americans not to surrender to the Turks a single slab of the epistyle, but to insist on the application of the law. In fact, one of the gentlemen had been authorized

to offer a large sum to redeem the entire frieze and some other statues; but the Turkish officials would not listen to him, and thus it was that *two* slabs were given over to the mission, while *seven* others made their way to Constantinople. A partition the result of which is that a most remarkable work of archaic art is now to be sought, partly in Paris, partly in Constantinople, and partly in America, may certainly be termed something worse than a failure—a real damage to civilization and learning.

Soon after my article had appeared in the *Revue Archéologique*, M. Ludlow, a member of the mission, wrote a brief letter to the same French periodical (1884, i., p. 52), stating that if the partition had been unfavorable to the excavators, the latter were not to be held responsible for it; that they had done all in their power to redeem the two-thirds of the discoveries claimed by the Turks, but had finally failed in presence of the obstinate reluctance shown by the Turkish officials, "perhaps alarmed," adds M. Ludlow, "by the polemic of a recent article published in the *Revue des Deux Mondes*." This is a stone flung into my garden and an allusion to a paper I contributed in March, 1883, to the aforesaid *Revue*, under the title, "Le Vandalisme en Orient." It has several times been asserted that my attacks against the Turkish laws regulating antiquities had induced the Turks, and in particular Plaundi Bey, the fanatical director of Tchinli-Kiosk Museum, to enforce the severity of these laws and thus retaliate upon the civilized world. I take this opportunity to state that there is no truth in that story, and that the new regulations, which I will mention below, were already decided upon long before my article went through the press. In February, 1882, living on familiar terms with Hamdi Bey at Constantinople—I was then working at the Catalogue of the Museum—I soon understood Hamdi's intention to modify, in a draconic sense, the law on antiquities of 1874. Rightly alarmed by the prospect of such a reform, I tried, but quite in vain, to stir up a movement in an opposite sense; my article was only the last and most energetical effort I made to awaken public interest on so important a question. Having foretold the storm and done my best to avert it, I should not be accused now of having brought it about.

On the other hand, I wish expressly to assert that I never held the American scholars responsible for the disgraceful partition agreed upon at Assos. I know too well by my own experience that an archæologist in Turkey, when not energetically upheld by his Ambassador, can do nothing but preach and cry in the desert. In 1881 I dug many tombs at Cyme, in Æolis, and made some very good discoveries. A dragoman of the United States Consulate in Smyrna, the name of whom I will charitably omit, thought he had some claims on the ground I was digging upon, and denounced me to the Turkish Government as having injured his rights. After three months wasted in scribbling reports and counter-reports, the Turks settled the quarrel by confiscating the whole of the discoveries and conveying them to Tchinli-Kiosk. The French Embassy was then very busy with Tunisian matters, and interfered only just enough to give the Turks the pleasure of taking no heed of it. A couple of months later, M. Schliemann, excavating at Troy, experienced all possible annoyance from the Turkish Commissary appointed as his overseer. A telegram from the German Chargé d'Affaires, declining to give him further help, is said to have been intercepted at Dardanelles by a Turkish official, who immediately informed Hamdi Bey that he could act as he chose toward Schliemann. Accordingly, the discoveries of the German scholar were seized upon in great part by the director of the Ottoman Museum. It is somewhat strange that Dr. Schliemann, in his work just published on his last campaign in the Troad, has not a word about the partition of his discoveries; his silence is ominous enough, and betrays the grievous annoyances which he could not manage to escape.

If I give these particulars, it is because I wish your readers to understand that Turkish impudence and encroachments have been continually encouraged by the weakness or indifference of foreign diplomatists. Hamdi Bey, who is the son of a Prime Minister, soon perceived that no one would check him in his attempt to exclude Western scholarship from Oriental archæology. Several reasons, the best of which are worth nothing, induced him and his friends to pursue that aim: firstly, the hatred of civilized Europe, which is a predominant instinct in the heart of every Turk, even if that Turk, as is the case with Hamdi, has been educated in France; secondly, the somewhat childish desire of imitating the external appearance of European civilization; thirdly, but not *least*, the hope that prohibitive laws may turn to the benefit of those who are intrusted with their application. A new regulation, drawn up by Hamdi, was submitted to a Commission, and finally, on the 21st of February of the current year, the new *law on antiquities* was issued and made known to the public by a French translation and extracts in the Constantinople papers *La Turquie* and the *Eastern Express*. The new law is a servile copy of the Greek one enacted in 1832, and may be briefly résuméd thus: No excavation can be undertaken without the leave of the Government; *no antiquity whatever can be exported out of Turkey*. It is not even admitted that private individuals can possess collections of antiquities without immediately making them known to the Government. If a foreign state or an academy obtains the permission to dig, with archæological purposes, *the excavators shall pay the overseer appointed by the Government, but they will in no case be allowed to carry away any part of their discoveries*. This is clear enough: the excavator must pay everything (in Greece the overseer is naturally paid by the Greek Government), and he will get nothing unless he is on good terms with *Sultan Bakshish*—that is to say, unless he succeeds in bribing the overseer, the museum officials, and many others who will contrive to stand in his way.

I am sorry to state that not a European paper as yet, not one archæological review excepting the *Revue Archéologique*, has protested against that barbarous regulation, or, indeed, seemed to be aware of its existence. German philological reviews know or care nothing about it. There was a rumor in Constantinople, when the decree was ready to be issued, that some Ambassadors wished to interfere; and they certainly had the right and the duty to do so, in the name of their respective national collections thus deprived of their main source of increase, and still more on behalf of ancient art and scientific research. It is reported that the German Ambassador discouraged the attempt, saying that Germany would always contrive to obtain favorable terms for her own archæological investigations. Unfortunately for the museum in Berlin, things have taken a quite different turn. When the statues discovered in the last campaign at Pergamon had to be divided two months ago—the old partition system being still admitted for excavations begun under the former régime—the museum of Tchinli-Kiosk claimed and obtained several beautiful fragments of the *Gigantomachy* and of the frieze of Telephus, the remainder of which had been previously secured by the Berlin Museum. M. Dennis, H. M. Consul-General in Smyrna, who possessed a firman for excavating at Sardes, immediately abandoned his plan, not caring to work under the absurd and leonine conditions imposed by the Turkish law of 1884. It is probable that the Austrian Government, which has lately obtained a firman to dig at Elæa and at Lagina, will do exactly like M. Dennis. Truly, Hamdi Bey has announced for the past twelvemonth in the Turkish papers that he was about beginning large excavations at the expense of the Ottoman Government; but who can be simple or foolish enough to suppose that the Turks will ever find money for archæological researches, in a country utterly destitute of schools, bridges, and means of intercourse? Except M. Edmond About, I know of no reasonable man having as yet been taken in and deluded by Hamdi Bey's humbug and charlatanism.

I must add a few words more to justify the severity of my censure respecting the new Turkish regulation and its authors. Europe and her diplomatists, by their benignant indifference or silent complicity, are partly answerable for the injury thus inflicted upon science, and it seems fit that every scholar in the Old and in the New World should understand the nature and extent of the injury sustained and the far-reaching consequences it involves. The law of 1874, enforced by that of 1884, forbids, under the penalty of confiscation and of a heavy fine, the exportation of works of ancient art. Now the obvious result of that absurd prohibition being to increase the price of antiquities on the markets of Europe, and the Turkish Government being quite unable and unwilling to purchase any works accidentally discovered in the country, the first consequence of the law is that antiquities continue to be exported in secret, but with all the fatal inconveniences attached to archæological smuggling: 1st. The origin of the antiquities exported to Europe is systematically altered by the dealers, who fear to attract the notice of the Turkish officials. Thus it happens that nobody can ascertain for the present the origin of some magnificent groups in terracotta, superior to the finest specimens from Tanagra and Myrina, which have recently been sold in Paris. 2d. *Marble statues, sometimes of high value, are daily being broken to pieces*, in order to be sold off in pieces by their owners, a head going to Paris and a foot to Berlin. I can vouch for the perfect certainty of my information with regard to that scandalous practice, which is particularly frequent in Asia Minor. As the Turkish Government confiscates *without indemnity* the antiquities found by the natives, the latter are almost compelled to break what they find, to be able to carry the pieces off and sell them secretly.

Such facts speak for themselves and sufficiently condemn the regulations and the officials who are alone answerable for them. I wish they could excite some indignation among the liberal-minded readers of this journal. They will perhaps think with me that if diplomacy dared to interfere collectively in matters of such high interest for civilization, no intelligent man, to whatever nation he might belong, would accuse his ambassador or minister of wasting his time, paper, and ink in pleading the cause of learning against wantonness and vandalism.

SALOMON REINACH.

PARIS, June 10, 1884.

Notes.

PROF. WILLIAM D. WHITNEY'S 'Sanskrit Grammar, including both the Classical Language and the Older Dialects of Veda and Brahmana,' will be published at once by Ginn, Heath & Co.

The more important announcements of Dodd, Mead & Co. are, a popular edition of 'Pepys's Diary,' from the same plates as their late *édition de luxe;* Church's 'Stories of the Persian War' and 'Roman Life in the Days of Cicero'; 'French Etchers'; and 'The Merchant Vessel,' by Charles Nordhoff.

The 'Fairalls of Tipton,' a new novel by Virginia W. Johnson, will soon be issued from the press of Charles Scribner's Sons. The same firm will publish the American edition of Rae's 'Contemporary Socialism' and Prof. Reville's (Hibbert) Lectures on 'The Ancient Religions of Mexico and Peru.'

A. C. Armstrong & Son announce a three-volume standard edition of Josephus, and 'Wild Adventures Around the Pole,' by the author of the entertaining 'Cruise of the Snow Bird.'

We have received the prospectus of 'The New England Institute Year Book of American Art,' which will be issued in connection with the art catalogue of the fourth annual autumn exhibition of the Institute at Boston. This volume, with its illustrations, is intended to be a concise and comprehensive account of the art work of the United States for the year 1884 in twenty-one departments, among which are the various modes of painting, engraving, and decoration, ceramics, textiles, brass-work, glass-work, etc. The reproduction processes employed will be of different kinds according to the subject. The work, on the mechanical part of which no pains will be spared, promises to be of still greater interest and value than the successful catalogue of 1883, which has led to the undertaking.

Dr. J. C. Sundberg (D. G. Brinton, Philadelphia) has prepared a little essay on 'Health Hints to Travellers.' It is practical and trustworthy, but might with advantage be somewhat fuller.

Dr. Bowditch Morton's 'Hand-book of First Aid to the Injured,' published by the society interested in that subject, fairly accomplishes the difficult exercise of arranging technical instruction in popular form, and is worthy of study. A chapter of crude physiology opens the book, and one upon nursing closes it. The misprints of Sheel for Scheele (p. 58), ureamic for uræmic (p. 56), the advertisement of Pond's Extract (p. 22), and associating Esmarch's name (p. 65) in place of Mayor's with the triangular handkerchief bandage, seem quite unnecessary.

'Cheshire Gleanings,' by William E. A. Axon (Manchester: Tubbs, Brook & Chrystal), is a book of much the same character as 'Lancashire Gleanings,' by the same author, reviewed by us several months ago (*Nation*, No. 953). It is a collection of miscellaneous papers, some fifty in number, mostly short, of considerable local interest, and many of them of importance in general history. Such titles as Dean Stanley and Alderley; Was Marat a Teacher at Warrington? The Wizard of Alderley Edge; The King of the Cats; The Chester Plays; Cheshire Proverbs; Dr. John Ferriar, indicate well enough the character of the book, with which any one may agreeably pass a leisure hour, and from which real information may be gleaned by those who know how to use it.

We have received 'Appletons' General Guide to the United States and Canada,' conveniently bound in two handy volumes, and clearly printed and well furnished with maps. The information which it contains is of interest to others than travellers, and in some respects it is an admirable book of reference.

The last issue of the Parchment-Paper Series (New York: D. Appleton & Co.) is 'Pictures of Life and Character, by John Leech. From the Collection of Mr. Punch,' a selection of eighty sketches by that amiable satirist whose representations of the social fashions and interests of English life make one of the most truthful and instructive forms in which the history of this century has left its impress. The praise which Thackeray delighted to accord to Leech would have been a more charming introduction than the excerpts from Mr. Henry James's article on Du Maurier, which, though sound and discriminating, lack the *bonhomie* of the older and more humane critic.

Observers of the weather in New England will be pleased to learn of the formation of the New England Meteorological Society, with the aim of coördinating and extending observations of rainfall, temperature, and other climatic elements. Such records are already made at many places, but their usefulness is much limited because they are rarely published and seldom compared. The Meteorological Society desires to bring together all the records now kept, encourage the keeping of many more, and publish a monthly summary of the results obtained. The Secretary, at Cambridge, Mass., will be glad to send a circular descriptive of the Society's plans to those who feel an interest in these matters, whether they can act as observers or not.

A call has been issued for a meeting to be held in Putnam Hall, Saratoga, September 9, during the session of the American Social Science Association, for the purpose of forming an American Historical Association. A few original papers will be presented at that time, and action taken looking to the closer coöperation of historical students in the country both with one another and with specialists in the cognate branches of social science, jurisprudence, and political economy. The call is signed by the President and Secretary of the Social Science Association and by Prof. C. K. Adams, of Michigan, Prof. M. C. Tyler, of Cornell, and Prof. H. B. Adams, of Johns Hopkins.

It is stated by one of our contemporaries that Mr. Julian Hawthorne and his publishers are receiving a large number of letters from readers of 'Archibald Malmaison' who wish to be confirmed in their belief that the story is true. The question, we think, is very definitely settled by the second sentence of the book, where it is stated that the hero "had the odd distinction of being born on the 29th of February, 1800." This is a very odd distinction indeed; for, what could be odder than for a "real" person to be born on a day which never existed? Is it charitable to suppose that Mr. Hawthorne was ignorant of the fact that the year 1800 was not a leap year?

One of the Positivist societies of London proposes to publish, under the editorial care of Mr. Frederic Harrison, a volume to be called 'The New Calendar of Great Men.' It will contain short notices of each of the 558 persons whose names appear in the Positivist Calendar drawn up by Auguste Comte. The work will be the result of coöperative effort, and if well done, as it is likely to be under the care of Mr. Harrison, it will form a handy manual of the history of the course of civilization as conceived by the founder of the Religion of Humanity.

Another publication which would be very significant of the religious confusions of the past age is one that M. Renan seems to promise in the preface to his recently printed 'Nouvelles Études d'Histoire Religieuse.' He says he has often dreamed of extracting some passages from his writings and, in somewhat the same way as Saint Nil reduced the manual of Epictetus to the needs of the Christian life, rearranging them and issuing the collection under the title 'Lectures pieuses.' The contents would be divided into fifty-two parts, one for every Sunday; and in each part there would be a passage from the Gospels and the Fathers, a prayer and some "ejaculations" (to use the Elizabethan word) in the manner of François de Sales. "A pious woman," he says, "would perceive only by certain omissions the difference between such a book and the prayer-book that she carries to church with her. Perhaps she might end by preferring it in some ways." The volume would certainly be a very curious and interesting one.

Of the recent announcements of Firmin-Didot, two, of which we have received the prospectus from F. W. Christern, are of especial interest: Pougin's 'Dictionnaire historique et pittoresque du Théâtre et des Arts qui s'y rattachent,' and 'La Renaissance en Italie et en France à l'Époque de Charles VIII.,' in which the account of the literary and artistic movement is by Eugène Muntz. The former of these will be illustrated with four hundred engravings and eight chromo-lithographs, and will cover the history and furnishings of the stage in a very thorough and graphic way so that it will form a work unique in theatrical literature. The second, although it must follow the lines of Burckhardt and Symonds to some degree, is based on original research and cannot fail to be a fascinating study of the period.

Mr. Henry James's 'American' has just been published in Paris as 'L'Américain à Paris'; it is translated by M. Léon Bochet, and published by Hachette. Mr. Crawford's 'Dr. Claudius' is about to appear as a serial in the *Indépendance Belge.*

The *Bibliotheca Sacra* for July announces that this review will hereafter be issued both at Oberlin, O., and Andover, Mass. The editors will be Professors Wright, Smith, and Ballantine, of Oberlin, with several associates in other parts of this country and in England. The price is reduced to $3, but no change of theological position is contemplated.

In the June issue of *Shakspeariana* Mr. F. G. Fleay, the well-known student of early dramatic literature, begins a series of articles on the annals of Shakspere's contemporaries which will be very valuable for purposes of reference. The subject of the first is Ben Jonson, whose career is detailed very fully year by year. The completed series will form a hand-book and encyclopædia of our knowledge about the Shaksperian stage, which is now scattered in obscure and untrustworthy volumes, and it will deserve credit.

We have not come to the end of plagiarism yet. M. Georges Ohnet, whose 'Maître de Forges' was a success as a novel, a still greater success as a play, and not without success when translated and played here, has been accused of having copied, conveyed, transferred from a Swedish novel by Madame Carlén. M. Ohnet defends himself like the lawyer who advanced four pleas for his client: that he never borrowed the pot, that it was broken when he borrowed it, that it was whole when he returned it, and that there never was any pot at all. M. Ohnet says: "I never read Madame Carlén's novel," which would seem to be enough, but is not for him. He goes on to claim for an author the right to "take his goods where he finds them," to use whatever is to his purpose in the writings of his predecessors, and reminds M. Henri Rochefort, to whom his letter is addressed, how Corneille borrowed from the Spanish theatre, Molière from Plautus and Terence, Lafontaine from Æsop and Phædrus, which is all true; but as he had not read and therefore could not have used Carlén's novel, it is not at all relevant.

The literary history of the prohibitory indexes issued by the Roman Catholic Church, is the subject of a valuable work by Professor Reusch, entitled 'Der Index der verbotenen Bücher.' The first volume, dealing with prolific indexes of the sixteenth century, is just published. Professor Knapp, of Yale College, has, for several years, we believe, been engaged in making re-

searches into the bibliography of the indexes, and has collected material for a complete record of the various editions.

Gustave Larroumet, who is best known by his important work upon Marivaux, published at Paris in 1882, has prepared an edition of "Les Précieuses Ridicules" of Molière, in which he summarizes the net results of the numerous historical and critical studies which have been published upon Molière. The original text is reproduced, with the significant variants, leaving out all those which appear to be mere typographical errors. The principal facts and dates are given in the introduction. In commentating, Larroumet has profited largely by the labors of Despois and Moland, subjecting their conclusions, however, to critical examination in the light of original documents.

The history of Istria from the ancient times down to the reign of Augustus, is the subject of careful and thorough treatment in Benussi's 'L'Istria, sino ad Augusto,' Trieste, 1883. The first two chapters of the work are devoted to its ancient geography, and the ethnology of the Istrians occupies the third chapter. The history of Istria before the Roman conquest is then taken up, and the work closes with a survey of the social and political condition of Istria under Roman administration, and an appendix contains a list of geographical names of Istria found in the ancient writers.

—The curious article in the *Bibliographer* for June is the first part of a reprint of the famous bibliographical hoax, "The Fortsas Catalogue," invented by M. René Chalons, of Brussels, in 1840. This volume, which numbered fourteen pages, purported to be a list of the books of the Count J. N. A. de Fortsas, about to be sold at Binche, in Belgium. It contained only fifty-two titles, but as the Count had excluded from his collection every book ever mentioned in any bibliography, the fifty-two were, of course, all unique. Orders were sent in good faith from all parts of Europe by expert bibliophiles, and in the course of the affair there were the usual illustrations of human credulity and self-deception. Men recollected seeing books that never existed, and one printer, the foreman of M. Casteman, of Tournay, remembered a bogus volume on the Belgian revolution of 1830 that was credited to his press, and furthermore recalled its mythical author "perfectly." Some of the titles which are now reproduced are truly tantalizing, and others so suggestive of good things that one does not wonder that Techener was unwilling to credit Nodier's sagacity, who declared the whole book a joke. He ordered, for example, No. 36: "'Évangile du citoyen Jésus, purgé des idées aristocrates et royalistes, et ramené aux vrais principes de la raison, par un bon sans-culotte,' Arras, an III. de la République une et indivisible. 12mo, pp. 168. *An incomplete volume.*" Van de Weyer and Crozat ordered the same book. No. 35, "'Poësies de Carême (du Sieur Poisson) à la Trappe,' chez Lafriture (Mons. Henri Bottin), 1779," would probably find many a secret purchaser, and "'Le Sardanapale de ce temps (à la sphère),' 1699," a satire on Louis XIV., by "the infamous and mysterious Corneille Blessebois," was much sought for by the learned. The Princess de Ligne, for the honor of her family, ordered No. 48 at any price. On the whole, interesting and valuable as some of these imaginary books might prove, it is a matter for congratulation that they were only the phantom progeny of "a miscreative brain." Of such literature bound in citron morocco, stamped with ducal and royal arms, and hoarded on velvet cushions, there is enough and to spare in the world already.

—Those educators who regret the steps now being taken to deprive the classics of their supremacy in the college curriculums, and who regard the movement as peculiarly American, democratic, and calculated to make our standard of culture different from that which prevails abroad, will find food for reflection in an article in the last issue of *Le Livre*, which devotes considerable space to a discussion of the disfavor into which books written in Latin have fallen. Brunet, more than twenty years ago, had noticed that the fine editions of Latin books issued from the older presses were becoming cheaper, and he was disposed to ascribe this lamentable change in the market to the rivalry of better texts. The writer of this article disagrees with him, and points out the fact that editions of the classics are seldom printed now except for schoolboys; that the old editions are not sought for unless in the case of Bibles, or books valued for some extraneous fact regarding their history, binding, or ownership; and that consequently, as compared with similar editions of books in other languages, those in Latin are comparatively cheap—a circumstance on which he congratulates the poor professors, who can now afford to buy them. In discussing the various causes of this decline, he incidentally remarks on the history of the prestige of Latin in France, and what he says is true of other countries. In the first place, he reminds us that Latin, even when written and spoken in the monasteries and by scholars, was a dead language, and that only on this supposition can its decadence from the mediæval times be accounted for. "A living tongue," he says, "is rooted in the social manners and the blood of the race that speaks it; centuries of persecution cannot suppress it. Latin was not persecuted: on the contrary, it was subsidized—an official class and a budget was devoted to its service; but in spite of all this it could not maintain itself." Fashion, he adds, kept it up until our times. In the last age it was good form to know it and to be able to quote it, just as was the case with Italian in the sixteenth and Spanish in the seventeenth centuries; but now the mode has changed: "It is no longer good form to know Latin, to possess a library of Latin authors, or to quote them. It is thought pedantic to fatigue one's self with their perusal. . . . The truth is, no one learns Latin any more, knows it, speaks it, still less writes it; *what is worse, the fashion of affecting to know it no longer exists.*" The italics are his own. What follows reads a good deal like an American view by an advanced utilitarian: "In fact, it is worth while to repeat, real life is too exacting: it is given over to appetites that our fathers never knew. We cannot afford to devote ten years to the study of a dead language, foreign to the larger part of our interests. We leave it behind more and more. There is no discussion, no war of the pen; we recede from it without a word, with a determined step which makes explanation needless. Public instruction has not yet accepted the accomplished fact; soon or late it must." So it appears, if this be authoritative, that the "freemasonry" of scholarship may hold for a while between the schoolboys of the two continents, but that it is already *passé* so far as the cultivated classes in general are concerned.

—At a recent meeting of the trustees of the Peabody Museum of Archæology of Harvard University, attention was principally devoted to the report of the curator, Mr. F. W. Putnam, in regard to the work now being done in excavating the mounds of the Ohio group, and in particular the great mound of the Turner group in the Little Miami Valley. In consequence of the discussion Mr. Putnam is to prepare a paper to be read at the next meeting of the American Association for the Advancement of Science, and on the completion of the undertaking a full account for publication by the Museum. It was also decided to raise by subscription the sum of one thousand dollars for the further prosecution of the work, in view of the remarkable discoveries which have been made. In fact, it is believed that former explorations in this field are practically of no consequence, and that the general theory in regard to these mounds must be essentially modified. It would seem that these structures, which are scattered over our country, are the work of different periods and of a race of which the Indians, as known to us, are merely a branch, if, indeed, they are at all ethnically related to the mound-builders who preceded them in the occupancy of this continent. The problem of American archæology is yearly showing itself a more interesting and far more complex and obscure study, owing to the constantly increasing number and variety of the relics unearthed. The recent discoveries, in the Ohio mounds in particular, are of a novel and suggestive character and point to a remote prehistoric period. The papers of Mr. Putnam will be looked for with great interest; but that they may be complete it is essential to furnish the funds for the excavation that remains to be done. Subscriptions may be sent to J. C. Phillips, State St., Boston, or to any trustee, or to Mr. Putnam.

—Two little brochures, privately printed at Baltimore within a few weeks, have not only a common source, but a common basis of interest. One of these—'Bluntschli's Life-Work'—sketches briefly, in its thirty-one pages, the career of a writer and teacher whose position is coming to be better and better recognized. Under three subordinate headings, dealing successively with his work at Zürich, at Munich, and at Heidelberg, the characteristics of his chief publications are concisely noted; while the whole is followed by a very complete bibliography of his writings, covering more than two pages, closely printed. The other pamphlet is entitled 'Bluntschli, Lieber, and Laboulaye,' its forty-two pages being divided with considerable impartiality between the three publicists named. There is of course a reason for thus grouping these three eminent names. A significant sentence (quoted from Bluntschli) indicates one of the grounds for this juxtaposition: "Lieber in New York, Laboulaye in Paris, and I in Heidelberg formed what Lieber used to call a scientific clover-leaf." An "international clover-leaf," as well, this felicitous connection and correspondence of the three, in coöperative economic studies, might properly be called. But quite as significant as this circumstance is the fact that the papers, correspondence, etc., of these distinguished investigators have, in two of these instances, found a permanent resting-place on this side of the Atlantic, in the special library of the Department of History and Political Science, at Johns Hopkins University. Bluntschli, who died in 1881, expressed in his will a desire that his collection "might go to America." By an uncommonly happy inspiration, this most valuable collection was secured through funds subscribed by German citizens of Baltimore, and placed where it will for the future be turned to account in such a manner as would have delighted the soul of its original collector. Bluntschli's manuscripts, moreover, are the direct gift of his family to the same institution. And during the present year, the widow of Francis Lieber has added to the same collection the "author's copies" of her husband's works, in many instances "richly illustrated by his notes and comments." To the same collection, finally, have been added the works written by Laboulaye, "so that," to use the language of the pamphlet from which we

have already quoted, "these three names are likely to be always associated in the minds of historical students in Baltimore." The Bluntschli collection, as at present classified, arranged, and catalogued, numbers about 8,000 volumes and over 10,000 pamphlets, and is almost unsurpassed as a collection of works on international law and related topics. To a thoughtful mind, not the least significant consideration in connection with these accessions, displaying as they do so intelligent a foresight and so wide-reaching a plan, is their revelation of the methods through which this institution is laying the foundations of future opportunities for intelligent study and research.

—'The Teaching of the Twelve Apostles' continues to occupy the attention of the theological public. The April number of *The Journal of Christian Philosophy* was almost entirely made up of discussions of the document, and the articles relating to it are now issued in a separate pamphlet (New York: 30 Bible House and E. Westermann & Co.). This contains the Greek text; English translation by Prof. S. S. Orris, of Princeton; the genuineness, priority, source and value of 'The Teaching,' by Mr. J. R. Harris, of Baltimore; the phraseology of 'The Teaching' as an index of its age, by Dr. Isaac H. Hall, of Philadelphia; and comments on 'The Teaching,' by Dr. E. R. Craven, of Newark. Mr. Harris finds that the ideas of the tract belong to the early post-Apostolic period of the Church, that it was known to Clement of Alexandria, Irenæus, Barnabas, and Hermas, and so falls before the main body of second-century literature, and that its author was a Jewish Christian, probably of Northern Syria—and he draws a conclusion as to the early date of the first Gospel, which is quoted in 'The Teaching.' Dr. Hall infers an early date for the tract from its phraseology; forty-nine-fiftieths of the vocabulary, he says, belong to a period as early as the New Testament itself, while the rest either has a primitive Christian tone or is found in early extra-Biblical writings. Dr. Craven remarks on the practical, the liturgical, the ministerial, and the eschatological ideas of the book; his opinion of the date is the same as that of the other contributors. The articles are all good; those of Messrs. Harris and Hall are the more valuable. A German translation of 'The Teaching' has been made by the well-known rabbinical scholar, Dr. Aug. Wünsche, of Dresden (Leipzig: Otto Schultze; New York: B. Westermann & Co.), with the notes of Bryennios and some of his own, and an index of Greek words. The translator regards the tract as very early (by a Jewish Christian of the second century), and thinks that it needs a careful philological and historical investigation, thought by thought, word by word.

—A not very satisfactory account of modern native religious movements in India comes to us under the title, 'Brahmoism; or History of Reformed Hinduism, from its origin in 1830, under Rajah Mohun Roy, to the present time, with a particular account of Babu Keshub Chunder Sen's connection with the movement. By Ram Chandra Bose' (New York: Funk & Wagnalls). So far as their history is concerned, the several organizations called Somaj are described with sufficient clearness and fairness, from the Adi or Conservative Somaj of Ram Mohun Roy and Debendro Nath Tagore, a pantheistic form of theism which still clung to the old sacred writings and to caste, through the Progressive Somaj and the New Dispensation of Chunder Sen, which has striven to abolish caste and to introduce other social reforms, but has not escaped a mystical and autocratic tendency, up to the latest phase of the movement, the Sadharan Brahmo Somaj, which may be called a simple and sober-minded theism. Justice is done also to their ethical purity and the excellence of their social reform work. But beyond this Mr. Bose can see only evil in these systems. He is a Christian missionary of Lucknow, and writes to explain why he cannot affiliate with the Somaj. His object is to prove that it is not identical with the Calvinistic Trinitarian form of Christianity which he himself professes. His readers will readily grant this proposition, and will wish that he had shown a little more intellectual and spiritual hospitality, a disposition to praise and accept the good more heartily as well as to denounce the faulty. But he cannot receive the Brahmo Somaj as an ally—for him it is Satan trying to don an angel's worn-out dress. He can see nothing real or affecting in Mr. Mozoomdar's religious experience. He dismisses Emerson contemptuously as a self-worshipper, and distinguishes Mr. Joseph Cook with the title of "illustrious." Mr. Bose shows good knowledge of the literature of his subject, native and foreign, and it is a pity that a book which is so good should not be a great deal better. It is always a pity when a defence of Christianity is made in a narrow, sectarian spirit.

—It may not be too late to refer our readers to a fertile and suggestive study by H. M. Regel on George Chapman's translation of Homer in one of the more recently bygone volumes of *Englische Studien*. Those of them who have read Chapman's wonderful, often brilliant, and yet fantastic performance will look with interest on Regel's painstaking research, which aims at no less than an exhaustive consideration of Chapman's general and special fidelity to his original, his treatment of the fourteen-syllabled line in the 'Iliad' and the heroic couplet in the 'Odyssey,' his blunders, misunderstandings, and inaccuracies in his dealings with the Greek particles, his interpolations, and his superabounding diction, which overflows even the capacious Homeric moulds. In the second part of his investigation he treats minutely of Chapman's translation as a work of art, of its extensive influence on the mind and art of his contemporaries, and of the spell which his bold and compelling spirit cast over Keats, Coleridge, and Swinburne. The plastic resource of English is shown in his successful imitation of many of the intricate compounds of Homer. In point and epigram his 'Odyssey' was a forerunner of Pope's. German-like, the essayist counts the rhymes and finds much that is inexact, licentious, intolerable, relieved, however, by a fresh and vivid vocabulary, a true poetic instinct, a genius for interpretation. A comparison of Cowper, Pope, and Chapman concludes the paper.

—At a conference of British architects, last May, Mr. R. P. Spiers read a paper on the French, German, and English systems of architectural instruction. It is only for twenty-two years that France has had an examination for the *diplôme d'architecte;* in four of those years no examinations were held, and in all only ninety-four candidates have obtained it. A subject is annually proposed to pupils of the École des Beaux-Arts, a sketch is made by them in the school, and six months are given to work out the full plans, elevations, sections, working drawings, details, and specifications, as if the building were to be constructed. When these are handed in, the candidates are orally examined on the various details in their drawings, the theory and practice of their construction, the qualities and defects of the materials employed, their strength and stability, and also on the history of architecture, on physics and chemistry applied to construction, and on building law. To prepare for all this requires about seven years' study, so that the French architect gets a much more thorough training than either the English or the American. So does the German: his university or school gives him a knowledge of geometrical drawing, drawing from the cast, mathematics, and physics. With this preparation, he passes a year in an architect's office, to learn what the profession is and what he will need to know. Then two years of school, with lectures on physics, mathematics, construction, ventilation, warming, and sanitary science, give him a chance to copy designs and to make original plans. If he passes the examination at the end of this time, he gets the degree of *Bauführer*, and an appointment for three years on some Government building as inspector or clerk, on a nominal salary; and then two more years of school and another examination give him the title of *Baumeister*. His apprenticeship, therefore, has lasted eight years; and if he has any ability, he ought to be an excellent master builder. In England, it appears from Mr. Spiers's address, there is no school instruction in architecture at all. A young man coming from an ordinary English school, with no knowledge of free-hand or geometrical drawing, enters an architect's office and picks up ideas as best he may, without any systematic teaching. Neither English nor German students travel much, the latter because their course is so long that they have no time; but the Viennese travel two years in north Italy, and the French four years in Italy and Greece. American architects have of late years travelled much, to the very great advantage of their art; and the Roach travelling scholarship, for which an examination was lately held in Boston, will encourage this tendency. It will be noticed that the German course gives a great deal of practical training. There has been some complaint that the French course in the École des Beaux-Arts was too theoretical and scientific, for which reason a very practical character has of late been given to the examination for the *diplôme d'architecte*. The French Government is always quick to notice defects in its art and industrial education; and if its methods are not always the best, it is at least not wedded to them, but ready to try others.

—'Gli Stati Uniti e la Concorrenza Americana' is the title of a very interesting and instructive volume just published by E. Rossi, treating of the agricultural, industrial, and commercial resources and development of the United States and their immediate as well as future effect on the Italian and other European markets. The author, who is a very intelligent and thorough observer, fortifying his statements at every step with official statistics, is lost in wonder at the immensity and variety of the products of this country. The book is divided into two parts, the first of which contains the description of the economic development of the American Republic, and principally of the "new States which the Americans have accustomed us to represent to the imagination as the type of the infinite—the Far West—which is rather a conception of the mind than a geographical limit." There is an admirable discussion of the public-land system and its results in peopling the wildernesses of the West; a large space is devoted to the investigation of the various agricultural sections of the United States, which Rossi divides into six zones according to the density of the population; the quantity as well as the cost of cereal production is carefully estimated; the pastoral resources of the country are weighed and considered, and the production of live stock and preserved meats comes in for intelligent treatment. The second part of the

book deals particularly with the effects of American competition on the transatlantic food centres, which induces a diligent study of the expenditure necessary to bring the products of the "zona frumentaria," of the cattle ranches, and the "carni conservate" to market. The results of the study are extremely favorable to this country; and the author's final thought is: If America enjoys such unrivalled advantages over other countries even now, when her 2,900,000 square miles of cultivable territory are but half colonized, what is her future—and what is *our* future—to be when the colonization and utilization of the entire territory are accomplished facts?

—Gastronomy among the ancient Romans is the subject of Heft 417 of the *Sammlung wissenschaftlicher Vorträge*, published by Carl Habel in Berlin. Dr. Saalfeld has not been able to discover much that is new on his topic, but has made an interesting and exhaustive summary of the facts collected from various sources. At the beginning he alludes to the fact that, just as modern German cookery is dependent on French example, so the Romans were influenced by the Greeks, the "Frenchmen of antiquity." The universal love of sausages appears to be another bond of union between the modern German and the ancient Romans. On the whole, Dr. Saalfeld thinks that we are inclined to exaggerate the extravagance of the Roman epicures on account of some special instances recorded for the astonishment of posterity. As for the matter of excess, even a Roman drinker would have hesitated before following the custom of the mediæval German knights, who filled up their cavalry boots and emptied them. The German students who drain their glass at a draught had their prototypes among the contemporaries of Horace. The salary of cooks in some cases exceeded $5,000, and has hardly been equalled in modern times. The ancient epicures, like the modern, appeared to prefer the animals of the sea and air to those of the earth, and it is a curious fact that it took much time before beef was accepted as a general article of food of equal rank with lamb, veal, and goat. The modern epicure blesses the day when he was born on reading that his ancient colleagues knew not the piquant caviare. Of salads the Romans had abundant variety. The use of honey in place of the almost unknown sugar must have added a peculiar flavor to ancient pastry, which it might be an advantage to restore. Butter was only known for its medicinal uses, its culinary place being taken by oil and honey, which we must admit appear to be more satisfactory than our insidious butterine and oleomargarine.

—In one of last year's numbers of Treitschke's *Preussische Jahrbücher*, Dr. Karl Koberstein, the dramatic poet, had the courage to assail the fame of the volunteer corps which Lützow commanded in the rising against Napoleon I., and which Theodor Körner immortalized by his songs and death. For seventy years, since the day when Körner fell pierced by a French bullet, an hour after finishing and reading to his comrades his stirring "Song of the Sword," the names Körner, Lützow, "Lützow's Black Huntsmen," and "Lützow's Wild Hunt," have been stirring remembrances of the German people. This tribute of admiration and patriotic gratitude seemed excessive to Dr. Koberstein, who, like Treitschke, is a strong believer in the wisdom and merits of the House of Hohenzollern, and of the predecessors of the Moltkes and Bismarcks in its councils, and proportionally sceptical in regard to popular risings, volunteer bands, guerilla warfare, undisciplined bravery, and youthful liberal enthusiasm. He thought the time had come to destroy the Lützow and Körner "legend," and substitute for it a chapter of dry history. He attacked, with a great display of historical and critical research, the plan, the composition, and the military record of the corps; the abilities, and even the disposition and impulses of its members. To abridge his indictment, the corps was a motley crowd of men of science, poets, sons of officials, and mechanics, mixed with vagabonds, deserters, and former inmates of penitentiaries; there was more playing at war than fighting, a great deal of swagger, of Teutonic masquerading, of empty declamation, of idle revolutionary dreaming; no experienced leadership, no obedience, no application. Almost everything was hollow, not excluding the pathos of Körner's lyre—and death. He threw away his youthful life from vaingloriousness, rather than from true heroic motives. Had Prussia's armies consisted of warriors like Lützow, Körner, Petersdorf, Jahn, and their less famous and less worthy fellow-volunteers, there would have been desultory and reckless fighting, as at Gadebusch, but no Leipzig and no victory of German independence. This sweeping attack by Dr. Koberstein has met with a very vigorous defence. The vindicator of the honor of Lützow's Volunteer Corps, "K. v. L."—probably Karl von Lützow—has devoted a separate pamphlet to the task ('Adolph Lützow's Frei-Corps in der Jahren 1813 und 1814'), and has done his work with thoroughness and ability. He has overwhelmed the assailant with evidence drawn from history, correspondence, and official war records, and seems to have placed him, in the eyes of his countrymen, in the unenviable position of a hypercritical judge, biassed by anti-liberal prejudices. Treitschke, in his *Jahrbücher*, however, will probably take his part.

—One does not usually look to Spain for such books as Enrique Piñeyro's 'Poetas Famosos del Siglo XIX., Sus Violas y Sus Obras' (Madrid: Libreria Gutenberg, 1883), which is a collection of essays of a kind more frequently met with in the lighter periodicals of France and Germany. The author, a Cuban by birth, is evidently a man of considerable culture and wide reading—a disciple, after a fashion, of the school of criticism which produced in Mme. de Staël's 'De l'Allemagne' its master-work. He discusses Shakspere, Keats, Shelley, Byron, Wordsworth, Espronceda, Leopardi, Goethe, Schiller, Heine, Lamartine, Musset, Victor Hugo—a truly cosmopolitan array of literary celebrities—in a pleasant and intelligent manner. His book reflects, on the whole generally accepted opinions and conventional literary canons. Such of his illustrations and analogies as may lay claim to originality are sometimes naïvely uncritical. Thus, one reads with a smile that Leopardi was, "so to speak, a modern Plato, with the supreme gift of metric and harmonious language, which the ancient Plato lacked." Señor Piñeyro does not often indulge in really dogmatic assertions, such as that "Schiller's last dramatic works—'Wallenstein,' 'Maria Stuart,' and 'Wilhelm Tell'—are indisputably superior to Goethe's 'Egmont,' 'Torquato Tasso,' and 'Iphigenie.'" His unbounded enthusiasm for Victor Hugo's poetry, which may be said to permeate the entire book, culminates in the following concerning the 'Légende des Siècles': "It contains many passages, entire pages, as good as the most celebrated of Milton, as rich in figures and images of every kind as the 'Divine Comedy,' marvels of style like those of the 'Æneid,' prodigies of poesy like those of 'Faust.'" It is, however, but fair to add that the author is much more discriminating in his estimate of the political achievements of Victor Hugo. Non-Spanish readers of the book will occasionally find amusement in recognizing 'Guillermo Meister,' 'Godofredo de Berlichingen,' 'Intriga y Amor,' etc., the original titles of the works being omitted. More unusual still seem "Mateo" Arnold and "Jorje" Sand. The biographical portion of the work is rather meagre.

GINDELY'S THIRTY YEARS' WAR.—I.

History of the Thirty Years' War. By Anton Gindely, Professor of German History in the University of Prague. Translated by Andrew Ten Brook, formerly Professor of Mental Philosophy in the University of Michigan. With an Introductory and Concluding Chapter by the Translator. Complete in two volumes. With twenty-eight illustrations and two maps. New York: G. P. Putnam's Sons.

It seems a little singular at first thought that the literature of history should have been obliged to wait 200 years and more for a satisfactory account of that strange compound of political, religious, and military events known as the Thirty Years' War. And yet the explanation is not far to seek. What was called Germany at that time was not a nation, but only a name for a loosely connected confederation of practically independent States. Each one of the numerous members of the confederation had its own form of government with which no other member had any political right to interfere. The ruling house in each of the States was ambitious to help itself on in every possible way toward the ultimate establishment of a recognized monarchy. In each of the States, therefore, there were political parties as well as religious differences; and, consequently, when a war became inevitable, the highest skill of the several contestants had to be devoted to methods of diplomatic finesse in order to secure and retain the needed allies. The mere statement of the elements of the problem is enough to show that the war was largely one of diplomacy; and when to the intricacies thus inherent in the situation were added the complications resulting from foreign interferences, the result appeared to be simply a vast entanglement of cross purposes which nothing short of omniscience could hope to unravel.

The struggle, instead of being a civil war in the ordinary sense of the term, was a contest in which more than a score of independent States were engaged, each having two or more parties struggling for the mastery within itself; each jealous of any increasing power on the part of any other State, or of the imperial Government; and, finally, each striving by more or less independent foreign alliances to lift itself into greater prominence and power. The complications of the Peloponnesian War, to the disentanglement of which Thucydides devoted his unrivalled skill, were the same in kind; but there is this important difference. The struggle of the Greeks was limited to so small a geographical area that the historian did not generally find it impossible to ascertain the causes of particular movements; but in the more modern war, the theatre of action was so vast, the struggle so prolonged, and the bitterness of the contestants so intense that a just comprehension of the period has hitherto seemed quite beyond the powers of human intelligence. Until within the present century, moreover, the secrets of the war were locked up in the archives of States and in the muniment rooms of the old German nobility. It is only very recently, therefore, that anything like a genuine history has been possible. The unquestionable literary merits of Schiller's well-known work have given it a very considerable popularity, and the name of the author has caused it to be relied upon as authority that has been echoed in a vast number of subsequent

publications. But the historical importance of Schiller's work is scarcely greater than that of Goldsmith's 'History of England.' It is a great piece of good fortune, therefore, to have at length a genuine history of the Thirty Years' War.

It is now thirty-one years since Anton Gindely, a young professor at the University of Olmütz, began the work of exploring the borders of that jungle to which he has since devoted his energies. The first published result of his researches was 'The History of the Bohemian Brethren,' in two volumes. In the preparation of this work the author had good opportunities for making himself acquainted with the history of Bohemia at the very period during which the opposing forces were preparing for the great struggle. His investigation into contemporary political history encouraged him to extend his researches; and accordingly, a few years later, he gave to the public 'Rudolph II and His Time,' also in two volumes, in which an account was presented of the complications involved in the last twelve years before the outbreak of the war. In the preparation of this work Gindely made use not only of the Austrian archives, but also of the state papers of Italy, Belgium, France, and Spain. The publication was at once recognized as one of the first importance, and the encouragement the author received led him to extend his researches not only to the history of the Bohemian insurrection which was the immediate cause of the war, but also to the war itself in all its complicated relations. The difficulties, as well as the vastness of the labor, may be inferred from the simple statement that in the preparation of one of the volumes the author found himself obliged to examine between five thousand and six thousand manuscripts that had previously been unexplored. The fourth volume of his great history brings the war down to 1623, when a sixth of the thirty years are past. It is not easy to see how the periods of Gustavus Adolphus, and Richelieu, and Oxenstiern can be regarded as less important and less intricate than the period before 1623; and one shudders to contemplate the result of the same minute and conscientious devotion to the details of all the complications between 1623 and 1648. If something like a patriarchal longevity should kindly permit the author to complete his work on the same magnificent scale, some future generation may have the advantage of a reasonably complete history of the Thirty Years' War in about twenty-four octavo volumes. But in the meantime, what was to become of the present generation of searchers after truth? Gindely's publishers seem to have been the first to reflect that an author's contemporaries have certain rights which the author is bound to respect. They succeeded in persuading the learned investigator to suspend his labors on the larger work long enough to put into a book of reasonable length and readable form the most important results of his researches. The fruits of this are the three small volumes of which the handsome work before us is a translation.

The author's preface assures us that the book rests upon the authority of investigations substantially completed for the whole period of the war. The nature of the evidence, however, is not here revealed. The reader is asked to suspend his judgment on every doubtful point until in the larger work the character of the evidence is fully set forth. These volumes are, therefore, to be considered the embodiment of the conclusions at which the author has arrived as the result of thirty years of hard study. The narrative is popular in form, though it is by no means a contribution to the light literature of the day. The author never forgets that his history is for the more intelligent portion of the public. He has given very little space to details of sieges and battles, evidently regarding the events which lead to a conflict as far more important than the details of the conflict itself. His pages everywhere make it evident that his investigations have been directed chiefly to the end of ascertaining the causes of events and the purposes of men. He deals with what to many readers must appear to be the least interesting part of the subjects in hand; and yet it is by far the most difficult part, and the most necessary to a correct understanding of the war. The author seldom yields to the temptation to describe at length an interesting incident or a picturesque scene. He never forgets that events were directed, not by interesting considerations, but by the dull details of personal and national policy. By the very nature of the author's purpose, therefore, the book is destined to be limited in its popularity to the intelligent and the discriminating classes. It would perhaps be impossible to show a more remarkable proof of the vigor of German intelligence than that afforded by the simple fact that twenty thousand copies of this history were sold within a year after its publication.

The tortuous intricacies of the scheming which took place about the throne of Bohemia were early buried under the mass of details of the war, and Gindely was the first one to bring them forth into the light. It is now possible to ascertain wherein each of the contestants was right and wherein each was wrong. With these details we have here very little to do further than to say that there was no one of the claimants that did not at one time or another do such violence to the requirements of right as to forfeit all just claims to sympathy or favor. This is shown by the briefest possible statement of the course of events. During the negotiations between Ferdinand of Styria and Philip of Spain the Protestants availed themselves of every opportunity to advance their cause. When Ferdinand was at length "accepted" as King of Bohemia, the liberties to which the Protestants regarded themselves entitled under their Charter were so much abridged that they made a complaint to the Emperor, and when it was found that this was not likely to be heeded, they determined to summon the Protestant Estates for a consultation. Accordingly a Protestant Diet was held in March, 1818, and a second one in May of the same year. While this second meeting was in session, the plan was concocted of putting the agents of the imperial Government to death. In order to accomplish the overthrow of the imperial power it was determined to make an irrevocable breach between the two parties by the public assassination of the Regents. This plan, according to Gindely, originated in the brain of Count Thurn, the leader of the Protestants. The author relates in detail how the scheme, first proposed by Thurn, was developed in the minds of himself, Ruppa, and Fels, and how the other leaders were gradually won over to this violent project. The day of Bohemia's doom, "the beginning and the cause of all the woes that followed," was the 23d of May. The Diet was assembled in the hall of the Landtag. After hearing a protest that had been framed in answer to an attempt to prevent their meeting, the members marched to the hall of the Regents and demanded whether the threatening imperial letter originated with them. The Chief Burgrave refused all information, declaring that it was unheard of that imperial councillors, bound by oath to keep all transactions secret, should have such a demand addressed to them. Thurn replied: "Whether such a question was ever addressed to the Emperor's councillors or not is a matter of indifference; we declare, however, that we shall not leave this place without a decisive answer—yes or no." Ritschan, one of the most violent of Thurn's followers, then read a declaration which he had drafted beforehand, closing with the words: "Schlauta and Martinitz are to be regarded as violators of the Royal Charter and enemies of the commonwealth." The question was immediately put to vote and was answered with a unanimous cry in the affirmative. The execution of this sentence of outlawry was immediately carried into effect. Two of the Regents and their Secretary were dragged to the window and hurled down from a height of eighty feet.

The effect of this atrocious act was, in one sense, all that Thurn had hoped for. It produced the "irreparable breach" which he had so much desired; but at the same time it did more than that, it made it evident that the impending struggle would be one of unexampled bitterness. It would have been singular indeed, if in the seventeenth century such a procedure had not stirred the fountains of vengeance to their lowest depths. The act was an unspeakable blunder; for, coming as it did at the very beginning of the contest, it was a precedent for every species of violence and revenge. The deliberateness with which it was designed, and the air of official formality with which it was carried out, deprived it entirely of all those extenuating considerations with which we justly surround any excesses that are committed in the heat of action and of passion. No reaping of whirlwinds ever more surely followed the sowing of the wind than in the course of the Thirty Years War.

The next few months were naturally devoted to the mustering of forces and the gaining of alliances. At almost every point the Protestants were outwitted in their diplomacy. Blunders were committed in negotiating with the Prince of Transylvania, with the Count of Savoy, with the Elector of Saxony, and with James of England. The consequence was, that when the forces came to battle in the winter of 1620 the Protestants fought at great disadvantage and were easily overwhelmed. But even while the mustering of forces was going on the furies of vengeance were at work. Gindely gives the following account of what took place even before the battle of White Mountain in 1620:

"The army of Bohemia and Austria spread for miles around them want and misery, since, in spite of all the promises made them, they were again paid no money, and the soldiers were obliged to supply their wants by compulsory demands. The imperial troops also, and especially the Cossacks, lived only upon plunder, and behaved themselves like very devils. In a written complaint which the estates at Horn, notwithstanding their own connection with the insurrection, addressed to the Emperor, they were charged with maliciously reducing villages and cities to ashes, plundering poor and rich, violating boys and girls, and practising inhuman cruelties; also with stringing men and women on ropes and then shaking them; with squeezing them between blocks of wood; with tearing pieces of flesh from their bodies with pincers; with boring through their shin-bones and kneepans, and hanging them up by their feet, all to force money out of them. The complaint further sets forth: thousands of persons died of their manifold torments, as there was no sparing of any who were Lutherans. . . . Cossacks in companies of 200 to 300 men were daily passing in all directions, not content with simple plunder, but striking down men, women, and children in the fields, or committing beastly violations upon matrons and maidens. Death were a thousand times preferable to living longer under such outrages committed upon their flesh and blood" (i., p. 217).

There can be no question in regard to the influence of this policy of personal violence on the issues of the war. Instead of intimidating and overwhelming, it exasperated and made the play of reason impossible. Indeed, it soon re-

sulted in sharp reaction. After the battle of White Mountain the Protestants were prostrate, and it is now evident that a judicious use of opportunities would have restored the power of Ferdinand. But the stalwart policy of vengeance was pursued and the opportunity was thrown away.

MALARIA IN ITALY.

Carta della Malaria dell' Italia, illustrata da Luigi Torelli, Senatore del Regno. Firenze. 1882.

La Malaria de Rome et l'ancien Drainage des Collines Romaines. Par le Pr. Conrad Tommasi-Crudeli, Directeur de l'Institut anatomique et physiologique de l'Université de Rome. Paris. 1881.

Sulla Preservazione dell' Uomo nei Paesi di Malaria. Relazione di Corrado Tommasi-Crudeli: Deputato al Parlamento. Roma. 1883.

Roma, l'Agro Romano e i Centri Abitabili. Studie del Dott. Giuseppe Pinto, Consigliere Sanitario Provinciale. Roma. 1882.

Illustrazione del Quadro sulla Salubrità Regionale di Roma. Pubblicato per cura del Prof. Francesco Scalzi, Membro del Consiglio Superiore di Sanità del Regno. Roma. 1883

SINCE the unification of Italy much attention has been directed there to the important question of malaria, or the cause of aguish and remittent diseases. The better Italian opinion on that subject may be fairly learned from the treatises above named. Signor Tommasi Crudeli, Professor of Pathology in the University of Rome, in 1879 believed that he had recognized the malarial cause in a microscopic organism that he named the *bacillus malariæ*. This, found in certain soils not necessarily marshy, thrives under the combined influence of heat, moisture, and access to the air. Klebs, a European observer, supposed that he confirmed these observations at the time, but they have not been sustained by others, although distinguished microscopists have paid much attention to them. The existence of this bacillus is neither distinctly proved nor disproved, although from one point of view it is probable.

In Italy two-thirds of the malarial districts are on hillsides and mountain slopes, and there, as elsewhere, the absence of one of the specified conditions prevents the development of the disease-cause—for instance, a marsh that is pestilential when half drained is harmless when flooded; or, were it possible to cover an ague-bearing tract with thick grassy sod, health would follow; and, conversely, the reëstablishment of the old conditions would bring about the old results. A case is cited by Signor Tommasi-Crudeli to show the inherent character of the poisoning germs in certain soils. A lady who had enjoyed good health and who lived in a healthful locality was attacked with a malarial intermittent fever. This yielded easily to treatment, but developed again as soon as she resumed her ordinary course of life. Alternations of facile cures and relapses continued through some months, until her physician remarked that the relapses supervened whenever she left her bed-chamber and resumed her ordinary life in a well warmed sitting-room. This room was ornamented with a quantity of growing plants. He caused these last to be removed, and from that day her cure was complete. Signor Tommasi-Crudeli supposes that a malarial taint in the soil which nourished the plants was developed by the required degree of heat supplied by the temperature of the sitting-room. But quite as unfortunately for America as for Italy, the malarial problem is not yet solved. The map attached to Signor Torelli's essay enables us to form some conception of the territory, which is, roughly speaking, about one-third of Italy, subject to the scourge of malaria. Of the sixty-nine Italian provinces, only six are completely free—Genoa, Porto-Maurizio, Florence, Carrara, Pesaro, and Piacenza; in thirteen it exists in a mild form; in twenty-nine more severely, while in twenty-one it attains its greatest virulence. That districts healthful during the periods of the Republic and the Empire are now rendered almost uninhabitable in summer, cannot be doubted. There is also every reason to fear that the malady has made considerable progress within the past fifteen years. The retrogression is supposed to be largely due to (1) the choking up of drainage systems and watercourses through war and the devastation or destruction of whole cities and communities—recent investigations have brought to light in now waste malarious districts perfect systems of underground drainage—*cuniculi*, often three or four stages one beneath the other, the lowest at an extraordinary depth below the upper surface; (2) the destruction of forests, which have induced malarious swamps, disarranged the climate of districts, or removed natural screens which interrupted malarious influences—it was not alone fancy that led the ancients to respect forests and groves through fear of the anger of the sylvan gods; (3) the throwing back of waters and consequent increase of subsoil moisture by the silting up of rivers and coast lines. Railways appear to have had much to do with the recent increase of malaria. Malarious earth, previously lying dormant, has been turned up, natural watercourses have been diverted, forests and thickets have been cut down to provide sleepers and to bring into cultivation tracts of country made more valuable by communication. Then, again, troops and railway employees are now scattered over all parts of the kingdom and are subjected to malarial influences. Thirty thousand of the Italian army annually are thus disabled for some days—one-third of this number more than once, thus bringing up the cases to 42,000—men in the flower of their age, well fed, and presumably of the best constitutions. Along 2,300 of the 5,200 miles of Italian railways open, malaria is said to prevail more or less. In Sicily alone 1,450 railway employees are annually prostrated, with an average of eleven days' illness each; in some districts permanent residence at the stations is impossible, and trains have to be provided to convey the staff to and from their work in the morning and at night.

These figures may indicate how important the whole question is to Italy. Numerous commissions of inquiry have been appointed, and many valuable reports have been drawn up on the subject. The recommendations have been chiefly in the direction of comprehensive systems of drainage, planting, and the establishment of colonies, under proper hygienic conditions, in malarious districts to render them healthful by draining, reclaiming, and cultivating. There are considerable difficulties, financial and otherwise, attendant on the complete carrying out of these recommendations, and we can hardly expect rapid progress. Much is hoped from the planting of the Australian gum tree (eucalyptus), which is proceeding in many districts, notably near railway stations. It is claimed that the roots tend to extract the malarious influence from the soil, and that the exudations from the leaves are beneficial. Signor Torelli cites some striking statistics in favor of the beneficial influence of this tree. Its usefulness probably arises from the moisture it exhausts through its extremely rapid growth. Signor Tommasi-Crudeli appears to have confidence in minute doses of arsenic as a preventive, and gives instances of its good effects among the employees on the Calabrian and Sicilian railways. It would be difficult, however, to look forward to any permanently beneficial results from the use of this drug.

Now that Rome is again the great and growing capital of a great nation, the questions involved in the sanitation of the surrounding campagna—the *Agro Romano*—have become of national importance, and we may hope for important results in the direction of the decrease or disappearance of malaria in that portion of Italy at least. The death rate of Rome itself has been reduced from 27.81 per 1,000 in the decennial 1861–1870 to 21.43 per 1,000 in 1871–1880. It is indeed now one of the most healthful capitals in Europe. The map of Rome, illustrated by Professor Scalzi, proves how baseless is the common saying that the streets about the Trastevere and the Ghetto are the healthfulest. They are, on the contrary, at the foot of the list; while the new districts between Porta Pia and Santa Maria Maggiore, and the "Strangers' Quarter" about the Piazza di Spagna and Via Sistina, are the most healthful. It is possible that the increase of population from 208,000 in 1861–1870 to 270,000 in 1871–1880, being presumably composed chiefly of young and active persons, may to some extent qualify the great apparent gain between the two periods; while it is certainly due principally to the great improvements in the sanitation of the city and to the works which are being carried on along the banks of the Tiber and elsewhere. Though we should not select Rome as a permanent residence, it is one of the most delightful winter resorts in the world, and safe enough if the traveller uses ordinary precautions. Dr. Drummond, in a paper read before the British Medical Association in Liverpool last year, says:

"Those who do come will find the Roman climate to be, in the words of Sir J. Clark, 'one of the best in Italy,' with a mild, calm atmosphere; an absence of storms; an unusually large proportion of sunny days, permitting exercise in the open air by carriage or on foot; the winter very short and free from fogs, with almost no frost or snow; while the art treasures, historical monuments, endless subjects of antiquarian and literary research, combined with agreeable society, find pleasing occupation for the mind, and banish in a remarkable degree those little cares which do more to harm and embitter existence than the graver troubles of life."

His advice accords with that of others who have had experience of Rome—to take regular meals and plenty of sleep, to avoid hurry and fatigue, to be careful in passing from sunshine into cold galleries and churches, and in short to follow, with a little extra precaution, those laws of health which prudent persons are accustomed to observe at home.

BOOKS ABOUT THE STAGE.

Henry Irving's Impressions of America. Narrated in a series of Sketches, Chronicles, and Conversations. By Joseph Hatton. London: Sampson Low & Co.; Boston: J. R. Osgood & Co.

Henry Irving in England and America, 1838-84. By Frederic Daly. London: T. Fisher Unwin; New York: Scribner & Welford.

A Study of the Prologue and Epilogue in English Literature from Shakespeare to Dryden. By G. S. B. London: Kegan Paul, Trench & Co.; New York: Scribner & Welford.

English Comic Dramatists. Edited by Oswald Crawfurd. [Parchment Library.] New York: D. Appleton & Co.

OF books about Mr. Irving there are beginning to be enough now to fill a fairly large bookshelf, and we are inclined to paraphrase Goethe and cry, "Irving and no end." Within a scant

year we have had a catch-penny anonymous biography, Mr. Austin Brereton's careful record of the actor's career, Mr. William Archer's incisive criticism, and Mr. Frank Marshall's needless answer to it. Add to these the multitude of pamphlets, magazine articles, and newspaper criticisms and interviews since it was first announced that Mr. Irving intended to visit America, and it is at once seen that the task of the future compiler of an Irving bibliography is not easy. Now we have before us two more goodly tomes, both devoted to the worship of the Irvingite rite, or at least to the swinging of the censers before the object of adoration. Mr. Hatton's book is the more portly and the more pretentious. It is greatly to be regretted that Mr. Irving did not take the hint of the Autocrat of the Breakfast Table to the effect that it is well to have Every Man his own Boswell. Having determined to have a Boswell, it is a thousand pities that the actor did not choose a biographer in attendance having finer qualifications for the task than "Mr. Joseph Hatton, the famous London correspondent of the *New York Times*." A great many Englishmen and Englishwomen have delivered themselves of their opinions of these helpless States—and indeed the writing of a book about America is an immemorial privilege of all British subjects, acknowledged to be theirs since a time whereof the memory of man runneth not to the contrary. The impressions of America carried away by so clever a man as Mr. Irving might very well be worth reading, if they could be seen directly and not through a dense medium. There is such a simple and condescending complacency about Mr. Irving's private interviewer, Mr. Joseph Hatton, that a critic hesitates to declare frankly and fully his opinion of the book. But as the critic returns to it and recalls the reiterated self-puffery which is its chief characteristic, his heart hardens and he hesitates no longer to say that "the famous London correspondent" has written one of the cheapest, most contemptible, and most worthless books in the whole department of books about the stage—an assertion of which only those who are well-read in such literature can know the full force. It is with regret that we see Mr. Irving's name associated with the work.

Mr. Daly's book is disfigured by a tone of persistent, dogmatic, and intolerant eulogy of Mr. Henry Irving; but it is such a relief after the disagreeable snobbishness of Mr. Joseph Hatton, that this defect may be pardoned. Mr. Daly's attitude is uncritical, for he is a thick-and-thin Irvingite. He is an Irvingite of the strictest sect, and he has no mercy for heretics or indifferents. Lowell has told us that the *odium æstheticum* is quite as fierce as ever was the *odium theologicum*, and Mr. Daly's attitude toward all those who do not bow before Baal is a case in point. This deduction once made, it may be said that Mr. Daly's biography is useful and entertaining. It covers the whole of Mr. Irving's eventful and instructive career. It devotes two chapters to the sojourn of the Lyceum Company in the United States. In another chapter Mr. Daly attempts to declare the "secret of success." Yet another, and perhaps the freshest and most interesting, is given up to an enumeration and consideration of Mr. Irving's literary labors—the various magazine articles, prefaces, and addresses published and delivered now and again since Mr. Irving discovered that there was "room on top," and climbed up the ladder of fame to engage the room. There is to be noted in Mr. Daly the same amusing insularity we have seen in nearly all English writers about the stage. Like them, he knows only what has been done in London. The condition and position of dramatic art in this country are wholly unknown to him. So we see Mr. Irving credited with reforms and new readings in "Hamlet" and in "Richard III." in which American actors had anticipated him. An appendix is devoted to a list of parts played by Mr. Irving in London since October 6, 1866, thus supplementing that given in Mr. Brereton's useful outline biography of the actor. The appendix also contains an interview with Mr. Edwin Booth, reprinted, we think, from the *Pall Mall Gazette*, which has of late developed an American fondness for "interviewing." M. Lalanze has supplied an effective etching of Mr. Irving, taken from a photograph; we infer from it that the etcher has never met the actor. There is no index.

If any more admirers of Mr. Irving are anxious to make books about him, we shall be glad to suggest one which will be of lasting value. One of the things which the student of the stage needs most and finds rarely is an exact and accurate statement as to how the great actors of the past have performed the great parts of the drama. We have no criticism of the whole performance by Garrick of any given part—no criticism at once detailed and complete. Prof. Fleming Jenkin has rescued and published in the *Nineteenth Century* and in *Macmillan's Magazine* contemporary criticisms of Mrs. Siddons in two of her best parts, which are precisely what we want. If the admirer of Mr. Irving will buy a copy of Mr. Irving's acting edition of any Shaksperian play—and this acting edition is in itself a document of great importance in considering an actor's value; if he will have this interleaved with blank pages; if he will carefully follow Mr. Irving's performance, noting in the text all his "readings" and setting down on the opposite blank page all his illustrative "business," he will have preserved a record of the actor's art which may do more for Mr. Irving's fame a century hence than a library of declamatory eulogy. Mr. Booth has published his 'Prompt-Books,' with the assistance of Mr. William Winter; and he has thus provided any of his admirers with the opportunity to set down exactly what he does on the stage. It is not too late yet for some of Salvini's ardent admirers to put on record the exact facts of that great actor's performance of *Othello*. What would we not now give for this skeleton of Kean's *Othello*, of Garrick's *Richard*, of Betterton's *Hamlet*?

The writer of the very pleasant and gossipping book on the prologue and the epilogue as they existed in the English drama from the time of Shakspere to that of Dryden has an excellent subject, and he has treated it with knowledge and judgment. It is a subject, too, which has been practically neglected hitherto, for we can recall little or nothing about it except the opening and closing chapters of the late Dutton Cook's carefully-compiled 'Book of the Play.' Indeed, the only serious fault we have to find with "G. S. B.'s" essay is that it is too short. It stops with Dryden, although another chapter, or at most two, would have brought it down to Sheridan, who was practically the last of the writers of prologues and epilogues. This extension would have allowed a consideration of Garrick's work in this field, in which he had no superior but Dryden. The task would have been easy, also, since there exists a collection of English prologues and epilogues, published in five volumes, early in this century. As "G. S. B." succeeds in showing, the addresses to the audience before and after the play are most important documents in the history of the drama, containing many facts not elsewhere recorded, and abounding in valuable information on the manners and customs of the time and of the town.

Mr. Crawfurd tells us that "in making the selections from the comic dramatists which are to follow, it has been my endeavor not merely to put together at haphazard a number of comedy scenes that shall amuse and entertain the reader of them, but to give him in a succinct form something which shall thoroughly represent our English comedy literature." And in this endeavor we believe that Mr. Crawfurd has been fairly successful—as successful, indeed, as any one can be, for, in truth, our English comedy literature cannot be thoroughly represented by such a series of selections from a dozen dramatists, even when as shrewdly made as in this case. That Mr. Crawfurd's elegant extracts, his golden treasury of the best bits of the best plays of the best English writers of comedy from Shakspere to Sheridan, have been chosen with great skill and afford excellent reading is indisputable, and we are not inclined to quarrel with the effort to attain the unattainable, since it has given a greater symmetry and a higher quality to the volume as it stands. We are inclined to think that the editor, in considering Sheridan's plagiarisms, has much overstated the case against him, but this is a trifle. The introduction and the prefatory notes are full of pith and point, and they can be read with as much pleasure, almost, as the comic scenes they introduce—and surely no editor of an anthology could ask for higher praise.

The Elements of Political Economy. By Émile de Laveleye. New York: G. P. Putnam's Sons. 1884.

Coleridge said of a certain production that it was history not merely popularized but plebificated, and the remark might be applied to a great many treatises that assume to make easy what is in its nature difficult. The world is full of abridgments of universal history, of compendiums of literature, and of elements of all the sciences. What becomes of them all is as great a question as what becomes of all the pins; but the pins are at least of some service before they are lost. Doubtless the convenience of beginners is promoted by the use of text-books that present but few of the facts of a science, and that expound only the leading principles; but unless they show the manner in which the facts have been established, and the logical processes by which the principles have been derived, they are unfit for their purpose. Those who depend upon them are as certain to lose by it as those who undertake to prescribe for their ailments by the aid of the 'Domestic Cyclopædia of Medicine,' or to preserve themselves from legal embarrassments by following the 'Business Man's Guide.' But in such a science as political economy, certainly there is no royal road. If one has not the time to master it, he had better let it alone. An ordinary text-book can do no more than inform the student what theories have been maintained by certain authors, and, if it pretends to do no more, it may be of service. But if the learner is led to suppose that by acquainting himself with the views of certain men, and even committing them to memory, he is mastering the science, he sustains a positive injury.

We regret to say that the work of M. de Laveleye seems to us to be of the worthless class that we have described. It is with reluctance that we speak so unfavorably of it. The amiability of the author almost disarms the critic, and the simplicity of his style imparts a charm to his matter. He has been an industrious investigator, and his labors in certain directions have been highly honored. But as we read this book we seem to be transported back to the eighteenth century, when philosophers imme-

diately presented whatever opinions happened to enter their heads as the most profound truths. It is difficult to imagine the mental state of a writer who deliberately and in all seriousness publishes such statements as this: "A country without mines will produce no metals, and a people living far inland will not be able to devote itself to navigation." We could quote pages that read like extracts from one of our party platforms or from a school composition. We shall select a passage that illustrates the author's method of dealing with statistics, as well as the sobriety of his judgment:

"According to calculations made in the United States, in ten years alcohol imposed on the country a direct expenditure of about 300,000,000*l.*, and an indirect expenditure of a similar sum. It has sent 100,000 orphans to the asylums, it has brought 138,000 persons to the prison or the workhouse, it has led to 10,000 suicides, and has made 200,000 widows and 1,000,000 orphans. The total expenditure for civilized countries can hardly be less than 250,000,000*l.* Opium, which brings those who smoke it to idiocy, annually costs China at least 16,000,000*l.*

"The inexplicable habit, borrowed from the savages, of burning a leaf of tobacco between the lips, in order to absorb a certain dose of a highly-noxious, narcotic poison, costs . . . civilized countries generally more than 120,000,000*l.* . . . The highest part of the human race accordingly spends some 400,000,000*l.* to poison itself in large or small doses.

"Women also pay thousands of pounds for precious stones, which have no other effect than to foster two serious vices—vanity in those who wear them and envy in those foolish enough to wish to have them.

"Throw into the sea the alcohol and opium, the tobacco and precious stones, and nothing will be lost. On the contrary, those who were poisoning themselves and corrupting their minds and bodies will gain much in moral and physical well-being. Things whose destruction improves the condition of mankind cannot be true wealth."

This is not what we understand to be the science, or even the elements, of political economy. If every one would give up foolish expenses and live soberly, righteously, and godly, the world would be much better off than it is. But it is absurd to attempt to construct the economics of such a world, and it is vain to take such an ideal as an end in a practical treatise. We are unable to think of any class of persons that will be benefited by the perusal of this book. It will not interest children, nor can it instruct adults. Mill's treatise is quite elementary enough. Every one that is competent to deal with the subject at all can understand it, and no one ought to try to deal with such a subject until he has been trained in the methods of reasoning that are essential to its successful treatment. Such books as this can only serve to furnish learners with conclusions for which they can assign no premises and facts for which they know no authority. Its economic teachings are sound enough, according to our way of thinking, but if the students of our colleges are to get their ideas of political economy through such media, we shall contemplate the future of that science with melancholy forebodings.

The American Horsewoman. By Mrs. Elizabeth Karr. Boston: Houghton, Mifflin & Co.

THIS very readable and instructive volume has been written by an appreciative friend of horses who, from extended experience and careful teaching, advises her sisters on almost every point where a novice needs information. And many well used to horses also may read and learn. We cannot altogether agree with her, but we admit at once and frankly that the author has the advantage of speaking *ex cathedra* from the side-saddle, while the reviewer only looks on from above two stirrups.

The book is inspired by love, but the love is not idolatry: there is careful discrimination between animals, and recognition that the physical and moral attributes of the very best horses are no nearer perfection than are those of men. In fact, the frequent caution of possible peril might lead a timid beginner to doubt if there were any road of safety through so many contingencies of evil. But it is not undue fear; it is simply prudence pointing out what may generally be avoided. The animal as a vital machine receives a plain, well-illustrated, untechnical description that many others than horsewomen might study with profit. The rider's dress and personal fittings are then described with the wealth of detail that delights a practical woman's heart, and that leaves nothing to the vague generalities a man would be compelled to employ—this is the characteristic and makes the value of the book. It states distinctly what the author thinks it is best to do, and then carefully, without waste of words but with plenty of them, describes exactly how to do it; and almost every possibility of equipment or of *manége* is covered.

Where we dissent is in the eulogy of the three-pommelled saddle and of the rising trot. The third horn the author regards as so essential to comfortable riding that she barely refers to the older form as "the saddle of our grandmothers." The next edition should contain a chapter for those old-fashioned people who, from ignorance or preference, cling to the freedom of the archaic style, and resent being held in place. Any horse may fall, and it seems almost impossible for a woman taken unawares to release the left leg so as to escape promptly—whether she tries to leap from the rearing horse, as advised (p. 286), or whether the animal, by some accident, goes down to the front or side. The hunting horn is safer in that the unskilled rider is less liable to go over the horse's head. But we have seen in actual use a railing, like that of an arm-chair, raised about a saddle. Now if the rider is to be mechanically encased, why not make also the railed saddle popular?

A kindred abomination is the rising trot. The centaurs were not all male, and the perfect horsewoman even yet is as a part of her horse. The woman who rides without a saddle—and there are such—does not fly through the air except as her horse does. Some superb riders are those who, with the leg over the horn of a man's California saddle, follow every curve of the horse's career. No shying can unseat them. The beginning, equally with the end of all riding for women, as for men, is independence of the saddle. Put the girl upon the girthed blanket, and the same faculty that guides her in the ballroom or upon skates will ultimately keep her there. It is primarily a matter of balance; and although the new school, entangled among the three pommels, may not believe it, the average woman, if self-possessed, needs little mechanical help. There are horses that Satan might not ride, but a decently-behaved animal and a vigorous woman will soon be in accord. The English trot is essentially artificial, and it is an artifice that adds neither beauty nor efficiency to its possessor. The woman or man who is always, as it were, on the wing, has much greater dependence for exercise and progress upon stirrups and pig-skin than upon horseflesh. The trick of rising is confessedly unsafe (p. 202), it is assuredly unnatural, and it is anything but picturesque. If the natural seat is, as the author expresses it, the cavalry seat, one may be pretty sure that the horsemen of the State are held to it for sufficient reasons.

A limitation of this admirable book is that it is, not only primarily but almost solely, intended for the wealthier few who command every equine luxury. Makeshifts should be noticed, especially for the fair majority who traverse country roads. One of the best of these is a contrivance used in the interior of California by ladies, some of whom do not own and some of whom discard a side-saddle. A broad girth has on its inner surface a wedge-shaped pad, the square end uppermost, which, pressing against the curve of the ribs on the off side, holds itself in place. Directly above the wedge is a leather handle, that may be grasped in an emergency. From the near side hangs a stiff leather stirrup. Upon blankets thus held down, the loping or the easier trotting horses of that region will carry their riders, without the risk of sore backs, and with ease and grace, quite independently of the costlier appliances of the saddlers' shops. It might startle Central Park, but what is serviceable in the Sacramento Valley should be applicable to the highways of the East. It is, further, a little odd that one so familiar with horse equipment should have ignored entirely the so-called dragoon or Spanish knot, that so excellently and completely replaces buckles in fastening the girth. It is so simple and so safe that this device should always be prominent on a saddle that the rider may be required to adjust. In the composition of the book we observe but one actual slip, and that probably of the type: Queen Charlotte is represented (p. 67) as entering London on a pillion in 1700, instead of 1761.

Our commentary has grown far beyond the limit we set, and it is only because the volume is so admirable that we have allowed it such space. It is fascinating in its well-controlled enthusiasm; it is full of details that all riders should know, is wise and clear in its instruction, and is invaluable to all women who hope to ride—especially if they *will* use the bearing pommel and *will* rise to the trot.

Wit, Wisdom, and Philosophy of Jean Paul Friedrich Richter. Edited by Giles P. Hawley. Funk & Wagnalls. 1884. Pp. 225.

NOTHING affords a more striking illustration of American nervousness and impatient haste than the national craving for literary hotch-potch. In the majority of the newspapers columns of paragraphs take the place of articles, longer pieces are sure to be overlooked unless provided with "catching" head-lines, and soon the value of an editor will be measured by his ability to manufacture crisp epigrams. Many pens have been busy for several years condensing the classics, and making birthday books of the works of all the great writers, and the little book now under consideration belongs to a similar category. It contains translations of short extracts from the works of an author who was at one time read by all the women and young men of Germany, but who is now almost forgotten. They are arranged under various headings, as Nature, Art, Society, Friendship, Love, Marriage, Education, Satire, Religion, etc. Many of these extracts justify Carlyle's tribute to Richter's fancy—"hanging like the sun a jewel on every grass-blade, and sowing the earth at large with Orient pearl." Indeed, no author is better adapted for being treated in such a way than Richter, for he had the habit of scattering throughout his writings in the greatest profusion gems of thought in poetic form, which can be better appreciated separately than in the places assigned to them, where their multitudinousness destroys their effect. Jean Paul's fate is a terrible warning to all authors of the value of a good style. Had he, with his fertile imagination, possessed the literary instinct of Heine or Goethe, he would be as popular as ever. But there is a constant sophomoric straining after humor, which becomes tiresome, and an over-sentimentality—an at-

mosphere of "oh" and "ah" and "alas"—which offends modern readers as much as the intricate and inconsequent style and the appearance of affectation. Some allowance must perhaps be made for the fact that the people whom Richter painted *were* queer folks; but that does not quite account for the moonshiney tone of his writings, so directly opposed to modern naturalism and literary photography. His casual epigrams are the best products of his genius, and Mr. Hawley has made an excellent collection of them, well translated in most cases. That in the strange world in which Richter lived the ideas on love, friendship, marriage, and happiness were the same as elsewhere in different ages may be seen by these extracts. To authors more valuable advice has never been given than is contained in these few words: "He never wrote without having read himself full on the subject; and, the reverse, he never read without having first *thought* himself hungry."

Biographie Vendomoise: Histoire par ordre alphabétique de la vie publique et privée de tous les personnages remarquables nés dans le Vendomois, et de tous ceux qui s'y sont signalés par leurs services et leurs travaux. Ornée de portraits et de fac-similes. Par le Marquis de Rochambeau. Tome 1er. Paris: Champion. 1884. 8vo, pp. 407.

THIS curious volume, with its eighty-two brief biographies, and its dozen or more portraits of its most notable subjects, reaches only through the "D's." It is interesting as a proof of the strong local feeling that still attaches to the men of note in the immediate region of their birthplace, and as showing that provincial France is proud of its ancient glories. The alphabetical order makes queer neighbors; venerable saints, great historical characters, actresses, men of affairs, kings and their kinsfolk, philanthropists, travellers, and revolutionary chiefs, jostle each other in rapid succession, but all furnish forth a lively picture of the elements that go to make up the history of one of the French provinces that still retains much of its old character. The Bourbons and the Condés make a great showing; and some of the early church dignitaries, heads of the once famous monastic establishments, with a few notable literary and legal worthies, furnish the historic and antiquarian subjects. There is a curious story of a man named Girodon, changed by him to Dorgoni, who played an important part in Rangoon, and after telling it to his friends in France in print in 1862, died in the East in 1865. His case was but another proof of the defects of the French in their dealings with foreign people. The book is a very interesting contribution to the growing library of local history, as it is full of local color, and really a noteworthy publication.

Superior Fishing; or, The Striped Bass, Trout, Black Bass, and Bluefish of the Northern States, etc., etc. By Robert Barnwell Roosevelt. New York: Orange Judd Co. 1884.

THIS is a new edition of a deservedly popular book, which combines instruction in the art of angling and information about the habits of the best fish of the Northern States, with some delightful narrative of personal experience in their pursuit. Nearly one-half the volume is devoted to the fish of Lake Superior, a subject on which an angler may justifiably grow enthusiastic. The Harmony and Batchawaung Rivers, on the north shore of the lake, and the sport they afford are fully treated of, but we have not, in this or any other book on Lake Superior, found mention of the Two Heart, a river on the American shore, twenty miles above Whitefish Point, which we think fully equal to either of the above-named streams in the quantity and size of trout.

There is a good chapter on fly-tying, which gives the best American substitutes in feathers for tying English trout flies. We do not agree with Mr. Roosevelt in his opinion that a salmon rod should be twenty feet long. The same reason for lightness exists as with trout rods, and a rod of sixteen or eighteen feet in the hands of anybody knowing how to handle it is ample to fish for and kill the biggest salmon of the Cascapedia or Restigouche.

BOOKS OF THE WEEK.

Abbott, A. V. Testing Machines: their History, Construction, and Use. D. Van Nostrand. 50 cents.
Adams, R. C. Travels in Faith from Tradition to Reason. G. P. Putnam's Sons. $1.25.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2 50.
HENRY HOLT & Co., N. Y.

Henry Holt & Co.

HAVE JUST READY:

LIFE OF JOHN KALB. Major-General in the Revolutionary Army. By Friedrich Kapp. 12mo, $1.75.

*THE MISTRESS OF IBICH-*stein. By Fr. Henkel. Translated by S. E Boggs. 16mo, Leisure Hour Series, $1.00; Leisure Moment Series, 30 cents.

Johns Hopkins University,
BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

WE WILL FURNISH A SAMPLE Case (12 quart bottles, no two alike), pure California Wine, price $5. SONOMA WINE AND BRANDY CO., 30 Warren Street, New York.

LEE & SHEPARD'S NEW HANDBOOKS.

*BEGINNINGS WITH THE MICRO-*scope: a Working Handbook, containing Simple instructions in the Art and Method of Using the Microscope and Preparing articles for Examination. By Walter P. Manton, M.D., author of 'Taxidermy without a Teacher,' 'Insects,' and 'Field Botany.' Illustrated. Price, 50 cents.
Dr. Manton's handbooks are the result of practical experience in the subjects of which he treats. The microscope handbook is one of his best.

LESSONS ON MANNERS. By Edith E. Wiggin. Price, cloth, 50 cents; School Edition, board, 30 cents, net.
This little work is one which will be found especially valuable for use as a supplementary reader in the school-room.

*BROKEN ENGLISH: a Frenchman's Strug-*gles with the English Language. Amusing as a narrative, instructive as a handbook of French conversation. By Prof. E. C. Dubois, author of 'The French Teacher: a Right System of Teaching French.' Cloth, 50 cents; cheap edition, paper, 30 cents.
It is published in English and French, on opposite pages, and will prove a very valuable aid to those learning French.

THE PARLOR GARDENER: a Treatise on the House Culture of Ornamental Plants. Translated from the French and adapted to American use. By Cornelia J. Randolph. With eleven illustrative cuts. Price, 50 cents.
It contains minute directions for the "mantelpiece garden," the "étagère garden," the "flower-stand garden," the "portable greenhouse," the "house aquarium," the garden upon the balcony, the terrace and the double window, besides describing many curious and interesting experiments in grafting.

*** *Sold by all booksellers and newsdealers, and sent by mail, postpaid, on receipt of price.*

The Nation.

NEW YORK, THURSDAY, JULY 17, 1884.

The Week.

THE heartiness with which the Democrats and Independents everywhere have accepted Cleveland's nomination will give the Blaine leaders a dreadful sinking of the heart. There are only a few feeble signs of a disposition to bolt. A few professional workingmen are threatening to go over to Blaine, but they are likely to change their minds before the campaign is much older. John Kelly is sore and sulky, and the Blaine managers are regarding him with great interest, but we do not believe there are serious possibilities of harm in him. The O'Brien machine leaders are going about chuckling that "it is all arranged with Tammany to 'knife' Cleveland in the city," but we very much doubt if it is. Kelly has no grievance, and if he were to attempt to "knife" Cleveland, either openly or secretly, he is not likely to be able to control votes enough to overbalance the thousands of independent votes which will be given to the national Democratic ticket. It looks very much like a "tidal-wave" year, and if it is, Kelly and Butler will be of small account, no matter what they do.

The general willingness of prominent citizens to speak well of the Democratic ticket is very suggestive in view of the utter inability of the *Tribune* to find anybody except Gould, Field, and Sage to come out warmly in commendation of Blaine and Logan. We do not observe that any of those three has anything to say about Cleveland, but we are willing to give the Blaine people the benefit once more of what they said about Blaine by reproducing it. Mr. Gould said:

I shall be perfectly satisfied with the nomination. Blaine is a live man and will be a live President. There is nothing dead about him. He is abreast of the times and never allows himself to fall behind a single step. Arthur has done very well in the office, and worse candidates might be selected; but Blaine is the man for the place.

Of the same candidate Mr. Cyrus W. Field says:

Mr. Blaine is a strong and able man; he is one of the ablest men in the country. The attacks on him will not hurt him. They will recoil on the people who make the attacks. Lies always hurt the people who tell them.

Of the same candidate, Mr. Russell Sage says:

Mr. Blaine is the leading statesman of the age in this country, or indeed any other country. All this talk about his aggressiveness is nonsense. As President of the United States he will be careful and conservative; his very responsibility will make him cautious. I am warmly in favor of him, and of his election I have not the slightest doubt.

We commend these opinions to the workingmen who are talking about bolting Cleveland because he is a monopolist candidate, and about voting for Blaine as the "workingman's friend."

During the sessions of the Convention and in the preliminary canvass much was heard about Governor Cleveland's unpopularity among the workingmen. Those horny-handed sons of toil, John Kelly and Benjamin F. Butler, were loud in denunciation of the Governor as the enemy of the laboring classes. But there was a great scarcity of specifications of the acts which had led to these unpleasant relations between the Governor and the workingmen. The veto of the Five-Cent-Fare Bill was speedily knocked out as a cause of unfriendliness, for the reason that the working classes are already in the enjoyment of five-cent fares during the hours in which nine-tenths of them ride on the elevated roads, and for the further reason that the bill was notoriously in violation of the contract between the companies and the city. An additional reason for discounting the statements of Kelly and Grady on this point may be found in the fact that the most prominent of the elevated railroad "monopolists" are supporters of Blaine. It is generally acknowledged that Jay Gould and Cyrus Field know on which side their bread is buttered.

The so-called Independents of Pennsylvania have issued an address to the Independents of New York and Massachusetts, giving reasons why the latter should support Blaine. There is nothing in these reasons worth consideration. The entire address is disposed of by the fact that the Independents of Pennsylvania were not Independents at all in the sense in which the term is understood in New York and New England. They were simply working for the overthrow of the Cameron Machine. They were no more Independents than Warner Miller, Jimmy Husted, and Collector Robertson were in this State when they were seeking the overthrow of Conkling. The great leader of the Pennsylvania revolt in 1882 was Wharton Barker, the author of the surplus-distribution scheme, which so captivated Blaine, but which he dropped so quickly when he discovered that its humbug character was too apparent to be magnetic. Barker's associates were nearly all Blaine men, and one of the chief objects of their revolt was to destroy the Cameron Machine, and thus smooth the way to securing a Blaine delegation this year.

About the only active campaign work which appears to be under way in Massachusetts is that of the Independent Republican Committee. According to the Boston *Advertiser* of Thursday, the Independents "continue to receive letters from all over the State from Republicans who are not for the Blaine and Logan ticket. One letter yesterday stated that there were scores of old-line Republicans in the little towns of Franklin, Hampden, and Hampshire Counties who avowed their purpose not to support the ticket, and many more who were only awaiting a good Democratic nomination to declare themselves in the same way. Long lists of anti-Blaine men have been sent in from Taunton, Fall River, and many of the towns on the Cape, while in and about Boston the revolt is said to take in a large proportion of the Republican party." Neither sneers nor threats of party excommunication appear to be diminishing the numbers of the dudes and pharisees. The Blaine managers in the State are evidently a good deal depressed by the situation. They announced several days ago that a grand Blaine ratification meeting would be held next week, at which Governor Robinson would preside. When he was asked about it on Wednesday the Governor said that he could not tell whether he could or could not preside. It was also discovered that neither the day nor the hall had been fixed upon, and the grand ratification remained suspended in mid-air until Senator Hoar and Congressman Long could be heard from.

The Blaine "aggressive campaign" does not seem to begin. The only "charge" his friends have yet made against his opponents is that they are not as good as they pretend to be, or that they are too good for this world. The "holier-than thou" taunt really means that it is wrong to try to be better than the worst men of your party—just as cavalry take the pace of the slowest horse. What you should do in politics, they maintain, is, single out the worst rascals among your political associates and work down to their level, or at all events avoid any appearance of difference with them on moral questions. The poet of the Blaine campaign, for instance, is Colonel Joyce, the whiskey thief and ex-convict, and it is the duty of all good Republicans to avoid all appearance of being holier than Joyce. One of the directors of Blaine's canvass, "Pow" Clayton, of Arkansas, is a leading carpet-bag rascal, who has stolen far more than Joyce, but, like his friend and coadjutor, Dorsey, escaped the penitentiary, and no good Republican must pretend to be any more sensitive on questions of personal honor than Clayton. We might fill our columns with illustrations of the same kind, but where would be the use? There is really no good defence for Blaine but the "holier-than-thou" defence. All that can be said for him is that other politicians are no better than he and that anybody who condemns him is a hypocrite. But this is really the criminal's view of society. Nearly every old offender, who is brought up for sentence, thinks the judge is a canting knave, who would filch himself if he had not a good salary. It has been the defence of the criminal class against all reformers from the early Christians down to the abolitionists. The rascals and the men who live by abuses always maintain that the world is well enough as it is, and that the people who try to make it better are pharisees, who are not satisfied with their own share of what is going. But when a political party in a Christian country is driven in on this as a defence of its existence, its hour has come. Its doom is sealed. It is only bands of brigands who can be held together by a sense of their equality in iniquity.

As there is apparently not to be an "aggressive campaign" on the Blaine side, we think the managers should enter on their defensive one with more activity and vigor. The first thing they ought to explain is this—how it happens that all the Star-route men and whiskey thieves and navy-yard jobbers and spoilsmen of every description, small and great, all over the country, we believe without exception, are Blaine men. The Robesons, the Keifers, the Claytons, the Dorseys, the Joyces, the Chandlers, the Boslers, the Hubbells, the Mikes, the Jakes, the Barneys are all Blaine men. We know what the Independent explanation of this is; but what is the Blaine explanation? There must be some theory of the matter current in Blaine circles. What is it? There is material here for six or eight *Tribune* articles and about a dozen Philadelphia *Press* ones. Let us have them. We shall comment on them when the series is complete—say about the middle of August.

Nothing more clearly demonstrates the paucity of ammunition in the Blaine camp than the charge that in vetoing the Tenure of Office Bill Governor Cleveland acted in accordance with a "deal" with Commissioner Thompson. The Governor vetoed the bill because it was defective, and gave his reasons for his course in a message which left no doubt about it. The friends of the bill agreed with him in believing that the measure as it reached him was defective and ought not to become a law. Mr. Francis M. Scott, who drafted the bill and worked most earnestly for its passage, published a letter in which he said that the Governor was perfectly right in vetoing the measure, because as it reached him "it was a very shabby piece of legislation, quite unfit to find a place on the statute book." He explained also that the defects were introduced by an Assemblyman from this city, who offered an amendment, which was accepted in good faith, because its author "had not at that time displayed the cloven hoof that his subsequent course in regard to the Bureau of Elections Bill made so apparent." We hunted up the record and found that this Assemblyman was Isaac Dayton, who was sent to Albany as a reformer, but who through the entire session did Johnny O'Brien's work, and who is now one of the leading local shouters for Blaine. He not only defeated in this way the Tenure of Office Bill, but he led the Republican opposition to the Bureau of Elections Bill and defeated that also. The audacity of the *Tribune* in accusing the Governor of participation in a "deal" in vetoing the former bill, is, in view of these facts, worthy of its position as the leading Blaine organ.

Two more old pastors, or former religious advisers, have been produced to vouch for Mr. Blaine's spiritual character, and they strike us as rather improving upon their overzealous predecessors who made such a mess of it by mixing the Catholic question with their Protestant certificates. One of the newcomers says he stood in daily official relations with Mr. Blaine as Chaplain of the House during three Congresses, and that those who know him best have the highest admiration for his broad, able, and brilliant statesmanship, and are confident that as President he would give the country a clean, wise, patriotic, and popular administration. The Chaplain deprecates the current disposition to slander public men, quotes Scripture against it, and dips into history to corroborate the established Blaine position that Washington was a tattooed man. This is all very impressive, but the other new-comer among the pastors gives a much closer personal endorsement. He was pastor of the noble Old South Church in Augusta when Blaine was a young man, and lived so near to Blaine's house that "I could throw a doughnut into his yard from my piazza." Now, if this pastor had been a dude or a pharisee, he would have said that he could have "tossed a biscuit" into Blaine's yard. He uses the good old New England word "doughnut," and when after this he says that "no one can assail Mr. Blaine's moral character," we are inclined to think that the question is settled.

The report that Steve Elkins was in Augusta over Sunday with other of Mr. Blaine's advisers proves to have been a mistake. As he was not there, he did not, of course, form one of the party which filled the two Blaine pews on Sunday, and all speculation as to whether he went to church willingly or only on compulsion is a waste of time. Still, we dwell with much satisfaction on our surmise, which was that if he had been there he would have gone cheerfully. And this suggests an idea which we submit to the Blaine campaign managers for consideration. Why not collect all the shining lights of the Blaine party at Augusta on some Sunday during the campaign and send them all to church together? What a fine moral effect it would have to group at the same time in the two Blaine pews, Pow Clayton, Steve Elkins, Joyce, Tom Platt, Jimmy Husted, Jay Gould, Russell Sage, Cyrus W. Field, Patrick Ford, O'Donovan Rossa, Robeson, Keifer, the four old pastors, Barney Biglin, Bob McCord, and Johnny O'Brien. They would crowd the two Blaine pews and overflow into two others, and the effect upon them, as well as upon the country, would be powerful for good.

The old Tory Squire who acts as the London correspondent of the *Tribune* is plunged in great embarrassment by the way the Blaine nomination has been received. He had evidently been assuring his cronies at White's and Boodle's that Blaine was emphatically the gentlemen's candidate, whom all the really "nice Americans" would support, and whom, therefore, all the vulgar Americans and the low Irish would oppose. The news about the bolt of "the dudes" and the college graduates has, therefore, evidently given him a hard blow. But he was able to bear up under it until he heard that O'Donovan Rossa and the Irish dynamiters had come out for Blaine. This quite vanquished him, and he must for some days have looked a very sickly object to the club loungers. He telegraphed to the *Tribune* that "this will end by alienating European opinion, unless Mr. Blaine promptly disowns such allies." The Squire in his simplicity naturally thinks that this is the very worst thing that could happen Mr. Blaine. At the mess of the Guards it of course seems "perfectly dreadful." But if the Squire were better informed about America and American politics he would know that "the alienation of European opinion" is exactly what Blaine is aiming at. In fact, he wants to have it understood that all foreigners hate and fear him, and that when he comes into power, Europe will quake with fear, and all the well-dressed people retire to their backyards.

The Blaine managers say that they are going to make a vigorous campaign in the South, and that they expect to carry West Virginia, North Carolina, and Florida and to "make it hot" in Louisiana and Tennessee. This is what they have a perfect right to do, and it is to be hoped on all accounts that they will carry out their programme. The country ought not to be divided politically on "Mason and Dixon's line." There ought to be a more general commingling of North and South in politics, and the present is a fitting time to bring the two sections into better acquaintance with each other. Such acquaintance can be best promoted by the presence of eminent Northern speakers in the South and eminent Southern ones in the North. We should be glad to hear such men as Senators Morgan, Vance, Garland, and Lamar as well as Mr. Bayard and Mr. Carlisle on the stump in the Northern States. We should be glad to hear the colored orator, John R. Lynch, in Cooper Institute. We should be gratified to learn that a select body of Republican speakers had been detailed to canvass the South. It is time to diffuse through both sections something of the amicable personal relations and acquaintanceship which subsists at Washington among Senators and Representatives who meet on a footing of cordiality and mutual respect, however much they may differ in political opinion. No opportunity more favorable can occur than the present campaign. We trust that the Democratic Committee will embrace it, whether the Republicans carry out their declared intention or not.

The campaign has opened unexpectedly with a debate between the Democratic candidate for the Vice-Presidency and the Secretary of the Navy. In a speech at Indianapolis on Sunday Mr. Hendricks remarked that a defalcation had been found to exist in the Bureau of Medicine and Surgery of $63,000; that in the course of an investigation by a Senate Committee, Mr. Chandler had testified that he had received a letter a year ago informing him of "some of these outrages," and that a short time since somebody had come to him and told him that there were frauds going on in the service, but that members of Congress had recommended the continuance of the head of the bureau with such earnestness that he thought it must be all right. Now, said Mr. Hendricks, what is the remedy? Why, "to have a President that will appoint a head of bureau that will investigate the condition of the books and bring all the guilty parties to trial." Mr. Chandler has replied to this by

a letter in which he says that the defalcation went back to June 21, 1880; that the first he knew of the frauds was in December or January last; that he at once determined to and actually did discharge Dr. Wales, the chief of the Bureau, and Corrigan, the chief clerk, notwithstanding a strong Democratic petition for Dr. Wales's retention. Mr. Hendricks, in reply to all this, says that if the defalcations went back to 1880, it involves Mr. Chandler's predecessor in office, but does not help Mr. Chandler; further, that Mr. Chandler misrepresents his own testimony, because before the Senate Committee he testified that after investigation he concluded that nothing need be done; and Mr. Hendricks continues that the frauds were actually discovered by Wood, a Government detective. As Mr. Chandler's testimony is not at hand, we cannot yet verify the different accounts of it here given; but it is safe to say that even if Mr. Hendricks was not accurate, there is no dispute about the main fact, which is the defalcation and loss of $63,000. Everybody can decide for himself whether it would be a better remedy for troubles of this sort to elect Mr. Blaine or Mr. Cleveland President.

The Dingley Shipping Act, which was intended to take burdens off American shipping, contains one provision which threatens to impose a burden by making it more difficult for masters to get crews. Advance wages to seamen are prohibited by this statute, probably because it was supposed to be an exaction on the part of the mariner, and a cause of loss to the ship. But the real reason is that sailors are improvident and reckless, and when in port soon spend all their money, and are frequently held in a sort of pawn by boarding-house keepers and other "land sharks." A ship which can advance money to relieve a sailor from his temporary distress, and furnish him with a little ready cash, can easily secure him, while a ship which is forbidden by law to do so has much more trouble in finding sailors. The reformers who favored the Dingley measure seem to have overlooked one of the most marked peculiarities of the sailor's character on which, as well as on abstract principles, changes in the law of shipping contracts have to be based.

The Court of Appeals of West Virginia has undertaken to administer summary punishment upon a newspaper publisher and editor for contempt. The publisher, as generally happens, was not aware of the publication, and was fined only $25; his wicked partner, the editor-in-charge, was fined $300. The editor-in-chief seems to have been away for some months. The offence was the publication in the Wheeling *Intelligencer* of a statement that three members of the Supreme Court attended a legislative caucus and lobbied for the enactment of certain measures, promising in the event of their passage to sustain them if tested in the courts. When the two men were arraigned the editor-in-charge admitted his agency in the republication, said he believed it to be true, and held himself justified in so believing, as the original publication had been made at the home of one of the judges and had not been contradicted. He referred to the Governor of the State, the Auditor, and others, as sustaining the accuracy of the allegations, and denied that any contempt of court was intended or expressed. The judges took a different view of the matter, decided that they had common-law power to punish for contempt, and imposed the fines we have mentioned.

The offence charged is serious; but it seems as if in such cases, where the newspaper is willing to produce its witnesses, they ought to be summoned, and, if they have been slandering the court, be punished also. Without something like a real trial of the truth of the accusation, the charge is not set at rest; the punishment for a common-law contempt being entirely arbitrary, it proves nothing, and what the judges most want, if they are really innocent, is to have the stain removed. The only effect of these contempt proceedings that we have observed is that the charge, which was at first confined to an obscure corner of the country, is now being circulated all over the United States, without the public being at all able to decide that it is false—*i. e.*, without the judges having cleared themselves.

Mr. Frelinghuysen last week received a despatch from Mr. Mason, our Consul at Marseilles, to the effect that there had been thirty-five deaths in sixteen hours from cholera, and according to a Berlin despatch, the German Government has, "in consequence of Dr. Koch's report," requested the various Federal States to adopt measures for the prevention of its introduction into Germany, while the Italian Government is said to be "blockading all roads leading into Italy" with troops to prevent cholera from coming in. Dr. Koch's report is based on his "microbe" theory—that cholera is due to an intestinal germ—and from a *Gaulois* interview it appears that he not only pronounces the disinfecting of baggage, letters, and travellers ineffectual, but he cannot understand how "any faith was ever put in it." This makes it look as if quarantine measures or a military blockade would hardly have his approval; and the fact that it is Germany and Italy who are bent on taking most vigorous measures against Gallic cholera abroad, suggests that the scourge might be put to practical political use by stimulating international hatred. A hint against eating pork has already appeared in the despatches, and the German distrust of the American hog may be still further stimulated by suggestions that the cholera might "stalk" concealed in the American sausage or ham. So little is really known about the cholera—except that it follows routes of travel—that almost anything may be suggested.

Mr. Gladstone has announced an early adjournment and an autumn session, at which the Franchise Bill will be again passed and presented to the Lords. This is really an arrangement for a three months' popular agitation over the question, very much resembling a canvass before a general election. The leading orators on both sides will take the field and stump the country, delivering impassioned harangues, and "making it hot" for the Lords, who will be again summoned about October, and asked whether they have had enough, which is really what the renewed passage of the bill will mean. The minor members of the House of Commons will swell the fray in addresses to their constituents on the bill and on the work of the session generally—an excellent custom, which has always prevailed in England to some extent, but of late years has been growing general. Every member is now expected, as soon as convenient after the adjournment of Parliament, to meet his constituents at one or more meetings, and, besides giving his views about the political situation generally, explain anything that may have been peculiar in his own votes, and answer any civil questions which a voter may choose to put.

There have been negotiations going on for some days between the leaders of the majority in the House of Lords and Mr. Gladstone for a compromise touching the Franchise Bill. The Lords did not throw the bill out. They simply amended it so that it should not come into operation until after there should be a redistribution of seats. Mr. Gladstone now promises that if they will pass the Franchise Bill he will introduce a Redistribution Bill this year at an autumn session. The difficulty with the Lords is that they are by no means sure that the Redistribution Bill will be any more acceptable than the Franchise Bill, and if they let the Franchise Bill pass they will be absolutely helpless about securing any change in it. They therefore ask to be shown where the new voters are to live before they agree to let them in. Lord Salisbury is for standing firm now, but he has lost his leadership as a fighting man. The majority takes counsel of cooler heads. In the meantime the Radicals in the provinces are straining on the leash, in their eagerness to open a campaign against the House of Lords, and Mr. Gladstone has indicated, not very obscurely, that he will not be sorry to see it started if the necessity should arise.

The retirement of Iglesias in Peru will serve to test the possibility of establishing any permanent government in that country. Order and security for life and property have been maintained since the close of the war chiefly by Chili, and it is at least doubtful whether the country will not now relapse into anarchy—in fact, whether Cáceres, of whom we hear so much now in the despatches, is not another name for anarchy. What the Peruvians need more than anything is a stable government which will prevent revolution at all hazards; but does the country supply the materials for any such government? Calderon's fiasco succeeded by Iglesias's retirement, shows that the question is not settled. An increase of population through emigration would be a godsend to Peru; for it would give her, what nothing else will, new resources and the means of developing them. Iglesias called attention to this in a "reform" proclamation which he issued some time ago.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 9, to TUESDAY, July 15, 1884 inclusive.]

DOMESTIC.

THE National Democratic Convention, at Chicago, reassembled at 11 o'clock on Wednesday morning, and was opened by prayer by Bishop McLaren, of Illinois. Ex-Senator Thurman was greeted with applause as he entered the hall. A communication from the Committee on Resolutions was received saying that their work would not be completed before Thursday morning. Resolutions were offered and referred without debate in favor of various planks in the platform. The Committee on Credentials reported the list of delegates with an amendment giving the Territorial delegates a right to vote in the Convention. This was adopted, and the necessary two-thirds for a nomination thus became 547 instead of 535, the whole number in the Convention being 820. The Committee on Permanent Organization presented for President of the Convention W. F. Vilas, of Wisconsin. Colonel Vilas was received with cheers. In his speech he held up the Democratic party as the only hope for relief from the abuses of Government which had been fastened by Republican rule. A motion that no vote be taken on the candidates until after the Committee on Resolutions should report, but that the candidates be presented, was carried. Another motion was then made that the Convention call the roll and present candidates for President. The anti-Cleveland men were anxious to pursue a policy of delay, and so moved to table the resolution. The motion was lost; ayes, 268; noes, 542. Several motions to adjourn were lost, and the presentation of candidates began. Mr. George Gray presented Thomas F. Bayard, of Delaware. The latter's name was enthusiastically received. Mr. Hendricks presented ex-Senator Joseph E. McDonald, of Indiana, in a speech which was more for Hendricks than McDonald. When New York was called, Mr. Daniel S. Lockwood took the platform, and in a vigorous speech which was warmly received, proposed the name of Grover Cleveland. Mayor Carter Harrison, of Chicago, seconded the nomination. Mr. Grady (Tam.) then got the floor and spoke vehemently against Cleveland, asserting that he could not carry New York. He was replied to by Mr. E. K. Apgar, who recalled the story of Tammany's opposition to Tilden in 1876, and its powerlessness in preventing his carrying New York. A recess till 10:30 o'clock on Thursday morning followed.

When the Convention reassembled at that time the Committee on Resolutions reported that they would not be able to present a complete platform until 7 P. M. The call of the States for nominations was then continued. Mansur, of Missouri, seconded the name of Thurman. Thomas E. Powell, of Ohio, presented Governor George Hoadly, of that State. Ex-Senator William A. Wallace, of Pennsylvania, made an earnest speech for Randall, and Governor Abbett, of New Jersey, seconded the nomination. John W. Cummings spoke in favor of Bayard and made a bitter attack on Cleveland. A number of other speeches in favor of candidates already nominated followed. When Wisconsin was reached General Bragg took the platform in Cleveland's favor, and created much excitement by saying that the young men of Wisconsin and the West "loved him most for the enemies he has made." Mr. Grady sprang to his feet and said in behalf of the Governor's enemies he reciprocated that hatred. Great confusion followed. General Bragg in closing said the party had followed the old leaders to its death and it asked a new and young man to lead it. The roll call was soon finished and the Convention adjourned until 8 P. M.

At that hour Mr. Morrison, Chairman of the Committee on Resolutions, presented the platform. It is a very long document, an analysis of which is given elsewhere in this number. The allusion to Tilden in it excited tremendous cheering. General Butler was given thirty minutes in which to present a minority report and make a speech upon it. His platform contained a number of views in accord with the elements with which he has recently affiliated, on the questions of American labor, foreign labor, monopolies, and the absorption of public lands. Mr. Converse, of Ohio, protectionist, and Mr. Henry Watterson, free-trader, spoke in favor of the majority platform. Butler's was lost, only receiving 97½ votes, and the majority report was adopted. The anti-Cleveland forces then made a motion to adjourn, but it was defeated by 196 to 616½. The first ballot was taken soon after midnight and resulted as follows: Cleveland 392, Bayard 170, Thurman 88, Randall 78, McDonald 56, Carlisle 27, Hoadly 3, Flower 4, Tilden 1, Hendricks 1. An adjournment was then taken to 10 o'clock Friday morning.

A second ballot was ordered soon after the assembling of the Convention. Mr. Randall's name was immediately withdrawn. The balloting proceeded quietly, Mr. Cleveland making small gains, until Illinois was reached, when the announcement of 1 vote for Hendricks was the occasion of wild, general, and enthusiastic cheering. The disorder continued for fifteen minutes. While the uproar was at its height Senator Voorhees succeeded in announcing that at the request of the Indiana delegation he withdrew the name of McDonald, in order to cast the vote of that State for Hendricks. This caused renewed cheering, but the effort to stampede the Convention was unsuccessful. After Iowa had announced its vote, Pennsylvania retired amid great excitement for consultation. Kentucky withdrew Carlisle and cast 15 of her votes for Hendricks. As the roll proceeded Cleveland's gains were small but frequent, New York, of course, cast her 72 votes for Cleveland in accordance with the unit rule, 50 of the delegates being in his favor. When all the votes had been recorded except Pennsylvania's Cleveland had a total of 433. Pennsylvania added 42 to this number, and the result of the second ballot was announced as follows: Cleveland 475, Bayard 150½, Hendricks 124½, McDonald 2, Thurman 60, Randall 5, Tilden 2. The necessary two-thirds required for a nomination was 547 of 820 votes. The States then began to make rapid changes in their votes. The first great gain for Cleveland was 22 votes from North Carolina. Florida, West Virginia, Maryland, and Missouri cast their entire votes for the New York candidate. Cleveland's success was now assured. Democrats from many other States were clamoring for recognition. The cheering was deafening; the band played, and, outside, cannon were booming. When the changes were completed the official result of the ballot was announced at 1:10 P. M. as follows: Cleveland 683, Bayard 81½, Hendricks 45½, Thurman 4, McDonald 2, Randall 4. The nomination was triumphantly made unanimous and the Convention adjourned until 5 P. M. to canvass the Vice-Presidency.

The Convention completed its work on Friday evening by nominating Thomas A. Hendricks, of Indiana, for Vice-President. General Rosecrans, McDonald, General Black, of Illinois, Governor Glick, of Kansas, and Mr. Hendricks were put in nomination, the latter by Pennsylvania, Indiana making no nomination. The Indiana Chairman declared that Mr. Hendricks would not accept the nomination. The other names were, however, withdrawn, and delegation after delegation named Hendricks. The Convention then adjourned *sine die*.

The news of Cleveland's nomination was received in this city with enthusiasm far exceeding the announcement of Blaine's nomination. In Buffalo, Albany, and other cities of the State the joy of the people was great. Governor Cleveland received the congratulations of his friends quietly at the Executive Chamber at the State Capitol. In the evening he was serenaded by the Young Men's Democratic Club and the Jacksonians, and made a short speech, in which he said: "We believe that the people are not receiving at the hands of the party which for nearly twenty-four years has directed the affairs of the nation the full benefits to which they are entitled—pure, just, and economical rule—and we believe that the ascendency of genuine Democratic principles will insure a better government and greater happiness and prosperity to all the people. To reach the sober thought of the nation and to dislodge an enemy entrenched behind spoils and patronage involves a struggle which, if we underestimate, we invite defeat. I am profoundly impressed with the responsibility of the part assigned to me in this contest. My heart, I know, is in the cause, and I pledge you that no effort of mine shall be wanting to secure the victory which I believe to be within the achievement of the Democratic hosts."

The Massachusetts Reform Club on Saturday passed resolutions saying "that this club pledges its hearty support to the nominations of Cleveland and Hendricks, believing them to represent the demand of the people for candidates for the highest offices above suspicion, whose characters and public acts are an assurance of wise and honest government."

At a meeting of the General Committee of the Independent Republicans in this city, on Monday, a call was adopted for a conference in this city on July 22, of Republican and Independent voters who will not support the Republican ticket. The meeting is for the purpose of determining upon a common course of action in the coming canvass.

General Butler has not yet intimated whether he will run as the Greenback candidate for President, or support the Democratic ticket.

William Purcell, editor of the Rochester *Union* (Dem.), has obtained a leave of absence during the campaign, as he cannot consistently support Cleveland, and has also resigned from the electoral ticket. Mr. Purcell is a Tammany sympathizer in Western New York.

The old and prominent house of Halsted, Haines & Co., dry-goods jobbers, of this city, made an assignment on Saturday morning. The liabilities are about $1,000,000. Shrinkage in business was the chief cause of the failure.

Fletcher & Sharpe, the oldest and considered the safest banking firm in Indianapolis, on Tuesday posted a notice on their door that, owing to inability to realize on securities, they were compelled to suspend payment. They say their securities are ample to pay in full. They were rated at about $1,000,000.

The American Lacrosse team, which has returned from its victorious tour in Great Britain, was defeated by the Toronto team on Staten Island, 3 goals to 1, Wednesday, and in this city on Thursday, by 5 goals to 1.

The Rev. Dr. Eliphalet Nott Potter has written a letter declining the Bishopric of Nebraska and has accepted the Presidency of Hobart College.

A destructive tornado on Saturday afternoon and evening passed over parts of the counties of Ulster, Orange, Dutchess, and elsewhere inland along the Hudson valley. The damage in Ulster County is serious.

Philip Hamilton, the youngest son of Alexander Hamilton, died at Poughkeepsie on Wednesday. He was born in this city June 1, 1802. For many years he had lived in retirement at Poughkeepsie. He was at one time Assistant District Attorney of New York, and conducted the trial of Gibbs, the pirate, in 1861. Dr. Allan McLane Hamilton, of this city, is his only son.

Paul Morphy, the champion chess-player of the world about twenty years ago, died in New Orleans on Thursday, at the age of forty-seven. His mind has been weak for many years.

Prof. Alpheus S. Packard, of Bowdoin College, died on Sunday afternoon, at Squirrel Island, Me. Professor Packard's career has been notable for his long and faithful service with one college. He was born at Chelmsford, Mass., on December 20, 1799, and was graduated at Bowdoin in 1816, ten years after the first class was graduated. Three years later he became a tutor there and has been actively connected with the College ever since. In 1825 he was made professor of Latin and Greek and held that chair until 1865, when he was chosen Collins Professor of Natural and Revealed Religion. He was at one time Vice-President of the College, and at the last Commencement was elected acting President. Among his writings are an edition of Xenophon's 'Memorabilia' and 'The History of the Bunker Hill Monument Association.'

Mrs. A. Lincoln Phelps, formerly Miss Willard, of Troy, N. Y., who was widely known as an educator, died on her ninety-first birthday anniversary in Baltimore on Tuesday. She was the author of several books.

FOREIGN.

The rejection of the Franchise Bill by the House of Lords has caused great excitement in British political circles. The Liberal clubs are preparing a protest. In the House of Commons Mr. George Anderson, Radical, on Wednesday gave notice that he would ask Mr. Gladstone to arrange for an early discussion of the standing resolution in the House to the effect that a continuance of an unreformed hereditary House of Lords is incompatible with wise legislation. Mr. Gladstone subsequently refused the request. Sir Charles Dilke, at a Liberal meeting in Middlesex, said he believed the country wished the Franchise Bill presented repeatedly to the House of Lords until they passed it. If the House of Lords did not use their powers with moderation, the speaker said, they must come to disaster.

At a meeting of Liberals on Thursday Mr. Gladstone said that in view of the action of the House of Lords on the Franchise Bill the Cabinet had decided to close the session of Parliament as soon as possible, and call a new session at a very early date to again pass the bill and submit it to the House of Lords. Parliament, he said, would reassemble in October. He thought the House of Lords would not again reject the bill. He promised that when Parliament met next year the whole energies of the Government should be devoted to the passage of a complete measure for a redistribution of Parliamentary seats. Mr. John Bright announced his intention of joining in the reform agitation. He hoped the powers of the House of Lords would be curtailed.

Commenting on the defeat of the Franchise Bill in the House of Lords, the London *Times* on Wednesday said: "The House of Lords have nullified four months' labor of the House of Commons, and have deprived two million persons of the rights of franchise. The struggle will only end in defeat and loss. The Lords have placed themselves in antagonism with the popular assembly in a most defiant and aggressive manner."

Influential Conservative Peers were reported to be urging a reconsideration of last Tuesday's vote in the House of Lords on the Franchise Bill. A motion was to be made on July 17 to pass it on condition that the Government would agree to devote the autumn session to a measure of redistribution. Earl Granville announced in the House of Lords on Monday afternoon that the Government would introduce a bill for a redistribution of Parliamentary seats at the autumn session if the Franchise Bill were passed now. The attempt to arrange a compromise with the Conservative Peers failed on Monday evening, the Marquis of Salisbury maintaining his position that there should be no franchise bill passed without a redistribution.

At a meeting of Conservative Peers and members of the House of Commons on Tuesday, Lord Salisbury's position was almost unanimously sustained.

A scene took place in the House of Commons on Friday between Mr. Gladstone and Lord Randolph Churchill. The former insisted upon the accuracy of his statement, made at the recent meeting of the Liberals, that the Government had proposed a compromise with the House of Lords on the Franchise Bill. The proposal was made through Earl Granville, Foreign Secretary of State, to Earl Cairns, but was declined. Sir Stafford Northcote stated that he had the authority of the Marquis of Salisbury and Earl Cairns to say that their communications in relation to the compromise were private. Mr. Gladstone denied that they were of a private nature. Lord Randolph Churchill moved that the House adjourn, at the same time charging Mr. Gladstone with having used private communications with which to traduce his opponents. Mr. Gladstone indignantly repelled this charge. Lord Randolph Churchill said that he deeply regretted having spoken as he did. He promised to coöperate with Mr. Gladstone in order to avoid a conflict with the House of Lords in the event of the renewal of the offer of a compromise. Mr. Gladstone accepted the apology.

The English Government has offered £150,000 for four of the pictures in the Blenheim collection.

A despatch from Assuan to the London *News* published on Friday confirmed the rumored treachery of the Mudir of Dongola. The Christians in the town are imprisoned and have been compelled to turn Mohammedan to escape the vengeance of the Mudir. El Mahdi has made the Mudir his Emir. The battle of Debbeh was an invention of the Mudir's brain. He has control of all telegraphic communication with Dongola and has been deceiving the Khedive since June 20. The British Government has no definite information in regard to this report. Seventeen fugitive soldiers have arrived at Assuan from Berber and confirm the reported fall of that town.

On Saturday it was reported that Osman Digna, the Egyptian rebel, had seized Asis, a port on the Red Sea six miles south of Suakim.

The operations for the relief of Khartum, it has finally been decided, will begin early in September.

The technical experts of the Egyptian Conference have concluded their inquiry into the financial proposals made by England, and have prepared two protocols of their deliberations. Their opinions in regard to the matter differ widely, but it is thought that they are not irreconcilable. The protocol will soon be submitted to the Conference.

A Constantinople despatch on Monday said: "In consequence of the Egyptian Conference having, according to information received by the Porte, approved the proposals made by the English Government, the Grand Vizier has tendered his resignation. The Sultan refuses to accept it."

War between France and China is considered inevitable in the latter country. The French Cabinet has decided to limit the immediate operations in China to a great naval demonstration. There will be no military movements until the close of the hot season.

France has given China one week, which will expire on July 19, in which to answer the demand for an indemnity, and, in the event of an unsatisfactory reply being received, will immediately seize one of the Chinese forts. The preparations for an aggressive naval movement are complete.

The Chinese Minister to France, on Friday, made an offer to Prime Minister Ferry to withdraw immediately the Chinese troops from Tonquin, and declared that China recognized the right of France to demand reparation.

It was rumored on Wednesday that France and Portugal had concluded a secret treaty against China, by the terms of which France will be allowed to make Macao, an island at the mouth of the Canton River, the base of a land attack upon the city of Canton. Another point of the treaty is that action shall be taken to compel China to recognize Macao as Portuguese territory, which she has hitherto refused to do. This report has not been confirmed.

The Chinese Ambassador in France continues to negotiate with Prime Minister Ferry upon the basis of the immediate surrender of Lang-son. They are discussing the question as to who fired the first shot, and it is said the payment of the indemnity depends upon the settlement of that question.

The San Francisco *Call* has published a letter from the Military Grand Secretary of China to certain wealthy Chinamen of that city, under date of May 19, announcing the intention of China to combat the French, and ordering a tax on Chinese in America for the imperial treasury. For this object $500,000 were sent to China on July 1, and a like amount will be forwarded by the next steamer. Another letter from the China Merchants' Steam Navigation Company asserts that a secret treaty was made in December, 1883, between Germany and China whereby the former will support the latter in a war with France. In return Germany is to receive a sovereignty over the Island of Formosa.

The celebration of the fall of the Bastile was very successful in Paris on Monday. Two reviews of troops were held. An incident of the day was an attack by Alsatians upon the Hôtel Continental and the tearing down of German flags there. Prime Minister Ferry has apologized to the German Ambassador in France for the insult

In regard to the character of the cholera, several French doctors of Toulon reject Dr. Koch's views. They insist that the inoculation of a number of animals with Asiatic microbes failed to give them cholera. There were thirty deaths at Marseilles on Friday evening, and the panic among the people became extreme.

Advices received from St. Paul de Loando, on the west coast of Africa, under date of June 11, state that the French were encroaching, and had had a conflict with Stanley's men, under Pollock. Stanley had reproved Pollock for his action.

The latest advices from Madagascar state that the Hovas are actively preparing to resist the French. Heavy fighting is imminent.

A serious anti-Papal demonstration occurred in Rome on Sunday during the services in memory of Pope Pius IX. The rioters attempted to cross the square in front of St. Peter's, but the police and military prevented them. Six of the rioters were arrested.

The Royal Armory, in Madrid, adjoining the old armory, was damaged by fire on Thursday. It contained many valuable works of art, which were mostly saved.

The Belgian Government has decided to restore its embassy at the Vatican.

Dr. Cervera has at last retired from the Presidency of Panama. General Ruiz has been proclaimed President, and fresh dissatisfaction has ensued.

The Court at Quebec, on Saturday, declared that nothing had been proved to warrant the extradition of John C. Eno, late President of the Second National Bank, of this city, and he was released.

CLEVELAND'S NOMINATION.

THE nomination of Governor Cleveland by the Democratic Convention makes the way perfectly plain and simple for all friends of good government who are for any reason dissatisfied with the Republican candidate. This time the Democrats have made no mistake. If Cleveland had no other claim to the confidence and support of those to whom parties are simply a means of promoting the national welfare, he would have a strong one in the character of the opposition he encountered in the Convention. As General Bragg finely and happily said in seconding his nomination—"We love him most of all for the enemies he has made." The hostility of Tammany and Butler, and in fact of whatever is basest and most demagogic in his own party, is of itself a tribute of which any public man might well be proud.

But he is by no means dependent on this negative kind of testimony. The enmity of corrupt intriguers might mean after all simply that his intentions were good, and that they merely feared that he would, if put in power, fail to answer their purpose. Cleveland has happily something far stronger than the promise of a strong character to commend him to the suffrages of good men of all parties. He is a tried administrator. One of the Blaine organs in its great agony has tried to relieve itself by calling him "a man destitute of experience." Of one kind of experience—experience in political trickery and manipulation, and in the art of making money for himself and his friends out of politics—he is, indeed, destitute. But the present extraordinary political crisis is due to the profound and growing popular belief that this kind of experience is too common among our statesmen, and that the Republican candidate in particular is too rich in it either for his own or his country's good. Of the kind of experience which the present situation in national affairs most imperatively calls for, experience in administration, Cleveland has more than any one who has entered the White House since 1860, more than any man whom either party has nominated within that period, except Seymour and Tilden—more than Lincoln, more than Grant, more than Hayes, more than Garfield, more than Arthur.

He laid at the start the best of all foundations for American statesmanship by becoming a good lawyer. He began his executive career by being a good county sheriff. He was next intrusted with the administration of a great city—as severe a test of a man's capacity in dealing with men and affairs as any American in our time can undergo. In both offices he gave boundless satisfaction to his fellow-citizens of both parties. His nomination for the Governorship of this State came in due course, and at a crisis in State affairs which very closely resembled that which we are now witnessing in national affairs. His election by an unprecedented majority is now an old story. It was the beginning of a revolution. It was the first thorough fright the tricky and jobbing element in politics ever received here. It for the first time in the experience of such politicians gave reform an air of reality. But it might, had Cleveland proved a weak or incompetent man, have turned out a very bad blow for pure politics.

Luckily he justified all the expectations and even all the hopes of those who voted for him. No friend of good government, who, in disregard of party ties, cast his vote for him, has had reason to regret it for one moment. We owe to his vigorous support a large number of reformatory measures which people in this State for forty years had sighed for with little more expectation of seeing them enacted than of seeing the Millennium. In other words, he has arrested the growth of political despair among large numbers both of young and old voters in this State. His messages, too, have been models of sound common sense and penetrating sagacity, clothed in the terse and vigorous English which shows that there is a man and not a windy phrasemonger behind the pen. Though last not least, his best work has been done in utter disregard of the hostility of that element in his own party which for so many years has been an object of mingled hate and fear to the best part of the American people. He is in truth a Democrat of the better age of the Democratic party, when it was a party of simplicity and economy, and might almost have put its platform into the golden rule of giving every man his due, minding your own business, and asking nothing of government but light taxes and security in the field and by the fireside. No one who has entered the White House for half a century, except Lincoln in his second term, has offered reformers such solid guarantees that as President he will do his own thinking, and be his own master in the things which pertain to the Presidency.

We say, in the things which pertain to the Presidency, because we are all very apt in discussing the merits of Presidential candidates to discuss them on irrelevant grounds. A Presidential campaign rarely occurs in which the constitutional distinction between the different branches of the Government is not completely ignored. In the current popular discussion, the President is apt to be treated not simply as a part of the Legislature, but as himself a supreme legislator. His views on the tariff are considered as anxiously as if the duties on imports were settled every four years by a proclamation issued from the White House. His position on the labor question is examined as carefully as if he could fix the rate of wages by general order, or, as O'Donovan Rossa thinks, clap a tax on all Englishmen and other obnoxious persons entering the country. The consequence is that the public attention is apt to be totally distracted from the kind of administrator he is likely to make. The true questions for the voter to ask himself about a Presidential candidate, especially in crises like the present, when there is no substantial difference between the bids which the contending parties make for the popular support, are, In what way will he probably behave in the proper sphere of Presidential duties? What kind of nominations to office will he send to the Senate? What considerations are likely to prevail with him in making removals? What sort of men are likely to surround him and be listened to by him at the White House? What is likely to be his attitude toward the moral and intellectual currents of the day, and toward the upward movements in American politics and society? How does he feel about money and rich men, and about the money-making enterprises which are the great snare and temptation of modern life? Has he the sobriety of judgment, the steadiness of temper, the maturity of character, and the patient deliberativeness which high places and great cares imperatively call for? Is he a sound and prudent man of business, and has he a keen eye for the remoter consequences of legislation? Will he deal with foreign nations with the quiet and manly self-respect which becomes the representative of an industrious commercial people, among whom swashbucklers and military adventurers are despised or unknown?

These questions can, we believe, be answered as regards Mr. Cleveland in a way with which every friend of good government may be fully satisfied, and we commend him especially to the younger voters all over the country who long for a better era in politics, as a man to be trusted and worked for. Even those whose Republican traditions are most deeply rooted may rest assured that they can render no better service to the party they have long loved and supported than by securing his triumph. For this time a Democratic victory will arrest peremptorily, and, we believe, finally, the insolence and hopefulness of the corrupt and freebooting element among Republicans, which has found its final expression in the Blaine nomination and has at last destroyed that dream of "reform within the party" which has for so many years sustained the patience of tens of thousands of its best members.

THE DEMOCRATIC PLATFORM,

THE platform adopted by the Democrats at Chicago bears a striking resemblance to that upon which Mr. Tilden was nominated in 1876. It is about twice as long as the Republican platform, which was itself of unusual dimensions. Both parties appear to multiply words in proportion to the paucity of issues. Either one is long enough for a speech. The Democratic platform is the better speech of the two because, for the first time in the history of the parties, it embodies less demagogism than the Republican. The cheap clap-trap in the Blaine platform about the Eight-Hour Law is omitted altogether, while the declaration in regard to "contract labor" is rather less offensive. The Republican platform pronounces distinctly against immigration "from Europe or Asia" in cases where the immigrant has agreed beforehand to work for his living. The Democratic platform leaves it open to dispute whether the foreign labor to be excluded is or is not confined to "servile races unfitted by habits, training, religion, or kindred, for absorption into the great body of our people." It is perhaps somewhat to the credit of the Republicans that they boldly

declared that they meant to include Irish, Germans, and Scandinavians in their prohibition, while the Democrats leave a shade of indistinctness as to their real meaning. Both are contemptible and at variance with our institutions and the whole course of our history. Nevertheless the general tone of the Democratic platform is superior to the customary deliverances of the party. It implies that the leaders are looking for recruits of a higher range of intelligence this year than they have been accustomed to court. This is shown also in the literary cast of the platform, which is above the common level of such productions.

The tariff plank, over which there was so much disputation, appears to be satisfactory to such ardent revenue reformers as Henry Watterson, and if not satisfactory to the other side, yet not so offensive as to make trouble in the campaign. While declaring in favor of a reduction of the tariff, "it is not proposed to injure any domestic industries, but rather to promote their healthy growth." For the purpose of convenient reference we reprint the essential parts of the two platforms relating to this subject:

REPUBLICAN PLATFORM.

"It is the first duty of a good government to protect the rights and promote the interests of its own people. The largest diversity of industry is most productive of general prosperity and of the comfort and independence of the people. We, therefore, demand that the imposition of duties on foreign imports shall be made not 'for revenue only,' but that in raising the requisite revenues for the Government such duties shall be so levied as to afford security to our diversified industries and protection to the rights and wages of the laborer, to the end that active and intelligent labor, as well as capital, may have its just reward, and the laboring man his full share in the national prosperity.

"Against the so called economic system of the Democratic party, which would degrade our labor to the foreign standard, we enter our earnest protest. The Democratic party has failed completely to relieve the people of the burden of unnecessary taxation by a wise reduction of the surplus.

"The Republican party pledges itself to correct the inequalities of the tariff and to reduce the surplus not by the vicious and indiscriminate process of horizontal reduction, but by such methods as will relieve the taxpayer without injuring the labor or the great productive interests of the country.

"We recognize the importance of sheep husbandry in the United States, the serious depression which it is now experiencing, and the danger threatening its future prosperity, and we therefore respect the demands of the representatives of this important agricultural interest for a readjustment of the duty on foreign wool, in order that such industry shall have full and adequate protection."

DEMOCRATIC PLATFORM.

"Knowing full well that legislation affecting the operations of the people should be cautious, conservative in method, not in advance of public opinion, but responsive to its demands, the Democratic party is pledged to revise the tariff in a spirit of fairness to all interests. But in making reductions in taxes it is not proposed to injure any domestic industries, but rather to promote their healthy growth. From the foundation of this Government taxes collected at the custom house have been the chief source of Federal revenue; such they must continue to be. Moreover, many industries have come to rely upon legislation for successful continuance, so that any change of law must be at every step regardful of the labor and capital thus involved. The process of reform must be subject in the execution to this plain dictate of justice — all taxation shall be limited to the requirements of economical government. The necessary reduction in taxation can and must be effected without depriving American labor of the ability to compete successfully with foreign labor and without imposing lower rates of duty than will be ample to cover any increased cost of production which may exist in consequence of the higher rate of wages prevailing in this country. Sufficient revenue to pay all the expenses of the Federal government economically administered, including pensions, interest and principal of the public debt, can be got under our present system of taxation from custom-house taxes on fewer imported articles, bearing heaviest on articles of luxury and bearing lightest on articles of necessity.

. . . . . .

We are opposed to all propositions which upon any pretext would convert the general Government into a machine for collecting taxes to be distributed among the States or the citizens thereof."

The implication that a tariff can make wages higher in this country than they would otherwise be, except in a few selected industries, and in these only for brief periods of time, is completely erroneous, but as it is an idea very generally held by workingmen and sedulously cultivated by manufacturers, we can hardly be surprised that the Democratic party refuses to run counter to it. The Republicans will, of course, "arraign" their opponents for inconsistency in dealing with it, but they will not arraign the idea itself. Notwithstanding the multiplicity of words in which the Democratic deliverance on the tariff is involved, the intention to reduce tariff taxation is clearly discernible, and the declaration against Mr. Blaine's wild plan for collecting duties on imports in order to provide a fund for distribution among the States is timely and explicit.

The student of platforms, if there be any such, will search in vain through the jungle of words in which the two conventions have set forth what they call their principles for any precise issue between them. They arraign each other for misconduct with great volubility. They accuse each other of desperate intentions; they draw gloomy pictures of the disasters which will befall the country if one or the other should carry the next election, but they draw no dividing line of principle or policy upon either side of which the voter may be sure that he is casting his influence in favor of one set of ideas as opposed to another. There is no such dividing line. "The Republican party," says the Democratic platform, "so far as principle is concerned, is a reminiscence." Quite true. The Democratic party is another. It follows that in the present campaign the character and record of the candidates nominated will be the real platform, and that the great mass of unattached voters will range themselves on the side which gives the better promise of good government in the person of its standard-bearer.

A DEFENCE OF MR. BLAINE.

We have received a copy of a pamphlet in defence of Mr. Blaine by Edwin D. Mead. It is written in the form of an open letter to the Boston *Advertiser*, and deals largely in the *argumentum ad hominem* by quoting liberally from the *Advertiser* of a former period, when it was under a different management, and was edited by a person not now living. The value of the argument, so far as it seeks to convict the *Advertiser* of inconsistency, is therefore worthless. As Mr. Mead has given some attention to the *Nation* also, we propose to take notice of his pamphlet so far as to refresh the public mind upon one important fact connected with the Blaine investigation. Referring to the original groundwork of the investigation, viz., the charge that the Union Pacific Railroad Company relieved Mr. Blaine of $75,000 of Little Rock and Fort Smith Railroad bonds after that speculation had turned out badly, paying him $64,000 therefor, Mr. Mead says:

"If, therefore, the present insinuations of the *Nation* are to be heeded, it must be on the theory of an amount of systematic, dove-tailed, and very dangerous and vulnerable lying [on the part of Caldwell and Tom Scott], which is absolutely preposterous."

The belief that Mr. Blaine did receive the $64,000, which it was proved that the Union Pacific Company paid without any good reason at a time when it was itself in financial straits, rests upon circumstantial evidence of such various and remarkable and self-supporting character that it could not possibly have been invented by any person or any number of persons. It is opposed by the testimony of Thos. A. Scott, who, if the charge were true, was himself *particeps criminis*, and therefore under suspicion as a witness. Caldwell never appeared before the Committee, was never examined or cross-examined. A cable telegram signed with his name was received by the Chairman of the Committee, purporting to confirm Scott's testimony. While the Committee were still in session, and while they were endeavoring to ascertain Caldwell's whereabouts, in order to secure his attendance, or at least to prove the genuineness of the telegram, Mr. Blaine, with characteristic effrontery, made a speech in the House charging that such a telegram had been received by the Chairman and that it had been *suppressed*. He had no means of knowing that it had been received except through another cable telegram from Caldwell to himself, and as to the suppression of it, there was nothing to suppress except upon the grotesque assumption that it was the duty of the Committee to report what they had got by hearsay before they were ready to report what they had got under oath. The testimony of Scott is therefore the only offset to the circumstantial evidence going to show that Mr. Blaine did receive the $64,000 in question.

It was shown near the close of the investigation, and quite unexpectedly by Mr. Blaine's letters, that he did receive from some quarter a large sum of money through a sale of Little Rock and Fort Smith bonds at much above their value. The source from which it came was explained by the witness Mulligan in a very straightforward way. He said that Elisha Atkins told him and Fisher that the Union Pacific Company held a lot of these bonds which came from Blaine, and would be glad to turn

them infor the purpose of reorganizing the Little Rock Company on a new basis; that when Mr. Blaine was pressing Fisher for a settlement, alleging that he had lost heavily by the deal in Little Rock securities, Fisher wrote in reply that his losses could not have been heavy because he (Fisher) knew where he (Blaine) had received $64,000 from the sale of one lot of the depreciated bonds; that Blaine replied that Fisher was mistaken if he supposed the sale was for his own benefit, because he had turned the money over within forty-eight hours to the parties in Maine to whom he (Blaine) had sold the bonds, in order to save them from loss. Mr. Blaine's letter upon this point was dated April 18, 1872. It said:

"The sales of bonds which you spoke of my making, and which you seem to think were for my own benefit, were entirely otherwise. I did not have the money in my possession for forty-eight hours, but paid it over directly to the parties whom I tried by every means in my power to protect from loss."

These facts came out only a few days before the close of the investigation. What had gone before may be briefly recapitulated. May 15, 1876, J. C. S. Harrison, a Government Director of the Union Pacific R. R., testified that at the meeting of the Board in September, 1872, the President of the company presented a letter from the President of the Little Rock and Fort Smith Railroad Company, with reference to some bonds of the latter company held by the Union Pacific Company; that he (Harrison) moved the appointment of a committee to ascertain how these bonds came into possession of the Union Pacific, and that E. H. Rollins, the Secretary of the company, took him aside and desired him to withdraw the motion, because it would involve Mr. Blaine; "that the October election was near at hand, and the investigation of the matter would ruin Mr. Blaine and defeat his reëlection to Congress." May 16, 1876, E. H. Rollins testified that he had said to Mr. Harrison that "he had heard that these were Mr. Blaine's bonds, and that he might be involved in it." He could not recollect who told him that they were Blaine's bonds. May 15, 1876, Thomas A. Scott testified that he bought $75,000 of Little Rock & Fort Smith bonds of Josiah Caldwell, for eighty cents on the dollar, and sold them subsequently to the Union Pacific Railroad Company, of which he was then President, at about the same prices, *i. e.*, for $64,000, and that Mr. Blaine had nothing to do with the matter. Being asked how the Union Pacific Co. came to buy these bonds at a price so much above their value, he said that they were taken off his hands as compensation for his services as President of the company in lieu of salary. It was proved that the salary of the President of the Union Pacific Company was only $8,000 per year; that Scott was President only one year; that the difference between the market price of Little Rock bonds and the price at which the Union Pacific Company took this lot was at least $32,000; that Scott was President of thirteen or fourteen other railroad companies, and gave very little attention to the Union Pacific; that it was not customary for railroad companies to pay salaries in this roundabout way, and that there was no understanding or agreement between Scott and the Union Pacific Company when he became President that he should receive directly or indirectly more than $8,000 per year for his services.

The testimony of Mulligan was given on the 31st of May, and two or three days following, and the letters were published on the 5th of June. It should be added that Mr. Atkins, although having a generally good opinion of Mulligan as a man of veracity, failed to remember telling him and Fisher that the bonds came from Blaine, but Fisher testified with a good deal of reluctance that "the inference" he drew from Mr. Atkins's remarks on the subject was that "they were Blaine bonds." Mr. Atkins was himself a director of the Union Pacific and a member of its Executive Committee. Fisher admitted that he might have referred to these bonds in his letters to Mr. Blaine, as having been turned over by the latter to the Union Pacific Company, and that Mr. Blaine might have replied that the money went to his (Blaine's) friends in Maine.

These are the links in the chain of circumstantial evidence going to show that Mr. Blaine, notwithstanding his denial, and Scott's queer narrative about the manner in which he collected his salary from the Union Pacific, and Caldwell's suspicious cable telegram, did get the money with which he reimbursed his Maine friends for their losses, in part at least, from the Union Pacific treasury.

THE BOLT OF 1872.

THE Milwaukee *Sentinel* deems the present a suitable occasion to recall the "bolt of 1872," for the purpose of showing how inconsequential the present revolt against the nomination of Mr. Blaine is likely to prove. It finds a striking resemblance between the state of affairs then and the condition of parties now, and concludes that the result in November will be substantially the same as in 1872.

The single point of resemblance which the present revolt bears to that of 1872 is that it is a revolt against a party nomination incited by public misdemeanors. The similarity begins and ends there. The accusation against General Grant was not that he was personally corrupt, but that he had an aptitude for falling into the hands of rascals, and giving his confidence to them, which amounted to a continuing public scandal; that he had introduced military methods into civil administration to a dangerous degree, and had treated the Presidency as a personal perquisite. These accusations were perfectly true, and will scarcely be controverted now by his most ardent admirers. The principal charge—his unreasoning adherence to any bad character who had once gained his confidence—was proved to be true in repeated scandals during his second term, and has received its final and overwhelming confirmation in the recent explosion in Wall Street. Perhaps nothing short of the ruin of Grant & Ward could have convinced the General himself that there was a substantial foundation for the charge preferred against him by the Liberals in 1872, that the public interests were imperilled through his proneness to fall a victim to designing knaves.

Nobody can say what would have been the result of the election of 1872 if Charles Francis Adams, or Senator Trumbull, or any man of similar gravity and repute and statesmanlike qualities and experience had received the Cincinnati nomination. It is not necessary to speculate upon what might have been, but it is certain that the nomination of Mr. Greeley, able as he was in his own department and field of influence, gave an air of comedy to the Liberal movement which was fatal to it. Mr. Greeley had been noted as a marplot during the war and as a crank in many ways. He had made himself so obnoxious to the Democratic party that even the Baltimore nomination could not bring the rank and file with any unanimity to his support. As many Democrats bolted Greeley as Republicans bolted Grant, possibly more. At all events, the fact that the Democrats did not nominate a Democrat in 1872, but did nominate a Republican of the most pronounced type and one who had dealt them some of the severest blows they had ever received, constitutes a remarkable difference between the circumstances of that year and of the present.

Another difference, perhaps even more important, lies in the changed condition of party issues. In 1872 the reconstruction of the Southern States was, in the minds of the great body of Republicans, incomplete. Tales of Kuklux outrages filled the public ear. Louisiana was still under military control. Arkansas and Florida and Missouri were in turmoil. The questions of amnesty and of suffrage to rebels were unsettled. The ghost of the rebellion was still revisiting the glimpses of the moon. The lava passions of the war were but thinly overlaid. They broke out again immediately after the election, and were not finally appeased until the second year of Mr. Hayes's term of office.

The difference between 1872 and 1884 in the state of public feeling on these questions is measured not merely by the lapse of twelve years' time, but by the oncoming of new subjects of public interest, the most important of which is the reform of the public service, national, State, and municipal. At no time since the close of the war, if at any time, has this question engaged the thought and service of so many minds. At no time has it appealed so successfully to the young and active men who are making their first acquaintance with public affairs. The issues of slavery have ceased to excite men's passions. The wand which conjured Republicans to the support of Grant in 1872 has lost its power. Whoever wins this year must win by his personal character, and by the promise which it gives of fulfilling the public demand for reform in administration and respectability in high places.

ENO AND THE ASHBURTON TREATY.

THE Eno case has resulted, as all lawyers at all familiar with the Ashburton treaty had anticipated, in the escape of the accused; and it is one of those cases where the common-

sense view and the legal view so thoroughly coincide that the result has caused no surprise to the press or public at large. The attempt made was to extradite Eno for the crime of forgery, and this was a crime of which no one had ever accused him or believed him to be guilty. What he had done was to misappropriate or embezzle funds committed to his care as president of a bank by means of falsification of accounts, and neither in law nor in common parlance is this forgery any more than it is burglary.

It is not very satisfactory to reflect that it has taken at least three distinct litigations and a period of many years in three different countries, all governed by the Ashburton treaty, to settle this same point as a matter of law. The English judges decided it long ago in the Windsor case, and the recent Tully case in this country and the Eno case in Canada have only followed the Windsor decision. Of course it is the enormous amount of money—some $3,000,000—lost through Eno's operations which led to the desperate attempt to kidnap him under the forms of law that has just broken down; and the main value of Judge Caron's decision is to make plain to all the world what was known before only to a few, that England and Canada afford a safe harbor of refuge for all embezzlers and defaulters and swindlers from the United States, and that the United States does the same for England and Canada. Internationally, in other words, the law puts a premium on swindling, a crime which the domestic law of both England and the United States punishes most severely—and which is perhaps the most dangerous offence common in modern commercial states.

The difficulty with the reformation of the law hitherto has been a curious one. We have a better treaty with every leading Continental Power, notwithstanding the differences of race, language, and religion, than we have with England. And why? Chiefly because international distrust and suspicion have been repeatedly aroused by attempts at sharp practice in the extradition of criminals and in the construction of the treaty. In this we have been chiefly to blame. There was no excuse for an attempt made in General Grant's time to establish the extraordinary doctrine that a fugitive might be extradited for one crime and then tried for another, and the result of this—the passage of the English Extradition Act of 1870, forbidding the surrender of criminals unless a pledge was given that they should be tried only for the extradition crime—was simply a proof of international distrust excited by our behavior. The fourteen years which have elapsed since the passage of that act has been a period rich in the production of enlightened extradition treaties, covering various sorts of breaches of trust, with countries far less advanced than England. With the republics of Salvador, of Nicaragua and Peru, with the Orange Free State, Ecuador, Belgium, Spain, and even Turkey—few of them countries likely to be attractive as an asylum for American swindlers—we have had no difficulty in making treaties which cover other pecuniary crimes than forgery; and in all the European treaties a clause forbidding the trial of the person surrendered for any crime committed prior to that for which he is given up is to be found—a fact which shows that we have abandoned the very point which led to the passage of the hostile Extradition Act by England.

The passage of the Extradition Act, however, was resented by General Grant's Administration as an indication of a distrust on the part of England of our good faith, and it almost led to a stoppage of all extradition proceedings under the treaty. Fourteen years have elapsed, and a new attempt to evade the provisions of the treaty has been made from our side of the border, and once more it has been demonstrated that our extradition treaty sets a premium upon crime. The evident bad faith of the attempt has converted one of the great swindlers of the day into a popular favorite with the people among whom he had taken refuge, and this time not only political antipathy, but religious fervor, has been excited, by the mere fact that the swindler appeared in company with a Catholic priest.

The matter has now, however, been made so plain that a child can understand it. The Ashburton treaty is no protection against the commonest forms of swindling, and if the swindler ever gets away there is no hope of getting him back for trial. Eno, according to one story, is going to settle down in Quebec and set up in business as a broker. The overtures for an amendment to the obsolete Ashburton treaty ought as a matter of propriety to come from our Government, and as the subject is one in which the people of the whole Anglo-Saxon world have a deep interest, we devoutly hope that diplomatic sensitiveness will not any longer stand in the way of a determined effort, and that immediately, to have a new treaty drafted ready for ratification when the Senate meets in December.

COLLEGE CONTROVERSY.

THE commencement season is over without any very noteworthy incidents. The address of Professor Jebb, at Cambridge, and the unveiling of the statue of Professor Silliman, at New Haven, are the two events which are the most striking in the reports—always excepting the boat races, which in these days command very much the same attention from the public and from the colleges as was formerly given to orations and alumni dinners. Noteworthy changes are announced in the undergraduate curriculum at Harvard and also at Yale—in the direction of still greater freedom for undergraduates in the choice of their studies. The colleges continue to be the recipients of generous benefactions, and on the whole, are steadily growing in influence, wealth, and adaptation to the country without any serious hindrances. Yet there is undoubtedly one danger which may at any time interfere with the welfare of a particular institution—the danger of internal dissension.

Frequently, we may even say with increasing frequency during the last few years, the colleges of this country have been disturbed by internal commotions. These quarrels or controversies have been reported to the public and have been discussed by the newspapers, usually with strong partisan animosity. At least a dozen excellent institutions can be named which have thus been rent with discord during the last two or three years. The epidemic, though due, as we think, to a single cause, is manifest in diverse forms. Sometimes, especially in newly organized colleges, the entire faculty, or a large part of it, incurs the censure of the board of trustees, and sweeping resignations or removals from office are insisted on. It is more often the case that the president is attacked. Either the trustees find him inefficient for the carrying out of the policy which they would like to see prevail, or the faculty regard him as dictatorial and inclined to usurp the rights which they have been accustomed to exercise. It may be that a trustee, by a conscientious devotion to what he believes to be his duty, gives offence to some member of the faculty, who is thus thrown into a state of hostility toward a member of the governing body. It may even happen that the entire body of trustees are brought into collision with the academic staff. These instances are not hypothetical. They represent a state of affairs which is deplorable, tending to destroy that spirit of good-fellowship and coöperation which is essential to the welfare of a school or college.

These differences appear extraordinary when the character of the men involved in them is considered. Most of them belong to the salt of the earth. They are mature in years, quiet, and considerate; accustomed to look at subjects from different points of view; indisposed to quarrel; faithful, sincere, devoted men. The points involved are generally so obscure that only those who are nearest to the controversy understand what is in dispute. The public at large hears only vague charges and intimations—that "President A is not the man for the place; he does not compare with President B"; or that "the Faculty are trying to manage affairs which legally belong to the Trustees"; or that "Professor X is a mischief-maker, aspiring to show what he can do by so and so"; or that "Mr. M., one of the Trustees, treats the Professors as if he had hired them and had a right to direct their doings."

As similar dissensions arise in old colleges and in new, at the East and in the West, in colleges chiefly governed by clergymen, and in those which are under the control of the State, there is probably some underlying cause which can be discovered. It is most desirable that it should be pointed out, for before the evil can be eradicated, its sources must be discovered. A specific remedy like the removal of an individual from the office of president, trustee, or professor will not restore harmony for any long period, if it be true that there is some fundamental difficulty quite independent of the persons who are called to the administrative offices.

The writer of this article, after a long acquaintance with the colleges of this country, has arrived at the conclusion that these difficulties are the natural result of a bad system of government. They are not in fact, though they are in form, personal quarrels. They are the conflicts which inevitably arise when men of strong character, independent

opinions, and great determination are placed in offices the responsibilities of which are serious and the duties of which are ill defined. They are the legacies of a monarchical system which is now out of fashion and is attacked by men who are trained in republican or constitutional usages. In any society where the functions of the different authorities overlap, where the prerogatives of the different offices are obscured by the changes of the times, and especially where the interests which were once homogeneous have become complex and diversified, trouble is sure to come. Is not this the case in the American colleges? Can anybody in any college distinctly define the administrative duties of the trustees, the faculty, and the president? In most cases do not mutual courtesy and consideration constitute the bond of union—a system which works well in times of peace and quiet, but is not adapted to times of conflict?

A reference to the history of our institutions may throw some light upon the problem. The college governments of this country had their origin in the usages of the English colleges nearly three centuries ago. The governing authority in every college was a Board of Fellows, whose elected chief was their "Master," or "Rector," or "President." These Fellows resided in their colleges, owned the property, made the regulations, took part in the instruction, and governed the students. Harvard and Yale began by the association of ministers living near to one another as a Board of Fellows for the maintenance of a college. They chose their head to be Rector of the college; they acquired and held property, made laws for the instruction and government of students, and exercised parental authority over those who were committed to their charge.

Gradually a separate body of teachers was formed; professors were appointed, who became a faculty, and their head was the head of the Board of Fellows. In other words, two boards, one of instruction and one of management, were developed, under the common presidency of one person. The President was therefore called upon to act in a double capacity. To the Trustees or Fellows he was the representative of the Faculty, the principal teacher; to the staff of teachers he was the exponent of the Trustees, the principal governor or manager. He was both the chief among those who received appointment to teach, and chief among those who conferred such appointments. His position was, therefore, a very difficult one—for he combined two distinct offices, representing interests which might often be divergent—let us say, for example, the need of expansion and the need of economy. He was like a king acting with two privy councils, the Faculty on the one hand, the Fellows or Corporation on the other. All this appears to have worked pretty well until the expansion of simple colleges into universities, with many faculties, much property, manifold relations to the progress of knowledge. A government which claimed to exercise a sort of simple domestic authority is not adequate to the control of a complex organization such as many of our colleges have now become. At Harvard, the President has quite demitted the functions of a teacher; the general administration of the affairs is enough to occupy the strongest man. In small colleges, on the other hand, the president is expected to be chief teacher, chief preacher, chief politician, chief financier, chief solicitor of funds, chief builder. He is regarded almost as the embodiment of his college.

The faculty used to act *in loco parentis*, governing the students by residence among them, by attending divine worship with them, by partaking of a common table. All this worked well enough in simple days; but as everybody knows there is but little left of these primitive usages. The faculty in many colleges have now more to do with the material affairs of the college than the trustees; they solicit funds; they suggest improved methods of instruction; they select new teachers; in short, they are wisely recognized as the party most competent to decide on the standards of a liberal education, and most interested in securing the permanent progress of the institution to which they belong.

Thus it has come to pass that at the present time the functions of president, faculty, and trustees are more or less confounded, and either branch of the government is liable to be offended by the action of one of the other branches. It is becoming more and more difficult under these circumstances to find individuals who are adequate to the office of college president; more and more difficult to keep in office those who are called to undertake such ill-defined responsibilities. It is only the dominant common sense of college officers, and their sincere devotion to the interests intrusted to them, which keep affairs as steady as they are. Even wisdom, conciliation, and forbearance are not adequate, as the readers of newspapers are aware, to the prevention of internal feuds and occasional open controversies.

The traditions of the older colleges in this country are so binding that it would be no easy task to define the relations of president, trustees, and faculty in terms which would be applicable alike to all foundations, but in any single college it would not be very difficult to frame a written constitution which would serve as a substitute for the unwritten and conflicting usages and theories which are now the cause of so many controversies.

RENAN'S 'NEW STUDIES IN RELIGIOUS HISTORY.'

PARIS, June 26.

M. RENAN has given us a volume of 'New Studies in Religious History,' a natural sequence of his 'Studies of Religious History,' published twenty-seven years ago. The new essays are chiefly devoted to Buddhism and to some portions of the middle ages. The essay on Buddhism was composed during the last months of the life of Eugène Burnouf. "It was composed," says Renan, "for the *Revue des Deux Mondes*, and it was the first work which I offered to this review. M. Buloz, the least Buddhist of men, praised my article as regards some accessories, but as for its essence he would not believe that it was true. A real Buddhist, blood and bones, seemed to him an inadmissible thing. To all my proofs he answered invariably, 'It is not possible that there should be such stupid men.' Burnouf died, and I left the article in my drawer." It is fortunate that it is now published, as it gives a very vivid account of the views of Burnouf on Buddhism. The original article has been enlarged, and Renan has used the labors of some new workers in this field, particularly of M. Senart.

We find in these pages on Buddhism, part of which are already so old, some of the finest and best qualities of Renan:

"A doctrine which assigns to life as its supreme end nothingness; a doctrine which proclaims that the culmination of perfection is the annihilation of life; one in which man is represented as the highest term of creation; in which the idea of a Supreme Being appears only at a late period, is such an extraordinary phenomenon that our mind can only conceive its possibility with some difficulty. And still such a doctrine exists. To make the paradox complete, this doctrine, apparently the most despairing that has ever been professed, has inspired prodigies of devotion in the most various races; the church of nihilism has remained to our days, without any notable schism, the most compact religious body of the East. This is certainly a most extraordinary fact in the history of the human mind. Strange in its destiny, Buddhism is still more so in its philosophy, its doctrine, in the legend of its founder, in the odd style of its sacred books. Uniting the abuses of the most abstract scholasticism to the dreams of the maddest imagination, this religion, which begins without a god and almost without rites, issues in the extravagance of an unbridled mythology. The religion which was the most philosophical at first, and in which some of the modern schools affect to find the last word of wisdom, has become the coarsest of popular superstitions."

Renan unfolds the poetical legend of the life of Buddha, with all the charm of a style which seems made for such miraculous feats. The doctrine of Çakya has never been better expounded than by Burnouf in his classic 'Introduction to the Study of Indian Buddhism'; but Renan has a flexibility of words, a richness of images, which in such a subject produces a wonderful impression: "For Buddhism, as well as for Christianity, the sense of the universal vanity of things is the beginning of all wisdom; but after 'all is vanity' the Christian can add 'except God and the worshipping of God,' and the Buddhist adds nothing and can add nothing." His atheistic religion has, however, been eminently moral: "As a father who sees his children play in a house which is beginning to burn, Buddha sees all beings consumed, devoured, by birth, by death, by lamentations and despair, given up to the desires and to the evils which result from them, constantly coming to life again; and in the midst of this infinity of sorrow they play, they amuse themselves, they do not tremble, they do not even think how miserable they are. And Buddha says to himself: 'I am the father of all these beings; I will deliver them; I will give them the incomparable happiness of knowledge.'"

The reason of the popularity of a doctrine which seems made for the most subtle philosophers, is probably to be found in its profound sympathy, not only for men—for all animals, for all beings. Buddha tries to convert the snakes, the birds, the vampires, the harpies, the fantastic creatures which constantly dwell in the Indian imagination. The Vedas, which Renan calls severe and aristocratic, could not have as much effect on the popular mind. Renan shows us all the transformations of the original Buddhism; in becoming popular it organized itself, and became less idealistic. The old traditions were kept up in philosophical schools, and the popular religion became more and more a kind of paganism. The religious symbols transformed themselves so as to give satisfaction to more people, without losing a certain sort of unity.

Almost all the essays of the new volume concern the extraordinary religious movements of

reform which filled the thirteenth century of our era, and which were crushed afterward by orthodoxy in the fourteenth and fifteenth centuries. The centre of this religious agitation was in the order of St. Francis; but the history of the Franciscan sects cannot be well understood without a preliminary study of Joachim of Flore, as Joachim, if he was not invented by the exalted Franciscans, became, at any rate, a subject of legends, a precursor. The article on Joachim of Flore was made at the request of M. Victor Le Clerc, who had to speak of the "Évangile Éternel" in the 'Literary History of France.' Joachim lived in Calabria; he was placed on the boundary of the Greek Church and of the Latin Church; he was recognized as a prophet by the Latin Church; he foresaw what was realized after him by Francis of Assisi; he denounced the vices of his age, and praised poverty as a remedy against corruption. The article of Renan on Saint Francis of Assisi is one of the best he ever wrote. At the time when it appeared there was much discussion on the subject of the 'Life of Jesus'; the name of Renan was in everybody's mouth. A Capuchin monk, who had read the article, said to Princess ——, with whom he often conversed on the subject of Renan: "He has written on Jesus otherwise than people ought to do, but he has spoken well of Saint Francis; Saint Francis will save him." It is perhaps a pity that in the preface of his new volume Renan gives reasons for the devotion which he has always felt for Saint Francis. It is enough to have gone to Assisi, to have seen the chapel of Giotto, to have read the life of the saint who exalted poverty, humility, simplicity of heart, and made the most sublime devotion to all the sufferers and sinners of the world a sort of habit, of commonplace occupation. Why should Renan tell us:

"Sympathies in history, as well as in common life, are often founded on a community of defects even more than of qualities. The defects which would have rapidly ruined the work of Francis of Assisi, if the Church Universal had not given to it consistency and fixity, are those which have given to me no other influence on my contemporaries than to have afforded them momentary amusement. . . . Like the patriarch of Assisi, I have gone through the world, without any serious tie with the world, in the state of a mere tenant. Both of us, without owning anything, have found ourselves very rich. God has given to us a life interest in the universe, and we have been content to enjoy it without owning it. Such a disposition makes unsafe conservatives and revolutionists who are not dangerous. . . . The abuses which shock me, for instance, are those which relate to enjoyment rather than those which relate to property. A barrier which shuts the way to a fine valley, a river which is made dirty by a manufacturer, a wall which encloses a corner of the great field of God, whatever makes of beauty a personal apanage, of truth a private property—all this is very repugnant to me. . . . Late admirers of the Sermon on the Mount, do not let us ask for a civic recompense. Not only have we rendered no service to the cause of order, but perhaps more than one refractory man, in his revolt against established order, may have looked upon us as allies. We have contributed to consolidate nobody's property: the bourgeois of the future will owe us no gratitude."

It is not for the first time that Renan directly or indirectly complains of his contemporaries, while he apparently complains of his own want of practical wisdom. It seems to us that the reproach is somewhat unjust; it looked at one time, when the 'Life of Jesus' appeared, as if Renan would become somewhat of a martyr; but the time of martyrs is passed; no blood was shed in that terrible quarrel, only oceans of ink; and the name of Renan became illustrious, though he suffered no real persecution. He was elected a member of the Academy of Inscriptions, a member of the French Academy, a professor at the Collège de France; he is now the Administrator of the Collège de France, in the place of M. Laboulaye. His books have given him, if not a large fortune, at any rate entire independence. He is a happy husband and a happy father; but he is not a Senator, and, as we have all our weaknesses, this want of a positive part in the legislation of his country is the rose leaf in the bed of this philosophic sybarite. He is not content with making his mark on his generation, or on the thought of generations to come; he wants to be tinkering old laws or moulding new ones. He really complains of universal suffrage, as if universal suffrage had condemned itself by forgetting him.

This is one of the weaknesses of a great mind; there is another one which is becoming more apparent in this new volume. I hardly know how to speak of it; it is a weakness which has been growing in the old age of some very great men, such as Michelet, a certain disposition to introduce sensuality in everything. Michelet, in the last volumes of history which he wrote, explained the greatest events of history by physiological phenomena; there is in everything he wrote, when he had passed his middle age, a sort of senile craving for voluptuousness. There is something of this sort in the preface of this volume. Renan prophesies a time when life will be all joy, all pleasure, all gayety. A few persons, he says, piously disposed, have told him that they have in all his writings found passages which edified them.

"I would like to extract these passages from the volumes where they are, and to publish them in a small book under the name of 'Pious Readings.' I would divide the matter into fifty-two parts, for the fifty-two Sundays of the year. There would be for each Sunday an extract from the Gospels and from the Fathers of the Spiritual Life, a prayer and a spiritual *bouquet*, after the fashion of François de Sales, and afterward some engravings could be joined to it. A pious lady would only notice by some omissions the difference between such a book and the Prayer Book which she takes to church. Perhaps in the end she would prefer it."

He goes on speaking of his jealousy of the Prayer Book, a book "which has the incomparable privilege of receiving the abandoned looks of woman when she thinks herself alone with the Creator"—this book "on which so many charming eyes have fixed themselves with amorous intentness." As for the little book, made of the essence of his own work, "My last ambition," says he, "would be satisfied, if I could hope to enter the church after my death, under the form of a small 18mo volume, bound in black morocco, kept in the long fingers of a well gloved hand." What do you think of this well gloved hand? It seems to me that criticism has a right to tear off these gloves, and this foolish sentimentality, and this sensual form of a false religion.

THE WORK OF THE REICHSTAG.

BERLIN, June 30.

AFTER a long and protracted session, the fifth legislative period of the Reichstag has just been closed. The result of the last session is rather meagre. The best thing which can be said of it is that, while it did not do much good, it frustrated at least the most pernicious attacks of our protectionists and state socialists on the foundations of our institutions. The signet under which it was elected remained the same during its whole existence. The power of the Liberal and Conservative parties was balanced by the Centre. Our Ultramontanes, however, found it for their interest to barter with the Government in order to reap some substantial advantages for themselves. In this bargain they have been the more successful, as they did not care for anything except their clerical ends. Thus some liberal, but more reactionary, measures have been put on the statute-book. By partly yielding to its declared foe, the Government did not gain much; the great Conservative alliance could not be brought about, because the different interests did not centre in one great focus. Hence almost everything remains *in statu quo*, and the decisive battle will and must be fought hereafter.

The only practical result of the last session was the passage of the law for the workingmen's insurance against accident. It is the first attempt at the reconciliation of their interest with that of their employers and of society at large. I consider it a failure, as it makes insurance a state monopoly, and thus kills so important a business as that of private insurance. Besides, it excludes more than three-quarters of the working classes—viz., the farmers' help—and saddles the insured and those to be insured with more burdens than before. The agrarians only voted for it under the condition that they were not bound to support and nurse their field hands. I do not think the law will stand the practical test.

The new bill for, or rather against, the formation of shareholding companies was finally adopted, with a few less objectionable amendments. Thus, the lowest amount of one share is fixed now at 500 marks (about $125), and not at 10,000 marks, as originally proposed. The time within which the founders of a shareholders' company may be held responsible for any unlawful transaction or intentionally false statement is limited to five years, and on some other less important points restrictions have been done away with. On the whole, however, the law breathes the same hostile spirit against capital and self-earned property as did its first draft. Of the mediæval notions of our country squires you have no idea. The unsophisticated views of these petrified specimens of a bygone period are without a parallel in the present century. Thus, the Chairman of the Committee which had to frame the law insisted upon having the amount of a single share fixed at 5,000 marks at the lowest, as otherwise the small bankers and sharpers in the country would ruin the small buyers by selling them worthless shares of a small amount. When it was objected that the law was to be made for all business men, the same gentleman, belonging to an old aristocratic family, indignantly replied that these money men all stood on the same level, only that perhaps one was more and the other less honest.

Other measures which the Government had introduced it was forced to withdraw, as they had created such a general indignation that an ignominious defeat was to be anticipated. To this class belong the new bills for the increase of duties, and that for taxing all sorts of business transactions, not only those at the Stock Exchange, but also any purchase and sale of goods and merchandise. The bill for the reduction of drawbacks on sugar was withdrawn in deference to the wishes of our influential sugar manufacturers, who, in consequence of overproduction, are on the eve of bankruptcy. Other bills, like that for the increase of the pensions of army officers, have not been acted upon, on account of the stubborn opposition of the Secretary of War, who did not consent to the taxation of their private fortunes by towns and communes. General Kameke, the predecessor of the present incumbent, General Bronsart, had in this respect met the Reichstag half way, but not having seconded the wishes of the Emperor energetically enough, he had to resign; General Bronsart, by being more energetic ("schneidig," to use the officers' slang), prevented a fair compromise.

The great event in the history of the last days

of the Reichstag was the appearance of Prince Bismarck in the standing committee which had to discuss the bill for erecting and subsidizing German steamship lines to eastern Asia and Australia. Since May 25, 1871, the Chancellor had not taken part in the proceedings of any committee. The greater, of course, was the surprise when, on June 23, Bismarck made his appearance for the purpose of explaining his colonial policy. Afterwards, in the sitting of June 26, he repeated in substance in the Reichstag what he had, so to speak, privately given as his opinion. This, for the highly influential position of its author, as well as for its cool appreciation of facts, deserves to be given here. At present a wild colonization fever is raging all over Germany; one scheme outdoes another. East, South, and West Africa, Corea, Borneo, and Australia, Paraguay, Southern Brazil, and even Patagonia, are pointed out by our colonial Hotspurs as offering fertile and cheap lands for German emigration. In short, these colonizers want to direct emigrants almost to any country rather than the United States, where they, it is alleged, lose connection with the mother country and do not buy enough of home-made manufactures and merchandise. As far as I can judge, the German-Americans are the most numerous and readiest purchasers of these goods; but our protectionists and agrarians care more for fancies than for facts. It is a very interesting feature of this colonial and subsidizing agitation that the firmest supporters of such adventures belong to middle and southern Germany, while the business men of our seaports take the whole matter rather coolly and are not so loud in their praise of this colonial patent medicine. The secret of the colonial passion is disclosed by the present low state of trade and commerce. Our weavers and spinners on one side, and the ironmongers on the other, after having half ruined themselves by underbidding each other, can keep their establishments running only by conquering new markets. That a semi-civilized or wholly barbarous country has no need of railroad iron, or satin cloth, or silk dresses is beyond the simple understanding of these worthy gentlemen, who, of course, work exclusively for and in the national interest. In the manufacturing towns public meetings are held and resolutions are passed, appealing to the members of the Reichstag to act at once and grant subsidies if they would not forfeit the confidence of the people and be turned out ignominiously at the next election. Thus the epidemic is raging all over the country. The most unselfish of all the agitators are the Bavarians and Würtembergers, whose Governments need not contribute anything to the burdens of the venture, as in 1871 they reserved to themselves their postage sovereignty. The empire, in turning over the whole job to the Post-office Department, must pay all the cost for Bavaria and Würtemberg also.

So much about the present state of the colonial craze which Bismarck quite unexpectedly reduced to reasonable limits. He declared that he was far from looking over the world for the purpose of finding unoccupied land, and still less had he a desire to found colonies after the French fashion, with Prussian privy councillors or subaltern clerks. Such bureaucratic and military settlements would not do, as they required more money, more soldiers, and more ships than Germany could afford. He would not spend a cent for such artificial establishments, and therefore did not care whether a colony yielded profit or whether it cost money. This question did not concern the Government, but the individual settler, for whose protection the Government was responsible when in prosecution of his legitimate rights he was without cause attacked by other nations. Bismarck exemplified his views by reference to Angra Pequeña in southwestern Africa, and the question of the Congo River. He closed with the statement that England had just acknowledged the correctness of the German view and congratulated him (the Chancellor) on this peaceful acquisition of territory by a German private citizen, Mr. Lüderitz, of Bremen. On June 26, two days before the close of the Reichstag, the same question was more fully discussed in public session. The Opposition raised the question what the proposed new steamship line had to do with the old Samoa plan, defeated in 1880, and with some new colonial designs in the Pacific, which in the last days of the session occupied the foremost place in popular rumor and gossip, and it refused to vote for the new enterprise unless a fuller specification were given. On the other hand, it declared itself willing to enter into a thorough examination of the subject at the next session. Thus the matter stands at present, and it will probably not be taken up again before the beginning of next year. Thus far, at least, by Bismarck's declaration, the hopes of our colonial *chauvins* have been baffled. † † †

Correspondence.

MR. BLAINE'S CLERGYMEN.

To the Editor of The Nation:

Sir: I have been surprised, and yet not surprised, at the defence of Mr. Blaine attempted by his ex-pastors. They seem to me to entirely misapprehend the logic of the situation. It is not a mere suspicion which is directed against their old parishioner. In case that were all, then they might reasonably introduce their testimony as to his good character, in the hope of dissipating the suspicion. But when there is positive incriminating evidence, as there is, previous good character can be urged only in plea for pardon, not in bar of condemnation. Nor is it a question of veracity, as between Mr. Blaine and opposing witnesses. In that case, too, there would be some pertinency in testifying to foregoing trustworthiness. But the fatal evidence is out of Mr. Blaine's own mouth.

Unfortunately, church-membership has long since ceased to be a synonym for irreproachable morals, if, indeed, it ever was. It seems to me that my brethren, Ecob and Webb, are unwittingly doing what they can to make a public profession of Christian faith seem a mere form, if not a mockery, by saying, as they virtually do, that because Mr. Blaine made such a profession, there can be nothing wrong in what he did in Washington.

Respectfully,

An Ohio Minister.

LITERARY BLUNDERS.

To the Editor of The Nation:

Sir: I was lately looking over some last year's numbers of the *Century Magazine*, and came across a chronological error in a story by a popular author which I think it would do some good to notice publicly. In "Impressions of a Cousin," by Henry James, the heroine is made to say in a letter, *dated* 1873, that she sees from her window a station of the Sixth Avenue Elevated Railroad. But a more remarkable case of ignorance is in another number of the same magazine in a story called "Mrs. Findlay's Elizabethan Arm Chair." The author informs us that Mr. Findlay's family originated in Scotland, but that his ancestors had lived *three hundred years* in Philadelphia.

I am not often driven to magazine literature for my reading, and may therefore be mistaken in supposing that these instances of ignorance are exceptional and worth public correction.

G. H. H.

Capri, Italy, June 28.

"THE PEOPLE'S FAITH."

To the Editor of The Nation:

Sir: It is related of the elder Dr. Storrs, of Braintree, that the terrible rumor was once spreading through his parish that he was, at heart, an Arminian. A thrill of mingled horror and sorrow ran through the whole town. At last an old lady, a fast friend of the doctor, presented herself in tearful tremulousness at his study-door. She could bear it no longer. She had come in all Christian faithfulness to learn from his own mouth if the dreadful charge were true. The doctor was at first perplexed, then righteously indignant: "What a malicious slander! I an Arminian? Nothing could be more false. Why, madam, I solemnly assure you that I was born in Danvers!" The good old creature went away greatly relieved, vowing that, so far as it depended on the activity of her single tongue, that slander should be refuted. This, for fifty years ago, in New England, when the people did know something of technical theology, was not a bad story. It would have little point in these degenerate days, when a religious newspaper can discourse learnedly, as one did recently, about the Arminian Patriarch, without stirring a smile on the faces of a majority of its readers. Yet it may serve to introduce a few remarks on the unwarranted way in which certain professional theologians and religious journals identify their own views with what they variously term "the faith of the people," "the cherished beliefs of the great heart of the country," etc.

This was a very common form of argument with the late Dr. Hodge. Again and again it appears in the pages of his 'Systematic Theology.' It is almost invariably his custom to close his answers to the objections which opponents had urged to his doctrines by saying, in effect: "Well, whatever may be said by unbelievers, this is the belief of the people; it is wrought into their hymns and prayers; it is a part of the common faith." His successors have by no means dropped the convenient assumption. It is not so long ago that a celebrated theological teacher defended a pet definition of conversion, couched in the dryest scholastic terms, as being exactly the process of thought involved in the commonest Christian experience; when it is probable that nine out of ten "common Christians" would not know what he was talking about. There is often a similar assumption of perfect knowledge of the operations of the "people's" mind in the utterances of those religious editors who feel that their sect, for whose defence they are set, is really the catholic faith. Yet it may be said with entire safety that these are the very classes of men who, as a rule, know least of what the people think, and ought to be the last in making such bold assertions. One cannot well conceive of a life more thoroughly cut off from the great currents of popular thought than that of a theological professor. Just in the measure that he is "successful," or "learned," or "distinguished," according to the prevailing standards, will he be isolated from the life of men. One of the most famous of living teachers of theology was once on the train for Boston, in company with a college president. Both were going to preach in vacant pulpits. It happened that they were again together in the cars on Monday morning. They fell to talking about the services of the day before. "I do not think that I was led to choose an unusual theme," said the President, "simply because I reflected that I was preaching in Boston; and yet, I must confess, I put unusual emphasis upon certain parts of my sermon, in consequence of my remembering that I was speaking in the home of so much radical

thought. How was it with you?" "Why, the truth is," replied the theologian, "I do not know what all these men are thinking about. I have never found it worth while to read their writings—all their scepticism was so much more forcibly put by the writers of the seventeenth century"! It was this same professor who, in a course of lectures to his classes, lasting an entire winter, amid abundant references to the literature of his subjects, cited only two books written in this century; and, as one of his students remarked, one of these works being the 'Systematic Theology' of Dr. Hodge, the fact was that there was but one book alluded to which could be fairly said to have been written in this century.

While as much could not be truthfully said of the editors of religious newspapers, still it is evident that the larger part of them are removed from close contact with popular thought. The editorial sanctum rarely has windows on four sides. The editorial spectacles are not always achromatic. The editor has good facilities for knowing what other editors think, what the leaders of their denomination are busying themselves about, but has small access to the thought of the people. It was this which led Maurice to cry out so bitterly against those "philosophers," and such journals as the *Record*, that condemned him for attacking the people's faith, when, as he maintained, they were so isolated among men that they could not know what that faith was. Himself a busy pastor and preacher, a frequenter of the homes of the poor, a constant visitor at the hospital, a friend of workingmen, with whom he had fresh and direct intercourse, he felt that he might reasonably claim to know as much of what was in the minds of the people as his assailants.

Now, I do not propose to imitate these of whom I have spoken. I have no intention of giving a particular formula in the terms of which the Christian faith of the people can be stated; no formula can state it My position is one of protest against those who think that the whole matter can be rolled into a glib definition. Yet it may be well to point out one or two of the ways in which great changes in the popular conceptions of Christianity are effected almost insensibly. One fact of great significance is that the mass of people make very much more of personality than of doctrine. Of the latter, in its technical sense, they know very little. But they are able to recognize honesty, sympathy, piety, consecration, and they put much more faith in such qualities than in the subtleties of dogma. The consequence is that when men possessing them happen to be religious teachers and leaders, the multitude simply identify Christian doctrine with the public teachings of such men. Mr. Beecher is a conspicuous example of this. His large church believe in him for the sake of what he is to them personally. He is popularly supposed to be very little orthodox. That makes no difference to his people. They believe in his teachings because they believe in the man. If he were of the straitest sect of the orthodox they would accept his views just the same. People care as little about doctrine, when it is set over against personality, as they know about it. This was well shown in the recent Presbyterian heresy case in Pennsylvania. It suddenly appeared that a minister was not orthodox. The Presbytery deposed him, practically, from the ministry, and declared his church vacant. But his people would not submit to it. They knew nothing about the heresy, but they knew and loved the man. They simply withdrew from the Presbyterian Church, and kept their pastor. Somewhat in the same line is the power which a few religious journals exert. They win their place in a family and, usually, become a fixture. Their teaching and policy may have changed radically in the course of years, but the old name floats them into the household as before, and their opinions are accepted just as unquestioningly. A certain newspaper of this class recently contained an article on the Resurrection, in which the editor went so far in opposition to received views as to say in the most outspoken manner, "I do not believe in the resurrection of the body." An old lady who had read the paper for years was considerably startled at this. Yet she had been reading and delighting in other teachings of the same periodical, which were no less revolutionary than the one in question, only they had not happened to strike an old prejudice so squarely. De Maistre, the great dogmatist, said: "He who speaks or writes with the aim of filching from the people a national dogma, ought to be hung as a sneak-thief." And Mme. de Sévigné writes: "This is my old thesis, for which I shall be stoned one day: 'C'est que le public n'est ni fou ni injuste.'" Grant both, if desired, and still the question recurs, What are the "national dogmas" of our public? Our theologians and editors are answering it in far too off-hand a style. The true answer can be given only as a result of the widest and most patient study, at first hand. This our self-constituted oracles have not undertaken. Were they to do so, they might find that the residuum and only vital part of Christianity is something quite unlike their hasty and ignorant assumptions. O.

CLEVELAND, OHIO, July 10, 1884.

Notes.

HARPER & BROTHERS announce a new edition of W. J. Rolfe's Shakspere, in twenty volumes. Each volume will contain two plays, except the last, which is devoted to the poems. The arrangement will be approximately chronological. It is to be known as "The Friendly Edition."

S. E. Cassino & Co. announce a popular treatise on the birds of Eastern North America, by Rev. J. H. Langville of Buffalo, under the title 'Our Birds and their Haunts.'

J. R. Osgood & Co. have published a revised and enlarged edition of their handy and full "Guide to the White Mountains," with six maps. This is one of the most thorough of hand-books.

The sixth number of the pamphlet edition (Lee & Shepard) of Wendell Phillips's speeches is "The Labor Question."

Ginn & Heath's edition of Whitney's Sanskrit Grammar, which was announced last week, is not a new work. It is the original edition of 1879 published with their imprint, and at a price which is only a little more than half that at which it was obtainable heretofore.

Experts with the rod and tackle, and especially those of the traditional literary turn, will find the mild entertainment which is supposed to be their characteristic pleasure, in *The Angler's Note-book and Naturalists' Record: a Repertory of fact, inquiry, and discussion, on the Literature and Practice of Field-sports and on subjects of Natural History*, of which we have received the first of a new series, to be completed in twelve numbers. The most curious essay is a brief one on 'Walton's Hanging Cupboard,' which indicates by its mere title the sense of leisure, antiquity, and country air which gives its tone to the publication. The venture is conducted by the editors of the 'Bibliotheca Piscatoria.'

The third annual report of the Dante Society unfortunately shows no increase of membership, but this does not seem to interfere with its modest and useful work. The perfecting of the Dante Library for Harvard College goes steadily on, and we are now promised by the librarian, Mr. Justin Winsor, a catalogue which will contain "a list of all editions of Dante and books relating to Dante in the Harvard College Library, the Boston Public Library, and the private collection spoken of in previous reports, which is to be the foundation of what the Society hopes to make a library virtually complete for the purpose of the study of Dante." The Society announces that the notes of Mr. Longfellow, meant as additional illustrations for his translation, are being edited by Prof. C. E. Norton, and will be printed, and it promises aid to a concordance of the 'Divine Comedy' by Professor Fay, which, however, may not be ready for three years. The report concludes with a bibliography of the Dante literature printed in the United States. From this it appears that the first American writing on Dante was by Benjamin Welles in 1807, at Boston, and the first translation was Cary's, in 1822.

We have received a number of minor scientific publications of which the most important are, "Notes on the Volcanic Rocks of the Great Basin," by Arnold Hague and Joseph P. Iddings, of the U. S. Geological Survey, which deals with the nature of the geological formation of the depression between the eastern wall of the Sierra Nevada and the western wall of the Wahsatch Range; "The Influence of Convection on Glaciation," by George F. Becker; the "Okadaira Shell Mound at Hitachi," by I. Iijima and C. Sasaki, of the Tokio University, which contains a description of the pottery, stone implements, etc., found in this mound, and is illustrated by eleven very interesting plates of the objects; and "Earthquake Measurement," by J. A. Ewing, Professor of Mechanical Engineering in the same University, being No. 9 of the Memoirs of the Science Department, a work which is mainly concerned with the instruments and methods for observing seismic disturbances, but contains also a discussion of the theory of such motions, a statement of the results of observation of eight earthquakes from February 7, 1881, to April 23, 1883, and twenty-three illustrative plates.

Prof. W. P. Atkinson's three lectures 'On History and the Study of History' (Boston: Roberts Bros.), delivered originally to the students of the Massachusetts Institute of Technology, is an excellent plea for the rightful place of history and literature in technical schools.

Henry Grey's 'Key to the Waverley Novels' (Griffith & Farran, London; E. P. Dutton & Co., New York) has reached its sixth thousand. Its résumés of the plot of each novel are of slight value to those who are previously unacquainted with the story, but its index of the principal characters is useful for quick reference. It is to be remembered, however, that the public already has a 'Waverley Dictionary' which serves the purpose of literary men much better.

'How He Reached the White House; or, a Famous Victory,' an anonymous novel just published by the John W. Lovell Co., of this city, as No. 402 of Lovell's Library, is a reissue, with changed title, of an anonymous novel published in 1880 by Jansen, McClurg & Co., of Chicago, and then called 'A Famous Victory.' No intimation is given in the new issue that it is an old book. A portion of chapter xxxviii. has been rewritten, but otherwise the book is printed from the old plates.

A late circular of the Johns Hopkins University announces a special course of lectures on molecular dynamics to be delivered at Baltimore in the coming autumn by Sir William Thompson, F.R.S., Professor of Physics in the University of Glasgow, Scotland. The introductory lecture will be given on Wednesday,

October 1, and the other lectures will follow on consecutive days, there being eighteen lectures in all. Professors and students of physics from other institutions are invited by the University to attend, and arrangements will be made by which they may easily obtain temporary lodgings, provided an early intimation is received of their intention to come. A registration fee of $5 is required from such persons as follow the course, unless they are in other ways connected with the University.

Number 11 of the "By-Paths of Bible Knowledge," published by the Religious Tract Society, London, is a pleasantly written and illustrated discourse on "Assyrian Life and History," by M. E. Harkness, with an introduction by R. S. Poole, of the British Museum. Only two out of the nine chapters of the little book are devoted to "history" proper, the other seven treating respectively of "Writing," "Literature," "Religion," "Architecture and Art," "Military and Hunting Affairs," "Domestic Affairs," and "Colossal Animals." The expositions are clear and popularly written.

The interesting article of the *English Illustrated Magazine* for July is an account of the royal collection of miniatures at Windsor Castle, which is abundantly and effectively illustrated.

The August *Outing* exhibits a sign of prosperity in two profusely illustrated articles, one of which, "Tricycling Trips in Tokio," is novel and entertaining. Mr. Bradford Torrey contributes a leisurely article on "Scraping Acquaintance with the Birds."

In addition to the information we gave in a recent note about the authorship of "Frederic Daly's" biography of Henry Irving, we may state that at least two chapters of it are reproduced, word for word, from an article which appeared in the *Dublin University Magazine* for September, 1877, over the signature of Augustin Lewis, which we suspect to be an anagram of the real name of the writer of both eulogies. This can hardly be a case of plagiarism, although, of course, no allusion is made in the volume to the magazine article. The more probable explanation is that Mr. Irving's secretary finds one name—his own—insufficient to enable him to do justice to his subject.

The Council of the London Mathematical Society have awarded the first De Morgan memorial medal to Professor Arthur Cayley, F.R.S., for his contributions to the modern higher algebra, and other branches of mathematics. The presentation will take place at the annual meeting of the Society in November next.

We have received from F. W. Christern the first number of *Le Monde Poétique*, a monthly devoted to the popularization of French poets abroad and of foreign poets in France. The present issue has for its leading article a notice of Leconte de Lisle, apparently the first of a series upon contemporary French poets; and this is followed by a review of German verse, translations of Ebers, Björnson, etc., etc. Among the names of the staff we notice Jules Claretie, Leconte de Lisle, Jean Richepin, and Sully Prudhomme. The contents of the first number, however, are not striking.

The *Revue Critique* of June 9 contains a long and angry reply of M. Gilles de la Tourette to a review of his "Théophraste Renaudot," by Tamizey de Larroque. It appears that Larroque is preparing a complete edition of the "Lettres" of Guy Patin, the chief enemy of Renaudot, and the ill-feeling of the heroes has spread to their biographers. M. Tamizey de Larroque, who is always distinguished for minute erudition and extreme accuracy, saw with delight, no doubt, a number of cases in which M. Gilles de la Tourette had laid himself open to correction, and he used his advantage to the utmost. Unluckily for himself, however, he made two or three mistakes which M. de la Tourette discovered with an equal pleasure. The controversy is of interest only to the combatants, save in one thing. Every one who knows what Tamizey de Larroque has done to promote the exact knowledge of French biography and history, and what he was expected to do, will read with regret his remark that he is nearly blind, which is his excuse for the misprints that he had failed to correct in his review.

Those who have to consult archives or other documentary collections will find a useful guide in an exhaustive treatise on the use of documents issued by Dr. Friedrich Leist, of the Bavarian Reichsarchiv, under the title, 'Die Urkunde: ihre Behandlung für Edition und Interpretation' (Stuttgart, 1884). Among the subjects considered are questions of palæography abbreviations, initial-letters, vowel marks now obsolete, etc.

The first number of a comprehensive German periodical devoted to financial studies has just been issued by Cotta, in Stuttgart, under the title: *Finanz-Archiv: Zeitschrift für das gesammte Finanzwesen.* The editor is Dr. Georg Schanz, Professor of National Economy at the University of Würzburg. Though forming only a "Heft" of the first "Jahrgang," the number embraces upward of four hundred pages in large 8vo. It comprises treatises (by Lorenz Stein, Gustav Cohn, Felix Hecht, W. Vocke), statistical exhibits, résumés of the latest financial legislation, notices of new financial publications, and miscellaneous notes. The periodical, to judge from the contents before us, promises to be of great value to close students of financial matters.

—Dr. F. W. Taussig's 'Protection to Young Industries' shows much labor in the examination of the sources of information as to the state of manufactures in this country during the early part of the century, and a calm and dispassionate temper. "The argument" in favor of the protection of young industries "is, in brief, that it may be advantageous to encourage by legislation a branch of industry which might be profitably carried on, which is therefore sure to be carried on eventually, but whose rise is prevented for the time being by artificial or accidental causes." We understand the author to maintain that this argument applies to the case of "a young and undeveloped country in a state of transition from a purely agricultural to a more diversified industrial condition; this transition, moreover, coinciding in time with great changes in the arts, which make the establishment of new industries peculiarly difficult." Now, Mr. Taussig's investigation has no bearing upon this argument. It is devoted to showing the effect brought about upon some branches of industry by duties upon the importation of some of their products. It is one thing to maintain that it may be for the economic advantage of a people to pay some of its number to manufacture a certain article; it is a different thing to maintain that it may be for their advantage to pay all that choose to engage in this industry. It is, also, one thing to maintain that it is for their advantage to pay these manufacturers by levying a duty upon the importation of the articles that they produce; and it is an entirely different thing to maintain that it is for their advantage to lay duties upon a number of different articles with the view of stimulating the manufacture of all of them. A bounty upon pig-iron may increase the production of pig-iron and not materially affect any other industry, for it is paid out of the revenue derived from all the people; but a duty upon pig-iron may prevent the manufacture of bar-iron, unless there is a duty also upon bar-iron—and so on through all the industries that are dependent upon one another, as in fact all industries are. Nothing can be more misleading than such expressions as "the woollen industry" or "the iron industry." There are a thousand branches of each, and whatever raises the price of the product of any one of these branches may ruin a score of industries that are dependent upon this product. Not to convey a wrong impression as to this book, it should be added that Mr. Taussig's conclusion is that nothing was gained by the costly protection maintained by the United States in the first part of this century.

—It seems we are to have a series of Irish Nationalist publications with a view to reviving the theories of the Young Ireland party of 1848. The inspirer and editor of this series is Sir Charles Gavan Duffy, who, as one of the prominent members of the former movement, was induced for a time to leave his country for his country's good. As we have before had occasion to show, Sir Charles acquired a fortune, became Premier of Victoria, and modified his views in regard to the rightful powers of government. For some time past he has surveyed the troubled waters and the floundering ships of Ireland from the calm retreat of his château at Nice in a spirit that would have brought delight to the heart of Lucretius himself. The announcement promises us a series of publications designed to infuse a new national spirit into the Irish people, while not openly opposing Mr. Parnell and his party. The present movement is evidently thought by Sir Charles to be too selfish in its principles, and accordingly he will advocate the establishment of something like the old College Green Parliament. Works are announced by several well-known writers and politicians. Mr. John O'Leary is to contribute 'The Life of Theobald Wolfe Tone' and a 'Sketch of Fenianism,' while Sir Charles himself is preparing a 'Life of Thomas Davis,' the Irish Nationalist poet. Mr. Thomas Clarke Luby, one of the I. R. B. Council of Three in 1865, is also to be one of the contributors to the series. It has also been suggested that these gentlemen will probably, a little later, start a newspaper at Dublin for the propagation of their particular ideas.

—One of the most useful—at least to Americans—of the "English Citizen Series," issued by the Messrs. Macmillan, is the volume entitled 'The State in its Relation to Education,' by Dr. Henry Craik. The author brings to his task not a little insularity of spirit, but with this limitation he is well qualified for his work. He begins with a general outline of the earlier educational work done by the Church "and other religious bodies," and then proceeds to trace the historical growth of the principle of state aid to education. This principle, the author takes pains to indicate, is scarcely more than a generation old. It is refreshing to note with what unsuspecting simplicity this learned author, whose name is decorated with so many of the honors of Oxford and Glasgow, ignores the fact that in this matter England is at least a hundred and fifty years behind some of the other nations. But that a Glasgow Doctor of Laws should trouble himself about the provisions for education in Massachusetts or in Holland a century and a half ago, is perhaps as little to be expected as that an Oxford graduate in the time of Cobden should know the location of Chicago within less than a thousand miles. We cannot help thinking, however, that even the English reader would perhaps have borne a little more generosity of information on the subject of the history of state aid to education; but, with this exception, the book is

all that could reasonably be desired. Several chapters are devoted to showing the gradual enlargement of the grant system under the early orders of the "Committee of Council on Education," and of the subsequent work of the Committee under the Revised Code. The most important part of the volume is that which describes the principles and the machinery of the acts of 1870, 1876, and 1880. The merits of this portion of the book are quite sufficient to secure plenary pardon for the author's earlier historical sins; and we cannot do less than recommend the volume to all who would become familiar with what has justly been called the greatest of England's national undertakings.

—That the spectators know more of the play than the playwrights, as well as the actors, especially when they are spectators like the well-known dramatic critic of the London *Daily Telegraph*, and the editor of the *Theatre*, is shown by the contribution which Mr. Clement Scott has just made to the series of articles by English playwrights on their art, of which we recently gave an account. In answer to the question, How are modern plays written? Mr. Scott replies, on the stage. When they leave the study they are crude, unsatisfactory, and sometimes quite impracticable. On the stage, the stage manager, the actor, the carpenter, and the mechanician combine to mould them into works of art. Mr. Scott declares that so many gifts are necessary to a playwright besides the ability to furnish plots and words, that it is very rare for any one man to possess them all. Sardou is the most brilliant example of this in our own time, and Boucicault is the only dramatist who has approached his power. When he comes to the theatre, says the critic, with his manuscript under his arm, he knows exactly what he is going to do, and what ought to be done. Next to Boucicault, Mr. Scott would place Robertson, who could both write and "stage-manage," but could not devise plots. After him came Tom Taylor, Charles Reade, and John Oxenford. "How few of the successful dramatists of the day," says Mr. Scott, "except Mr. Gilbert, can conscientiously say they could take an order for a play of any kind—drama, melodrama, comedy, or farce—and without assistance guarantee its success, under the ordinary conditions of the stage." The moral of this is that if dramatic authors would collaborate more they would make more money and fewer failures. D'Ennery and Scribe always work in double harness, and Mr. Scott thinks that Dumas *fils* would have a greater reputation as a dramatist if he had followed his father's example in this matter. His opinion is confirmed by the fact that several of the most successful recent plays have been written in collaboration. The Adelphi melodramas of Pettitt and Harris, the "Silver King" of Jones and Herman, and the "Claudian" of Wills and Herman are instances in point. Mr. Scott points out that the same lesson is enforced by the fact that the plays of even so great a dramatic architect as Sardou would fail utterly on the English stage unless they are adapted for it by writers familiar with its conditions and requirements. "Diplomacy," he says, was thus arranged for the stage in a railway carriage between Paris and London. His recipe for writing a play is, therefore, as follows: Select a strong human motive from whatever source you can obtain it. Invent one if you can, if not, barter for it, and pay for it in hard cash to a Frenchman, or go in partnership with an Englishman. If you cannot write a good dialogue, and if you are not skilled in the art of characterization, call in some one to assist you; lastly, study the stage, or summon an expert who has lived behind the curtain. Two heads are better than one, and the dramatic broth runs no risk of being spoiled by a multiplicity of cooks. This is, doubtless, excellent advice, but the would-be playwright will probably think that it relegates him to a position too much like that of the artist's servant, who said of his master, "I stretch his canvas, I wash his brushes, I mix his colors; all he has got to do is to shove them on."

— The speech of the Public Orator of the University of Cambridge, Mr. J. E. Sandys, M.A., in presenting for the honorary degree of Doctor in Letters Professor Charles Eliot Norton, the delegate of Harvard at the recent celebration of the tercentenary of Emmanuel College, was of unusual length and great felicity. Its allusions were received with constant applause, and, as the occasion possesses special interest for Americans, many of our readers will, no doubt, be glad to see the complete text of Mr. Sandys's brilliant and generous introduction:

"Dignissime domine, domine Procancellarie et tota Academia: Hodie a Collegio antiquo magna alumnorum suorum frequentia annus ab illo trecentesimus celebratur, in quo Academiae in solo deposita est glans illa quernea aliquando in arborem evasura et non tantum Academiam ipsam ramorum luxurie mox obumbratura sed etiam trans aequor Atlanticum progenie nova gloriatura. E Cantabrigia autem Transatlantica, non nomine tantum sed ipsa origine et vetere hospitii iure nobiscum coniuncta, diei tam fausti testis, nuperrime nobis legatus insignis advectus est. Adest unus e professoribus illis qui Cantabrigiae illius nomen illustrius reddiderunt, nuntius ille felix quem, eloquentiam eius hesternam recordatus, Horatii verbis alloqui ausim: 'Mercuri, facunde nepos Atlantis.' Adest vir de artium historia praeclare meritus, qui poetae maximi Florentini Vitam Novam quae vocatur feliciter interpretatus est, qui medii quod dicitur aevi aedificia ecclesiastica opere egregio illustravit, qui archaeologicam denique societatem illam primus condidit, cuius coloniam Athenas auspiciis optimis recentissime deductam, etiam Britanni imitari et aemulari nunc maxime conantur. Ergo hospiti nostro non ingratum erit atria illa nostra invisere, archaeologiae studiis nuper dedicata, et unius e popularibus suis curae commendata; in museo illo vicino pictoris maximi tabulas illas, ab amico suo Britannico, artium existimatore optimo, nobis donatas, laetus agnoscet. Domum illam proximam, Collegiorum nostrorum antiquissimum, non sine pietate quadam contemplabitur, recordatus illic educatum esse unum e maioribus suis, theologum illum non minus doctum quam modestum, qui cum aliis plurimis trans aequor Atlanticum libertatis asylum plus quam duobus abhinc saeculis petivit. Gaudebit denique in Collegio illo altero sacra saecularia hodie celebrasse, cuius aula ex hospitali, velut ex urbis antiquae πρυτανείῳ, Collegii primi Transatlantici conditor puram illam flammam olim trans oceanum secum tulit, quasi coloniae novae artium optimarum studiis consecratae focum ignibus illis perpetuis accensurus, qui nunc quoque, talium virorum auxilio, et incorrupti conservantur, et materia nova quotidie aluntur, et lumine indies clariore effulgent. Vobis praesento Academiae Cantabrigiensis Transatlanticae legatum, Professorem insignem, CAROLUM ELIOT NORTON."

The *Glans quernea* in the above speech is the expression applied by Sir Walter Mildmay to his college when charged by Queen Elizabeth with having erected a Puritan foundation. Fuller, who tells the story in 1655, adds: "Sure am I that at this day it hath overshadowed all the university," to which remark allusion is made in the *non tantum Academiam ipsam* above. *Eloquentiam eius hesternam recordatus*, with the extremely happy quotation from Horace which follows, refers to the deep impression produced by Professor Norton's eloquent speech at the commemoration banquet of the preceding evening—an allusion greeted with loud cheers. *Unus e popularibus suis* pointed to Dr. Waldstein, who was present, and *amicus suus Britannicus* is Ruskin, to whom the Fitzwilliam Museum is indebted for a large collection of Turner's pictures. *Unus e majoribus suis* is John Norton, whom Fuller describes as "one of no less learning than modesty," *non minus doctum quam modestum*, in Mr. Sandys's speech. *Collegii primi Transatlantici conditor* is, of course, John Harvard.

— A neat publication on the Moluche dialect of the Chilian language (Chili-dúgu, or Chilidengu), a facsimile reprint of Bernard Havestadt's Latin treatise of 1777: 'Chilidúgu sive tractatus linguae chilensis' (Leipzig, B. G. Teubner), we owe to the indefatigable efforts of Dr. Julius Platzmann in republishing grammars and dictionaries of South and Central American languages long out of print. Havestadt was a German Jesuit missionary from the Rhenish provinces, of uncommon scientific attainments, who instructed the Chilian natives for a number of years, and left a curious diary of his journey through the Andes, performed in 1751–1752, which is, with a map, appended to his 'Tractatus.' His Latin style is correct and fluent, devoid of rhetorical flourishes, and the padre is an enthusiast for the Chilian language, which, as he says, "excels, by its simplicity, expressiveness, and consummate regularity, all other languages of the world." The 952 pages of the two 12mo volumes contain the following parts: Chilian grammar; three vocabularies, very copious; catechism with Latin translation and hymns in Chilian, composed by Havestadt, to which music notes are added; the diary of his journey. The publication commends itself to the attention of the ethnologist as well as of the linguist.

—The history of one of the most striking—and least pleasing—of the paintings in the Paris Salon, Surand's "Mercenaires de Carthage," is very curious. The scene is from Flaubert's 'Salammbô,' where the mercenaries, on the road to Sicca, pass by the line of crucified lions. How was a crucified lion to be represented? Nobody has seen one for two thousand years and more, and imagination in such a matter is powerless. Moreover, Surand's imagination seems a little weak, since he found it necessary, in order to paint the colored necklaces of the mercenaries, to cut out pieces of wood of the proper form, color them as described by Gautier, string them, and hang them on the necks of his models. He sought models of his lions by hanging dead cats on a cross, but they were too lifeless, wooden. He needed a writhing model. It is true that if he had painted by guess and painted wrong, no one could have known his mistakes; but the painter of the present day is nothing if he is not true to nature. Art is his religion, and realism is his conscience. Surand thought of petitioning the city to give him a lion and to allow him to crucify it, all for the sake of art—vivisection outdone! But by chance he met with a man who followed the singular trade of extracting pepsine from the stomachs of living dogs and cats to sell to apothecaries. To get it abundantly he was obliged to put them in a vertical posture, with the fore paws extended. He dealt with a dozen a day, and he had observed that cats when crucified are affected by a spasm, a peculiar torsion that is very striking. "You might suppose them lions," he said. So the living lions of the Jardin des Plantes gave the painter the leonine head and form, the crucified cats gave him the dramatic element, and the result was his horrible picture. The story is hardly likely to revive the fading love of the Parisians for the realistic and the repulsive.

—Friedrich Meyer von Waldeck, ex-editor of a German journal in St. Petersburg, remarks in his 'Russland'—a contribution to 'Das Wissen der Gegenwart, Deutsche Universal-Bibliothek tür Gebildete'—"everybody in Russia is filled with esteem, friendliness, and kindness toward every one who bears the name of a German."

Whatever the sentiment of educated Russians toward Germans may be, we have no doubt they must turn away with disgust from Germans who, like this author, carry back into the literary field of their enlightened fatherland a spirit of abject servility acquired under the institutions and influences of Czardom. In No. 915 of the *Nation* we presented to our readers specimens of the historical food prescribed by the Russian Government for use in schools and families; we showed them how in manuals of Russian history and other publications the facts of the court assassinations of Peter III. and Paul, for instance, are entirely suppressed, in order that the Russian mind should remain innocently unacquainted with the idea of regicide. Now, writing in Heidelberg, for publication outside of the sphere of Russian censorship, and "für Gebildete" in Germany, the author of 'Russland,' in the historical part of it, voluntarily commits the very same falsification of history by the suppression of almost everything injurious to the fame of Czars and Czarinas of the House of Romanoff, such as Elizabeth Petrovna, Paul, or Nicholas. Over the assassination of Paul he slips in a curious way: the notice of his reign ends with this sentence, "Two years before Paul's death Grusia was annexed to Russia," and that of the next begins with the words, "The Emperor Paul left four sons. . . ." Thus "the death" of the Czar is there. We are also told that Prince Alexei "died" in prison, but not how he died. Peter the Great is lauded to the sky for his very relations to that unfortunate child of his; closely examined, we are told, they reveal an "ungeahnte Grösse" of his character. And the book is offered to the German public as "Wahrheit über Russland." Such "Wissen der Gegenwart" will be allowed free circulation in Russia.

— It will be remembered that the past winter was the first in which the meteorological observatory on the summit of Ben Nevis was occupied by observers in continuous residence. The first portion of the observatory was opened in October last, and the month following the observers began, under the direction of the Scottish Meteorological Society, a series of hourly observations of the conditions of the atmosphere at the top of the Ben, with special reference to temperature, pressure, humidity, and motion. Mr. Buchan, the Secretary of the Society, has discussed these observations, together with those daily made by Mr. Wragge in the summers of 1881 and 1882, and the Council are fully confirmed in the expectations they had formed concerning the value of a high-level station, both in its bearing upon general meteorological problems, and also with reference to possible forecasts for the British Islands. The Council of the Society have already made arrangements for such additions to the observatory as will just double its size, and enable the three observers—who during the winter have been much cramped in a single apartment—to work under more favorable conditions. An octagonal tower is to be added to the present building, the internal diameter of which will be eight feet, with walls six feet in thickness. The tower will be built to a height of twenty-five feet, and divided into three apartments, the lower being a dark chamber for photographic purposes, the centre a spare-room, and the upper a depository for observing instruments. The estimated cost of all the additions to the observatory contemplated this season is about $4,000, not including the heavy item of transportation of the materials on horseback to the summit. It is expected that these improvements will complete the observatory, the only possible addition, at some future time, being an extension for magnetic and seismic observations. The cost of equipment and maintenance of the observatory heretofore is understood to have been heavier than was anticipated.

GINDELY'S THIRTY YEARS' WAR.—II.

History of the Thirty Years' War. By Anton Gindely, Professor of German History in the University of Prague. Translated by Andrew Ten Brook, formerly Professor of Mental Philosophy in the University of Michigan. With an Introductory and Concluding Chapter by the Translator. Complete in two volumes. With twenty-eight illustrations and two maps. New York: G. P. Putnam's Sons.

THE most interesting, and perhaps the most valuable, portions of these volumes are those which pertain to the careers of Waldstein and Gustavus Adolphus. These commanders were respectively the embodiment of the worst and of the best elements of the war. The Bohemian general found in the turmoils of the time simply a means of gratifying the ambitions he had already given abundant evidence of before the war broke out. He had no religious zeal, he even gave signs of indifference in regard to the great political issues that were at stake. The King of Sweden, on the contrary, was the representative of that spirit which finally demanded that human rights should be respected, and that neither of the contesting parties should be allowed to carry on the policy of extermination.

Waldstein—this is the spelling of the name which, Gindely tells us, was always used by the General himself—was thirty-five years old when the war broke out. He had seen a little of war, having entered service as a captain and risen to the command of a regiment. But his predominant ambition did not incline to military affairs. As a son of one of the younger daughters of the richest family in Bohemia he directed all his energies to getting possession of the estate. The blowing up of a castle took away the superior claims of his mother's eldest sister. Another aunt, the next in line of succession, was so indiscreet as to take a journey to Hamburg without the Emperor's permission, and for this heinous offence Waldstein persuaded the Emperor to disinherit her. There were now only two other aunts and their children to be got out of the way. They were involved in the first insurrection, and consequently their lives as well as their property were in considerable danger. Here was Waldstein's opportunity. He represented that he alone could save them, and that he would do so if they would renounce to him their claims to the estate. The bargain was made, and Waldstein found himself rewarded for his schemes by the undisputed possession of all the estates of the Smiritschky family. But he immediately showed that he was not content with being merely the richest man in Bohemia. He aspired to a fortune equal to that of the greatest German princes. A search through the records of a thousand years revealed to his covetous eyes certain chartered rights by means of which he was able to gain enormous concessions from the Emperor. In this way he increased his wealth by three or four fold, and, by a system of judicious purchases, he put into permanent form whatever of wealth came into his hand. He married a very rich widow, who was so good as to die without much delay and give him an opportunity to marry another. In these various ways he became a power that had to be conciliated, but could not easily be controlled.

To a man of Waldstein's ambitions and methods, the Thirty Years' War offered unrivalled opportunities. What but freedom from restraint does such a man desire? When the war had been going on four or five years, we find him secretly engaged in a matter of debasing the coinage, by which the Emperor was enormously defrauded. Of his connection with this transaction, Gindely says the proofs have recently been found to be incontestable. In 1625 the Emperor deemed it not prudent to deny him the privilege of enlisting an army. He undertook to raise a corps of 15,000 infantry and 6,000 horse. He made his own terms; and such were the privileges he offered that in a short time he was at the head of an army of 50,000 men. And what an army it was! Here is Gindely's description:

"Most of the troops were, during the greater part of the time, like a horde of beggars or famishing vagrants. Nothing but their arms indicated their occupation. At times, however, they were indeed adorned with fine fabrics and with gold and silver, especially when they had just taken great booty in a marauding expedition. Since this was imperatively necessary for the purpose of distinction during a battle, each soldier put on something before he entered the contest, such as a white or red band upon his arm, hat, or cap, with green twigs or other marks. As these could easily be assumed or laid aside, it sometimes happened that prominent prisoners escaped by quickly exchanging their marks of distinction for those of fallen enemies, and thus slipping away" (ii., 392).

Soldiers were allowed to take their wives and children with them. The author says that "at a later day the number of camp-followers was increased beyond all belief by the multiplication of children, so that in the last years of the war the numbers in the camp must be placed at three or four times that of the combatants." Waldstein's policy was not simply to make the war pay for itself, but also to make it furnish to his soldiery such rewards and privileges as would attach them strongly to their commander. An order issued by Waldstein in 1627 gives us a view of the pay and rations. The colonel received weekly three hundred florins; the lieutenant-colonel, one hundred and twenty; the captain, seventy-five; the lieutenant, twenty-five; the chaplain, ten; the sergeant, eight; the common soldier, two—besides fuel, salt, light, and lodging. A horse was to have twelve pounds of hay daily, and two bundles of straw each week. The common soldier was to have every day three pounds of bread, two of meat, and three quarts of beer; a corporal double the quantity, and the amount was to advance at the same ratio for the higher posts. Though these rates were promulgated by general order, they were not enforced with any regularity. Numerous instances are given where officers demanded and received amounts greatly in excess of the authorized rations. In Schwarzburg a captain required for himself weekly three hundred florins, and for the company no less than five hundred and forty florins, nine hundred bushels of oats, ten loads each of hay and straw, eighteen bushels of rye, twelve of wheat, fifteen of barley, one ox, two fat hogs, two calves, four fat wethers, fifteen geese, fifty pounds of fish, the same amount of butter, and two hundred eggs. "As there was no regular paying of the army, and as the troops lived chiefly on the regions in which they were stationed by contributions pressed out of the people, so the extended stay of a regiment in a city or section of the country was equivalent to its complete ruin." Under such a system there could be no regularity of supplies, but a constantly-recurring alternation of superabundance and want. At one time we are told that in the alleys of the camp pale and hollow-eyed faces were met, and that, while in every tent lay the sick and the dying, the air in the neighborhood was made pestilential by the bodies of the dead scarcely concealed in burial. At another time, when extraordinary contributions were successfully exacted, there was a general resort to gluttony, and enormous sums of money found

their way into the officers' pockets. This species of corruption soon spread from Waldstein's army to the other commands; it finally infected even the highest officers of the Swedish army itself. Baner left a million of dollars accumulated by this kind of robbery; Wrangel was violently agitated when he heard that peace had put an end to his robberies; and Königsmark, who had been penniless at the beginning, left to his family a yearly income of 130,000 thalers.

But this policy bore its natural fruits. In the end Catholics were scarcely less energetic than Protestants in demanding of the Emperor Waldstein's dismissal. That the great Bohemian yielded so gracefully has often been regarded as an evidence of loyalty; but Gindely is clearly of the opinion that the astute General foresaw that he would still be needed, and that he would be recalled with greater power than ever.

As to the purposes of Waldstein in 1634, there has been a variety of opinions among historians. Many efforts have recently been made to bring the matter out into the clear light of evidence. Forster and Hallwich admit that Waldstein meditated turning against the Emperor, but they claim that his course was forced upon him by the injustice designed against himself. Schebeck attempts to acquit Waldstein of all guilt whatever, while Ranke finds an excuse for his treason in the view that he sincerely labored for an adjustment of the difficulties between the religious parties. But Gindely finds unquestionable evidence of guilt. His conclusions, though not his proofs, are best stated in his preface:

"A final judgment upon this question will not be possible until all the original documents, for and against Waldstein, some of them still unknown to the public, and which lie at the foundation of my narrative, shall have been published. I shall, of course, early apply myself to the solution of this problem, until which time I shall claim only a provisional recognition of my judgment in the matter of this contest. The original documents, which I have myself discovered, have impressed me with a conviction of Waldstein's guilt. The facts which I have brought forward, and the confirmations which I have given of my view, as also the supporting proofs from single documents that have been indicated, may serve for the conviction of my readers also, who may, however, properly reserve their decisive conclusions until the future publication of the documentary proofs."

Concerning the career of Gustavus Adolphus, Gindely has also found much new evidence. In the archives of Berlin, Munich, Dresden, and Paris he has examined everything that pertains to the subject, and has brought to light testimony of the greatest importance in regard to the gradual growth of the King's plans. The nature of the new evidence he does not disclose, but says that in due time he shall publish it. He gives to his readers, however, the conclusions he has reached, asking them, as in the case of Waldstein, to adopt his opinions only provisionally until the evidence shall have been made public.

From the author's narrative the reader will receive two very deep impressions. In the first place he will find borne in upon him with irresistible power the evidence that he is in the presence of a really great man. It would not be easy to point out anything in modern history that shows so many evidences of real genius as the career of Gustavus Adolphus during his two years in Germany. As a strategist, a tactician, and a soldier, he certainly is entitled to very high rank; for, though he fought against the ablest commanders of the imperial army, and often on their own terms, he never failed to overwhelm them. But whoever reads Gindely's pages will see that the genius of the King was even more commanding in diplomacy than it was in war. The skill with which Brandenburg and Saxony were brought into alliance, the ingenuity with which the petty princes along the Rhine were convinced and controlled; and, above all, the politic measures by which Richelieu was drawn back from his purpose to go over to the Emperor—all these show an ability for diplomatic persuasion that has perhaps never been surpassed. The other impression that the narrative will make on the reader is likely to be a less agreeable one. The evidence seems at last to be conclusive that the King's pretensions and demands rose steadily with his victories, and that they can be accounted for in no other way than on the ground of personal ambition. One is reluctantly forced to admit that the concessions which he declined, as well as the demands which he made, point straight to a desire for the permanent control of Germany. It is doubtless useless, but it is at least interesting, to speculate as to what the future of Germany would have been if the battle of Lützen had not left the great King dead on the field.

The limitations of our space do not allow us to follow the subsequent events of the war, or even permit us to indicate the new evidence on which much of the narrative rests. It must suffice on this point to say that the papers of Simancas made many a disclosure to the author, the most important of which, perhaps, is the evidence that actual negotiations were carried on with regard to the assassination of Gustavus Adolphus. But the volumes should not be dismissed without a word concerning the work of the translator and of the publishers. The translation is in the main excellent. The version is perhaps a trifle too literal, but the English is not often disfigured with too obvious indications of German origin. In the first volume there are a few awkward sentences, which careful proof-reading should have corrected. The worst example is on page 27, where the author is made to say: "*Ad*vised *ad*versely *as* to these violent measures, Maximilian, in order by his *p*ersonal *p*resence to a*pp*ly the needed *p*ressure to the Emperor, visited *P*rague." Not infrequently, moreover, the translator has used the English *must* as a proper rendering of the German *musste*. By inadvertence, doubtless, the illustration designed to represent the second battle of Leipzig (1642) is inserted as a representation of the first (1631). But a careful comparison of several pages of the translation with the original has revealed so few defects that we have no hesitation in saying that what must have been a laborious task has been successfully performed. It should also be added that the work of printers and publishers has been all that could be desired. Indeed, we do not remember that two handsomer volumes have ever come from an American press.

COWPER'S LETTERS.

Letters of William Cowper. Edited, with introduction, by the Rev. W. Benham, B.D., F.S.A. London: Macmillan & Co. 1884.

THE career of Cowper, as all the world knows, was one to fill the pessimist with perennial gladness; and, in fact, if it were possible to look at the natural order of things only as Cowper was affected thereby, it might seem that nothing short of malignity in the overruling powers could account for the fiat that gave up so pure, simple, and cordial a nature to be the prey of the seven devils, and rendered so many delightful traits of character futile to achieve the happiness of their unfortunate possessor. In these select letters, flowing on in the old, sweet, fresh English, one perceives the rare literary faculty, the shy humor, the discrimination, the sound sense, all the many graces of style and many virtues of intrinsic worth that have long been familiar to scholars; and, more than that, one gladly recognizes again the companionable, soft-hearted, pathetic man whose pastimes, whether in gardening, or poetry, or caring for his pets, were a refuge from the most poignant anguish; who played only to escape his terror, and at last failed even in that. The pity of Cowper's life, however, although it contributes to his poetic attractiveness, is only a small part of what must be dealt with by the observer of that life as it appears in his familiar letters. These, as a body, it is needless to say, hold a place in the *literæ elegantes* of leisurely minds from which they are not likely to be dislodged. Nevertheless, letters at the best are not a high form of literature; even when, as in the present case, their workmanship entitles them to rank as classics, their interest must finally reside in their being unconscious autobiography rather than in their artistic perfection. Hence, instead of regarding this correspondence as an object of literary *virtu*, it may be well for once to consider it with a more direct reference to the sober facts it chronicles and the spirit it reveals.

Few persons experienced in the world would be likely to hold up the routine of Cowper's days as worthy of imitation. So far as earthly matters were involved, it was a life of very small things; its mundane interests were few and trivial, and sprang for the most part out of pursuits that belong usually either to the domain of childhood or of invalidism. This is not said disparagingly, but with due regard to the fact that for the larger part of his career Cowper's condition was such that his attention had to be distracted and his mind amused as is the case with children or invalids. In his later years the composition of verses became one mode of such diversion, and was undertaken practically as a sanitary measure; and thus his larger interests, involving conceptions of the eternal world and sympathy with his fellow-men, were extended to his hours of recreation. These larger interests, as they must be called, were from the first peculiar. When he was not attending to his hares or his vegetables, or versifying, or taking rural walks, he was engaged in devotional exercises of one kind or another. In 1766, for example, every day the time from breakfast until eleven o'clock was spent in reading the Bible or sermons, or in religious conversation; the hour from eleven to twelve was passed in church at service; in the course of the afternoon there was a second period of religious conversation or hymn-singing; at night there was commonly another sermon and more psalms, and after that family prayers. In other words, it appears that Cowper's life, at that time at least (and it is a fair sample of the whole), consisted of an almost monastic religious routine, relieved by the diversion of country pursuits on a small scale, and, later, of literary pursuits in addition. At present, as has been said, few qualified judges would consider this a life of high order, either in the way of wisdom or utility; but in Cowper's case, the peculiarity of his mental condition and the charm of his nature, revealed at its happy moments in pleasant letters, blind the reader to the monotony and vapidity of this existence, for such were its characteristics, except in so far as the healing influences of natural scenes, to which Cowper was very sensitive, and the kindness of his household friends, gave it variety and substance.

Now, it is a very striking fact that while Cowper spent the larger part of his time in religious reading and conversation, and besides meditated in private on the same themes, his letters do not show in any degree that insight into spiritual things which would naturally be looked for from real genius occupied with such subjects. Spirituality should have been his trait if religion was his life, but, in fact, these letters are in this regard barren. The anomalous nature of his

poetic life—the fact that he used his powers not to express his deepest emotions but to escape from them—may be pleaded in extenuation of what seems at first a surprising defect; but a more likely explanation lies in another direction. It was sermons that he read, theology that he talked about, a theory of grace and salvation that he meditated upon in secret; his religion occupied his thoughts rather than his acts, touched his future rather than his present—in a word, it was a system rather than a life, the source of doubt instead of inspiration. To put it in the simplest form, he derived his light not from his own inner experience but from the creed. In his case the light was the darkness of insanity; but his own conviction in the matter is shown in his characterization of Beattie—"a man whose faculties have now and then a glimpse from Heaven upon them, a man not indeed in possession of much evangelical light, but faithful to what he has, and never neglecting an opportunity to use it." A poet who identifies "evangelical light" with "the vision and the faculty divine," may write "The Castaway," but one is not likely to find in his works those intimate revelations of truth that flash in convincing beauty from the lines of the true spiritualists, such as Wordsworth, Shelley, or Emerson. Cowper's misfortune, both as a man and a poet, was this substitution of dogma for instinct, which, operating in so sensitive and feeble a nature, made religion, which was his vital interest, not a life but a disease, and gave to all the activities of his higher powers the character of mania. It is misleading, therefore, to think of these letters as the fruit of a deeply religious mind; they are the record of the efforts of a creed-believing mind to get rid of itself, and their virtues—their amiability, their delight in small adventures, their interest in literature and humanity—exist not in consequence of but in spite of the religious bent of their author.

Cowper was deficient, too, æsthetically as well as spiritually, and the character of his limitations was much the same in both respects. His sense of beauty was practically confined to landscape and small animals. The cramping influences amid which he lived are well indicated by his remarks upon a clergyman who, it should be said, richly deserved censure:

> "He seems, together with others of our acquaintance, to have suffered considerably in his spiritual character by his attachment to music. The lawfulness of it, when used with moderation, and in its proper place, is unquestionable; but I believe that wine itself, though a man be guilty of habitual intoxication, does not more debauch and befool the natural understanding than music—always music, music in season and out of season—weakens and destroys the spiritual discernment. If it is not used with an unfeigned reference to the worship of God, and with a design to assist the soul in the performance of it, which cannot be the case when it is the only occupation, it degenerates into a sensual delight and becomes a most powerful advocate for the admission of other pleasures, grosser perhaps in degree, but in their kind the same."

Whatever truth there may be in this estimate of the influence of music, the limitation of its use to church choirs and organs is an expression of Puritan iconoclasm which acquaints the reader at once with Cowper's provincialism. The passage is English to the core, and not only does it suggest the æsthetic deficiencies of the poet and his life, but it also brings up once more the characteristic English picture of the family singing psalms and reading sermons, year in, year out, with which the letters begin. This correspondence has made that group of interest to the world; but in answer to the question, What was its life and its spirit, can one help feeling that trivial, not to say belittling, occupations, and a narrowing theology, were principal elements? Cowper's work, in the main, has only the sluggish vitality of this life; in his letters more than in his verses, speaking generally, there is literary grace and personal charm; but in both they seem a sort of salvage. A vision of quiet green fields, inhabited by respectable gentlefolk who led an existence of humble routine in a neighborly way, made up Cowper's world; he lived in it overshadowed by the ever present fear of damnation, and at last, sunk in despair, he died in it. Out of such a world no great poet either of the soul or of nature could come, nor even a poet of the second rank. Cowper's virtue was in his simplicity and genuineness, rare qualities then; his good fortune was in never belonging to the literary set or bowing to the town taste; hence in a time the most barren in English literature, he gave us a half-dozen fine poems that stand far beyond all contemporary rivalry, and some private letters of the best style and temper. When, however, the question comes as to the intrinsic value of these letters, it must be confessed that though they please the taste, they do not interest the mind except in a curious and diverting way. They are less the letters of a poet than of a village original, a sort of schoolmaster or clergyman *manqué*, of sound sense, tender heart, and humane perception, but the creature of a narrow sphere. We may love and pity him as we do the Vicar of Wakefield, but the excellence of an humble character in fiction or in life, though it may make a man the poet of dissenters, or even the occasionally welcome companion of refined minds on rainy afternoons, is not the same as that which lists him in "the golden roll."

The Annual Statistician (1884). L. P. McCarty, editor and proprietor, San Francisco and New York.

THE *Annual Statistician*, the eighth issue of which is before us, gives the full text of the Constitution of the United States and the names of the Emperors of China from the days of the Flood, or before; the population of Sucker Flat, Yankee Jim's, and Raw Hide, and a list of all the treaties to which this country has been a party. In short, it seems to contain almost everything which a person having a practical knowledge of the kind of information busy men are likely to need, could put into 624 pages. A scientific statistician might never have thought of devoting several pages to the best "records" in horse racing, high jumping, type-setting, brick-laying, and so on; but newspaper men to whom accounts of unusual feats of strength and skill are often brought late at night may find these pages valuable. The book is one which everybody who has much writing to do will find use for. To say this is high praise of the general plan of a work whose editing has been by no means all that could be desired. Its compiler has seemingly had a much clearer idea of what it would be convenient to know than he has of what it is possible to find out; for, in spite of his prefatory announcement that all the matter he publishes must consist entirely of facts, he is found, on page 321, stating without qualification or comment that the "average duration of life throughout the world is thirty-three years," from which it might be supposed that the vital statistics of China, or of the Sudan, or, for that matter, of the United States, were as full and accurate as those of England. This lack of discrimination frequently makes its appearance in the pages of the *Statistician*. In a slightly different form it is shown in the table on page 577 purporting to give the birth and death rates in a number of great cities. For some of the places certainly, for all of them possibly if not probably, the figures given are not the annual rates at all, but merely what would have been such had the rates for some accidentally selected week or month been maintained throughout the year. Some absurd misstatements are the natural result; for instance, in one of our American cities the births and deaths are to each other as 11 to 13; the table makes it appear that they stand as 5 to 3, thus reversing and more than reversing the true proportion. The whole table is, of course, valueless for all comparative purposes. Several other tables which, if they could be depended upon, would be very serviceable, are made worse than useless by their evident omissions and inaccuracies. A mere glance at page 247 will show that the table which undertakes to tell what property, by the laws of the several States, is exempt from execution, is defective. Thus in one State, it says, the only property protected is clothes, books, tools, and so on, while, in fact, in addition to these articles one hundred dollars' worth of property, whether real or personal, may be retained by the debtor. The list of legal holidays on page 584 is by no means complete; for example, nothing is said as to Good Friday and Election Day being holidays in Maryland. On page 244 there is what purports to be a statement of the various qualifications for eligibility to the United States Senate which some of the States have vainly attempted to add to those prescribed by the Federal Constitution. Not only is nothing said of the provision of the New York Constitution which forbids the Legislature to choose any of its own members, or of the Maryland law which divides the Senators between the Eastern and the Western Shore, but several of the restrictions which are set forth relate merely to the State Senates and have nothing whatever to do with that of the United States.

In order that a book which deals with so many different subjects may be made at all accurate, it is essential that every sheet should be carefully gone over by somebody upon whose eye an inconsistency in figures has as immediate an effect as a false note upon the ear of a trained musician. If the pages of the *Statistician* had been subjected to such a scrutiny, there would scarcely be found in it four different statements of the population of the world; not, be it understood, contrasted with each other, but each published as in itself the best estimate, without intimation that there are others which are entitled to as much credit. Thus it is said on page 321 that the globe has about 1,455,800,000 inhabitants. The aggregate of followers of the various faiths and no faiths of the world, as they are stated on the same page, is 1,355,800,000. The discrepancy is the result of a mistake of 100,000,000 in the population of Europe. If this error were corrected the two estimates would agree. But the population of the world, as it may be obtained by adding together the number of inhabitants in each of the countries of the earth as they are given on pages 322–324, is 1,342,000,000, while on page 587 still another estimate puts it at 1,424,000,000. As the leaves are turned over a good many such mistakes force themselves into notice. Thus, on page 140, Mr. Ten Eyck, of New Jersey, is said to have been in the United States Senate in 1814, the year in which he was born. On page 423 Prince Gortchakoff's age at the time of his death is stated to have been 64; if this be true he was only about five years old when he was in 1824 Secretary of Legation at London. On page 142 Mr. Warner Miller is credited with being the successor of Mr. Conkling instead of Mr. Platt. On page 47 the Judge-Advocate-General is given the rank of a Colonel, although upon the Army Register he is a Brigadier-General. In a note on page 38 California is included among the States which ratified the Fourteenth Amend-

ment, while a few lines below it is said that California never finally acted upon it. McPherson's 'History of Reconstruction' numbers California among the States which rejected it. The muddle into which the editor has fallen as to who have been Vice-Presidents of the United States seems almost hopeless. In the list on page 40 the names of Mr. Edmunds and Mr. Davis appear, but nothing is said of the other gentlemen who, as having been Presidents of the Senate, have as much, or rather as little, right to figure as Vice-Presidents of the Federation. The compiler of the table on the opposite page, 41, extends his courtesy somewhat further back and gives the names of all the gentlemen who since 1840 have presided over the Senate during a vacancy in the Vice-Presidency, but he has nothing to say of Mr. Hugh L. White, of Tennessee, who was placed in the chair upon Mr. Calhoun's resignation in 1832; of Mr. John Gaillard, of South Carolina, who was chosen upon the death of Elbridge Gerry in 1814, or of Mr. William H. Crawford, of Georgia, who was President of the Senate during the unexpired portion of the term of George Clinton, who died in 1812. There ought not to be a mistake made in such a matter as the number of Associate Justices of the Supreme Court, yet on page 44 it is said there are nine. In subsequent editions it would be well to be a little careful to get rid of all obsolete matter. In the issue for 1884 Mr. David Davis is, on page 231, said to have been on January 1, 1884, Vice-President of the United States, although he had ceased nearly ten months before to be even a member of the Senate. The book as it stands is a good one, but that very fact makes the blemishes which have been pointed out, bad enough as they are in themselves, all the more serious.

Manners and Social Usages. By Mrs. John Sherwood. New York: Harper & Bros.

NOTWITHSTANDING all the stories current since long before the days of Mrs. Potiphar concerning the vain presumption and the ludicrous mistakes of the newly rich, we believe there is no question oftener or more honestly asked by them of themselves, or of their nearest friends, than "How shall I spend this new money gracefully?" That the question has not always been wisely answered is only too evident. A book like Mrs. Sherwood's has long been needed. The separate chapters, as they appeared in *Harper's Bazar*, have already proved themselves most acceptable. They cannot be too widely known; for, the exigencies of great wealth apart, there will come to most persons, however simple, occasions when it may be a positive relief to know what is expected of well-bred people. Mrs. Sherwood wisely presupposes the fundamental rules as to personal habits, and takes up her subject where the customs of society begin. How the house shall be ordered; how company shall be received; how to visit and to be visited; how to do it all kindly, attractively, becomingly, in proportion to the means at command, is set forth very clearly and convincingly. It is not a small merit, in writing for a public which has borrowed its customs and is hard at work making its own traditions, to have kept in sight the fact that etiquette is always and only a convenience—a means, not an end. Intimate friends have no need of it, while common acquaintance can never be carried on without its help, either as a restraint or as a welcome medium. The latest giver of grand dinners or the last aspirant to social leadership will heed and follow Mrs. Sherwood, because she speaks with the authoritative tone of experience; but those of less ambition and more discrimination (and it is they whose approval she would most prize) will look deeper, and, understanding better, will say that she, like the famous shepherd minister,

"Avait du bon sens; le reste vient ensuite."

She has by no means constituted herself a censor. In the nature of things, to talk of customs is to talk of the world as it is; but at any doubtful point, in any possibility of choice, she seems to us almost always to prefer the best. To follow her suggestions would be to adopt the most rational course, the most agreeable to all.

Our space is scant for details. We are glad she has thrown the weight of her influence in favor of "the roof tree as an introduction." Nothing could make more difference in our receptions of every kind than the general adoption of this idea, as any one will admit who has known the charm of a foreign house or the affability of persons brought up under such a rule. Mrs. Sherwood, though very decided in her approval of the principle, does not discuss the matter; if she had, she would probably have said that what stands in the way is not at all a preference for stiff silence, nor even shyness, but "the fear of what it may lead to." In the absence of recognized standards—not merely as to who is who, but who is first, or who shall make the advance—many ladies are not prepared to risk the chance of having an acquaintance claimed afterward. It may be a long while before it is generally understood that "the guarantee of the roof" has its complement in the implied reservation: "This of itself goes no further, without personal introduction or without mutual agreement." Meanwhile, it is the duty of those who have seen a better way to show it, so far as may be, to others. In so good a piece of work, we do not mean to lay stress on small matters. There are some inadvertencies that involve contradictions or that risk misconstruction, as when "to be introduced to" is used instead of "to make the acquaintance of." One or two adjectives seem rather hard pressed. It may, however, be only an unconscious adoption of current speech that makes "elegant" do duty in so many ways, not only as "choice," "refined," "elaborate," "costly," but for the phrases "an air of distinction" and "on a grand scale." Is it best to apply "vulgar" equally to the mere manner of leaving a card and to an actual breach of politeness? Is not this to confound *gaucherie* and *grossièreté*?

There is quite another side to the book, which we can only hint at: it has its value as a photograph of contemporary manners. To contrast it with Mrs. Farrar's once famous book for young ladies may seem whimsical, yet the comparison has its meaning. The world has never seen in a like space of time a change such as has passed over our communities—whether for better or worse is a matter of opinion which is very likely to be governed by one of two facts which would seem to a Chinese philosopher most irrelevant: "Had a man a great grandfather, or has he just made his first million?" However, turning these pages at random, there is proof enough that human nature is much the same. The hostess who presides serenely over the long succession of elaborately simple courses of a dinner *à la Russe*, would think the loaded table of her hospitable grandmother a barbarous show. To-day thinks itself more refined; but was there any more ostentation in the crowd of dishes than in the seven fresh napkins now furnished to each guest for a single dinner? That fashion looks to England for its models has been for some time patent enough, but the book presents an odd sort of cumulative testimony to the fact. Still, France has not lost her hold. Even setting aside affectations, Briton and American alike depend on the Gallic phrase. The world will never cease to feel the force of the people that taught it the art of polite living.

On Musical Education and Vocal Culture. By Alberto B. Bach. Scribner & Welford. Pp. 272.

Artistic Singing. By Sabrina H. Dow. Boston: Lee & Shepard. Pp. 115.

SINGING cannot be taught successfully except under the personal guidance of a teacher; but if any book in the English language is capable of taking a teacher's place, it is Mr. Bach's volume, which consists of a collection of lectures delivered on various occasions at London and in Edinburgh, the author's home. The best evidence of its excellence lies in the fact that within a few years four editions have been sold. Every year a number of books are written by "professors" of singing who claim to have discovered the secrets of the voice, and profess to teach its use by an entirely new method. Mr. Bach does not belong to this class; he does not claim to have discovered any secrets, but merely to present in readable form the best rules for the management of the voice that have been established by the practice of vocalists and teachers within the last centuries. Many anecdotes and curious historic facts are cited, so that these lectures are of interest even to those who do not wish to learn how to sing. The subjects of the lectures are: On the cultivation of the voice; proof that there are no notes produced in the head; on the equalization of the voice; *portamento di voce;* care of the voice, or the singer's daily life; the influence of climate and other external conditions on man and the human voice; how can the musical education of the middle classes be improved? The only thing we miss in the book is a résumé of important rules that ought to be memorized. It might be put in the form "don't," originated by *Punch* and recently applied to etiquette and other departments—thus, for example: Don't choose a poor teacher for beginners; don't indulge in superficial breathing; don't use too much breath in singing; don't fail to pronounce the consonants distinctly; don't clear the throat; don't make your regular exercises in any other than the middle register; avoid very hot or cold or hotly-spiced dishes, strong drink, and heavy tobacco.

What is perhaps the most important rule for a vocalist to learn possesses at the same time great interest for all who wish to enjoy good health. It is the habit of deep breathing. The air which always remains in a man's lungs is estimated at 75 to 100 cubic inches. About an equal amount of supplemental air remains after an ordinary expiration, and only twenty to thirty inches of what Huxley calls "tidal air" passes in and out. But this last amount can be largely increased by habit; and if a person breathes deeply and slowly, the amount of oxygen supplied to the blood is largely increased, which is better for him than iron pills and all other tonics. There are few persons whose health will not be improved if they will take a daily dose of twenty to thirty deep inspirations in a park or other place where the air is pure. After a while the person who does this begins to take in more air all the time than previously, and thus a larger portion of his lungs is brought into activity. It is also of great importance that all breathing should be done through the nose, as thus the air is warmed before it reaches the lungs, and the mucous membranes remain moist, thus preventing those disagreeable enemies of refreshing sleep—a dry mouth and snoring. For singers these observations are of special significance, because the correct emission of a pure and firm tone depends on the habit of diaphrag-

matic breathing. The voice, the general health, and the appetite, too, are thus strengthened by a simple hygienic device which cannot be too frequently or too strongly recommended. Here, too, we have a practical argument in favor of teaching everybody to sing, which shows that an ornamental accomplishment may at the same time be useful. Singing being a sort of gymnastic of the lungs, Mr. Bach says, is an excellent prophylactic for those who have a tendency to disease of the lungs. "Very few vocalists die of consumption."

We cannot agree with Mr. Bach's statement in the preface that there is no new art of singing, and that about everything worth knowing was discovered by the old Italian school in its prime. The songs of Schumann, Franz, and Liszt, and the dramatic song of Wagner constitute a new art as distinct in style from anything that preceded it as Chopin's piano forte style differs from that of all his predecessors. It is the art of speaking in melodic intervals, which the originators of opera in Florence vainly endeavored to attain; and it is, as an art, infinitely superior to all the tricks of mechanical (and quasi-instrumental) vocalism of the Italian singers of the florid school. In a chapter on the recitative and Schrœder-Devrient, Mr. Bach appears to realize the significance of this style, which calls into activity the higher mental powers rather than the mere faculty of uttering beautiful sounds in rapid succession, which is the essence of the florid style. Another point on which we beg to differ with Mr. Bach is that the greatest charm in song consists in *messa di voce*, *i. e*, starting a tone *pianissimo*, and gradually increasing in loudness to *fortissimo*. This is a very primitive substitute for genuine expression (except in rare cases), and should be left to the cornetist Levy and his colleagues in the Bowery museums. Throughout the volume the word chord, in "vocal chords," is spelt with an *h*. This form also has the sanction of Huxley and other physiologists. But it would be much better and more accurate to use the word cord here, and reserve the form chord for cases where we mean harmony or the simultaneous sounding of two or more notes.

'Artistic Singing' is of a scope similar to Mr. Bach's book, but more gossipy in character. It can be read in an hour or two, and can be especially recommended to young ladies. They will do well to pay special attention to the chapter on respiration, and read the warning against tight lacing, which not only leads to false breathing and gives a bad quality and tremolo to their voices, but makes their figures ugly in the eyes of all men whose admiration is worth having.

Scenes in the Commons. By David Anderson. London: Kegan Paul, Trench & Co. New York: Scribner & Welford. 12mo, pp. 271.

MR. ANDERSON'S description of the scenes that he has witnessed in the House of Commons is told in a vivacious way. He is no respecter of persons, and he hits off the appearance of things in a way that catches the eye at once. The book begins with a lively sketch of the House proceedings as they appear to an intelligent visitor, followed by portraits of the leading politicians and a detailed account of some of the most exciting scenes that have taken place within its walls of late years, especially the exclusion of Bradlaugh and the obstructions of the Home-Rulers which brought about the adoption of the clôture. As an instance of Mr. Anderson's descriptive powers, an extract from what he says of that pink of political politeness, Sir Stafford Northcote, is as good as anything:

"He is never florid, seldom, if ever, eloquent. It is his habit to unwind his argument, or rather narrative, as if it were a long tape measure, increasing in length but not altering in breadth as it proceeds slowly but regularly from the neat shuttle of his understanding. Sometimes he is mildly satirical, but never, never unpolite. The gurgling stream of his sweet and slumbrous talk glides smoothly and safely along, emphasized here and there with an elegantly planted, unenvenomed home thrust; here and there ornamented with a highly appropriate and strictly correct Latin quotation."

Mr. Anderson's detailed story of the Bradlaugh and Parnell episodes gives a completer view of those violent quarrels than we have seen elsewhere, but his forte is descriptive rather than critical. It is very plain that in the Bradlaugh matter the House was more actuated by personal dislike than by legal principle. The yelling of the honorable members and the scuffling with the irrepressible member from Northampton resembled a Chicago convention, and arouses an unwilling sympathy with him for the loss of what Mr. Gladstone admitted were his legal rights. And yet in this, and in the violent contest with the Irish obstructionists, in which the House appeared to better advantage, the forms of debate were strictly preserved. The members might shout a man down, but they would not vote that he be not heard; and it was only as a last resort, when the Home Rulers had stopped the whole course of legislation at a most trying point by their dilatory speeches and motions, that a change was made. At last the irritating course of the Home-Rulers aroused the Government, and the clôture was passed and enforced by the suspension of the recalcitrant Irish members. The new rules, however, although passed under such a spur, do little more than authorize the Speaker to cut short a tedious or irrelevant speech, and to refuse to put unnecessary motions to adjourn or allow discussion thereon.

A Hundred Battles in the West. The Second Michigan Cavalry, etc. By Capt. Marshall P. Thatcher, Company B, Aide to Gen. P. H. Sheridan. Illustrated. Detroit, Mich.: Published by the author. 8vo, pp. 416, with appendix.

THIS is a lively account of the service of the Second Michigan Cavalry, a regiment which would be noteworthy as that in which Generals Gordon Granger and P. H. Sheridan first commanded, if it had not also a brilliant history of its own. The book is divided into two parts, of which the first is a connected narrative of the regimental history, while the second is a series of sketches of officers whom the writer had some opportunity for observing, and of events in which he shared. In this part are placed some laudatory letters concerning the book itself which would ordinarily be found in the advertising circulars, but which seem to be inserted on the theory that they are confirmatory of the statements made in its pages.

The narrative parts contain internal evidence that they are honestly and frankly written, and though savoring at times too much of the style of the newspaper correspondent, will have real value as material for broader history than this affects to be. The sketches and personal notices which make up the second part are of worth nearly in the inverse ratio of the rank of the officer sketched. This is almost necessarily so, for the writer's judgment would be best in regard to those of whom he could see most, by reason of his more frequent and intimate contact with them. He gives his impressions with candor, but is often wide of the mark in judging of the influences upon events or the share in important affairs which belonged to men bearing distinguished names. Evidently he has not corrected the impressions received during his campaigns by any very thorough study of the war from other sources. It is an attractive, readable, but very imperfect book, creditable to the author and useful, if it be not taken as an authority for more than the things actually observed by him.

GOODHOLME'S DOMESTIC CYCLOPÆDIA for Housekeepers. $2.50.
HENRY HOLT & Co., N. Y.

Henry Holt & Co.

Will publish next Saturday

A NEW AMERICAN NOVEL:

AMONG THE CHOSEN.

16mo, American Novel Series, No. 5, $1.00.

Johns Hopkins University,
BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

THE BUREAU OF REVISION EDITS authors' MSS. for the press. Compilations made for publishers. Dr. TITUS M. COAN, 110 E. 56th St., N. Y

Two Successful Novels

*BARBARA THAYER; HER GLO*rious Career. By Annie Jenness Miller. Price $1.

*** "Had this story been written by any one of our popular novelists, it would ere this have been the talk of the town. As it is, it cannot help winning its way to public favor."—*Boston Transcript.*

BUT A PHILISTINE. By Virginia F. Townsend. Price $1.50.

*** "The most powerful story the author has written."—*Boston Gazette.*

"An exquisite ideal of womanly life, and the book, with its poetic word pictures, its graphic description, its sweet, pure atmosphere, and the sustained interest of the story, will be an especial favorite among the summer novels."—*Boston Traveller.*

*** *Sold by all Booksellers or mailed on receipt of price.*

LEE & SHEPARD, Boston.

RENAN. — Nouv. Etudes d'Histoire Religieuse. 8vo, $2.65.

ALICE VON HESSEN.—Mittheilungen aus Ihrem Leben. 8vo, cloth, $2.95.

AMIEL.—Fragments d'un Journal Intime. 2 Vols., $2 50.

HEYSE, PAUL. — Neue Novellen. $2 20.

CARL SCHOENHOF,
Foreign Bookseller, Boston.

*** *Catalogues on application.*

NEW CATALOGUE OF BOOKS ON History, Philosophy, Politics, Social Sciences, Religions, Travels, etc., Old and New, in English and Foreign Languages, will be sent on application, as well as separate catalogues on AMERICANA and SCIENCES. Address,
LEON & BROTHER, Booksellers,
5th Avenue Hotel, Place 3,
Corner 5th Ave. and 23d St., N. Y. City.

F. W. CHRISTERN,
37 West Twenty-third Street, New York,
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

The Nation.

NEW YORK, THURSDAY, JULY 24, 1884.

The Week.

MR. BLAINE'S letter illustrates remarkably the truth of the saying that "a council of war never fights." The letter is undoubtedly the joint composition of the candidate himself, Messrs. Whitelaw Reid, William Walter Phelps, C. E. Smith, and Steve Elkins. The result is that there is nothing "aggressive" in it whatever. It does not contain a trace of the policy of "keeping the enemy on the run from the start" which we were told he had adopted. Nobody but a very quarrelsome or unprincipled man would deny with heat anything it contains, and no animated being except a deer, or hare, or horse would fly from it. Steve Elkins probably thinks a great deal of it very molly-coddleish, but Mr. Smith, the commanding mind of the Philadelphia *Press*, doubtless chuckles over its length, which to him is the highest mark of excellence in any product of the human understanding.

We think, however, that under all the circumstances it is not modest of the *Tribune* to call the letter a work which makes Mr. Blaine "the foremost man of the time." Surely it is not possible to write three columns of anything which would raise a man above Bismarck, or Gladstone, or Moltke, or the Mahdi, or General Grant, or Sheridan, or Senator Hoar. Is it possible, moreover, that anybody can produce in a week, even with such advisers as Mr. Blaine had, a short document, "which would have done honor to any President in our history" — say even to Washington or Lincoln, with their matchless record of soldier's and statesman's service? And is it possible that a man can have reached Blaine's age—over fifty—without ever writing one line that any human being remembered ten minutes after he had written it—always excepting the Mulligan letters—and then suddenly, in a single week, compound a short essay on half a dozen topics that "has elevated the standard of public discussion for coming generations, and raised the nation in the estimation of the wisest and best men of other lands"? If Blaine has done this, he beats Milton, and Burke, and Macaulay, Jefferson, Hamilton, and all other modern essayists and publicists of every tongue and land.

There is a pastoral simplicity in General Logan's letter of acceptance almost touching. While Mr. Blaine's letter seems to be written down to a low intellectual level by set purpose, General Logan's appears to rest upon the same level naturally, and will therefore be much the more attractive to voters upon that plane of intelligence. What could be more captivating to the wayfarer than the suggestion that "In all successful government it is a prime requisite that capital and labor should be upon the best terms, and that both should enjoy the highest attainable prosperity; if there be a disturbance of that just balance between them, one or the other suffers and dissatisfaction follows, which is harmful to both"? The wretched Cleveland holds, of course, that capital and labor should quarrel as much as possible, and fall to the lowest attainable misery. Equally pronounced are General Logan's views on the subject of "our own bottoms." "None realizes more fully than myself," he says, "the great delicacy and difficulty of adjusting a tariff so nicely and equitably as to protect every industry, sustain every class of American labor, promote to the highest position great agricultural interests, and at the same time to give to one and all the advantages pertaining to foreign productions not in competition with our own, *thus* not only building up foreign commerce, but taking measures to carry it *in our own bottoms*." The conclusiveness as well as the patriotism of this course is apparent at a glance. We are to exclude all foreign productions that come in competition with our own, and this will not only build up foreign commerce, but insure the carrying of it in our own bottoms. It is perfectly astonishing that all the attempts hitherto made to realize this double gratification have proved lamentable failures. On the subject of the currency also General Logan has very clear views. "The advantage," he says, "of having a bank note in the house which will be as good in the morning as it was the night before, should be appreciated by all." Undoubtedly. But there is one thing even more desirable, and that is to have a bank note in the house that will be better in the morning than it was the night before. This should not be overlooked by Mr. Hendricks when he writes his letter of acceptance. A banking system under which a note shall be worth a dollar and a half in the morning when it was worth only a dollar the night before would be immensely popular.

A large meeting of anti-Blaine Republicans was held in Concord, Mass., on Thursday evening, and delegates were elected to attend the Independent Conference in this city. The meeting organized itself into an anti-Blaine campaign club, with George A. King for President, and an executive committee of leading citizens, among whom are a son of Ralph Waldo Emerson and a son of Judge E. R. Hoar. At Princeton, New Jersey, there is a Blaine revolt, in which the leaders are nearly all the members of the College Faculty, who are helped on by an ex-Mayor of the city and several clergymen. In fact, the educated men in all the university towns and in many seats of smaller educational institutions are in open revolt now, and unless something is done about it their influence will be a formidable element in the campaign. We presume they can be partially disposed of by calling them "free-traders"—all educated men are free-traders, it seems—and if any of them hold out after that they can be called "mugwumps."

Mr. Sherman S. Rogers, of Buffalo, appears to think that if Cleveland is elected President he will immediately repeal the Civil-Service Act, and set its provisions at nought, while if Blaine is elected the act will remain in force and be faithfully executed. In holding this view Mr. Rogers, whose faithfulness to the principles of civil-service reform is not questioned, differs from nearly all those who have been chiefly instrumental in securing the passage of the act and in giving it such efficiency as it now has. It is one of the most effective guarantees of the permanence of the reform that its promoters were not confined to one party. Its most conspicuous advocate in Congress was Senator Pendleton, of Ohio, and its most efficient supporter in public station in New York was and is Grover Cleveland, without whose zealous coöperation it would have been impossible to enforce it here. Governor Cleveland might have appointed in this State a Civil-Service Commission who would have rendered the act nugatory and turned it into a laughing stock. Instead of doing so he appointed three men who believed in the necessity of the reform and who have given unremitting attention to the means for putting it in thorough execution. In point of fact Governor Cleveland sought the advice of the Civil-Service Reform Association in the selection of the Commission. His appointees were Henry A. Richmond, John Jay, and Judge Schoonmaker, and they selected Silas W. Burt as Chief Examiner. It is needless to say that four names could not have been found in the length and breadth of New York more satisfactory to the Association than these. Nor could four men have been found who would have labored more earnestly and intelligently to carry out the spirit of the law. Nor can we fail to add that in the person of Everett P. Wheeler, a Democrat, the Civil-Service Reform Association has found a helper second to no one in the restless activity he has brought to the service of the cause. As Chairman of the Association's Executive Committee Mr. Wheeler has been untiring in labors to promote the reform in national, State, and municipal government. And we speak with knowledge when we say that Governor Cleveland has seconded Mr. Wheeler's efforts in every possible way.

It may occur to Mr. Rogers upon further reflection that there is a law on the statute book regulating all minor appointments in the civil service of the United States, and that the President cannot repeal it, even if he desired to do so. The only danger is that the existing law might not be properly executed. Therefore it becomes important to know which of the two candidates for the office of President would be likely to give it the most efficient support. Mr. Blaine belongs to the class of politicians who have always held the reform in sovereign contempt. Whatever progress it has made, and whatever success it has achieved, has been gained in spite of them. No two of them can meet each other and broach the subject without laughing like a pair of Roman augurs. Their notion of civil-service reform is comprised in one fixed idea, viz., to keep "our fellows" in. The

real friends of that reform desire something better. They desire to see the rule of appointment and promotion divorced from politics entirely, so that no questions shall be asked of a candidate for routine duties (which embrace the great bulk of Federal appointments) whether he votes one ticket or the other. This, we are glad to say, is the rule now. It is the rule at Washington and it is the rule at Albany. We have abundant assurances from the past conduct of Governor Cleveland that the principles which have regulated his administration as Governor will control him in the higher position for which he has been nominated. We do not expect that he will appoint Republicans to offices not embraced in the Civil-Service Act, any more than we expect that Mr. Blaine would appoint to such offices the immediate friends of Mr. Arthur.

Mr. Theodore Roosevelt, in an interview published in the *Boston Herald*, has announced his intention of compromising between his known convictions about Blaine's character and his allegiance to the Republican party by voting for the candidate while taking no part in the canvass. In fact, he is going to keep out of politics all summer by going out to his ranche in Montana. Mr. Cabot Lodge, who is in a somewhat more difficult position than Mr. Roosevelt, as he is not only Chairman of the Massachusetts State Committee, but wishes the nomination for Congress in his district, comes near adopting the same course. He takes part in the canvass by speaking at public meetings in praise of the Republican party, but refrains, so far as we know, thus far, from saying a good word for the candidate. But that they are both going to vote for a man to fill the office of President of the United States whose character they believe to be bad, and who is therefore in their eyes unfit for the place, we presume neither of them would deny. The reasons which operate with them both are probably the same and have been succinctly expressed by Mr. Roosevelt. They are in substance that he cannot accomplish anything except through the regular party organization; that "whatever good he has accomplished has been through the Republican party," and he concludes, therefore, that if, through bolting or other irregularity, he caused it to drop him, he would accomplish no more good. There are some other cases of this sort of conversion to Blaine. Senator Hoar's is, however, somewhat different. His hold on the Senatorship is very insecure. He came very near being dropped last year for voting for the River and Harbor Bill, and alarm, acting on a narrow intelligence and a bitterly partisan temper, makes him, although he knows Blaine well, a real whole-hog Republican, who opens his mouth and shuts his eyes whenever he hears the rattle of the fork in the party pot.

We hold, however, that Mr. Roosevelt is making on a great scale the mistake which has brought several of his predecessors in New York politics to grief. They surrendered as soon as they got to Albany, and became obedient tools of the existing Machine, having been told by their older advisers that it was folly to try to do anything in politics either outside the party organization or in opposition to its managers. Mr. Roosevelt owed his success at Albany and his rise into prominence to the remarkable good sense which enabled him to avoid this snare, and to struggle for reform from the beginning in defiance of the party managers. He accomplished the good he did accomplish, let us assure him, not through the Republican party, from which he got hardly a dozen willing votes during the whole of last winter, but through the reform sentiment of the country on which he manfully threw himself unreservedly, and which bore him from victory to victory, in the teeth of all opposition. It was that, too, which sent him to the Chicago Convention as a real power. The Republican party as now managed would never have sent him there at all. To the wing of it which has nominated and is supporting Blaine, he is simply a crank and a nuisance, whose influence is an absurdity. What we fear is that in openly avowing his loss of confidence in the ability of this reform sentiment to keep him in politics and make him useful in it, he is deliberately sapping the sources of his own strength, and putting a blot on his record which will be remembered against him in better days than these we live in. Young men like Mr. Roosevelt owe all their force in politics not to party fidelity, but to popular confidence in their absolute integrity, and to their ability to wait for the sober second thought of the voters. We believe there is no case on record in which such a young man, with a natural talent for politics, has had enduring reason to regret having stood for honesty and truthfulness against party pressure. In fact, the function of such men is to stand firm against bursts of party folly or baseness, until the popular conscience has time to act. From this conscience there is no refuge. There is no ranche or other hiding place in the world in which a man can wait for Blaine and the Mulligan letters to "blow over," for they will never blow over until justice be done.

Secretary Chandler's treatment of Commander Evans, of the lighthouse service, is precisely the sort of thing which everybody who has followed Chandler's political career would expect, but it is nevertheless a gross outrage of official conduct, and a direct blow at the discipline of the navy. The Commander's offence was the removal of a negro lighthouse keeper who had been appointed in his district at the request of Mahone. The man was notoriously incompetent, and there was never any reason for putting him into this most responsible service except that Mahone wanted him to have a "place." It happened, however, that he was a member of the Virginia Legislature and a delegate to the Chicago Republican Convention. His removal by Evans stirred up a great political breeze; the case was carried to Washington, and great pressure was brought upon Chandler to have the audacious Commander removed. Chandler complied, and wrote the order for his removal; but it had no effect unless confirmed by the Secretary of the Treasury. Mr. Folger hesitated several weeks about giving his confirmation, but he has yielded now. It is a case of "politics" pure and simple, and if it is allowed to stand, it will be useless, during the remainder of Chandler's term at least, to attempt to enforce anything like discipline in the service.

Judge Daly writes to the *Herald* a letter on the heroic achievements of the Greely Exploring Expedition, in which he discusses incidentally the value and importance of Arctic discovery from the standpoint of common humanity as well as that of the geographer and man of science. He agrees with common people that further efforts to reach the north pole will be unavailing, and if persisted in will result in fruitless suffering and loss of life. The "open polar sea," he says, was shown to be an error and a delusion by the explorations of the *Alert* and *Discovery* in 1875–6. The experience of the sledging parties of this expedition proved by observations what science had already shown must necessarily exist north of the eighty-second parallel of latitude, viz., a frightful and impassable barrier of ice broken up in hummocks and tumbled into every conceivable shape, constituting an obstacle which the whole human race, if their united efforts were concentrated upon it, could not overcome. The utmost efforts of the explorers who leave their ships and take to sledges after pushing as far as ships can go, are only equal to a mile or two a day, accomplished by cutting narrow passages through interminable ice-walls which speedily fill up with driving snow so that the very road opened with so much labor is lost on the return. And since provisions and fuel must be carried on the backs of men or dragged over the rough pathway, the limit of such terrible labor is measured by the muscular strength of the individual and his power to resist the benumbing effects of cold. It is vastly creditable to Greely and his men that they penetrated a few miles further than the English sledgers under Sir George Nares, but they discovered nothing except that the ice of 1882 was the same as that of 1876.

But it is possible, says Judge Daly, to add largely to our knowledge of the structure of the earth within the Arctic Circle without the sacrifice of life. "Continuous scientific observations," he says, "around the polar basin, extending as far inward or toward the pole as favorable opportunities offer, are quite another matter, for we shall never accurately know the laws of aerial and oceanic currents unless we know more than we do now about what takes place in the Arctic Circle, and this will not in my judgment be abandoned, notwithstanding the calamity that has befallen the present expedition. No loss of life has hitherto attended the establishment of the many stations by other governments which have preceded ours, nor, as the event has shown, would any have attended the one established by our Government had it been properly carried out and attended to by those who undertook the direction of it at Washington or to whom the command of the vessels sent out in 1882 was intrusted." This view is not opposed to the popular dread of Arctic discovery, which derives its strength

from the tales of suffering and death so often reported on the return of the explorers, in respect of which the Greely expedition seems to yield nothing by comparison with any which has gone before. The project of establishing fixed stations and providing them with the necessaries of life is reasonable enough if the men who go there can be kept to their appointed work and restrained from endeavors to outdo others in achieving the impossible.

Some ministers and religious men are making a stand against Sunday music in the parks, which from the religious point of view even is very unfortunate. The reason was very well stated by Lord Bramwell in England the other day in a discussion about opening the museums and picture galleries on Sunday. We are unable to quote his exact words, but the substance of what he said was this—that by presenting "Sabbath breaking," even through innocent amusement to children and young people, as a sin as great as any other, and as often the beginning of all other sins, it being at the same time the sin of all sins the easiest to commit, and most likely to be committed even by the purest, Christian teachers make real offences against morality seem trifling, and bring the whole body of Christian ethics into a certain contempt. The vast majority of the people of this city do not believe that it is Sabbath breaking—that is, disrespect to the Creator—in any proper sense of the word, to have music in the Central Park on Sunday; and considering that hundreds of thousands of the good and wise men of all Christian countries agree with them, there is not the smallest chance of converting them. If the Central Park Commissioners, therefore, were to disregard their wishes in deference to the small minority who still hold the old Jewish view of obligation about Sunday observance, it would simply be regarded as the victory of bigotry, and do much to lessen the influence of the religious world on questions of legislation and administration about which there is no real difference among the friends of order and morality. Any Christian man, for instance, who was successful in stopping the poor man's music on the one day in the week when he can listen to it, would certainly speak with greatly diminished force in aid of the enforcement of the law against Sunday liquor-dealing.

One of the good signs of the times as regards the relations of the Church to the people in England was the support given by some Bishops in the House of Lords to the Franchise Bill the other day. In the division, in which the Conservative majority was seriously cut down, both the Archbishops and ten Bishops—all but one of those present—voted with the minority after a speech of some power from the Archbishop of Canterbury. Thirteen abstained. One of the most painful and damaging chapters in the history of the English Church, and one of which its enemies now and then make most effective use, is the course of the Bishops in the Upper House on a great many of the most important reformatory measures of the last century. Most of them opposed the abolition of the slave trade, Romilly's attempts to reform the criminal code, the Catholic emancipation, the commutation of the Irish tithes, the first Reform Bill, and a good many of the minor interferences with contract for the benefit of the working classes. The result was a terrible indictment of the Established Church, which only a year ago Mr. John Bright turned to account in a piece of passionate and powerful invective before a London audience.

The condition of the wheat crop in Great Britain, as reviewed by the *Economist* of June 28, does not fulfil the expectations indulged earlier in the season. During April, May, and June there were several sharp frosts, followed by cold east winds and an insufficiency of rain. Late reports from different countries indicate a great variation in the state of the wheat fields, instead of the uniform excellence of the early spring. "On the whole," says the *Economist*, "the crop prospects of the United Kingdom are only moderately good at the best. They have been going down and down ever since spring sowing was completed, except when the recent rainfall saved a very large area of our crops from something like a total failure." According to the same authority, the harvest prospects on the Continent are much less bright than they were a few weeks ago. "In many parts of France," it continues, "the blooming time for wheat has been cold and wet, and what promised to be a very fine crop will probably be only about an average. In Eastern Europe, and even as far west as Germany, heavy rains and extensive inundations have done great damage, while drought had previously injured the wheats in South Russia and the Danubian Provinces to a serious extent. At present, however, we know of no reason for expecting less than an average wheat crop, in place of the great one at one time indicated from Europe as a whole." No reports have been received from India, but the belief is general that exportation from that quarter has been checked by the low prices prevailing, and that after all is said the United States can undersell India in the English market. A correspondent of the *Economist* adds that the average prices of the last year, 37 shillings per quarter (say $1 12 per bushel), leave a loss to the English producer, and that higher prices must be looked for rather than lower in the coming year.

The *Saturday Review* has made an attempt to destroy the belief in the one fact generally admitted to be proved with regard to cholera—that it is imported from one country to another—and insists that nothing is known about it except that it always appears in very dirty places. But the belief in question rests on the fact that it has hitherto followed lines of established travel. It is not certain that quarantine precautions will keep cholera out of a place; indeed, Dr. Koch is quoted as saying that such precautions are useless. But the physicians are not unanimous about this; and as such precautions may help to keep cholera out they are usually resorted to. In short, the doctors think that we cannot afford as a practical matter to occupy a strictly agnostic position as to the question.

The French now ask, as an ultimatum, for a smart indemnity and the immediate withdrawal of the Chinese troops from the frontier of Tonquin, and, in case of refusal, Admiral Courbet, who is in command of the French squadron in Chinese waters, is directed to open hostilities. The places he can attack effectively from the sea are the island of Hainan, the ports of Canton and of Amoy. The greater part of the fleet, too, could ascend the Yangtse-Kiang, and thus reach the great cities of Nankin and Hanghow. But a good deal of pressure could be brought to bear on China by the occupation simply of the island of Formosa, including the port of Kelung, from which the chief coal supplies of the Empire are now drawn. An attack on Tien-Tsin, the port of Pekin, which is at the head of navigation in the Peiho River, will probably not be attempted, after the experience of the English in 1859. The waters of the river are so shallow at this point that the fire of the larger vessels would be ineffective against the forts owing to the length of the range, and a division of infantry at least would be necessary to operate against them by land.

The passage of a divorce law in France after sixty years of indissoluble marriage, is leading to some curious speculation as to its results. One journal says the absence of divorce has greatly increased the number of illegitimate children. Another says it has retarded the growth of population by diminishing the number of marriages. In England and Prussia there are 8.5 marriages to the 100 inhabitants; in France only 7.5. In Prussia, too, the number of births to the 100 inhabitants is 3.82; in England 3.56; in France it is only 2.47. The French have been depressed by this difference for a good while, and one deputy has proposed to overcome it by offering prizes in money to the parents of large families, but this has met with only slight favor. The *Journal des Économistes* thinks there will be more marriages if divorce is made easy, and more still if the legal formalities necessary for marriage are diminished. It condemns "the American system" of getting married by telegraph or telephone, but says the French have gone to the other extreme in the multiplication of formalities, and it points to the fact that it is in the countries in which divorce is easiest that there are most marriages. It finds an analogy for this in Turgot's well-known law that more grain is imported into countries from which the exportation of grain is free than into those from which the exportation is prohibited. In like manner people enter into wedlock most readily in countries in which they can get out of it most readily. It would seem from this, however, that the writer has not familiarized himself with American experience in this matter, beyond noting the practice of "marriage by telegraph or telephone."

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 16, to TUESDAY, July 22, 1884 inclusive.]

DOMESTIC.

THE Secretary of the Navy on Thursday received the news of the rescue of Lieutenant Greely, the Arctic explorer, and a number of his party by the relief expedition. Commander Schley, of that expedition, telegraphed from St. John's, N. F., at 9 A. M.: "The *Thetis*, *Bear*, and *Loch Garry* arrived here today from West Greenland. All are well. We separated from the *Alert* 150 miles north during a gale. At 9 P. M. on June 22, five miles off Cape Sabine, in Smith's Sound, the *Thetis* and *Bear* rescued the following alive: Lieutenant A. W. Greely, Sergeant Brainard, Sergeant Fredericks, Sergeant Long, Hospital Steward Beiderback, Private Connell, and Sergeant Ellison. They are the only survivors of the Lady Franklin Bay expedition. Sergeant Ellison had lost both hands and feet by frost bite, and died July 6 at Godhaven, three days after amputation, which had become imperative. Seventeen of the twenty-five persons composing this expedition perished by starvation at the point where found. One was drowned while sealing to procure food." Twelve bodies of the dead were brought on board the ships. Five were swept out to sea and could not be recovered. The names of the dead recovered with date of death are as follows: Sergeant Cross, January 1, 1884; Wederick, Eskimo, April 5; Sergeant Linn, April 6; Lieutenant Lockwood, April 9; Sergeant Jewell, April 12; Private Ellis, May 19; Sergeant Ralston, May 23; Private Whistler, May 24; Sergeant Israel, May 27; Lieutenant Kislingbury, June 1; Private Henry, June 6; Private Schneider, June 18. The names of those whose bodies were not recovered are: Sergeant Rice, April 9, 1884; Corporal Salor, June 3; Private Bender, June 16; Acting Assistant-Surgeon Pavy, June 16; Sergeant Gardner, June 12. Drowned while breaking through the newly formed ice while sealing: Jans Edwards, Eskimo, April 24.

Commander Schley's account of Greely's later movements and sufferings is partly as follows: Greely abandoned Fort Conger on August 9, 1883, and reached Baird Inlet on September 29 following, with the entire party well. He abandoned all his boats and was adrift for thirty days on an ice-floe in Smith's Sound. His permanent camp was established on October 21, 1883, at the point where he was found. During nine months his party had to live upon a scant allowance of food brought from Fort Conger, that cached at Payer Harbor and Cape Isabella by Sir George Nares in 1875, but found much damaged by lapse of time; that cached by Beebe at Cape Sabine in 1882, and a small amount saved from the wreck of the *Proteus* in 1883 and landed by Lieutenants Garlington and Colwell on the beach where Greely's party was found camped. When these provisions were consumed the party was forced to live upon boiled sealskin strips from their sealskin clothing, lichens, and shrimps, preserved in good weather when they were strong enough to make exertion." Forty-eight hours' delay in reaching them would have been fatal to all now living. All Greely's records and all instruments brought by him from Fort Conger were recovered.

General Hazen received a telegram from Lieutenant Greely on Thursday briefly narrating some of the discoveries made by his party. In it he said: "For the first time in three centuries England yields the honor of the furthest north. Lieutenant Lockwood and Sergeant Brainard, May 13, reached Lockwood Island, latitude 83° 24′, longitude 44° 5′. They saw from 2,000 feet elevation no land north or northwest, but to northeast of Greenland, Cape Robert Lincoln, latitude 83° 35′, longitude 38°. Lieutenant Lockwood was turned back in 1883 by open water on north Greenland shore, the party barely escaping a drift into the Polar Ocean. Dr. Pavy, in 1882, following the Markham route, was adrift one day in the Polar Ocean north of Cape Joseph Henry and escaped to land, abandoning nearly everything. In 1883 Lieutenant Lockwood and Sergeant Brainard succeeded in crossing Grinnell Land, and ninety miles from Beatrix Bay, the head of Archer's Fiord, struck the head of a fiord from the western sea, temporarily named by Lockwood Greely Fiord. From the centre of the fiord in latitude 80° 30′, longitude 78° 30′, Lieutenant Lockwood saw the northern shore termination, some twenty miles west, the southern shore extending some fifty miles, with Cape Lockwood some seventy miles distant, apparently a separate land from Grinnell's Land. Have named the new land Arthur Land."

The story of the rescue is briefly as follows: The *Thetis* and the *Bear* left Upernavik on May 29, 1884, and, after a constant struggle with the ice in Melville Bay, arrived at Cape York on June 18. By order of Commander Schley the *Bear* was now sent ahead, she being the faster vessel. Lieutenant Colwell was here landed with a search party. The *Bear* was ordered to push on to the Carey Islands, while the *Thetis* waited for Colwell, and was then to search the coast. The two vessels were to meet at Littleton Island. The *Bear* reached the Carey Islands on June 21. Records were left and she proceeded to Littleton Island. The *Thetis* searched the coast from Cape York to Littleton Island and found no trace of the Greely party. She arrived at Littleton Island on June 21, and was joined by the *Bear* on the 22d. At Brevoort Island the two ships were tied to the ice and parties were sent out to search for records or cairns. Lieutenant Taunt found a record on the top of Brevoort Island left on October 26, 1883, stating that the Greely colonists had established a permanent camp half way between Cape Sabine and Cocked Hat Island, having at that date but forty days' rations. They were sorely pressed, but all were well and safe at that time. The *Bear* being under way, Commander Schley took her and started ahead. The *Thetis* followed. Lieutenant Colwell and several others were ordered to push ahead in the *Bear's* steam launch.

The steam launch reached the camp first and returned to the ship with the terrible tidings that only seven of the party were alive, and that Lieutenant Greely and two of the party were dying. Captain Schley and Emory, the doctor of the *Bear*, and Ensign Reynolds were soon on their way to the camp with restoratives, food, and clothes, and everything required for immediate use. When Greely and the men were first found, the search party in the launch was obliged to cut through the tent to reach the starving men. Lieutenant Greely was just able to support himself on his hands and knees. On either side of him lay two of his companions, both in a dying condition—Corporal Joseph Ellison, with both hands and feet frozen off, and unable to raise his head, and Private Maurice Connell, in his sleeping-bag, dying of starvation. Greely had been reading the prayers for the dying when the party arrived. Four of the party—Sergeant Brainard, Privates Long and Fredericks, and Hospital-Steward Beiderback—were just able to stagger out of the tent. A small quantity of milk punch and ammonia strengthened them, and soon beef tea and warm milk were added. All were stimulated by their rescue, and their pleadings for food were heartrending. At the time they were rescued their food consisted of boiled seal-skin boots, cut up fine and mixed with reindeer moss, rock lichens, and small shrimps, and boiled into a soup. For some days after their rescue the men were in a precarious condition. The minds of all were weak, and physically they were greatly reduced. They soon began to regain strength, and when they reached St. Johns several of them had already gained forty or fifty pounds.

The Greely Expedition was one of those sent out in accordance with the international scheme of Lieutenant Weyprecht, of Austria, to establish a number of circumpolar stations for the purpose of scientific observation and practical exploration. The *Proteus*, with the expedition on board, sailed from St. Johns, N. F., on July 7, 1881. Discovery Harbor was reached in August, and there Lieutenant Greely located his permanent camp. The *Proteus* left the party on August 18, 1881, and they had not been heard from until their recent discovery. In 1882 the *Neptune* took supplies for the party to Cape Sabine. In 1883 the *Proteus* and *Yantic* endeavored to go to the relief of the party, but the *Proteus* was crushed in the ice, and the *Yantic* returned without effecting anything. The present expedition, consisting of the *Alert*, *Thetis*, and *Bear*, started this spring, the last sailing from New York on May 10th.

Delegates to the Independent Republican Conference in this city were chosen on Wednesday by the Committee of One Hundred representing the Massachusetts bolters and Independents. The delegates include President Seelye, of Amherst College, President Carter, of Williams, President Capen, of Tufts, Samuel Bowles, of the Springfield *Republican*, the Rev. James Freeman Clarke, Stephen M. Weld, Charles R. Codman, Wm. Everett, Congressman Lyman, and several Harvard professors.

The Conference of Independents assembled in the University Club Theatre, this city, on Tuesday, at 11 o'clock. The rooms were crowded with representative men from the principal Eastern cities. George William Curtis called the meeting to order and read a list of officers, who were immediately elected. Charles R. Codman, of Massachusetts, was chosen President. He made a vigorous speech, which was frequently interrupted by applause. In it he said: "For myself, I do not hesitate to say that the defeat of Mr. Blaine should be compassed by all honorable means. It seems to me that the cause of good government, of pure politics, of American character, requires it to be done. There is but one way to do it, and that way must be obvious to us all. We desire first of all a President that is incorruptible, and if, besides that, he is able and independent, so much the better. We have not far to go to find a man who is all this. . . . He is now Governor of New York and the Democratic candidate for President." A committee of thirteen was appointed to whom all resolutions were referred. Congressman Lyman, of Massachusetts; the Rev. Thomas R. Bacon, of Connecticut, and Col. T. W. Higginson, of Massachusetts, made strong Independent addresses, and a recess was taken until 2 o'clock. Mr. George Walton Green, one of the secretaries, then spoke of the progress of the Independent movement throughout the country. A letter just received from Maine gave the names of many well-known Republican citizens who had announced their determination not to vote for Blaine. Similar reports were received from Vermont and every other New England State.

Mr. Carl Schurz, in behalf of the Committee on Resolutions, reported that they had prepared an address on the theory that the Conference had been called not to form a new party or frame a platform. Mr. Curtis read the address. It points out that Mr. Blaine is "an unfit leader, who has been shown by his own words and his acknowledged acts, which are of official record, to be unworthy of respect and confidence; who has traded upon his official trust for his pecuniary gain; a representative of men, methods, and conduct which the public conscience condemns and which illustrate the very evils which honest men would reform." It then contrasts with him Grover Cleveland as a man "whose name is a synonym of political courage and honesty, and of administrative reform," and one who "presents the qualities and the promise which

Independent voters desire," and which a great body of Republicans do not find in their own candidate. It closes by recommending all voters in sympathy with these principles to vote for the Cleveland electors. The address was adopted and the meeting adjourned. Committees were appointed to carry on the work of the Independents actively in New York, New Jersey, Connecticut, Massachusetts, Pennsylvania, and Illinois.

James G. Blaine's letter accepting the Republican nomination for the Presidency was published on Saturday. It is a long document of more than 6,000 words, and its features are editorially treated of in this number.

John A. Logan's letter accepting the nomination for Vice-President was published on Tuesday. It follows closely the sentiments of Mr. Blaine's letter.

An Independent Republican club, of a permanent character, was organized in Englewood, New Jersey, on Saturday night. One hundred of the best citizens of the place were present.

Mr. Theodore Roosevelt has given an authoritative statement of his political attitude to the Boston *Herald*. He says he will vote the Republican Presidential ticket, and adds: "I went as a regular delegate to the Chicago Convention, and I intend to abide by the outcome of that Convention. I am going back in a day or two to my Western ranche, as I do not expect to take any part in the campaign this fall."

The Irving Hall Democracy's Executive Committee, of this city, approved on Friday night the nomination of Cleveland and Hendricks, and appointed a committee to make the arrangements for a ratification meeting, at which Lieutenant-Governor David B. Hill will speak.

The Kansas Republicans on Thursday nominated Colonel John A. Martin, late Secretary of the National Republican Committee, for Governor.

President Arthur on Monday called for the resignation of Gen. James Longstreet as United States Marshal for the Northern District of Georgia. This action is based on the recommendation of the Attorney-General, who had preferred charges against him for carelessness and inefficiency.

Governor Robinson nominated to the Executive Council of Massachusetts on Wednesday as members of the Civil-Service Commission created by the Legislature of 1884, Robert R. Bishop, of Newton; James M. Bugbee, of Boston, and Charles Theodore Russell, jr., of Cambridge.

At a meeting of the Cabinet on Friday it was decided to take prompt and vigorous measures to prevent the introduction of cholera into the United States. The State and Treasury Departments will act in conjunction in enforcing the regulations which are to be prepared. An order will be issued prohibiting the importation of rags from all infected countries for a period of ninety days, or for a longer period if deemed necessary. It was also decided that the vessels of the revenue marine service should establish a cordon along the coast to prevent the landing of all vessels from foreign ports which do not possess clean bills of health. President Arthur has issued a proclamation on the subject.

Dr. Lewis Swift, of Rochester, has received intelligence of the discovery of a comet by Professor E. E. Barnard, of Nashville, Tenn., on the night of July 16, and the discovery was verified on Sunday night. It is in the head of the Wolf, right ascension 15h. 50′ 30″, declination south 17° 10′, and is moving slowly in an easterly direction.

FOREIGN.

In the House of Lords, on Thursday, the Earl of Wemyss moved that the House proceed to consider the Franchise Bill provided the Government would undertake to present, at the autumn session, a bill for the redistribution of seats in the House of Commons. Lord Shaftesbury seconded the motion. The motion was defeated, 182 to 132.

There was a great Trades Union procession in London on Monday, and a meeting in Hyde Park, in favor of the Franchise Bill. An immense crowd was present. Thousands of people covered the Thames embankment between Charing Cross and Westminster. Agricultural laborers from the surrounding country were present in great numbers. All trades were represented. As the procession was starting from the embankment several loud explosions were heard near the Government offices. The crowd were greatly frightened, and thousands made a rush toward Whitehall, believing that the explosion was due to dynamite. The scare was ended when it was found that the explosions were nothing more than the salute which the Horse Guards were firing in honor of the birth of the Duchess of Albany's son. Each section, as it arrived at the park, marched to the platform assigned to it, and a band played until the Chairman arrived. There was speaking from several stands simultaneously. The resolution submitted to the meeting protests against the rejection of the Franchise Bill by the irresponsible and unrepresentative House of Lords, expresses approval of Mr. Gladstone's action, and declares that the "continued existence of the unchecked power of impeding the popular will which the Lords exercise is not conducive to the welfare of the people and the peace and prosperity of the country." It was adopted.

The Technical Commission of the Conference on Egyptian Affairs report that their deliberations were harmonious. The question as to the reduction of the interest on the Egyptian debt was not discussed. The British Government expects to reach a final agreement without prolonged discussion. When the Conference resumes its deliberations it will be on the basis of the report of the Technical Commission, viz.: The suspension of the Egyptian Sinking Fund; a temporary reduction of from five to three per cent. in the interest on the Suez Canal shares held by the English Government; a tax upon property in Egypt held by foreigners; the creation of a tobacco monopoly, and the limitation of the time of the occupation of Egypt by the British army.

The Financial Commission appointed by the Egyptian Conference has voted unanimously, with the exception of England, to reject the plan for a reduction of the Egyptian land tax and the interest on the Egyptian debt.

The Egyptian Conference reassembled on Tuesday, Earl Granville presiding. It continued in session for only about one hour, when it adjourned *sine die*. It is considered doubtful whether it will meet again for a long time, probably not till October. It is believed that it confirmed a portion of the Technical Commission's report, in order to enable the Government to make arrangements for a loan of £8,000,000 through the Rothschilds.

The British Government, on the advice of the Committee of the House of Commons, have agreed to loan to the Indian Government $140,000,000 for the purpose of making extensions of their railway system. This grant is based upon the report of the Famine Commissioners of 1879, which stated that it would be necessary to build 5,000 miles of railways to prevent the recurrence of famine in India.

It was positively announced from Cairo, on Wednesday, that 30,000 rebels were marching on Dongola.

The Mudir of Dongola telegraphed on Sunday that he has received a despatch from General Gordon dated June 22, saying that Khartum and Sennaar were safe. General Gordon had 8,000 men under his command, and asked that reinforcements be sent to him. Advices from Assuan say that a reconnoissance was made yesterday for a distance of fifty miles, but no trace of the enemy was seen

Prime Minister Ferry has reduced the amount of indemnity demanded by France from China to 50,000,000 francs. The time for accepting the ultimatum has been extended five days. There were, however, rumors in Paris on Monday that Admiral Courbet had captured Foo Choo. They were not confirmed.

The correspondent of the London *Times* at Shanghai telegraphed on Wednesday that China had rejected the demands of France and war seemed inevitable. The rumor was immediately semi-officially denied in Paris.

It was officially announced in Paris on Friday that China had given France the first measure of satisfaction. A despatch from Pekin said that the Chinese *Imperial Gazette* of the 16th inst. published a decree in accordance with the terms of the convention of May 11. In this decree the Emperor orders the Chinese troops to evacuate Lao-ki, Langson, and Cao-bang, and to withdraw to this side of the passes leading to Yun-nan, Kuangton, and Kwang-si. The evacuation is to be completed within a month.

MM. Rousseau, French Minister of the Interior, Hérisson, Minister of Commerce, and Raynal, Minister of Public Works, arrived at Marseilles on July 15 on a tour of inspection. The Prefect, welcoming them at the depot, said that over 46,000 persons had fled by the railway and 20,000 by other roads leading out of the city. The present moment threatened a more terrible scourge than the cholera, namely, unprecedented want and misery. Commerce and industry were at a stand-still and great numbers of workmen unemployed. M. Rousseau assured the official of the sympathy of the Government with the people, and said the utmost would be done to relieve their distress. On Wednesday the Ministers visited Toulon. The Comte de Paris and family have sent $10,000 to the Toulon sufferers. The death rate is daily increasing at Marseilles and Toulon, and the panic is great. All the European countries have taken strict precautions to prevent the spread of the disease. Three cases of cholera were reported in Paris on Saturday, two of which proved fatal.

A credit of $1,000,000 for the Madagascan campaign was granted Prime Minister Ferry in the French Chamber of Deputies on Monday. He said that only limited occupation was intended.

The existence of a plot to blow up the palace at Warsaw during the Czar's stay therein was discovered on Thursday. A justice of the peace named Barbovski, who is suspected of complicity in the conspiracy, was arrested. A quantity of arms and dynamite which were to have been used by the plotters in carrying out their designs were found. The Czar has postponed his visit to Warsaw on account of the discovery.

Five Russian terrorists have been arrested at Moscow. In their possession were found large sums of money, dynamite bombs, and documents. The latter showed that since the coronation of the Czar Moscow has been the seat of the Executive Committee of the Nihilists. A state of siege will be proclaimed at Warsaw. The Governor-General and the Chief of Police of that place will be removed. The St. Petersburg newspapers say that Russia and Germany propose the adoption of an international convention providing measures for the suppression of dynamiters.

Ferdinand von Hochstetter, the German traveller and geologist, is dead.

Dr. Cæsar Henry Hawkins, the celebrated British surgeon, is dead. He was Sergeant-Surgeon to the Queen, and grandson of Sir Cæsar Hawkins, first baronet, sometime Sergeant-Surgeon to George II. and III. He was born toward the end of the last century.

MR. BLAINE'S LAST LETTER.

MR. BLAINE'S letter of acceptance is a collection of platitudes drawn out to the utmost limits of verbosity. It has been trimmed and planed and sand-papered till there is nothing to catch hold of. It is too slippery to make an issue upon. Its only significance lies in the fact that it is Mr. Blaine's campaign speech and that it indicates the lines upon which he would like to have the Presidential contest fought out.

One-half of it in point of volume is directed to the tariff question. The Democratic platform was evidently not satisfactory to Mr. Blaine. It did not furnish the kind of issue he wanted. Consequently he makes no reference to it, but dwells upon what he assumes to be "the policy of our opponents." This, he says, is a policy of experiments—"a policy whose end must be harm to our manufactures and greater harm to our labor." No allusion is made to the policy of experiments begun by the Republican Tariff Commission of 1882 or to their report in favor of a reduction of 20 per cent. in the scale of duties which they said had been adopted as a war measure, and which had become incongruous by the lapse of time and injurious to the business interests of the country. Mr. Blaine talks of the tariff as he might have talked twenty-five years ago—as though the conditions of trade and manufactures had undergone no change in the last quarter of a century. His argument is pitched to the lowest order of intelligence, as when, for instance, he assumes that the increase of wealth and population since 1860 is due to the tariff, no allowance being made for the opening up of a continent of virgin soil, whose teeming productiveness has drawn hither millions of laborers as well as millions of capital from foreign lands. Look, he says, at the increase of wealth in Illinois and Iowa, since 1860, under the influence of our beneficent tariff. There is no suggestion that Illinois and Iowa have prospered by reason of the bounteous gifts of nature in a fertile soil and favorable climate. They might, for aught that appears in Mr. Blaine's recital, have prospered equally if they had been as barren as Arizona or as bleak as Greenland, provided only they had been blessed with a tariff. The advantages of a home market as compared with a foreign one, the magnitude of our internal as compared with our external commerce—the suggestion that foreign trade is injurious to us, coupled with other suggestions for increasing it—all these things remind us of a past age when the nation was engaged with the primer of political economy and when we had no manufactures and little agriculture. To apply these ancient fallacies to the conditions of the present day, when manufacturers are working on half time because they cannot sell their whole product in the home market, when the wages of the operatives have been screwed down to the starvation point by the same cause, when the profits of agriculture are regulated by the prices obtained for the surplus sold abroad, following the Liverpool quotations every day and hour, betrays either a Rip Van Winkle slumber on the part of the alleged great statesman, or a melancholy shortage of issues on his side of politics. The Republican platform is a better and more intelligent presentation of existing facts and existing needs than Mr. Blaine's letter.

For once in dealing with the tariff Mr. Blaine descends from generalities to particulars. "It is impossible," he says, "to point to a single monopoly that has been created or fostered by the industrial system which is upheld by the Republican party." He then goes on to talk of the advantages of enlarging our trade with South America. It is within the recollection of most people that we once had a considerable trade with one of the countries of South America in the article of copper ore, and that several flourishing industries on the Atlantic seaboard were dependent upon it, but that in an evil hour a monopoly of copper producers got the ear of the American Congress and induced that body to put a prohibitory duty on copper ore which destroyed this particular branch of trade with South America, closed up the copper furnaces at Boston and Baltimore, ruined the manufacturers of yellow metal, and enabled the Lake Superior producers to establish a close monopoly in this country—so close that they could and did sell their product at lower prices in London than in New York. No comment upon this recent occurrence in our commercial history is needed, but we may add that it is not a solitary instance.

It is clear that Mr. Blaine desires to turn the campaign into a tariff battle. This he would hardly be able to do even if there were no Mulligan letters to talk about. In order to make a fight on the tariff there must be somebody to fight. The supporters of Mr. Cleveland will let the Blaine men do their own fighting mainly. The Democratic platform is abreast with the present conditions of the country's industries, both manufacturing and agricultural. It is abreast with the average opinion, if not with the most enlightened opinion of the nation on this subject. All attempts to impute to the party or to Governor Cleveland more than the platform says will fail. It only remains to add that the President of the United States, whether he be Blaine or Cleveland, has very little influence upon the tariff question one way or the other. He has no vote to give upon tariff bills, and it is notorious that Congress pays little heed to the President's recommendations upon that class of questions, whether they are in favor of higher or lower duties.

So much has been said about the vigorous foreign policy that Mr. Blaine was going to give the country, and the essentially "American" tone by which his Administration would be marked, that great interest attaches to what he has to say in his letter about our foreign relations.

The policy, it appears, is to build up our South American commerce. Our trade with South America, he says, is already large, but it might be larger. It is in an unsatisfactory condition, too:

> "The imports during the past year exceeded two hundred and twenty-five millions, while the exports were less than one hundred and twenty-five millions—showing a balance against us of more than one hundred millions of dollars. But the money does not go to Spanish-America. We send large sums to Europe in coin or its equivalent to pay European manufacturers for the goods which they send to Spanish-America. We are but paymasters for this enormous amount annually to European factors—an amount which is a serious draft, in every financial depression, upon our resources of specie."

What we suppose Mr. Blaine to mean by this is that we get into debt to South American countries every year to the extent of one hundred millions, but that at the same time South America gets into debt to Europe by means of the "balance of trade" to a similar amount. We then settle the account in "coin or its equivalent," which transfers one hundred millions a year from this country to Europe—a very serious drain upon our resources in specie. If his calculation be correct, we must have lost in twenty years some $2,000,000,000, which of course is preposterous. Even a man as ignorant as Mr. Blaine of the laws of trade, must perceive that there is a flaw here somewhere. The flaw is simply in his childish belief in the old "balance of trade" delusion—that a country can impoverish itself by importing more than it exports.

But the main point is, as Mr. Blaine elsewhere shows that he perceives, that our trade with South American countries is not as large as it might be. Now, various ways of enlarging it have been suggested. It may be enlarged by encouraging the carrying trade; it may be enlarged by changes in the tariff; it may be enlarged by commercial treaties, which, as far as they go, would accomplish the same object as changes in the tariff. Strange as it may appear, Mr. Blaine does not say which of these plans he is in favor of; but he brings forward once more his scheme of international arbitration:

> "With the nations of the Western Hemisphere we should cultivate closer relations, and for our common prosperity and advancement we should invite them all to join with us in an agreement that for the future all international troubles in North or South America shall be adjusted by impartial arbitration and not by arms. This project was part of the fixed policy of President Garfield's administration, and it should in my judgment be renewed."

This is the whole of the brilliant foreign policy of which we have heard so much, that is to be found in the letter. That our foreign commerce can be extended by means of establishing the principle of international arbitration between countries already at peace, even Mr. Blaine can hardly imagine; and, therefore, all that can be said is that Mr. Blaine has no foreign policy at all.

But when Mr. Blaine was in office, as Garfield's Secretary of State, he conducted the foreign affairs of the country in such a vigorous way as very nearly to involve the country in a war with Chili. He insisted that the bogus claim of Landreau should be recognized in any treaty of peace that might be made; he recognized Calderon as *de facto* President of Peru when he was actually in prison in Chili; and tried to break off diplomatic negotiations with Chili because it would not do the same. This was the actual brilliant foreign policy of Mr. Blaine; this was the way he tried to extend the commerce of the United States

and establish friendly relations with the South American States. Why does he avoid referring to the subject? Simply because the subject will not bear discussion. He is forced to write about foreign affairs in a way that would bring a schoolboy to shame, and to vapor about a foreign policy when he has none to bring forward, because his actual administration of the State Department was such that he cannot talk about it. When we want to know what sort of a domestic policy Mr. Blaine is preparing for us, we have to read the Mulligan letters; when we want to know what a Blaine foreign policy would do for us, we have to examine the history of the fraudulent guano claims on which his administration of the State Department was based.

GOVERNOR CLEVELAND AND CITY REFORM.

It has been said, and the report has been so widely circulated as to affect the judgment of many, that Governor Cleveland refused to sign certain of the Roosevelt bills. The fact is that the Governor did not refuse to sign any of the Roosevelt bills. All those measures which passed the Legislature were approved by him. Two of them reached him in defective shape, but he promptly suggested to their friends that they be recalled and amended in order that he might give them his approval. This was done, and they are now laws. Throughout the session he coöperated earnestly with Mr. Roosevelt in all his efforts for the reform of our city affairs, and not only gave the assistance of his official approval, but took the trouble to write special messages to the Legislature declaring in emphatic language his readiness to help the work of reform in all ways within his power.

The first of the reform measures which reached him was that depriving the Aldermen of their confirming powers. This was a direct and deadly blow at Tammany's power and at the corrupt practice of controlling the Mayor by means of "deals" between John Kelly and Johnny O'Brien. Great pressure was brought upon the Governor to veto the bill. Tammany sent a delegation to Albany, with John Cochrane as spokesman, and the Governor was besought to rescue the city from this dastardly attempt to deprive the people of their "sovereignty." The Governor listened to the arguments and then signed the bill, giving his reasons in a message which was an admirable exposition of the hopes which had moved the reformers in framing the measure. In this message he made the following promise, which was of great assistance in securing the passage of subsequent reform bills:

> It is objected to this bill that it does not go far enough, and that there should be a rearrangement of the terms of these officers; also that some of them should be made elective. This is undoubtedly true; and I shall be glad to approve further judicious legislation supplementary to this, which shall make the change more valuable and surround it with safeguards in the interests of the citizens. But such further legislation should be well digested and conservative, and above all not proposed for the purpose of gaining a mere partisan advantage. I believe the change made by the provisions of this bill gives opportunity for an improvement in the administration of municipal affairs; and I am satisfied that the measure violates no right of the people of the locality affected which they now enjoy.

This was deliberate defiance to Tammany, and it was followed by a long series of other acts in the same direction. One after another the Roosevelt bills came before him and were approved. The President of the Board of Aldermen was made an elective officer; the Comptroller the same; the abuses of the fee system in the Register's, County Clerk's, Surrogate's, and Sheriff's offices were abolished, and the two former were put upon salaries. The saving accomplished for the city by the enactment of the various laws in reference to these four fee offices was estimated by the Roosevelt Committee at not less than $200,000 annually. At least that amount of money had heretofore been taken from the taxpayers and given to the various "halls" for political funds. It was shown by the Roosevelt Committee that the County Clerk, under the old system, had a net income of about $80,000 a year, the Register about $75,000, and the Sheriff about $60,000. The Register admitted that he contributed an enormous sum to the "halls" for election expenses as the price of his nomination, but could not recollect whether it was more or less than $50,000. The County Clerk made a similar admission, but could not remember whether his contribution exceeded $30,000, or whether it was less than $20,000. The Sheriff had been equally liberal.

The bills sweeping this vast corruption fund out of the reach of the local factions of his own party were promptly signed by the Governor. This is a sufficient answer to the question that has been put to us, whether he was a "reformer only in so far as a faction in the Democratic party friendly to himself was not affected," and as to whether he "faltered when his friends were likely to lose by reform legislation." These fee offices were not the property of any faction of his party. They were divided up by the different factions previous to elections, and the nominations were sold to the candidates who were willing to pledge the largest part of their plunder, after election, to the "halls" which they represented. The abolition of their fees, therefore, removed the greatest incentive to Democratic "deals," just as the bills stripping the Aldermen of their confirming powers and making their President elective, destroyed the main field for Johnny O'Brien's activity as a "dealer" in the name of the Republican party.

The principal reform measure which the Governor vetoed was the Tenure of Office Bill, by which the next Mayor was given power to make his own selections for Corporation Counsel and Commissioner of Public Works. This was not a Roosevelt bill, but was a Senate bill, introduced, if we remember rightly, by Senator Gibbs, of this city. It had the hearty coöperation, however, of Mr. Roosevelt, and would have undoubtedly become a law but for the treachery of one of Johnny O'Brien's men in the Assembly, Isaac Dayton, of this city. It had passed the Senate and was on its final passage in the Assembly, when Mr. Dayton, as a Republican and a professed friend of the bill, offered an amendment which was adopted. This, in the words of the author of the bill, converted it into a "shabby piece of legislation, quite unfit to find a place on the statute book," and as such the Governor vetoed it. It was not examined by him till after the Legislature had adjourned, and he could not, therefore, return it for amendment.

One of the most important of the Roosevelt reform measures, the Bureau of Elections Bill, which was really the culmination of the series, was defeated in the Assembly by Republican votes. This bill took the control of elections away from the Police Commissioners and Johnny O'Brien and placed it in the hands of a non-partisan commission. It was drawn to secure honest elections and to strike a final blow at "deals," by taking away O'Brien's power to supervise the elective machinery and manipulate the votes. There was no honest objection to the bill from any quarter. When it came up for final passage in the Assembly, the attack upon it was led by the same Mr. Dayton who had made the Tenure of Office Bill useless, and it was defeated by an adverse majority of seven votes. Twenty-eight Republicans and thirty Democrats voted in its favor, and thirty-nine Republicans and twenty-four Democrats voted against it. The full responsibility for this reform defeat rests upon the Republican majority, who killed the bill in accordance with O'Brien's orders.

THE TRUE CAUSE OF THE TROUBLE.

We are in receipt of so many applications from various parts of the country for copies of the *Nation* containing Blaine's letters and our article thereon that we have decided to issue both in a separate form, which we shall supply at cost, through the mail or otherwise. In addition to this, we may mention that the Young Men's Republican Club of Brooklyn is now engaged preparing a report on his railroad transactions, which will soon be ready. Both documents will be very useful for distribution to the numerous Republicans who would never think of voting for the party candidate if they had seen the evidence against him, but who, owing partly to absorption in business and partly to the careless way in which so many much-occupied men read the newspapers, are only now beginning to ask what these charges against Blaine are, about which so much fuss is being made. We received the other day an application for the evidence, in a connected form, from one of the leading manufacturers in the city, a man active and prominent in literary and art circles, who did not know on what all the current criticism of Mr. Blaine was based, and thought that he was being badly used. On seeing the letters, he had nothing more to say, and undoubtedly will not vote for him.

It is on this public forgetfulness and carelessness, that the Blaine managers most rely for the success of their extraordinary enterprise. They accordingly take great care to avoid not only any reproduction of the accusations against their candidate, but any specific reference to them in their speeches and articles. Their newspapers screech away about "slanders" and "calumny" in

general, just as if the charges were the ordinary ones concocted by unscrupulous partisans in the heat of a campaign. The orators, like Messrs. Evarts and Hawley the other night, content themselves with the common stereotyped expressions of respect for their candidate which we offer to anybody to whose discredit we have never heard anything. There was, indeed, something which would have been ludicrous, but for the reputation and position of the speakers, in the calm assurance with which both these gentlemen proffered their "affirmation" that Mr. Blaine was everything he ought to be. But the mournful, the painful truth is the readiness with which such men as Evarts, Hawley, Hoar, and Cabot Lodge have come forward to pretend on the stump that there is nothing wrong about a candidate whom some of them, at least—Messrs. Hoar and Lodge certainly—opposed in the Convention on account, not of his opinions, or his temper, or his temperament, but of the badness of his personal character as revealed by his railroad transactions; or that even if his character be bad, it is something which a party nomination can effectively and satisfactorily cover.

Now, we hold that the very fact that these men are willing, for the purpose of serving their party, to eat their own words—to pretend, by evasion, by omission, by suppression, that they do not believe what they really do believe; that they do not know what they know right well; that they never said what scores of persons heard them say; to maintain that it makes no difference what kind of man a party puts in high office, provided the aims of the party itself be good—shows more than almost anything that has occurred what rottenness has overtaken the Republican organization. We believe their speeches during the last few days, and above all the amazing audacity of Senator Hoar's sermon to Harvard College about the moral culture of young men, standing as he stood knee-deep in perversion, tergiversation, and sophistry, are even stronger proofs than Blaine's nomination of the need of a great political revival of some kind, that will put political men in mind that governments rest after all on the morality of the individuals who live under them and that a party which avows its indifference to personal honesty is fit for nothing but to be cast out and trodden under foot.

Every time one of these orators mounts the stump to "arraign" the Democrats and ignore the facts which are causing tens of thousands to refuse to vote the Republican ticket, he furnishes a great and almost solemn illustration of the need of the bolt, and of the tremendous importance of Cleveland's election. If this be party morality, every right-thinking man must say, we must overhaul it and clean it inside and outside. The Evartses and Hawleys and Hoars must be caught and brought back to the pure well of Republicanism from which they drew their first inspiration thirty years ago, when Democratic orators were doing the very work they are doing now, by preaching, in John Cochrane's terse and epigrammatic language, that if "the devil was nominated, we ought to vote for him." If this has become the doctrine of the party which risked the national existence and would have let the sky fall sooner than suffer a wrong, it is time for the broom and the scrubbing brush, even if the process should consign once respected statesmen to the ash barrel. If they have forgotten "the lessons of their better hours," the young men must put them in mind of them by any treatment, however rough.

ANOTHER WORD ON COLLEGE CONTROVERSIES.

In the remarks which were made in these columns last week in respect to college controversies the opinion was expressed that many such difficulties are due to a bad system of government, in which the functions of president, faculty, and trustees are more or less confounded; and the suggestion was made that while these functions may not be defined in terms equally adapted to all institutions, it might be possible in any single college to frame a written constitution which should tend at least to the prevention of conflict between the various authorities. This suggestion is, however, to be received with caution; it by no means provides a sovereign remedy; it may even in certain cases introduce new difficulties. A written constitution will not insure good government in a college any more than in a state, unless it is the careful expression of opinions and wishes held by those at whose instance it is framed. England, without a written constitution, gets on better than France with its oft-written constitutions, changeable at pleasure. An old college, having a history of one or two centuries, usages, precedents, administrative habits, and with governors who have devoted long lives to its affairs, and who have inherited opinions from their fathers and grandfathers, derived from like service, will thrive better without a written constitution than a new university with a brand-new organic act which may represent the writer's views, but is not the embodiment of the experience of many men through many years, and which, whether good or bad, may be set aside by the next legislative assembly. Some Western colleges have doubtless suffered from regulations prescribed at their foundation by the unwise though well-intentioned foresight of prophetic codifiers. Written law is nevertheless of value when it expresses in clear terms that which is agreed upon, when it defines that which has been vague, when it regulates that which has been confused, when it puts a stop to that which has involved abuse; but it will be a hindrance if it prevents the exercise of judgment, freedom of discussion and action, expansion, growth, and adaptation to new conditions. The secret of good government rests in an equitable adjustment of duties, responsibilities, and powers, in accordance with the full assent and complete understanding of all the parties who are entitled to be heard. Treaties, concordats, acts of legislation, are of very little enduring value unless they express the real conclusions of those who frame them. So in colleges it is desirable that there should be a recognition and statement of the principles which have been evolved by experience—not hasty, ill-considered enactments by the vote of to-day which may be set aside by the vote of to-morrow. A clear historic enunciation of the methods of good government in colleges, removed from any controversy in which personal animosities are involved, would be welcomed, we are sure, in all new institutions, and would be useful, though we are not so sure that it would be welcomed in those which are ancient and venerable. The names of two or three men occur to us who have had long and varied experience in the management of colleges, and whose careers have been marked by wisdom, and if one of them could be induced to give a written expression to that which he knows upon this subject, the service would be of incalculable value to the higher education of this country.

But we need not wait for the appearance of an educational Blackstone. Some fundamental ideas can readily be stated. It is of the first importance to remember that colleges are not the inventions or creations of our times. They are living organisms, developments and modifications gradually formed in institutions which are so old that their origin can scarcely be discovered. If they have life, it is inherited from other living institutions, *omne ovum ex ovo*. For at least six or seven centuries there is a well-defined history of collegiate and university education, in which may be seen the parts that have been taken by the Church, the state, the city, the benefactors, the teachers, the students, the legislators, and the reformers, at different epochs, and in different countries, for the establishment and government of seats of learning. This history cannot be thrown off. It controls our opinions, our conduct of affairs, our academic phrases and usages, our fundamental ideas of higher education. University government, like ecclesiastical, parliamentary, municipal, domestic, or military government, is an inheritance which we can modify, but which we cannot get away from. Nobody is wise enough to evolve from his own conceptions of right and wrong a scheme for college government which shall prove to be vital. Every college can learn from the experience of other colleges.

It is equally important to remember that the conditions of American society require American modifications of inherited methods. Educational institutions must be adapted to the civil, ecclesiastical, financial, and social circumstances of this country. Now, it is clear that the tendency among us is to oppose the concentration of a large amount of authority in the hands of an individual, and to distribute among various bodies the responsibilities of determining policies and devising plans. From this tendency, manifest in the government of the nation, the States, the cities, and the churches, colleges are not free. Nevertheless, with all this distribution of authority, the need of an executive head is as strongly recognized as ever—the need of a chief who cannot be removed from office during the period for which he is appointed (whether that be for life or for a definite term) without positive and proven charges; a chief, moreover, who must have large administrative discretion, whether he exercises it wisely or unwisely.

Bearing in mind, then, that college government is an inheritance from remote antiquity, to be modified in this country, as in every

other land, by the other usages of the people, let us next consider the various factors in this government, as they appear at present.

The initiative in the foundation of our colleges has sometimes been a religious body, sometimes a State Legislature, sometimes an association of founders or subscribers, and sometimes an individual. In almost every case, the sanction of the State has been secured either by a charter, or by an act of the Legislature, or by proceedings under some general law pertaining to corporations. Whatever may be the initiative, the nucleus of the institution, the lawful exponent of its rights and duties, is the body of trustees. They are the corporation—they hold the property, unless it is vested in the State; they determine the policy, except so far as it may have been fixed by the original act; they appoint the principal teachers and they confer degrees. The faculty, having been chosen by the trustees, teaches and governs the students. Subject to the general supervision of the trustees, it determines all questions of internal management. Good usage as well as good sense requires that the trustees should not, except in great emergencies, or in cases of serious controversy, interfere with or overrule the action of the faculty, when exercised in the matters which fall within its sphere. In all ordinary cases the trustees should register and confirm the conclusions which the faculty have worked out.

The relation of the president to these boards is peculiar. He is in confidential relations with the body which has appointed him, and with the body over which he is appointed. It is his duty to endeavor to promote a perfect understanding between them, to explain to each the views of the other. Like all intermediates, he is in a place of danger; he can not in every utterance make a distinction between his personal and his official opinions; he may wish and purpose that a certain course should be adopted, and may yet be overruled by the collective action of his colleagues. Here is a fruitful source of misunderstandings, all the more serious because neither party, the faculty nor the trustees, completely knows both sides of the question.

While the president should be expected to make suggestions and proposals for the advancement of the college, it should be within the province of the faculty to counsel him in his action pertaining to educational matters; and it should be within the province of the trustees to direct him in all questions which pertain to the management of the property. He should be a leader in the affairs of the institution, but a leader whose actions are always modified and restricted by one of the two councils which have cognizance of his doings. If he has a just idea of his office, he will shrink from assuming any great responsibility, unless it be in an emergency, without the sanction of his advisers. Although he should have a voice in the selection of teachers, his choice should never be final; in making a nomination he should take counsel, if not of all the faculty, at least of those who are most conversant with the duties of the station in question; it may even be said that without the concurrence of a well-organized board, he should perform no official act. In colleges which have become universities, where there are many departments—for example, museums, libraries, laboratories, observatories, special schools of science and art, and the like—the two councils which have been named, a board of trustees and a faculty, are quite inadequate to the management of the group of institutions. In some form or other, commissions, committees, syndicates, governing boards, are sure to be appointed to look after and promote these subordinate and yet very important interests. Among us, this state of things is comparatively new. How are these developments of the central stock to be governed? What should be their relation to the president, the trustees, the original academic or philosophical faculty? Shall each separate department have complete control of its own affairs, or shall each be governed by the board of trustees? Here we are involved in the question of federal and provincial sovereignty, the superintendence of the general authority, and the independence of each constituent body. Here are the chances of persistent discord. A clear written statement of the reserved rights of the trustees, leaving the utmost possible freedom to the special authorities of each department, would be, in our opinion, a wholesome prophylactic.

BOSTON MUSEUM OF FINE ARTS.

BOSTON, July 12.

THE Boston Museum of Fine Arts may be taken by any of our municipalities, ambitious of distinction in the art training of their people, as a model which, within its limitations and restricted means, cannot, in my opinion, be excelled by any European museum. The idea of beginning a competition with the British Museum or Louvre, and expending large sums for showy partial collections, has had no place here, but rather the effort to give as complete a representation of the arts of the past and present as the moderate resources of Boston permit; and in what has been done there is nothing to desire, unless it be the substitution of original Greek work for the well-chosen casts which cover the entire period of the bloom time of Greece and include every important statue or a part of every important complex work ever discovered. The building itself is one of the best examples of modern architecture in America (although, to my taste, the colored spaces in the façade are too brilliant to give the best effect to the *ensemble*), and the arrangement of the rooms is admirable. There are five Greek rooms devoted to casts, beginning with the Assyrian, and giving in 243 numbers everything necessary to the completest idea of the sculpture of Greece that is possible with the material thus far known. These are followed by a Roman room, with Roman and Græco-Roman work. Then comes an architectural room, with casts of architectural and decorative details, from the earliest known Greek through the various branches of Byzantine and Gothic, Moorish, Renaissance of the various schools; and this is followed by a room of Renaissance sculpture after the Pisani, Donatello, Michael Angelo, etc., etc., so arranged that not only may the visitor read, as he runs through, the history of the development of the arts, but the serious student can find any material he may be in quest of in any branch of plastic art. This is an advantage which even the British Museum or the Louvre will not give in all points, for the statues which are here represented are not to be found in the original in either, since the great museums, by their size and the pressure for space, do not permit the introduction of casts to complete any particular series.

Among the genuine antiquities is a small but sufficient representation of Cypriote art purchased from Colonel Cesnola, and some archaic Asiatic, Etruscan, and Greek pottery, including vases from Chiusi, Crete, Nola, Apulia, etc., of which many are most rare and some unique. An Etruscan balsamarium has the second earliest known Etruscan inscription scratched on it. A collection of balsamaria in the form of animals from Chiusi has no rival in the Italian museums, so rich in Etruscan work. The collection of antique glass, though small, is admirable and sufficient, and is from Greece proper, Crete, Melos, and Cyprus. A collection of Tanagra statuettes are good representations of a form of art not now easily attainable in the genuine form, though largely counterfeited and sold in the counterfeit. The antique collection includes the results of the excavations at Assos.

The picture gallery contains, either as the property of the Museum or as loans, a very complete representation of French art, among which is a collection bequeathed by T. S. Appleton—a Rousseau, a Constable, a Tintoret, a charming Diaz, Bonington, three Troyons, a Stuart Newton, a Tintoretto sketch, and a grand study by William Hunt. The Allston Room contains besides the Allstons some most valuable and characteristic pictures of the Italian schools, portraits of eminent Americans by Copley, Smibert, Greuze (a Franklin), Stuart Newton, and Stuart, and the Automedon of Regnault. There are in other rooms some excellent Dutch pictures, part of which are from the Demidoff sale. The admirable collection of prints includes the Gray and Sumner collections, and these are followed by a large collection of drawings and sketches, with paintings by artists of the early part of the century.

Tapestries, stuffs, and embroideries are admirably represented by various collections, and especially by those made by Castellani, Dr. Bigelow (Japanese), and Mrs. Wales; porcelain, by superb examples of Chinese and Japanese wares; and the artistic resources are enlarged by first-rate Japanese, Chinese, and mediæval carvings, bronzes, enamels, arms, illuminated MSS., furniture, etc., etc., leaving scarcely any branch of Oriental or mediæval art unrepresented.

The entire expenditure for that part of the contents which is the property of the Museum (and this includes the collection of casts) was about $28,000, and the cost of the Museum thus far has been about $300,000, the whole sum being less than one-third of what the Metropolitan Museum has cost the city of New York, without calculating the expense of the collection. The recent bequest of H. D. Parker of $100,000 will enable the Museum to show to much better advantage its collections, which are now somewhat crowded, and give it more gallery room, enabling it to profit more by the surprising artistic wealth of Boston. W. J. S.

MORE PARLIAMENTARY TROUBLES: THE CONFERENCE AND THE FRANCHISE BILL.

LONDON, July 8.

ANOTHER of those strange alternations of good with evil fortune which have checkered the career of the present Ministry. Three weeks ago, when they had announced that they would submit to Parliament the agreement with France which was to form the basis of the proposals to be considered by the European Con-

ference on Egypt, it was commonly believed that their downfall was at hand. They appeared, from the language which some of them held, to think so themselves; nor were persons wanting who suggested that they desired, and were trying to invite, a defeat which would justify a dissolution of Parliament, and either give them a new lease of life or hand over the Egyptian problem to their successors. This is what the technical language of the turf calls "riding for a fall." However, shortly before the time arrived for the promised disclosure, their prospects began to brighten. The influence of the constituencies, where the Liberal party is as loyal as ever to Mr. Gladstone, began to tell, and the extreme delicacy and difficulty of the position in Egypt was more fully realized by those who had blamed the excessive caution of the Government. Then the statement was made to Parliament, but only partially, the financial portion of the scheme being reserved. It was made with the express promise that the country should not be held committed to anything until, when the deliberations of the Conference had been concluded, the ministerial plan had been, as a whole, discussed and approved by Parliament, whose concurrence was necessary to enable the money to be raised. This future opportunity of challenging the Government gave the Tory leaders a good ground for postponing their vote of censure, which it would have been prudent to do, because the scheme had been received with less disfavor than was expected. They, however, were nettled at what seemed the clever strategy of Mr. Gladstone in so dividing his whole scheme that the first part would escape condemnation because it was incomplete, while the whole, when ultimately presented, would be defended on the pretext that as the Conference had accepted it, it was inconvenient to reopen the question. Unwilling to let him profit by this strategy, and afraid (it was thought) that if they did not themselves attack the Government, Lord Randolph Churchill might do so and thereby force their hand, the Tory chiefs brought forward a vote of censure and demanded a day for discussing it. Mr. Gladstone immediately gave the day. The hostile forces were drawn up in battle array, and Mr. Thomas Bruce (brother of the late Lord Elgin, and chairman of the Ottoman Bank), who had been selected to move the vote of censure, was ready to open fire, when a *coup de main*, almost without precedent in our Parliamentary annals, changed the whole face of affairs. Mr. Gladstone, being interrogated as to whether a debate on the arrangement with France would be injurious to the public interests, considering that the Conference had just met, had replied that it would certainly be inopportune. Pursuant to his promise, he then moved the postponement of the orders of the day, in order that the debate on Egyptian affairs might begin. Mr. Goschen, whose special knowledge of Egypt and the East, added to his high Parliamentary position, has given him a peculiar influence in this series of debates, suddenly rose to point out the extreme inconvenience of taking a discussion at such a moment. Encouraged, as it seemed, by the approval of his audience, he went on to say that he hoped "the House would refuse"—when his voice was interrupted by an outburst of cheering before he could finish the sentence. After the noise had subsided, he added: "—refuse to postpone the orders of the day" so as to permit the Egyptian debate. This suggestion created so much excitement that he declared he would divide the House against the proposal to postpone the orders; and after a short but passionate discussion, in which several Liberals supported him, while the Tories insisted that the vote of censure should be proceeded with, the division was taken. About twenty members of the Ministry, headed by Mr. Gladstone, and five stray Liberals, voted with the Tories for taking the debate on the vote of censure, while the rest of the Liberals present, together with the Parnellites, who hesitated till the last moment, doubting which way their interest lay, voted against postponing the orders of the day. The majority being found on this side, the debate was suddenly postponed *sine die*, and members who came down a few minutes later to hear Mr. Bruce's attack and Mr. Gladstone's reply, were astonished to find an almost empty House occupied with trivial business. Many Tories, including Lord Salisbury, who next day vehemently attacked the Government in the House of Lords, declared the whole thing to have been prearranged between Mr. Goschen and the Cabinet; but even apart from the explicit denial of the former, it was plain enough to those who watched one of the most dramatic scenes of the present Parliamentary age that it was a surprise not only to the Government and the Liberal party, but largely even to Mr. Goschen himself, who though he had conceived at home the idea of suggesting a postponement, was evidently hurried on by the unexpected assent of the ministerialists into the bold course of resisting the ministerial proposal and snatching the debate from between the teeth, so to speak, of the leaders on both sides.

The Ministry, though they had felt bound by their pledge to vote for taking the vote of censure, were both pleased and amused by the turn things had taken. The Tories, though it was really a piece of good for them to be held back from a debate and division in which they would have been heavily beaten, were annoyed. The general public, which likes a sensation, has applauded Mr. Goschen's boldness and the independence of the Liberal majority, yet some constitutional sages may be heard condemning this departure from the established principles of Parliamentary life. The working of the House of Commons, indeed of party government altogether, depends, say they, on party discipline, and party discipline is threatened if, on however exceptional an occasion, the bulk of a party breaks away from its leaders and puts them, even for their own and the public good, in a minority. The House must not interfere with the discretion of the Executive, else it tends to become executive itself. If the evil of having a debate was serious enough to require the postponement, the Ministry ought to have said so, and demanded that postponement, disregarding the taunts of the Opposition, who would, of course, have accused them of cowardice. The traditional rule that the Opposition leaders are entitled to have a day for a formal vote of censure whenever they ask for it, is too sacred to be broken through, unless it be at the instance of the responsible Government, declaring that the welfare of the nation forbids it. Such are the criticisms, but they have been little heeded. For a while the Liberals feel they have escaped a troublesome discussion, the Tories feel they have escaped a certain defeat; while the attention of both parties is now engrossed by a nearer and not less serious crisis.

The County Franchise Bill had scarcely gone up to the House of Lords when a meeting of Tory Peers was held to discuss what course the Upper House should take with regard to it. The leaders pronounced for rejection, the great mass of their followers applauded, and accordingly when the bill appeared for second reading yesterday Lord Cairns, who is the ablest man and one of the chief orators of his party, although not its leader, moved its rejection. Like the Tories in the Lower House, he professes no objection to the extension of the suffrage in itself, but grounds his opposition on the fact that it deals only with the suffrage, and does not also provide for a redistribution of seats. The amendment which he has proposed declares that franchise and redistribution must go together, because it would be absurd to leave the greatly larger county constituencies which the Franchise Bill will create with only the same number of members as they have at present. If this amendment is pushed to a division, as it will probably be, it will involve the loss of the bill, and the House of Lords will stand committed to a contest with the Commons. It will lie with Mr. Gladstone, who, in taking leave of the bill in the House of Commons, addressed a solemn warning to the Lords, which irritated the latter as much as it delighted the Radicals, to make the next move in this contest. There are three moves possible. One is to dissolve Parliament forthwith; the objection to which is that the Liberals don't want a dissolution, which would cost a vast deal of money and perhaps diminish their majority, although it would doubtless give a majority sufficient to secure this bill. Another course is to pass the bill a second time in a November session, after a campaign against the Lords during the intermediate months, and then challenge the Lords to reject it a second time. And lastly, the Government might bring in the bill again next January, but at the same time bring in a Redistribution Bill, and try to run the two through together. The objection to this last course is not only that it would look like a surrender to the Lords, and be therefore distasteful to the more advanced Liberals, but also that it might fail in its object, because the Lords would probably dislike the Redistribution Bill so much as to reject both bills on the plea that the latter was unfair. The prevalent expectation, therefore, is at this moment that Mr. Gladstone will take the second course, and call Parliament together again in the autumn to give the Lords "another chance," though those are sanguine indeed who think that they will avail themselves of that chance to submit to the will of the Commons.

These three courses do not quite exhaust the possibilities, for other intermediate schemes are being canvassed, nor is it yet absolutely certain that the Upper House may not, even at the last moment, change their tactics by passing the bill with a provision added that it shall not take effect until a redistribution scheme has been passed. Probably this would be the best plan, but they seem now committed to the more direct course which Lord Cairns has proposed.

If a contest begins, the position will be serious. The public opinion of the masses is already hostile to the House of Lords. In the campaign which will be set on foot against them many hard things will be said. Many voices will be raised demanding the abolition of a hereditary chamber. The Radical party welcomes this prospect, believing that "Down with the Lords" would be a good election cry; but there are many on the Liberal as well as the Conservative side who do not see how England could do without the Upper Chamber, and will therefore be dragged unwillingly into a constitutional struggle. Indefensible in theory as a hereditary chamber is, no one has yet suggested a good working substitute; and Mr. Gladstone, now seventy-five years of age, is very unwilling to touch such a grave and delicate question as the reform of that chamber would be. Hence moderate men of both parties are at present unhappy, while extreme Tory partisans applaud the courage of the Peers, and sanguine Radicals cry, in the words of Cromwell, "The Lord hath delivered them into our hands." Y.

Correspondence.

THE SOCIETY FOR PSYCHICAL RESEARCH.

To the Editor of The Nation:

Sir: You were good enough to insert in the *Nation* last year a letter appealing to your readers for well-attested narratives of those abnormal occurrences with which the Society for Psychical Research has to deal. That letter brought us some replies of very good quality; and from other American sources, especially from Columbia College, New York, we have received important aid.

The approaching visit of the British Association to Canada seems to afford a fitting opportunity for a second appeal, if you will permit us to make it through your columns. Not, indeed, that we expect our researches to be the subject of formal discussion, but many members of the British Association—from its President downward—are members of the Society for Psychical Research as well; and one of these—Professor Barrett—is desirous of personally investigating any well-attested case of thought-transference, clairvoyance, etc., details of which may be sent to him at the Reception Room, British Association, Montreal, during the month of August.

Narratives of apparitions at death or other crises (such, for instance, as we have given in the *Nineteenth Century* for July), of hauntings of houses, of premonitions recorded before the event, etc., will be welcomed by us at any time, if addressed to the Hon. Sec. S. P. R., at the Society's offices, 14 Dean's Yard, Westminster, London, where we have already had the pleasure of receiving many American visitors, who have shared our hope of reducing under the realm of science this "No man's land" over which fraud and superstition have usurped too wide a sway. Nothing that is sent to us will be published without the writer's consent. Our collection already embraces many hundreds of cases, but in so vast and complex a subject induction cannot have too wide a basis, and every ounce of theory should be the outcome of a ton of fact. The results already published in our 'Proceedings' are enough, we hope, to indicate that the inquiry is one whose scientific and philosophical interest it would be hard to overrate.

I am, sir, your obedient servant,

Frederic W. H. Myers.

Cambridge, England, July 9, 1884.

ARCHÆOLOGY IN ASIA.

To the Editor of The Nation:

Sir: I have read with much interest the letter of M. Reinach in No. 993 of the *Nation*, on the subject of archæology in Turkey, and the difficulty of dealing with the Turkish Government officials. In general I fully concur in what he says, as I usually do in whatever emanates from his intelligent and lucid pen. But there are exceptions even among the Turks, as I had good opportunity of learning from experience, in my efforts to assist the American Assos Expedition. When this expedition first went East, in 1881, under the charge of Messrs. Clarke and Bacon, it made Smyrna its base of operations, where I was United States Consul. Though the firman had not been obtained, and though there was really no obligation on the part of the Turks to do so, I was able to get all the books, scientific instruments, utensils of various kinds, supplies of provisions, beds, etc., for the use of the expedition while making the excavations, through the Smyrna Custom-house free of duty. I asked this not as a right, but on the ground that the expedition was a purely scientific one, and that such favors had been granted to similar expeditions previously, especially to Mr. Wood, who had excavated the Temple of Diana at Ephesus, and to the Germans excavating at Pergamon. I have never doubted but that we were indebted for the favor mainly to the amiable assistance of the liberal and progressive Midhat Pasha, then Governor-General at Smyrna, who, it will be remembered, was afterward condemned to death on trumped-up charges because of his liberal and progressive ideas, and then sent away to prison in the heart of Arabia, where he has since died, as is said, of starvation. He was, no doubt, Turkey's most honest, most capable, and most enlightened statesman, and his treatment I regard as a burning shame on civilized diplomacy at Constantinople.

But Assos, where the Americans were to excavate, not being situated in the province of Smyrna, neither Midhat Pasha nor the Smyrna Consulate could exercise any jurisdiction there, or render any assistance. At this Midhat repeatedly expressed his great regret, while the expedition was having to wait weeks and months for the firman from Constantinople before it could begin work, thinking he could have expedited the matter could he have interfered, as I have no doubt he would. I am surprised and disgusted at the disgraceful division of the objects dug up at Assos by the American Expedition, as shown both by the report of the Archæological Institute and by M. Reinach's letter, and yet not so greatly surprised when I consider the amiable character and inexperience of our diplomatic representative at Constantinople. It is true our present Minister began his career in Turkey by an act of extraordinary vigor and energy—nothing less than calling an American man-of-war all the way from Italy to Salonika to demand the release within forty-eight hours of a Turkish brigand, who, in addition to being almost certainly guilty, had not a shadow of right to American protection. But since this one energetic act, I have not heard of his obtaining redress for a single outrage on the rights of Americans, or for a single violation of a firman. Our treaty rights continue to be trampled under foot by the Turkish Government, and American merchants, able to hope for no assistance from our legation, are forced to make the best terms they can with the Turkish Custom-house officials. Even the prolongation of the firman of the Archæological Institute could not be obtained in order to complete the work at Assos. We have often heard in the newspapers of our Minister's friendly relations and great influence with the Sultan, but one of our leading missionaries in Turkey wrote me a year or more ago that they had all ceased to hope for any assistance from him, his influence seeming limited to obtaining personal favors for himself—such, for instance, as the beautiful painting sent him by the Sultan, an account of which he gave a correspondent on his arrival in New York a few days ago. But are not our representatives in the East forbidden to accept presents?

The American excavators ought not only to have been entitled to a division of their discoveries according to the Turkish law in force at the time the firman was granted, but also to the "most favored nation" clause, which, I believe, is in our treaty with Turkey. According to this latter, they should have had the option at least of obtaining by purchase everything discovered at Assos, as the Germans had of their magnificent discoveries at Pergamon. Mr. Huhmann, who had charge of the German excavations, told me that according to their arrangements they were to receive of right two-thirds of all they found, and the Turks the other third; and that after the excavations proved so extremely rich, he was instructed by the Berlin Museum to offer the Turks 20,000 marks for their third, and if they would not accept this to offer 40,000, and to go on doubling until he got it; and, he said, they would have given hundreds of thousands rather than lose it. But fortunately the Turks did not know his instructions, and accepted his first offer, having very little idea of the pecuniary value of such things. I presume there can be little doubt but that the Americans could have obtained equal favors—as they did in the Smyrna Custom-house—had they been supported intelligently and energetically by their Minister as the Germans were by theirs. But aside from all questions of favor, they were clearly entitled to a division according to the laws of Turkey at the time the firman was issued, and not according to some later modification, and it was manifestly the duty of our legation to insist upon that, and submit to nothing less. But as long as our present system of foreign appointments is kept in force we need not expect our rights and interests to be intelligently and energetically represented abroad. Usually no attention whatever is paid to experience and special qualifications in the selection of our diplomatic and consular officers. Favoritism or political influence alone controls. Our present Minister at Constantinople, who is personally a most amiable gentleman, is said to owe his appointment to a clever novel written by him—the scene of which is laid in the Holy Land—which greatly pleased President Garfield; and, as if this were sufficient evidence of his capacity and fitness to represent us among the shrewd, tricky, and treacherous Turks, he was given the important position. No wonder then if American rights and interests are not properly cared for in Turkey. It is to be hoped that this case will cause all friends of the Archæological Institute to unite energetically with civil-service reformers in insisting upon a radical change of the present system of appointments to our foreign service. It strikes me, however, as being time, after so much has been written on the subject, for Mr. J. T. Clarke, the energetic and intelligent leader of the Assos expedition, to give the public a full statement of the case, as well as the shortcomings, if any, of our official representatives in Constantinople.

But one of my main objects in writing the present is to correct and explain a reference to the dragoman of the U. S. Consulate at Smyrna in M. Reinach's letter, which as stated by him would reflect upon the consulate. My predecessor, Mr. Smithers, had obtained a firman to excavate on the site of ancient Cyrene, and on being transferred to another position had left his firman in the hands of one of the dragomen of the consulate to execute for him. The French Archæological Institute at Athens was making excavations at Ali-Aga, near by. After a time the dragoman, together with the then Vice-Consul, who was Mr. Smithers's uncle by marriage, made representation to me that the French were encroaching upon the ground included in Mr. Smithers's firman, and had made some valuable discoveries in the tombs. Their representation I forwarded to the Governor-General—not any more Midhat Pasha—with a request to investigate and see that Mr. Smithers's rights be not encroached upon. I explained my action fully at the time to the French Consul-General, and also, if my memory serves me aright, to the Director of the French Institute at Athens, neither of whom had any complaint to make of what I had done. I afterwards learned that the Governor-General had several cases of objects in dispute seized pending the investigation as to the rightful ownership, but I left Smyrna while the matter was pending, and never heard how it ended. Now M. Reinach

says in his letter: "I dug many tombs at Cyrene, and made some very good discoveries," which would seem to confirm the justice of the complaint of the dragoman, for Mr. Smithers's firman covered the site of ancient Cyrene. My only object was to have the Governor-General, the only competent authority in the premises, to examine and decide the question as to which party, Mr. Smithers or the French, had the right by firman to excavate on the site of Cyrene. It was my official duty to do this in behalf of my predecessor and countryman, and I did it without the least unfriendly feeling toward the French. If M. Reinach felt aggrieved at the action of the United States Consulate, as would now seem from his letter, it is singular that he never intimated anything of the kind to me either at Smyrna, or later at Athens.

I fully concur in all that M. Reinach says as to the injury that must result to archæological science by the new Turkish regulations relative to antiquities. It is the virtual closing of perhaps the richest field still open to archæological research, for everybody knows that Turkey has not and will never have the means either to make excavations herself, or to purchase what might be excavated by individuals or societies. The result will be clandestine excavations and exportations, by which the real archæological value of objects will be for the most part lost, and valuable objects will often be destroyed to prevent detection. No organized scientific excavations are likely to be made under such regulations. Against such a state of affairs one would think all civilized diplomacy at Constantinople would unite, and insist upon a modification of these new regulations.

B. O. DUNCAN.

NEWBERRY, S. C., July 18.

Notes.

S. C. GRIGGS & Co. announce a volume of miscellaneous information about the railway, its history, varieties, and work, entitled 'Wonders and Curiosities of the Railway; or, Stories of the Locomotive in Every Land.'

The last of Bernard Quaritch's valuable catalogues covers the subject of European philology, with a brief appendix on anthropology.

The current issue of the Essex Institute's "Historical Collections" is devoted mainly to a biographical memorial of the Rev. Charles T. Brooks.

No. 18 of the "Bibliographical Contributions" of the Library of Harvard University is a Bibliography of Ptolemy's Geography, by Justin Winsor. It makes forty-two pages, and contains full notes "of other original and augmented texts and translations, and of Wytfliet's continuation, with particular reference to the development of early American Cartography, and with an enumeration of copies in American libraries." The number owned in this country is very gratifying.

No. 32 of the Johns Hopkins University Circulars announces the appointment of Prof. G. Stanley Hall to be Professor of Psychology and Pedagogics, and the invitation of Prof. E. W. Gosse to lecture on English literature in the coming winter. The number is distinguished by its very interesting reports of the course of lectures on archæology given last spring by J. T. Clarke, W. J. Stillman, and Alfred Emerson, those of the latter in particular showing an unusual standard of thoroughness in scholarship.

Messrs. Henry A. Sumner & Co., of Chicago, publish 'Blanche Ellerslie's Ending,' by the author of 'Guy Livingstone,' "author's edition," with copyright entry and date of 1884. This is a reissue of Lawrence's well-known novel, 'Breaking a Butterfly; or, Blanche Ellerslie's Ending,' first published in this country by Lippincott & Co., of Philadelphia, in April, 1869. When first published there was some reason for calling it "author's edition," as it was printed from advance sheets supplied by the author; but now, when the author has been dead seven or eight years, the term is not very appropriate. While the title-page has been changed, the running title at the head of the pages remains as in the old issue—'Breaking a Butterfly.'

The same publishers also issue with date of 1884, 'Lady Bell,' by Sarah Tytler (pseud. for Henrietta Keddie). This is an old book, first published in *Good Words* in 1873, and reprinted in this country by Lippincott & Co. in 1874. Probably Messrs. Sumner & Co. have bought the stereotype plates of some old novels, which they wish to make profitable by issuing the books with bright covers and every appearance of newness.

'Love and Money,' by Charles Reade, published by George Munro, of this city, as No. 1,853 of the "Seaside Library," is the same as 'A Perilous Secret,' published by Harper & Brothers. It is stated that Mr. Reade intended the English edition to appear under the title 'Love and Money,' but this intention does not seem to have been carried out, for the English edition bears the same title as Harper's issue. It is a pity that Mr. Munro did not give the work the name given to it in the authorized editions, for, no doubt, many persons will buy both, thinking the books are different.

Last week a "Reading Circle" was organized in North Carolina by persons representing about forty counties of the State, the purpose of which is to unite the people, and especially the young people, of the State in an organization in which they will be a stimulus to each other. Doctor Battle, Professor Shepherd, and other prominent Southern educators have been asked to prepare lists of books, from which the Executive Committee of the Circle will select the course of reading for the year. The design is chiefly to aid those who are remote from bookstores to secure the best and cheapest editions of the best authors, and to encourage all to pursue a course of systematic reading. To accomplish this, a Board of Advisers will furnish each member with instructive hints, suggestions, and criticisms; blanks containing questions about the books in the course will be furnished members, which they are requested to fill out and return to the Board of Examiners, that the thoroughness of the reading may be tested. Certificates and prizes are to be awarded those attaining a certain average. Local Circles, it is expected, will be organized by members, for the purpose of discussing the books in the course, and to these plans for discussion in detail will be sent. This is the first attempt in the South to establish a habit of reading, the absence of which, as was admirably pointed out by Mr. Walter H. Page, the Secretary of this very Circle, in the *International Review* of October, 1881, is conspicuous even in the college-bred men of that section. Those acquainted with the "Southern educational problem" will agree with Mr. Page that the delight in reading, the craving for information, the zeal of inquiry are not sufficiently aroused by the methods of instruction now employed, and will be glad to see this recently-established "Reading Circle" properly managed, because it seems so well adapted to the educational wants of the people.

The Athenæum contains a curious letter in which the writer attempts, with much color of probability, to identify Byron's "Thyrza" with his friend, the chorister Eddleston, or at least to support Moore's assertion that there was no historical "Thyrza" (certainly it can hardly be Margaret Parker that called forth the dirge, as Jeaffreson thinks), but that the poems in question express his mingled grief in having lost "in four months," as he says, "six of his friends and relatives." There is a curious parallelism between words and allusions used in his letters regarding Eddleston—"the only human being who ever loved me in truth and entirely"—and those used in the Thyrza verses. The writer's conclusion is: "So far as this emotion was in his mind, Byron would feel that he would provoke ridicule (which no one dreaded more in such cases) by uttering in public such a sentiment about his humble friend as he expressed in his letters to Hodgson. He therefore adopted the language of a bereaved lover, and addressed his verses to a feminine name, though (apart from a few verses introduced, it may be, to give color to the fiction) the poetry would be equally appropriate in either case."

The *Illustrated Naval and Military Magazine* is a new candidate for the favor of the English-reading nations, or that part of them which is interested in military matters. The illustrations are for the most part of technical points; and those demonstrating the hypothetical designs, showing the attack and defence in marine-torpedo operations, have an interest which belongs neither to art nor mechanics. The only attempts at artistic work are the photo-aquatint of the Saving the Guns at Malwan, and portraits of the Queen and Princess of Wales, also in photo-aquatint, by Rudolf Blind, from photographs, all of which are bad enough and to spare. The illustrations in the text are "processed," and better because less pretentious.

The most important article in the June *Antiquary* is a continuation of Mr. Gairdner's paper upon the "Functions of the House of Lords." This paper treats of the modern period, beginning with the Tudor time, when "the House of Lords was a supreme legislative and judicial council." It contains a very interesting and instructive discussion of the powers of this house in modern times, and its relation to the King and the House of Commons; and the view, presented by the author, of the eminent and controlling authority of the Peers, differing materially from that generally presented, makes this paper one to be studied by all who are interested in English constitutional history. Another short article gives an account of a very important discovery made at Winchester—no less than a complete collection, fourteen in number, of the Charters of the Corporation, "from Henry I. to Queen Elizabeth, from which reign those in the Corporation's care commence." The other articles are of less historical interest, but of considerable antiquarian interest—the "Tower Guards," the "Diary of Nathaniel Hone," the "Coins of Venice," the "Adelphi," etc.

We have received from Henry P. Bult a copy of an admirable etching of Ames's portrait of Daniel Webster, remarkable not only for its size, seven inches in the head, but as an example of etching of the best type, firm and clear, subtle in the rendering of the forms of the parts, and keeping all the breadth of the original. It is etched by Samuel Hollyer and Auguste Barry.

F. Gutekunst, of Philadelphia, has issued an exceptionally fine photograph of the late Bishop Simpson, which, as photograph, does credit both to the lens and the photographer. The head is five inches in height, which people who are familiar with portrait photography will know to be a difficult thing to manage direct without any distortion or loss of definition.

Mr. H. Farrer sends us an etching (no publish-

er's name) of a landscape with twilight effect, in which the sky and distance are managed with his usual delicacy and facility, and in which also there is the want of recognition of the difference in aim between drawing in color and black and white, which we have noticed in his work at the Etching Club's exhibition. The present, which apparently belongs to the "no name" series, is one of the most important for size he has done, but in general quality no advance on his previous work.

J. W. Bouton, as agent for the publishers, Firmin, Didot & Co., Paris, sends us the fifteenth number of *Le Costume Historique*, a popular *aperçu* of the costumes and implements of the various nations of the world from the ancient Egyptians to the Red Skins of North America. The illustrations, to the number of 500, of which 300 are in colors, silver and gold, are drawn from documents of all times and derivations, and give infinite variety of material, furniture, arms, embroideries, etc., as well as costume strictly speaking, the colored plates being in chromo-lithography, carefully if a little garishly executed. To costumers and historical painters it must be an inestimable aid. The text is less to be praised, being edited with the proverbial (if not well merited) want of exactitude of the French critic of English manners. "Le rempailleur de chaises, s'installait à côté de *John Cooper*, le chaudronnier dont le nom générique veut dire *Jean Cuivre*," is a good sample of "English as she is wrote," *cooper* for *copper* not being even excusable to a foreigner from confusion to the eye or ear. The work is not bound or paged, which is a deference to artistic convenience, but each plate is accompanied by a flying leaf numbered in accord.

The Royal Astronomical Society has lately come into possession of a great rarity, through the generosity of Mr. C. L. Prince, of Crowborough, who has presented to the Society a copy of Sherburne's poetical translation of Marcus Manilius, 1675, a volume which is valuable as an English translation of Manilius's 'Astronomica,' and also for the extensive list of names of the Oriental astronomers which it contains. The Astronomer Royal purchased a copy of the same work for the library of the Greenwich Observatory some months ago.

Augustus Strindberg has just published at Stockholm a volume of "Poems in Verse and Prose," which have attracted much attention for their ability and for their advocacy of Nihilism. One of them is a hymn in honor of dynamite.

In our account of the French attempt to discover the playwright's art we alluded to M. de Banville's contempt for the verse-writing of "Monsieur Scribe." M. de Banville is equally proud of his own management of rhyme and metre. He will not be pleased when he sees in M. Guyan's 'Problèmes de l'Esthétique contemporaine,' just published, on opposite pages four lines of Scribe, given to show how verses should be written, and four verses of M. de Banville, given to show how not to do it.

—The midsummer *Century* easily leads its competitors both in the variety, freshness, and interest of its contents, and in the charm of its illustrations; it is weak only in its poetry, but according to the low standard of excellence prevailing, even in this it does not fall beneath mediocrity, except in the shocking namby-pamby of "Endymion." The cut of the "Daffodils" is a trifle early for the August season; and the gyrations in poetic wheels and levers that do service as "A Song of the Mocking Bird," as well as John Burroughs's "British Wild Flowers," suggest anything but midsummer. Mr. Burroughs writes very complimentarily of the cousins of our flora, but he should have thought of Mr. Warner's experiences some months ago before again attacking "the British strawberry," which in its wild state he has the transatlantic effrontery to term "pale greenish, not at all inviting." Just as he found the British birds not so sweet-voiced and melodious as ours, he now declares that the flowers, though far more abundant and robust, lack grace, are, in fact, "coarse." He saw nothing of their kind so brilliant as our cardinal, so graceful as our lily, so taking as our lady's-slipper; no bog-flower to compare with our arethusa, no rock-flower to call forth admiration like our columbine, no trailing flower equal to arbutus, no violet like our bird's foot, no fern delicate as the maidenhair, and so on through the calendar of the months. This difference he attributes to the fact that, speaking generally, ours are wood flowers and the British are field-flowers. The article that follows, "General Sam Houston," is an admirable sketch of the pioneer type now extinct, and gives Texas a history that seems almost a legend of the mythical period, so remote is it from the ideas of the present railroading generation. Of the other contributions the most notable is Mr. W. J. Stillman's opening chapter of his voyage "On the Track of Ulysses," which apparently will not be mainly archæological, as its title might lead one to think: in the present instalment the interest is about equally divided between the pleasure of yachting in the Mediterranean, the historical romance of Corfu, and the identification of Homeric landmarks in the neighborhood of Ulysses's native island. The fiction, except an admirable short story, "An Effect in Yellow," is massed at the close of the number under the names of James, Cable, and Boyesen. The illustrations of "A Glance at British Wild Flowers" are, as a whole, at the very high-water mark of this kind of work, that of "Poppies" being most noteworthy of all, and the "Primroses" the only failure to render the special character of the flower; the frontispiece, "Daffodils," perhaps requiring the ayes and noes with it. The portrait of the Queen of Rumania, from a photograph, like that of Bright in the last number, is a poor thing, as must be all figure photographs in engraving. If photographic portraits must be engraved, let the head suffice. The illustrations of "On the Track of Ulysses" are as good as anything Mr. Fenn has drawn, and engraved with the best art of the *Century*.

—In the August *Harper's* the chief feature is the first instalment of the long-announced series to be entitled "The Great Hall of William Rufus." It was a natural thought to one seeking a centre at once of historic and of scenic interest to select this memorable place as the stage for his characters; indeed, for the purposes of a magazine there could hardly be a finer subject—one that lends itself more naturally to popular treatment, to quick changes of interest, to dramatic situation, and picturesque or romantic illustration. But on perusing the text the reader cannot help thinking that the public would have borne more meatiness in the historic part, and a style of narration less painfully depressed to the level of the intelligence of "the babes" among readers. So far as this first article is concerned, an excellent opportunity for popular information has been utilized for what is really only a spectacular effect. The travel sketches of the number cover Salt Lake City, the beauty of which one who has once felt it is always glad to be reminded of, however stale it may seem to others; and a few new odd corners of Holland, in which Mr. Boughton continues his "Artist Strolls." Mrs. Harrison gives an instructive account of the work of the "Associated Artists," Mr. Shields a slight Western hunting episode, and in the way of fiction Mr. Roe's "Nature's Serial Story" continues to impress us as, like Nature herself, without remembrance of a beginning and without prospect of any end. Altogether, Mr. Julian Hawthorne's brief half-reminiscential, half-pleading paper in behalf of athletic sports, written in his smoothest friendly vein, is from a literary point of view the best thing in the number. Of the engravings, that of "The Coronation Chair," from a photograph, is a marvel of reproduction; both texture and form are singularly well rendered on a low key of light and shade. Mr. Abbey's illustration of the "Judith Shakespeare" chapter is very weak and careless, something in the vein of the *Cornhill* designs of ten years ago, but not to be weighed with the better work of to-day. The illustrations for Boughton's article on Holland are not up to the mark, and the frontispiece, "A Prelude," after T. W. Dewing, is as poor work as a good woodcutter ever wasted his time on. The pictorial interest of the number lies mainly in the work on the "Associated Artists."

—The *Atlantic* is distinguished in this issue by Mr. Charles G. Leland's "The Edda Among the Algonquin Indians," a sort of avant-courier of a book which he is soon to publish on the subject of the legends of the Algonquins and their ethnological bearings. Final criticism upon his theories and position must be deferred until he has had an opportunity to present the evidence as a whole and in full detail. Meanwhile, there is enough given in this number to excite curiosity. It has been said that the Norse mythology is chiefly composed of Finnish elements, and this is based on a comparison of the Edda with the Kalevala; now Mr. Leland declares that the Indian legends of New England and New Brunswick have a score of points of resemblance to the Edda, where the Finnish epic has one. He has recovered twenty-seven legends, or sagas, relating to Glooskap, the Odin of the myths, making a connected series, besides several others that stand by themselves. Some of the obscure points of Finnish folk-lore and custom that seem to have light thrown on them by these Indian tales are of striking interest; such are the Lapland song of apology to the bear after killing it, which Mr. Leland connects with the Passamaquoddy myth that the she-bear was the foster-mother of Glooskap and sacred, and the gloss of the incomprehensible passage in the Edda concerning the "woman's half-burnt thought-stone" in Loki's heart, which is afforded by the Indian fable of the Chenoos and the wickedness they would attain by swallowing the half-burnt heart of another female Chenoo. Mr. Leland, however, claims only to be a recoverer of the fast perishing lore of the Indians in which is wrapped up whatever is to be known of the history of the aboriginal dwellers on this continent since the period of the mound-builders. "Après nous la théorie," he says, and meanwhile pleads for more workers in the field. Among the Indians of the far north, he thinks, the whole cycle of legend might be recovered. Other articles do not call for comment. There is a labored attempt to vivify the attenuated ghost of Willis, whose volatile spirit, to change the metaphor somewhat, evaporated before he died; he may have been the first of our magazinists, but the college versifier of the Scriptures, the saunterer in Europe, the scandal-provoking "lion" in London (he was the "lion" of very small people, be it said), the society spark of New York cannot—to indulge in Carlylese—be tailored into an immortality by the cleverest of literary old-clothes' dealers. The sketch of the old Yale President, Ezra Stiles, is a healthy antidote to this last article; for, with all the grossness that

was in him, all the rawness and absurdity, there was the iron of a true man, and the solid work he did was the palpable, broad, hard work that makes the foundation of things to be. Mr. R. G. White's third contribution toward a true estimate of Shakspere's personality adds to his previous characterization of him as a money-grubber and a monopolist the further declaration that he was a snob and a toady, if judged from what, with an insidious thrust, is styled "the Thackeray (literary) standpoint."

—The August *Lippincott's* most readable article is John Coleman's "Personal Reminiscences of Charles Reade," the first of a series. The author, who was then manager of a provincial theatre, made the acquaintance of the novelist, who had always been ambitious of dramatic success, by offering to bring out a play adapted from 'It is Never Too Late to Mend'; and the triumph to which this led, Mr. Coleman naïvely remarks, "contributed greatly to the intimacy which existed so long between us." In this instalment not much is added to our knowledge, except by way of anecdote: a dinner, the first entertainment given to the young manager, is described; a view of the workshop littered with newspapers, and a glimpse of the voluminous scrap-books, some concrete instances of Reade's ridiculous vanity, and pleasanter ones of his good-nature, frankness, and simplicity, and a few bits of entertaining detail respecting his habits and talk, make up the staple of the article. In a note on the fate of Reade's poor drunken copyist there is a blotch of realistic horror that seems almost grotesquely ironical in relation to the methods and aims of the novelist, who sought so industriously far and wide for what is at almost any man's door in a great city. The illustrated article of the month gives us views of West Chester and Long Island, Yonkers and Flatbush being the localities principally dealt with.

—Dr. Richard T. Ely, of Johns Hopkins University, contributes to the second series of "University Studies" an essay entitled "The Past and the Present of Political Economy." Dr. Ely is an enthusiastic disciple of the modern German school, and the simplicity with which he reproduces the lucubrations of its professors renders his pamphlet entertaining reading. He maintains, with evident sincerity, that the system developed by the English economists is quite out of date, and, to judge from the account of it given in his pages, it should be a matter of surprise that it ever came into existence. The doctrine of laissez-faire is completely misunderstood, as well as that of the influence of self-interest. A reader unacquainted with the subject would receive the impression that the "orthodox" school maintained that men throughout their lives were actuated by no other motive than self-interest, that no laws should be passed affecting in any way the material welfare of men, that wages were reduced to an absolute equality by competition, and that capital could be instantly transferred without loss from one employment to another. As no very definite notions prevail in this country concerning the principles of the new school, we take pleasure in calling attention to two discoveries of Wagner, "the Corypbæus of German economists," which, we are assured by Dr. Ely, are of the highest importance. The first is, that the operations of government trench more and more upon the domain of private industry. Those who are not at once struck by the novelty of this discovery may be aided by the observation that if there were no counteracting forces all business would in time be absorbed by the state. The second discovery is that there are three principles "in all economic life of peoples," the individual, the social, and the caritative. As Dr. Ely does not specifically state what the importance of this discovery is, we leave it to our readers to find out. We are of the opinion that it is, in any event, equal to that of many of the discoveries of "our own Carey." As indicating the intellectual level attained in this production we quote two sentences from its concluding page: "This younger political economy no longer permits the science to be used as a tool in the hands of the greedy and avaricious for keeping down and oppressing the laboring classes. . . . It denotes a return to the grand principle of common sense and Christian precept."

—Prof. J. B. Thayer, of Cambridge, Mass., has contributed to the rapidly increasing Boswelliana of Emerson a sketch of his trip to the Pacific coast in 1871, under the title, 'A Western Journey with Mr. Emerson' (Boston: Little, Brown & Co. 1884). The little book is very pleasant reading, and presents Emerson in a natural, friendly, conversational way, so that it gives a more life-like impression of him as he was "in the flesh" than any that we happen to have received; though it must be added the direct information concerning him is slight. One familiar with the present look of the West realizes how great a change even thirteen years has made in its aspect, when he finds Emerson describing the fertile country just beyond Omaha as "this poor, flat, worn-out common," but the principal indication of the progress made in the last decade is in the omissions, so to speak, the things not commented on because then they were not there. In general Emerson's eye for the country was not particularly keen, nor does it seem to have made any deep impression on his mind. His remark on the region of the Humboldt River—"This all reminds me of the Bible and of Asia"—is almost the only sign of his having actually been out of New England. Usually his efforts to see, as when he attended the performance of "Marriage by Moonlight, or the Wild Cat's Revenge" at Salt Lake, or the exhibition at "the place where the miners went, the lowest theatre in San Francisco," are grotesquely simple. In fact, he carried along his own lectures and a bundle of old-world books, whereas that is not the way to start on a tour of observation through a new country. The conversation also too seldom concerns what was before the eyes of the party—it is about Goethe, or Donatus, or Romilly, or 'The Life of Buxton.' He was too old to lay aside his spectacles. One or two deficiencies in his own province likewise are noticeable. He has "lost sight" of Keats's sonnet, "On First Looking into Chapman's Homer" (this, too, when he was correcting the proofsheets of 'Parnassus'), and he asked to have a common quotation from "The Wreck of the Hesperus" repeated a second time, as if it were fresh to him. The result of all this is that we see Mr. Emerson, as always, one of the sweetest of companions and the best of men, but none the less in the presence of the vast solitudes of the West just such a transcendental Yankee as he was on his own little Concord farm. This persistent personality in the midst of surprisingly novel surroundings makes the charm of the book.

—Volume xvii. of the *Encyclopædia Britannica* (Motanabbi Ormuzd) has a much larger number of pages devoted to American topics than any of its predecessors. This is owing mainly to the prominent position which the monosyllable "new" naturally holds in the geographical vocabulary of the new world. To mention only larger territorial divisions and great cities, we have here more or less extensive notices of New Brunswick, Newfoundland, New Hampshire, New Jersey (by General M'Clellan), New Mexico, New Orleans (G. W. Cable), New York State (Professor Newberry and J. Austin Stevens), and New York city (E. L. Godkin); and also of Nebraska, Nevada, Nicaragua, North Carolina, Nova Scotia, Ohio, Ontario, and Oregon. Twenty-four beautifully-executed maps, illustrative of all these geographical divisions and places (except New Orleans and Nicaragua), and also of New Guinea, New South Wales, New Zealand, the Nile, Norway and Sweden, and several English counties, are added at the end of the volume. In its biography, however, the Western Continent is poorly represented, a rather brief life of Motley being probably the most conspicuous notice of an American. Among the more interesting biographical articles are the lives of Napoleon I. (by Professor Seeley), Napoleon III. (Fyffe), John Napier (Glaisher), Neander (Dr. Tulloch), Nero, Newton, and O'Connell. The biographical notices of classical interest are, with few exceptions, very brief, and so are, comparatively, those of Münzer, Necker, and others. Prof. Robertson Smith writes learnedly, as usual, on Nahum and Obadiah, and also on Nineveh and Numerals; and Professor Wellhausen contributes an interesting critical notice on Nimrod. Egyptology is represented by Miss Edwards's on Mummy. Mysticism is treated by Professor Seth, Neoplatonism by Professor Harnack, Mythology by A. Lang. The latter article (twenty-three pages) is one of the most extensive in the volume, being exceeded only by those on Numismatics (thirty-three pages), Napoleon I., Music (by Professors Macfarren and Bosanquet), and Newspapers (Edward Edwards and Whitelaw Reid). Almost equally extensive are the subjects Navigation, Navy, and Nutrition. Among the best-illustrated articles are those on Muscineæ, Myriapoda, and especially Mural Decoration.

—The last issue of William Grigg's photo-lithographic facsimiles of the Shakspere quartos is one of exceptional interest to book lovers who are not merely Shaksperian scholars. It is a reproduction from the Cambridge Trinity College copy of the very rare first quarto (1599) of 'The Passionate Pilgrim,' which the original title-page declares to be by "W. Shakespeare." It was, as is now well known, only a pirated issue by W. Jaggard of twenty (by other divisions twenty-two) poems, of which five are certainly by Shakspere (only two of them being published for the first time), two by Barnfield, one by Griffin, and one by Marlowe and Raleigh; the remaining eleven are of uncertain or unknown authorship. Professor Dowden examines in a thorough preface each poem in turn, and gives all the information regarding it; but he does not himself contribute anything of marked interest or value to the questions of scholarship involved. The several poems belong, it is hardly necessary to say, to the best Elizabethan lyric school, and are full of quaintness, vigor, beauty, sentiment, and charm. No. 14, "The Lover's Night of Waiting"—

"Good night, good rest, ah! neither be my share"—

recalls Shelley's "Good Night," which it may have inspired; and No. 18—

"When as thine eye hath chose the Dame
And stalde the deare that thou shouldst strike"—

is of great interest through its suggestive parallelism with a portion of 'Willobie his Avisa' (1594), the only contemporary writing that can rationally be thought to throw any light on the "W. H." of the 'Sonnets.' Indeed, there is hardly any one of these poems that has not a peculiar value of its own for one or another reason. The collection makes an excellent example of the miscellanies of the Elizabethan booksellers, and in its present shape—each original page be-

ing exactly reproduced and the whole bound up in Roxburgh style—the volume is one that many should be glad to possess. It can be obtained separately, though, of course, at a higher rate than the subscription price.

—French novelists and poets are not slow to take advantage of new scientific theories. The *vibrions* of Dumas are an example. The more strange, the more obscure, the less proved the theory, the better; for then it will impress the reader the more, and be less likely to be used by any one else. The latest theory so adopted is the one enforced with so much humor by Samuel Butler in his 'Life and Habit'—the memory of the cellules of our body by virtue of which hereditary transmission of bodily habits, of gestures, looks, tastes, takes place, and by which instinct in animals is explained. M. Richepin employs this theory to his own glorification in the 'Blasphèmes,' which has just made a great sensation in Paris, at least in the newspapers, and is welcomed by all the naturalist school as its last word. M. Richepin's cellules are, he avers, Turanian, not Aryan. He is "ni Latin ni Gaulois"; he has slender bones, a yellow skin, eyes of copper, "un torse d'écuyer et le mépris des lois." It is true he cannot carry his contempt of the laws quite so far as to eat children and old men like his Tartar or Samoyedic ancestors. His cellules, no doubt, would like to, but he has been obliged to refuse them a liberty which would have led him before the *police correctionnelle*. But he could wear rose-colored waistcoats and sky-blue trousers, and this he is said to have done, like the young hero of Gautier's 'Celle-ci et celle-là,' at least in his own chamber. And he could contrast in forcible verse the contemptible Aryans, laborers of the earth and believers in gods, with the wild and free Turanians, nomads, anthropophagi, and describe the mad whirl of his globules when he thinks of these things. He could deny everything: God, progress, morality, beauty, the ideal—in short, everything but eating and drinking. He does it very well, and he deserves that his friends, the naturalists, should proclaim him their greatest poet. Whether verses, however forcible, however varied in rhythm, will last, though founded on a repudiation of all the poetry of life, may be questioned. But they succeed now, and M. Richepin is the lion of the day.

—Father Beckx, who has been General of the Society of Jesus since 1853, has withdrawn from his post on account of old age, and Father Anthony Anderledy, who was elected his vicar and prospective successor by the General Congregation of the order in September last, has now definitely taken his place. The retired General is in the ninetieth year of his life, having been born in February, 1795. He is a native of Belgium, but the principal scenes of his activity before his election were, first, the little German duchy of Anhalt-Köthen, after the conversion of Duke Ferdinand to Catholicism, and subsequently the Austrian Empire. For a time he was Rector of the Jesuit College at Louvain. His generalship has been remarkable for great missionary efforts of the order in Protestant countries, and ranks among the most successful in recent times. The ably conducted *Civiltà Cattolica* of Rome was his organ. His successor, Father Anderledy, is a native of the Swiss Canton of Valais, and sixty-five years old. He studied philosophy and theology in Rome and Fribourg, from which place he was driven into exile by the victory of the Protestant Cantons over the Sonderbund in 1847. He went to Piedmont, but the revolution in 1848 compelled him to leave that country also. He with many other Jesuits sought refuge in the United States, and officiated as priest in Green Bay, Wisconsin; but in 1851 he returned to Europe, and was active as college director or professor successively at Cologne, Paderborn, and Maria-Laach. In 1870 he became General Beckx's assistant in Rome.

—On the occasion of the transit of Venus of 1882 the Commission of the Belgian Government, under the direction of Dr. J. C. Houzeau, placed its chief reliance upon observations made with a new form of heliometer, in which, by employing half-objectives of unequal focal length, the images of the sun and Venus were nearly equal, thus allowing an observation of the angular distance of the centres of these two bodies to be taken by a single measure. With instruments of this pattern, set up in the southern hemisphere at Santiago de Chili, and in the northern at San Antonio, Texas, a sufficiently large number of measures were made to afford a fair test of the worth of the new method. The facility with which this instrument can be employed in work of precision is shown well enough by the large number of observations obtained at the Santiago station, where no clouds interfered with the progress of the measurements. Doctor Houzeau has completed the discussion of the work of the two expeditions, and the results are published as the first fascicule of the fifth volume of the 'Annales de l'Observatoire Royal de Bruxelles.' The value of the solar parallax which he derives is 8."911, or about one-tenth of a second larger than that now regarded as the true value. The probable error of his result, however, is so large that the experiment, while an interesting one, can fairly be said to have added very little to our knowledge of the distance of the sun.

MARSHAL BUGEAUD.

Memoirs of Marshal Bugeaud. 1784–1849. By the Count H. d'Ideville, late Prefect of Algiers. Edited from the French by Charlotte M. Yonge, author of 'Heir of Redclyffe,' etc. Two vols. London: Hurst & Blackett. 1884.

MARSHAL BUGEAUD was a member of one of the old aristocratic families of France which were ruined at the French Revolution. His father and mother were arrested during "the Terror" under Robespierre, and only escaped death by the revolution of the 9th Thermidor, which resulted in the overthrow and execution of "the sea-green Incorruptible." During the period of their parents' imprisonment, his two sisters, Phyllis and Hélène—the elder being only sixteen—with that admirable constancy in misfortune which so many of the French nobility displayed at this time, supported themselves and their parents by shirt-making. The future Marshal of France was then a boy of eight, and it was his duty to cook, to run errands, and to take home the work when finished. A little later Bugeaud and his two sisters were living in the family château of La Durantie, in the department of Périgord. The house was in a ruinous and almost uninhabitable state. The poverty of the sisters was so extreme that they had no shoes, and did not leave the house for months together. Their food consisted of roasted chestnuts, with such fortuitous additions as the brother might get, out shooting. For this purpose, the future Marshal had improvised shoes made of the bark of a cherry tree; and all his days, and no small part of the cold wintry nights, he spent roaming the woods in search of game or waiting by the river side for the water-fowl. He was indifferent alike to cold and heat. He took no regular meals; when hungry, he would pile up a few dry twigs, light them, and roast his chestnuts, and then resume his sport. An admirable training this was for one who was destined to endure the tremendous wear and tear of the Napoleonic method of making war.

At nineteen Bugeaud entered the Imperial Guard as an infantry private. This was in the year 1804. At first his disgust at the new life was extreme. He complains in his letters to his sister Phyllis—his favorite correspondent through life—that a man must be like a stone to endure the affronts and humiliations which are the daily lot of a soldier. The coarseness, ignorance, and brutality of his comrades—officers as well as men—was another cause of much suffering to the young soldier. He writes to his sister that the fact of wearing a French uniform is sufficient to exclude a man from the society of all decent and respectable men and women, and that he has, in consequence, to choose between the alternative of solitude or associating with disreputable characters. Young Bugeaud came under fire for the first time in the campaign of Austerlitz, and his letters to his sister during this eventful period are touched with a lively feeling of sympathy for the sufferings of the populations whose fields and villages were made the theatre for the devastating conflicts between the crowned heads of Europe. "The profession of a hero," he writes, "is so much like that of a brigand, that I hate it with my whole soul. A man must have a heart destitute of all humanity to love war." Bugeaud very speedily acquired "the heart of stone" which he speaks of here. Familiarity with scenes of suffering soon blunted this youthful susceptibility, and after his first campaign that particular aspect of war is never again referred to. These letters also contain instructive and interesting evidence of the terribly wasteful and fatal effects, on his own armies, of Napoleon's military methods. He cared less than nothing for the lives of his soldiers. He was, as Kléber said of him, an admirable eneral at the rate of ten thousand men a day.

"In war," writes Bugeaud to his sister, "it is not the fighting that is to be feared; on the contrary, it is often wished for as a deliverance from the sufferings, weariness, and privations that are more cruel than death. I can assure you that one day, when we were in front of the enemy—that is to say, in the second line, but very near—it rained, snowed, and hailed by turns, and I twenty times wished they would let us charge. We were obliged to remain in the ranks, carrying our packs, unable to light a fire, with nothing to eat, having had no bread for four or five days, wet to the bones; and that went on all day and part of the night, till we took possession of a very strong position that the enemy had held. I was weak enough that day to wish for death, and longed for one of the shot that I saw rush through our ranks."

In these letters, as in those of most of the distinguished soldiers of that day, whether of French, English, German, or any other nationality, one cannot fail to be struck by the uncomplaining readiness and obedience with which men confronted hardship and peril at the word of command, without apparently caring to inquire whether the purpose for which they were to be sacrificed was good or bad, frivolous or important. This unquestioning docility, it appears to us, must have been a powerful incentive to the incessant and insensate wars which ravaged Europe from 1793 to 1815. Great Britain, in fact, piled up no inconsiderable portion of her national debt in continually bribing emperors and kings—"subsidizing" was the diplomatic euphemism which veiled the actual fact—to form "coalitions" against France; and these regal personages, knowing the acquiescent temper of their subjects, were always eager to barter the blood of their people in exchange for the wealth of the islanders.

At Austerlitz Bugeaud won his corporal's stripes, but it was mainly in Spain that he fought his way, by dint of sheer hard service, into the upper commissioned grades. His opinion of the British infantry is well known. They were, he

said, the best in the world, but, fortunately, there were very few of them. This opinion was not the result of personal experience. He never encountered an English army in the field. He was present throughout the siege of Saragossa, and a letter to his sister gives a very vivid account of the heroic and desperate character of the defence, and of the indomitable persistency of the French besiegers. Every house had been turned by the Spanish into a fortress, which had to be reduced by a regular siege or destroyed by mining. This process of reduction, house by house, had been going on for two months at the time when he wrote to his sister. The losses of the French, especially in officers, had been enormous, for the besieged, secure behind their loop-holed walls, singled out the officers as a special mark for their rifles. "What a life," he writes, "what an existence! It is now two months that we have been between life and death, corpses and ruins. If we get all the advantage from this war that is expected, it will be bought very dear." After the fall of Saragossa, his regiment was placed under the orders of Marshal Suchet in Catalonia, and it was under the eye of that remarkably able general that Bugeaud made his way to the rank of *chef de bataillon*. He led the assault at the storming of Lérida, and was engaged in a multitude of other affairs, where he distinguished himself as much by his skill and ready judgment as by his coolness and intrepidity. Suchet conceived the highest opinion of the young soldier, and exerted all his influence to obtain him promotion.

When Napoleon returned from Elba, Bugeaud accepted, at his hands, a command under his old leader, Marshal Suchet, in the Army of the Alps. Thus he was not present at Ligny or Waterloo, but a few days after the last battle he inflicted, at the head of a small force, a severe check upon a greatly superior body of Austrians who were attempting to make their way into France. This battle might have been avoided altogether if Bugeaud had made known to the Austrian commander the intelligence of which he was possessed—that the French had been defeated and the Emperor had abdicated—but as he had received no specific orders to that effect from Marshal Suchet, and was confident of his power to beat the Austrians, he determined to fight. About 3,000 men fell in this unprofitable engagement; but whether or not Bugeaud was justified in giving battle is a nice point which we leave to the consciences of military casuists to determine. He had no orders *not* to engage; ought he then to have taken the initiative in order to avert a useless sacrifice of life? Humanity would assert the affirmative without hesitation; military casuists, we suspect, the negative. The part that he had played during the Hundred Days caused Bugeaud to be placed on the retired list when the Bourbons returned to Paris, and the next fifteen years—the happiest and most useful of his life—he spent as a country gentleman upon his estates at La Durantie. He devoted all his energies to improving the condition of the agricultural classes by the introduction of improved implements and the development of the capacities of the soil by a better rotation of crops; and, according to his biographer, these labors of his were attended with wonderful success. He was the originator of the first Agricultural Society in France.

On the establishment of the Orleanist monarchy Bugeaud returned to public life as Deputy for his Department, but his military career did not recommence until 1835, when he was sent to Algeria in command of a force to extricate a portion of the French army of occupation from a dangerous and humiliating position. The succeeding twelve years are the most important of his life. It was as the conqueror and pacificator of Algeria that he rose to the rank of Marshal of France and Duke of Isly, and that he will be best remembered by his countrymen. Until his arrival the French had made no progress in either the subjugation or colonization of that costly acquisition. They had lost a vast number of officers and men, and though upon maps and in official reports the French province of Algeria extended over many hundreds of square miles, the troops really held little more than the ground on which they were actually encamped. Everywhere else Abd-el-Kader and his rapidly moving swarms of horse and foot did what they pleased, pouncing down upon weak and isolated detachments, capturing convoys, and evading by their celerity all efforts to force them into a general engagement. General Bugeaud, with the instantaneous intuition of a man of genius, had no sooner landed in Algeria than he discovered the causes which had reduced the French to impotence, and the remedy which should be applied. The operations in Algeria had so far been intrusted to men who had been trained in the military traditions of the Empire, and who carried on the war against Abd-el-Kader and his Arabs in precisely the same way as they had carried on war against the Archduke Charles or Lord Wellington. They took the field encumbered, in the regular orthodox fashion, with heavy and light artillery, with a long commissariat train, and with the infantry weighted down by their arms, and in addition by rations, picks, and the component parts of their shelter-tents. A column thus equipped set out in solemn and deliberate march to hunt for Abd-el-Kader. It is needless to say that it never caught him, but was itself harassed and broken down by incessant attacks upon its baggage, its pickets, its front and rear guards. As soon as its provisions were exhausted it had to fight its way back to its cantonments, having accomplished nothing. The losses inflicted upon the Arabs in these expeditions did not probably exceed those annually caused by their inter-tribal feuds, and in no other respect did they suffer at all. The French losses, on the other hand, chiefly from excessive heat and fatigue, bad food and water, were very great, and much more costly and difficult to make good.

General Bugeaud saw at once that the war for the possession of Algeria must go on forever unless a radical change in its method was effected. He perceived that until the French could rival the celerity of their adversaries, it would be impossible to push Abd-el-Kader to extremities; and he began his Algerian campaigns by taking the field without any artillery, by giving his infantry soldier nothing to carry beyond his rifle and his ammunition, and breaking up the large bodies of men with which his predecessors had moved about the country into a number of small flying columns. The movements of these columns were carefully prearranged so that the Arabs fleeing from the pursuit of one found themselves unexpectedly attacked by a second, and so on. It needed some time to develop this new system perfectly, but its entire success was shown at the close of twelve years by the surrender of Abd-el-Kader to the Duc d'Aumale and the cessation of all opposition to French rule. The Arabs had been, in fact, beaten at their own tactics. Bugeaud and his lieutenants gave them no rest. They were hunted from place to place, their crops destroyed, their cattle seized, their women and children carried into captivity. A tribe which had ever been weak enough to march under the banner of Abd-el-Kader knew not the time when it could rest secure from a French raid; and the state of tension became too much for Arab flesh and blood to endure.

Algeria was regarded by the French as a training school for their army. It may be questioned if, even for this purpose, it did not do more harm than good. The certainty of their victories over their Arab antagonists can hardly fail to have bred looseness in discipline and an imprudence likely to be fraught with very disastrous consequences when they should be opposed to a better-skilled and more resolute antagonist. Similarly, we are of opinion that late Indian and Egyptian experiences will be found to have been positively harmful to the *morale* of the British soldier, should Great Britain be at any time involved in war with a European Power. However that may be, certain it is—and these memoirs teem with facts in confirmation of it—that the conquest of Algeria was one of the main causes of the instability of French political institutions, and of that violent lawlessness which is the besetting sin of "French Saviours of Society," quite as much as of those whom they denounce as its destroyers. A mere perusal of the names which appear and reappear in these memoirs suffices to show that all, or nearly all, of these self-constituted "Saviours of Society" were military men whose solitary qualification for the management of civil affairs was the crop-burning, cattle-lifting, and military executions in which for many years they had been engaged in Algiers. Among Marshal Bugeaud's Algerian lieutenants are to be found Changarnier, Cavaignac, Lamoricière, Saint-Arnaud, Canrobert, Pélissier, Ducrot—all of them subsequently distinguished by their bitter antipathy to popular liberty and their readiness, upon the slightest provocation, to sweep the streets of Paris with grape and round shot. All of these men—not excluding the Marshal himself—resented criticism upon their acts and methods in Algeria as the exhibition of a spirit of evil which was not to be parleyed with, but suppressed with the utmost possible despatch and by any means that came readiest to hand. The violence and bitterness of their language naturally produced a corresponding violence and bitterness on the part of those they were in the habit of menacing. The barricades of Paris were, in truth, the construction of Algerian generals—a response to the inflammatory harangues which they were in the habit of addressing to their troops. Here, for example, is a part of one of Marshal Bugeaud's compositions in this line, delivered in 1849, when he was in command of the "Army of the Alps":

> "The Government places my headquarters at Lyons; I obey, and shall start for that city to-morrow. But from thence I shall always keep my eye fixed on Paris; and if it be necessary for me to enter there at the head of the Army of the Alps and the National Guard of the Province, let us hope that then, by God's assistance, order would be preserved, not for a few moments, as has happened, but for ever."

It is a notable emphasis that the Marshal puts upon the words "I obey," as if this obedience on the part of a soldier to the authority which employed him was an act of extraordinary condescension in a general commanding the "Army of the Alps"; and he hastens to prevent any misunderstanding of it by assuring his hearers that, whether at Lyons or elsewhere, he will continue to consider himself an independent potentate, and march upon Paris whenever it seems right to himself to do so. Marshal Bugeaud, according to his lights, was a man of sterling honesty, of undeviating uprightness; but he had all his life been accustomed to decide all differences of opinion—whether in Austria, Russia, Spain, or Algeria—by the arbitrament of the sword, and almost instinctively, therefore, pursued the same method when he had to deal with home politics.

Louis Napoleon showed that he understood the kind of character which an Algerian training tended to produce, when he fixed upon Saint-

Arnaud as the chief agent for executing the *Coup d'État*. Saint-Arnaud was at one time an aide-de camp of Marshal Bugeaud, and afterward one of his most trusted lieutenants. He appears frequently in these memoirs—a daring, clever, dashing, and unscrupulous soldier, always plunged in pecuniary difficulties, to extricate himself from which was probably the inducement which impelled him to make common cause with the President, Louis Napoleon. Marshal Bugeaud resigned the government of Algeria a few months before the abdication of Louis Philippe. When the disorders broke out in Paris which drove that monarch from the throne, Bugeaud was for a time nominated to the command of the troops whose duty it was to act against the rioters; and had he been allowed full freedom, there can be little doubt that Louis Philippe would have preserved his crown. But he was hampered at every step, and finally replaced by another officer, who was thought to be less unpopular with the Parisian mob. He then gave in his allegiance to the Provisional Government. He was not quite satisfied with the election of Louis Napoleon to the office of President, but he derived consolation from the thought that, guided by the precedents of his great uncle, he would at least make short work of republicans and journalists—the two great enemies of the human race, according to the philosophy of the Field Marshal. Had he lived, there can be little doubt he would have entirely approved of the *Coup d'État;* but on the 10th of June, 1849, he fell a victim to the great cholera epidemic which during that year traversed a great part of the continent of Europe. He was in his sixty-fifth year.

ROGERS'S WORK AND WAGES.

Six Centuries of Work and Wages. The History of English Labor. By James E. Thorold Rogers, M. P. New York: G. P. Putnam's Sons. 1884. 8vo, pp. 591.

It is probably no exaggeration to say that Professor Rogers's 'Six Centuries of Work and Wages'—at least when taken in connection with his 'History of Agriculture and Prices,' upon which it is principally based—is the most important contribution yet made to the economical and industrial history of England. And by this we do not mean merely the history of industry and of economical relations, but—which is a very different thing—the elucidation of industrial and economical phenomena in such a way as to bring them into close relation with the more conspicuous events of history, and thus to throw new light upon these more conspicuous events. This book is concerned mainly with the lower, not to say the lowest, classes of English society; and we do not suppose that the author would say, as many writers of a socialistic turn seem to imply, that these classes deserve our regard more than the so-called upper classes. The nobility and the middle classes form a part of the English people, as well as the laborers and proletariat, and such events as the Norman Conquest, the War of the Roses, the Reformation, and the great Revolution of the seventeenth century will always obtain and deserve the first consideration of the student. But what we wish to know, what it has heretofore been impossible to know, is how far events such as these were influenced by the humble and obscure circumstances which surrounded the lower classes. It must not be expected, however, that this influence can be traced at all times and in all events. The laboring classes have lain so completely out of the regard of the governing classes, and so completely in their power, that it seems often as if their destinies were wholly apart from each other. No more striking fact is brought out by Mr. Rogers than in regard to the two great civil wars of England: that that of the fifteenth century, the War of the Roses, was carried on, so to speak, above the heads of the middle classes (p. 334), while the greater contest of the seventeenth century took little account directly of the laborers. "The eager spirits who crowded into the House of Commons, the mounted yeomen who rode with Hampden, the men who fought and won at Marston Moor and Naseby, thought no more of the peasant and the workman, had no more care for bettering him, than the Irish patriots of 1782 cared for the kernes and cottiers, on whose labors they lived" (p. 432). But although the facts contained in this book seem to have little bearing upon the great current of English history, we may be sure that they were not without such influence; it is shown, indeed, in many instances, for example, in the Reformation period, and even in the Revolution period, as will appear presently. And at any rate they stand in the closest and most direct relation to the events and movements of the nineteenth century, which cannot be understood in their true meaning without this explanation.

Six centuries; why not more than six? In this title lies an important historical fact: that the mediæval system ended and modern industrial history began in the latter half of the thirteenth century. As if with foreknowledge of these changed relations, it is at this very point of time, the early part of the reign of Edward I., that we have that remarkable abundance of records and rent rolls which affords the best means of studying the organization and condition of the agricultural classes of the middle ages. It is just at this time that the forced services of serfdom becoming commuted for money payment, and labor becoming thus a subject of bargain and contract, the modern "laboring class" came into existence. Hitherto agricultural labor had been performed by predial serfs, who rendered this labor as the equivalent of rent for their land; now it began to be performed by paid laborers, whose status, at first servile, gradually passed into that of freedom. It is this class whose fortunes are traced in the volume before us.

The work consists of twenty chapters. A general introduction, sketching the history of industrial relations down to the period in question, is followed by six chapters describing the condition of society, social and economical, at this period. Then follow three chapters upon the great economical changes of the fourteenth century, resulting from the famine (1315–16) and the plague (1348–9). Five chapters cover the important period to the close of the sixteenth century (Elizabeth's Poor Law), a period which was the turning point in the fortunes of the laboring classes. Five more chapters bring the story to the present day.

The mediæval system of agriculture was that of "cultivation by the capitalist landlord," with the labor of serfs and of free tenants who rendered labor for rent. This system, after the great plague, and with the gradual relaxation of the bond of serfdom, was "hopelessly doomed" (p. 274), and was succeeded by that of leases. During the fifteenth century, "an epoch of peculiar prosperity" (p. 367), land rose rapidly in value, labor received a very high remuneration (the real wages, reckoned in the cost of living), and the two important classes of the capitalist artisan (p. 338) and the yeoman, or small freeholder (p. 384), received a rapid development. We wish that this latter topic had received more detailed attention, as well as that of the abandonment of agriculture and conversion of arable land into pasture, at the close of the century, which is so frequent a subject of observation with writers of this period. While desiring, however, more elaboration of these two points, we must recognize the admirable clearness and fulness with which the economical questions of this century are treated.

The sixteenth century was a still more important period for the day laborer. Here we have the rise of prices resulting from the discovery of America, hastened, intensified, and made harmful by the debasement of the currency by Henry VIII. Shortly after, at the very end of this monarch's reign, attention is called to the confiscation of the property of the guilds or "benefit societies," as being mischievous in the highest degree to the laboring classes. A third cause of the deterioration of this class is the statute of 5 Elizabeth, chap. iv., by which "the Justices in Quarter Sessions are empowered to fix the rate of wages in husbandry and handicrafts" (p. 352). This put the finishing touch to the system, and it was not until the very close of the eighteenth century that any steps were taken to relieve the laboring classes from the oppression thus exercised. During all this time the cost of living was rising, while the rate of wages, fixed by Quarter Sessions, was either stationary or rose in a much less proportion. Chapter xiv., "Wages of Labor after the Rise in Prices," gives many astonishing illustrations of this. For example (p. 391), "in 1610 the Rutland magistrates met at Oakham on April 28, and made their assessment." Then follow the rates established, together with the price of provisions:

"and it therefore appears that a Rutland artisan with 9d. a day wages, supposing oatmeal were worth, as its natural price should be [wheat being 40s. 4d. a quarter], about 43s. 4d. a quarter, would have to work forty-three weeks in order to earn that which an artisan in 1495 obtained with ten weeks' labor; while the wages of the peasant, who got this supply by fifteen weeks' labor 115 years before, would be insufficient, even if he worked fifty-two weeks in the year, and every day except Sunday, by 24s. 9½d., to win that quantity of provisions. Even the extra payments in harvest would not make up the deficiency."

In view of such facts as these, he seems justified (p. 398) in saying:

"I contend that from 1563 to 1824 [probably a misprint for 1814, when the act of 5 Eliz. was repealed], a conspiracy, concocted by the law and carried out by parties interested in its success, was entered into to cheat the English workman of his wages, to tie him to the soil, to deprive him of hope, and to degrade him into irremediable poverty."

The period of the Commonwealth, little as the Parliamentary party has been shown to have cared for the laborer, was nevertheless a period of improvement, and the rates fixed at this time were decidedly more favorable.

"But the Restoration came, the landed interest became dominant: the principle that the Crown and the Parliament should be employed in the interest of the landlord and the trader was stereotyped, and the law of parochial settlement was forthwith enacted. This law consummated the degradation of the laborer. It made him, as it has left him, a serf without land, the most portentous phenomenon in agriculture. It applied equally to the artisan, but he was able to extricate himself at an earlier period from the toils of this hateful law" (p. 432).

In the same connection he speaks (p. 424) of "the housing of our poor in cities" as the second source of degradation, the first being the law of settlement.

We have left ourselves no space to speak of what is, after all, the most important part of the work—the closing chapters, upon "the present situation" and "remedies." It is enough to say in general that Mr. Rogers is an ardent believer in coöperation and in trade unions, "with considerable improvements in detail," and that he does not doubt (p. 563)

"that it is still possible to recall a rural population to the English soil, to renew and extend the productiveness of English land, and to find abundant high-class labor for the capitalist farmer when he reappears. It is true that the occupiers of peasant holdings might demand higher wages than they now earn. But what of that? They might illustrate anew the doctrine that low wages do not mean cheap labor, and that high wages may."

He remarks with great severity on the laws prohibiting combinations of laborers—laws to which he attributes a good share of the evil practices that have characterized these unions; and he refers with commendation (p. 440) to three processes which

"have been adopted by the working classes, each of which has had a vast, and should have an increasing, influence in bettering the condition of labor, and making the problem of dealing with individual distress, however caused, easier and readier. . . . They are trade unionism, or, as I prefer to call it, labor partnership; coöperation, or the combination in the same individuals of the function of labor and capital; and benefit associations, or the machinery of a mutual insurance society."

Apart from the main object of the book, a treatise like this cannot fail to throw light incidentally upon every portion of social history. No man, we suppose, has studied the history of English society so much in detail as Professor Rogers; it means a good deal, therefore, to find him testifying to the corrupt condition of the Church at the period just before the Reformation: "The bishops of the fifteenth century till its close were, on the whole, bad men; but the parochial clergy were little better, and the monks were worst of all" (p. 381). He emphasizes (p. 273) "the enduring influence of Lollardy," as an important factor in the Reformation of the sixteenth century:

"Geneva would have produced little fruit in the minds of the better-off peasantry and the artisans unless it had found the soil already prepared by the teaching of Lollardy. Wiklif is infinitely more the father of English Protestantism than Cromwell and Cranmer, Parker and Grindal were. There is a saying that Cambridge bred the founders of the English Reformation, and Oxford burnt them. There is a grain of truth in the statement. The English Reformation took root in the minds of the people in the eastern counties, not because State Anglicanism was developed in the younger University, but because for nearly a couple of centuries the poor priests of Wiklif's school had pursued their obscure but effectual labors in the east of England, and had familiarized the minds of men with an organization which was first bitterly hostile to Rome and afterwards as irreconcilable with Canterbury."

May there not also have been something hereditary in this? These East Anglian counties, with their large Danish population, were the only part of England at the time of the Domesday Survey which contained a numerous body of free peasantry—*liberi homines.*

Contemporary Socialism. By John Rae, M.A. London: Wm. Isbister. 1884.

THIS book is a very admirable piece of work, displaying thorough research in the presentation of the various forms of socialistic theory, keen discrimination in their analysis, and a masterly comprehension of the whole economic situation. There are so many wretched books upon social topics, written with no better motive than the desire to communicate to the public the crude views and wild projects of their authors, and written, too, with inexcusable ignorance of what has been already thought and done, that the presumption with most of us is against a book bearing such a title as this. No one can be unaffected by the sight of the inequalities that are the chief stimulus of all socialistic schemes, nor be blind to the injustice and oppression that prevail even in the most advanced civilizations. But the proposals of the socialists are so mad, and their measures so certain to add to the miseries that they wish to abate, that most people are driven to include both the end and the means in one sweeping condemnation. Mr. Rae is superior to this weakness. His kindly sympathy with what is elevated in the designs of the leading agitators never deserts him, even under strong provocation. We contemplate with reverence the patience with which he has waded through the dreary wastes of ink in which the German socialists wallow and flounder. It is a labor which it would have been cruel to inflict as a punishment upon a hardened offender, but with Mr. Rae it has been a labor of love. *Sic vos non vobis.* Mr. Rae is a benefactor to his fellow-men. He has produced one of the most excellent of labor-saving contrivances—a book the reading of which dispenses with all need of ever looking at several hundred others.

It is reasonable to believe, too, that the very socialists whose theories he expounds would ask from him nothing more than he has given them—except more space. His examination is so conscientiously careful, and so free from bias, that even those who suffer most from it cannot deny that it is fair. They would certainly delight in his criticism of opinions that they do not entertain, for nothing is more striking or more pathetic than the hatred and distrust that the leaders in this movement entertain toward one another. Whenever they are not undergoing such active persecution at the hands of government as to compel them to devote all their efforts to self-preservation, they at once fall to calling one another names, and, perhaps, if governments would let them alone, as in this country, their intestine broils would render them equally ridiculous and harmless.

The scope of the book is shown by the titles of its chapters. The subjects are Lasalle, Marx, Carl Marlo, the Socialists of the Chair, the Christian Socialists, Russian Nihilism, Socialism and the Social Question, and Henry George. Every one of these essays is marked by very high ability, and there is surprisingly little repetition in them. Apart from their interest as biographies, which is considerable, they are of great value as showing the history of economic thought in certain important directions. Especially the chapter entitled "Socialism and the Social Question" seems to us to be one of the clearest and most powerful discussions of the relations between the state and the working classes that modern thought has produced. During recent years there have been several writers, of greater or less ability, who seem to have thought that the study of economics was best prosecuted by ridiculing and belittling all that had hitherto been accomplished in it. Those who are familiar with the works attacked are able to estimate such assaults at what they are worth, but the great public, reading only what is published from day to day, has been seriously confused about matters concerning which it is much for its interest to have clear ideas.

Mr. Rae's work is not of this cheap kind. His criticism is of value not only because he is thoroughly versed in economics, but because he has some constructive purpose. The introductory chapter, which is quite as valuable as anything in the book, is, in our judgment, of a very high order of philosophical writing. Mr. Rae points out with great critical ability the marked difference of spirit which animates the agitators of the present generation as compared with the mild philosophers of the past. The era of voluntary communities is over. No one now thinks of Saint Simon or Proudhon. The world, having shown little disposition to attend of its own accord the feast that they prepared, is now to be compelled to come in. No one being willing to embrace socialism, every one is to be forced to do so. This seems to be on a par with the celebrated decision of the mice to bell the cat. Quite in keeping with this is the policy of agitation now favored by the leaders, such as Marx, who refuses to support his position by arguments, for the excellent reason that if he does they will be refuted:

"The masses can only be gathered under the flag of negation. When you present detailed plans, you excite controversies and sow divisions; you repeat the mistake of the French socialists, who have scattered their red oubtable forces because they tried to carry formulated systems. We are content to lay down the foundation of the revolution. We shall have deserved well of it if we stir hatred and contempt against all existing institutions. We make war against all prevailing ideas of religion, of the state, of country, of patriotism. The idea of God is the keystone of a perverted civilization. It must be destroyed. The true root of liberty, of equality, of culture, is atheism."

It is hard to say whether it is more melancholy or reassuring to see the complete failure on the part of modern socialists to consider the moral element of life. So far as they are concerned, the down-trodden of this world are never brought low by their own vices. Many of the oppressive features of human institutions would disappear if their removal were sought in a spirit of justice, and not of mere envy and hatred. It is because reforms are advocated with the spirit of savages, that conservatism presents so solid a front. It may be true in Russia that the only policy that can be at present adopted is one of assassination, but this can be said of no other country. Mr. Rae's essay on Nihilism is as good as anything that we have seen on that mysterious subject, but there are few persons who are interested in the history of the present century that will not be glad to read the whole book, and some parts of it more than once. We will only add that the analysis of Mr. Henry George's theories is extremely well done. It undermines the very foundations on which Mr. George's structure is built, and the whole fabric dissolves before our eyes.

History of the First Church in Hartford. 1633–1883. By George Leon Walker. Illustrated. Hartford: Brown & Gross. 1884. 8vo, pp. xii.-503.

WHAT is now known as the First Church in Hartford, Conn., was first established at Newtown (now Cambridge), Mass., at some time prior to September 4, 1633. The people who constituted it soon became discontented with their residence in the Bay Colony, and in 1636 they removed in a body to Connecticut. Few churches in our country have a history better worth recording than that presented here. The book, prepared by the fourteenth minister of the church, grew out of his preparations for the celebration, during his pastorate, of the two hundred and fiftieth anniversary of its ecclesiastical organization. It begins with the story of how the church came to be—an account of events of the first half of the seventeenth century in Old and New England.

Thomas Hooker was a Puritan minister who had been compelled to flee to Holland, and in 1632 some of the people who had attended his ministry in England came to America, having already made plans to have their minister follow them. "To enjoy the privilege of such a pastor they were willing to emigrate to any part of the world." Hooker arrived at Boston September 4, 1633, bringing with him Mr. Samuel Stone, another Puritan lecturer from Towcester, England. The two proceeded at once to Newtown, and on October 11 were chosen pastor and teacher of the church at that place.

MALDEN
PUBLIC LIBRARY

The story of these early times is well told. It is a story of beginnings, and brings plainly before the reader the conditions under which earnest men, with little hindrance or help from precedent or established usage, laid the foundations of new institutions. The "unchartered freedom" had, of course, its inconveniences, its crudeness, and extravagance; but the people and their leaders were capable of learning from experience, and Church and state slowly took shape and grew. Some new things were given up after trial. The curious experiment of a double-headed ministry, with one man for teacher, to "attend upon points of knowledge and doctrine," and the other for pastor, to look after "points of practice," had its natural result, and came to an end. Every well-regulated church had a "ruling elder," but the men to whom that function was committed did their work so well that the office was discontinued. One of these, Mr. William Goodwin, "a very reverend and godly man," was censured in open court for his "unreverend speech." There is a brief and picturesque account of the removal from Newtown to Hartford. The pilgrims began their journey on the 31st of May, 1636, and for a fortnight they struggled onward, encamping each evening in the forest. The pastor's wife was carried on a litter. One hundred and sixty cattle, besides numerous pigs and goats, were taken along, startling the denizens of the forest with unfamiliar sounds. Life in the new settlement was busy and interesting. The land was bought from the Indians, though some of it had been bought before by the Dutch, and was apportioned among the people. The church records prior to 1685 have been lost, and the history for the first fifty-two years had to be constructed from scattered minutes of secular transactions. But many names are known, and various interesting facts are here recorded concerning the original distribution of the town lots of the city of Hartford, and the place and construction of the successive houses of worship.

On April 5, 1638, the General Court directed that "the costlets in the meeting-house of Harteford," should be put "in good Kelter," and the town voted at a very early meeting that there be a "guard to attend with their arms fixed, and 2 shote of powder and shott, at least, upon every public meeting for religious use." On the same public square with the meeting-house were the market, the jail, the stocks, and the whipping-post. There was soon war with the Indians. One incident resembles occurrences of our own times. An Indian chief gave his lands to the white men that he might live with them and be protected, but they soon drove him away with violence, retaining possession of the lands. The war ended with the capture of a Pequot fort, where "several hundred Indians of both sexes and all ages were killed by fire and sword in about an hour's time." The next spring Indians brought down to Hartford and Windsor fifty canoes laden with corn at one time, and so saved the settlements from famine. Some two months after the Pequot slaughter the Hartford ministers went to Boston to attend an ecclesiastical synod upon the difficulties caused by the peculiar notions of Mrs. Anne Hutchinson. Some of their church members went along as delegates on this important religious business, and carried with them the skins and scalps of several Pequot sachems, whom they had surprised and slain. Roger Williams said the dead hands were no pleasing sight, and reprobated "such dismembering of the dead."

The Hutchinson troubles and Hartford's small share in the witchcraft delusion are well described. Mr. Hooker had much influence in shaping legislation. Doctor Bacon has said of one of his sermons (Thursday, May 31, 1638) that it is "the earliest known suggestion of a fundamental law, enacted not by royal charter, nor by concession from any previously existing government, but by the people themselves." Its suggestions were soon afterward embodied in the fundamental laws of the colony. The early New England ministers took an active part in political affairs. Mr. Wilson, the pastor of the Boston Church, on the day of an exciting election climbed a tree, and preached to the assembled voters from among the branches.

Among the features of interest are the accounts of Hooker's writings, of "The quarrel in Stone's day," of Whiting and Haynes and the division of the church, Isaac Foster and early church usages, the order of worship in early times, the troubles about the seating of the people in the church, the behavior of the boys, funerals and marriages, the working of the half-way covenant, and the excitement produced by Whitefield's work. The personal qualities of each successive pastor are described, and the distinctive features of his work made clear. The appendices contain many documents of value, such as the list of the original proprietors and settlers, Mr. Hooker's will and inventory, names of subscribers to church funds in 1802, 1852, and 1879, and the programme of the celebration of the two hundred and fiftieth anniversary of the church last year. There are some interesting anecdotes and good sayings, though these are not very numerous. Probably the best things in this line have perished. What is perhaps more to be regretted is the loss of many documents and records of much interest in connection with the history of the church. The book is interesting to the general reader by reason of the constant forward movement of the narrative. It appears to be written with thorough fairness and honesty, and with no effort to make saintly men seem faultless. It has a number of valuable illustrations.

Tales, Essays, and Poems. By Jane and Ann Taylor. With a memoir by Grace A. Oliver. Boston: Roberts Brothers. 1884.

THIS volume, which on the outside of its brilliant gold and scarlet cover is inscribed "Classic Tales," is similar in all essential respects to the selections from Mrs. Barbauld's works recently reviewed (*Nation*, No. 988). The tales were meant for evangelical Sunday-school children in England over half a century ago, and they aim at moral instruction directly by means of the most obvious fable, the most violent contrast, and the strictest execution of poetical justice upon the characters. The moral is, of course, excellent; and, considering their time, the opinions advanced were not illiberal, though they involved the legitimacy of "select Christian dances" and other topics about the very phraseology of which there is a musty odor of antiquity. The picture of life given in "Display," the leading tale, is without doubt full of realism; the reader of Jane Austen recognizes the locality and the people at once, and hails, like an old scene, the shady country-place, the long village street, and the glittering entrance of "the Regiment." In knowledge of human nature, too, as it was among commonplace, narrowly-limited English girls of the period, Jane Taylor is not deficient. There were the elements of a minor novelist in her talents; but the aim of fiction is lost in her moral purpose as a teacher who constructed her story not with reference to the affairs of life, but to death and the hereafter. Her anxiety to make a religious impression absorbs her faculties for narrative, and frequently betrays her into passages of the worst taste, and sometimes of a truly sickening nature, as where she details the physical incidents of a deathbed and at once transfers the characters to the frippery interior of a millinery shop, just for the sake of the cheap effect on a young girl in process of conversion. For the most part, however, the contents of the volume are only narrative in form, without any real story at all.

Considered with reference to use among children, the book is peculiarly ill adapted. Part of the contents could not interest any child who had not recently emerged from long clothes, and the remainder appeals only to girls who are being subjected to the first temptations of finery, flattery, and idleness. Juvenile literature was indeed a dreary waste when these tracts in prose and trivialities in verse were the best to be had. For the very young, some of the poems make an excellent exercise for the memory, because they have a grotesque attractiveness; and others of them are good in themselves, and have gained a charm, like "Twinkle, twinkle, little star," from being lisped by innumerable rosy lips. In general, however, the reading of this volume would tend to develop morbid religion in those who understood it, and impatient weariness in those who did not. It might be given of a Sunday to any child by the strictest Sabbatarian with complete certainty that he would get no amusement on that day, at least from that source; but those parents who do not wish their children to confound goodness with dulness and religion with conversion would better leave it on one side.

The Mothers of Great Men and Women, and Some Wives of Great Men. By Laura C. Holloway, author of 'The Ladies of the White House,' 'An Hour with Charlotte Brontë,' etc., etc. Illustrated. New York: Funk & Wagnalls. 1883.

THIS book is a very queer medley. It makes no attempt at chronological arrangement, nor at arrangement of any sort. The list of subjects jumps from Washington's mother to Mendelssohn's, then to Napoleon's, and from her to Augustine's. From Monica to Nancy Hanks, the mother of Lincoln, is the next transition. The mothers of Dickens, the Wesleys, Lamb, and Thackeray come next, and after these Cornelia, the mother of the Gracchi. The remaining chapters, which are more numerous than those already named, go forward and back among the centuries in an equally curious manner. When we come to a chapter of "Short Sketches of Some Wives and Mothers," ending with General Grant's mother, we imagine we have reached the end. But no; there is a *palinode*, an afterpiece, concerning Abigail Adams—an afterthought, most likely, and a very happy one. This higgledy-piggledy arrangement does not prevent the book from being very readable. It is not a critical performance. Mrs. Holloway cares a great deal more for edifying matter than for mere niceties of biography. In some instances her material is slight, and affords no argument for her general thesis—the descent of character and genius in the female line. Even her most elaborate arguments do not make this thesis good. Though she claims for it the warrant of the physiologists, their sounder dictum is that "children are not a mean, but a mixture"—a mixture in which one parent sometimes predominates and sometimes the other, as in the education of the child. One of the most interesting chapters is that on Lady Lennox, the mother of the Napiers. It is all the more interesting because it has so much in it about the two Miss Gunnings. The chapter on Milton's wives is greatly enriched by three of Milton's noblest sonnets. A more caustic humor would have been pardonable in treating of his married life with Mary Powell. The chapter upon Lincoln's mother is a much-softened pic-

ture of the utter sordidness and squalor of his early years. One of the fullest chapters is that upon Marie Antoinette. It makes too little account of her utter inappreciation of the political situation and her evil influence upon it. The illustrations in the book are execrable.

Reflections in Palestine. 1883. By Charles George Gordon. London: Macmillan & Co. 1884.

THIS little volume opens with a few pages of suggestions on subjects connected with the topography of Jerusalem, such as the place of crucifixion, the outline of the temple, the Haram and great altar, and the Eastern and Western hills. This part of the book is, in the author's words, "a portion of those thoughts which arise from and turn again towards the place of crucifixion," and from these thoughts the author passes to a series of contemplations on religious themes—the written word, the first three days of creation, the new birth, holy communion, and the presence of the Holy Ghost.

The book is of interest chiefly because it reveals what must be regarded as, in great measure, the key to the author's remarkable career: his thought and feeling in regard to religion. General Gordon is a mystic, and his mysticism is thorough-going and intense. The principal thoughts are the written word as the sheath or vehicle of the incorruptible word, possible analogy between the first three days of creation and our own lives, the close connection between the sacrament of the Lord's Supper and the resurrection of the body; salvation through the awakening of the dormant soul, and the indwelling of God in us as living vessels. The fundamental idea in the author's system of thought is thus indicated: "My mind turns on whether in us believers the term *Me* is not the Holy Ghost Himself. . . . I cannot help thinking that it is so, viz.: that when we are believers, and consequently members of Christ, our term *Me* is one with the Holy Ghost in us, and the life we live the life of the Holy Ghost" (p. 113).

This belief leads a man to regard himself as the object of God's direct and special care. It lifts him above fear, selfishness, and all the influences which chiefly irritate and exhaust men not possessed of it. When held by a man in whom other natural powers and qualities of a very high order are accompanied by strong common sense and great physical vitality, such a belief is an important factor in his career. General Gordon appears to have excellent judgment in worldly affairs, and a genius for organization and command among uncivilized and religious races of men; but in the Western or modern world he would find no opportunity for the development of such of his peculiar ideas as are indicated in this volume.

A Grammar of the Cakchiquel Language of Guatemala. By D. G. Brinton. Philadelphia. 1884. 8vo, pp. 72.

IN the library of the American Philosophical Society in Philadelphia there is a volume of moderate size containing a number of Cakchiquel-Spanish writings; one of these, the work of an anonymous author, embodying a short grammar of that language, proved to have been composed in 1692. The Cakchiquel language, extensively studied by the earlier Spanish missionaries, is a dialect of the Maya family, which has been subdivided into five branches by the latest investigator, Dr. Otto Stoll: the Huaxtec, Maya proper, Pokonchí, Qu'iché, and Mame. The last three are spoken in Guatemala, and the Cakchiquel is an offshoot of the Qu'iché group. It is surmised from lexical indications that at a very early epoch the Qu'iché language separated into two dialects, the Qu'iché proper and the Cakchiquel, and that subsequently the dialect of Uzpantan evolved from the former, and Tz'utujil from the latter. Among all these the Cakchiquel is distinguished by having the greatest frequency of croaking and explosive sounds, but its grammar does not differ much from the easy and simple framework on which the other Maya languages are built up. The grammar of 1692 has just been made public by Doctor Brinton in an English translation under the general title 'Cakchiquel-chí,' (chí, tchí means "language"), and since the old-fashioned plan upon which the grammar is laid out could not be conveniently altered, its Spanish text was rendered as accurately as possible in English. To correct some doubtful statements of the author, and to bring together as much information on this language as possible, the editor has supplemented his instructive publication by quotations from two manuscript grammars in his possession: that of Benito de Villacañas, who died in 1610, and another of Estevan Torresano, who shortly after 1753 wrote annotations to Flores's grammatical treatise on Cakchiquel. A bibliography of Cakchiquel literature and an ethnographic map of a portion of Guatemala increase the value of the book very materially.

BOOKS OF THE WEEK.

Annuaire Diplomatique et Consulaire des États des Deux Mondes. Supplément à l'Almanach de Gotha. 1884. Gotha: Justus Perthes. (New York: Westermann.)

Appletons' Dictionary of New York and Vicinity. With maps. Sixth year. D. Appleton & Co. 30 cents.

Harland, Marion. Cookery for Beginners. Boston: D. Lothrop & Co. $1.
Harris, J. C. Mingo, and Other Sketches in Black and White. Boston: J. R. Osgood & Co. $1.25.
Iijima, I., and Sasaki, C. Okadaiva Shell Mound at Hitachi, being an appendix to Memoir Vol. I., Part 1, of the Science Department Tôkiô Daigaku (University of Tôkiô). Tôkiô: Tôkiô Diagaku. 2543 (1883).
Kapp, F. The Life of John Kalb, Major-General in the Revolutionary Army. Henry Holt & Co. $1.75.
Leech, J. Pictures of Light and Character. From Punch. D. Appleton & Co. 30 cents.
Littell's Living Age. Fifth Series. Vol. XLVI.—April, May, June, 1884. Boston: Littell & Co.
Mackenzie, Dr. M. Hay Fever: its Etiology and Treatment. A Lecture. Philadelphia: P. Blakiston, Son & Co. 25 cents.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & Co., N. Y.

Henry Holt & Co.

Will publish next Saturday

A NEW AMERICAN NOVEL:

AMONG THE CHOSEN.

16mo, American Novel Series, No. 5, $1.00.

Johns Hopkins University,
BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

THE BUREAU OF REVISION EDITS authors' MSS. for the press. Compilations made for publishers. Dr. TITUS M. COAN, 110 E. 56th St., N. Y

One of the Most Popular Books of Travel.

Germany Seen Without Spectacles;

Or, Random Sketches of Various Subjects, Penned from Different Standpoints in the Empire. By Henry Ruggles. *New Edition.* Price, $1.50.

"Mr. Ruggles tells what he sees and knows, and writes without fear or favor. The university life, the social manners, the way in which young Americans spend their time at foreign medical schools, the music, and the beer drinking, these and other topics are discussed in a strong, straightforward manner, which is really refreshing. Some curious and romantic episodes are introduced, which are highly interesting. Leading men are described, and characteristic anecdotes are related. Every chapter is complete, and full of interest and information. Whoever begins the book will finish it, and will find the last chapter as full of charm as the first."—*New York Tribune.*

*** *Sold by all booksellers and newsdealers, and sent by mail, postpaid, on receipt of price.*

LEE & SHEPARD,
Publishers, Boston.

Wadsworth, Howland & Co.,
IMPORTERS AND DEALERS IN
ARTISTS' MATERIALS
And Architects' and Engineers' Supplies of every description,
84 WASHINGTON STREET, BOSTON.
☞ Catalogues free on application.

NEW CATALOGUE OF BOOKS ON History, Philosophy, Politics, Social Sciences, Religions, Travels, etc., Old and New, in English and Foreign Languages, will be sent on application, as well as separate catalogues on AMERICANA and SCIENCES. Address,
LEON & BROTHER, Booksellers,
5th Avenue Hotel, Place 3,
Corner 5th Ave. and 23d St., N. Y. City.

F. W. CHRISTERN,
37 West Twenty-third Street, New York,
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

GOVERNMENT APPOINTMENTS.
50 cents will buy COPP'S SALARY LIST and 20 pages of Civil Service examination questions.
H. N. COPP, Washington, D. C.

The Nation.

NEW YORK, THURSDAY, JULY 31, 1884.

The Week.

THE selection of Mr. W. H. Barnum for the Chairmanship of the Democratic Committee can only be justified on the plea which the Republicans have too often recognized—that you must fight the devil with fire. When Thaddeus Stevens was the leader of the House, one of his most frequent admonitions to halting, tender-conscienced young members who were ready to use the sword of the Lord, but made wry faces over the sword of Gideon, was that they must not be "too d—d particular." He used also to admit freely in questions of contested seats that to him "our man" was always the right man, and the other man a rascal. The times were, however, very troublous, and war does not help to keep consciences tender. In the reconstruction period, which was also full of difficulty, Republicans learned to wink at a great many queer things, and pat on the back some sad examples of human depravity. When waning majorities, during General Grant's Administration, satisfied them that the real tug of war was coming in 1875, they put the campaign in charge of one of their least squeamish managers, the late Zachariah Chandler, to whom in a canvass all was fair, and nothing dreadful but defeat. Since then there has been a deplorable fondness on both sides for the Chandler cast of mind. Dorsey was the manager in 1880, and he was a treasure. The present Republican Chairman is reported to be a gentleman of average scrupulousness, but no one believes him to be much more than a figurehead, except in the matter of raising funds. The chief of the staff and real commander will be Elkins, aided by Clayton, and in them Barnum will find foemen worthy of his steel. All recognize in the fullest manner the power of money over the modern man. The spectacle is a sad one for the American people, but especially for the Republicans, who have this time gone to the length of heading their ticket with the name of a speculator and lobbyist.

Governor Cleveland is now probably preparing his letter of acceptance. It is to be hoped he will not imitate the example of his opponents by making it a huge essay. What is most needed in a letter of acceptance is not a string of the candidate's opinions on all manner of subjects, but an explanation of the way in which he will perform the duties of his office. The opinions of the candidate on such topics of the time as are likely to become subjects of legislation are, it is to be taken for granted, those of the party as expressed in the platform of the Convention which nominated him; and it is enough for him to say that he agrees with it. If he does not agree with it on any point, of course some discussion may be necessary, but otherwise not. If the platform, for instance, contains a protectionist plank, there is no occasion for the candidate to write an essay on the tariff or give an historical sketch of it if he is a Protectionist. This would be excusable only if the President had the making or altering of the tariff. As a matter of fact, he has little more control of it than any other citizen. The same thing may be said of the labor question and various other questions about which candidates palaver a great deal.

The greatest objection to the amount of space given in letters of acceptance to matters on which the President has little or no influence, is that it helps him to evade or curtail the discussion of those for which he is directly responsible. A rationally constructed letter of acceptance, for instance, ought to be very explicit touching the condition of the administrative machinery of the Government, both civil and military, and the rules which will govern the candidate in making appointments to office; touching the relations of the Government to foreign Powers, and the manner in which he will maintain those relations, and all other things about which the Executive has to take action, or is likely to be better or more regularly informed than other branches of the Government. Other subjects than these may be disposed of as lightly as possible. Indeed, when one thinks of it, there is something rather ludicrous in the appearance, when nominated to the Presidency or Vice-Presidency, as politico-economical essayists, of men who know next to nothing about the tariff or the currency, or cognate subjects, and have no earthly prospect of ever being able to exert the smallest influence on them. But for this absurd custom, for instance, poor General Logan would have been spared the exhibition he made of himself the other day as the author of a short treatise on the balance of trade and the currency. He knows little more about these things than a Sioux chief would know after six months at the Hampton School, and talks about them in somewhat the same artless way in which Hole-in-the-Day or Rain-in-the-Face would talk.

The Prohibitionists have nominated Governor St. John, of Kansas, for President, and adopted a platform in which they denounce Blaine and Logan, the former for publicly recommending that "the revenues derived from the liquor traffic should be distributed among the States," the latter for proposing to devote these revenues to the support of the schools—both thus virtually recommending "the perpetuation of the traffic and that the States and their citizens shall become partners in the liquor crime." In Indiana one set of Prohibitionists, said to be "deputy Democrats," threaten to give the Republicans a great deal of trouble, as they have put a State ticket in the field, and even Neal Dow has come out in a letter urging independent action, though endorsing Blaine as a Prohibitionist and a total abstainer. The 10,000 votes cast in 1880 will probably be increased this year, though how much no one can now say. There cannot be much doubt that the general independence of party shackles this year will tell, not only in favor of Cleveland, but in favor of any reform behind which there is a sincere conviction of any kind, however "cranky" it may be.

The Prohibition party is a growing party, but it is still too small to count for much in a national election. In 1872 they polled 5,608 votes in the whole country. In 1876 they numbered 9,322, and in 1880 10,305. The only States in which they counted more than 1,000 votes in 1880 were New York, Pennsylvania, and Ohio. In Michigan they had 942, in Massachusetts 682, and in Iowa 592. The Greenbackers in 1880 polled 307,740 votes in the whole country; that is, they were about thirty times as numerous as the Prohibitionists, although their "principles" were far less meritorious, and, in fact, positively baneful. The vote cast by the Prohibition party in Presidential elections is, however, no measure of their real strength. In Maine, Vermont, Massachusetts, Ohio, and Iowa they are very nearly a match for either of the other parties when the issues are dissociated from national politics, and the question to be voted upon relates strictly to the liquor traffic. Indeed, nothing has given the Republican party so much trouble in State elections as the temperance issue. Their continuity of power in local government has been more than once severely shaken by the Prohibitionists, whose perseverance is unflagging and whose capacity to seize every favorable occasion seems to be intuitive.

The question of immediate interest is, whether the campaign of this year is a better occasion for drawing out the Prohibition party's latent strength than that of 1880 or former Presidential campaigns. Aside from the fact that their Pittsburgh Convention was larger and more enthusiastic than any former convention has been, we cannot see any reason for expecting a greatly increased vote this year. It is true that they have given us a national issue in the form of a resolution that the manufacture, importation, and sale of intoxicating liquors should be prohibited by the general Government in all places where it exercises jurisdiction, and that no new State should be admitted to the Union unless its Constitution prohibits such manufacture and sale. The tax on distilled and fermented liquors is reprobated as a tax on vice from which society ought not to derive a revenue. Of course it is not intended by the Prohibitionists to repeal the whiskey tax unless they can abolish whiskey at the same time. It is no part of their intentions to relax any existing restraint upon the liquor traffic unless they can strangle it entirely. To do so they must first of all secure a majority of votes. The question whether they can practically accomplish the end they have in view after they get a majority is open to much doubt, but there is no doubt that they must get the majority first. We see no early prospect of their obtaining this result, but it is not unlikely that they may draw from the Repub-

lican party some votes in Indiana and elsewhere which it will be embarrassing to spare this year.

We have received from a gentleman of considerable political experience an inquiry to the following effect:

"In the *Nation* some years ago I noticed occasional strictures on General Logan which interested me, and to which I now wish to refer. I think they appeared about the year 1872, or between that date and 1876 or 1877, but the index to the bound volumes does not contain Logan's name, and so I can't find what I want. It is, no doubt, to be found under some other title, and if you can put me on the track of it without too much trouble to yourself, I shall be very much obliged to you."

The *Nation* never made any "strictures" upon General Logan, but merely described him from time to time as a war-horse, a ranter, and an ignoramus. The accuracy of these descriptions has never been disputed by any one. The point which our correspondent has in mind is perhaps this: On January 8, 1869, General Logan, in the House of Representatives, fiercely assailed the Jenckes Civil-Service Reform Bill, and denounced it as the "opening wedge to an aristocracy." This was referred to in the *Nation* at the time. He is now running as a civil-service reformer, and fifteen years' study of the subject has brought him to the point of declaring in his letter of acceptance that one of the crying "subquestions" connected with the matter is:

"How best to avoid the evils of creating a privileged class in the Government service, who, in imitation of European prototypes, may gradually lose all proficiency and value in the belief that they possess a life calling only to be taken away in case of some flagrant abuse."

A stricture upon General Logan as a civil-service reformer and statesman is to be found in the account given by the Chicago *Tribune*, in 1879, of the Senator from Illinois. It was quoted in the *Nation* at the time. It declared him to be "opposed to all reform in government," and to be the "embodiment of the worst phase of Machine politics." It added that "a majority of his appointments (in Grant's time) turned out to be corrupt and faithless, a number were indicted, some fled the country, others escaped through flaws in the law, many passed under a cloud, and some who are out on bail have yet to be tried." The *Tribune* is now ardently supporting Logan for the Vice-Presidency as a blunt, honest reformer. Yet 1879 is not very long ago.

The removal of General Longstreet from the United States Marshalship of Georgia, on which there has been a good deal of comment not very favorable to President Arthur, causes, whatever may be the motives which prompt it, but little surprise to those who know anything of the way in which he has for some time discharged its duties. In fact, nothing but General Grant's steady protection has kept the Confederate veteran in office so long, and now this protection is probably not so powerful as it used to be, and Longstreet has to go. He was originally appointed because he was perhaps the first conspicuous Confederate to acknowledge fully that the game was up, and that there was no use in mourning over the past, and then General Grant liked him as a plain fighting man, who did his work well while he was at it, and who when he stopped fighting stopped in good earnest. But he has made an indifferent Marshal, having few or none of the qualifications the place most requires. So that his dismissal is really a contribution to civil-service reform, whether it be due to a political bargain made with his successor or not.

Those who assail the purity of the President's motives in the matter will find some support for their view, however, in the appointment of the immortal Flanagan, of Texas, to a Collectorship of Internal Revenue in that State. He was an Arthur delegate to the late Convention, and did not go over to Blaine, and probably he now has his reward. He achieved fame, as most of our readers may remember, by the now historic question, "What are we here for if not for the offices?" at the Convention of 1880, being much puzzled by the civil-service reform talk he heard all around him. Probably a great many other delegates in the Convention shared his bewilderment, but no other blurted it out. His views on the reform even now would be interesting if we could get at them. He probably knows why his question caused so much laughter, but has doubtless not made much further progress as a reformer.

The Rev. George W. Pepper, a Methodist minister, told a remarkable story at a meeting of Blaine Irishmen recently which ought to be investigated by the Conference, if he is in good and regular standing in his denomination. This story, as reported, is that being in London some time ago, he took occasion to speak disrespectfully of the Queen. Whereupon a warrant was issued for his arrest and a policeman came to execute it. He, however, met the policeman at the door and pointed out to him that there were a great many women in America who had made lint for the wounded soldiers during the war, and were therefore "as much superior to the Queen as the heaven was to the earth," and that if the warrant was executed, he would "telegraph to James G. Blaine." It would appear, though Mr. Pepper does not say so explicitly, that the policeman either recognized the force of his explanation with regard to the Queen or was terrified by the mention of James G. Blaine's name, and the whole proceeding was abandoned. A good many people will, however, account for the policeman's odd behavior on the theory that Mr. Pepper has been lying, which even a Blaine preacher ought not to do. An inquiry into his English trip on the part of his ecclesiastical superiors would therefore seem to be desirable.

Mr. Edwin D. Mead, the young moralist who has been writing a pamphlet to show that Blaine's venality is a mere matter of "taste," has been delivering a most interesting lecture on "Emerson's Ethics," before the Concord School of Philosophy. He praised Emerson highly for having made an "ethical statement possible large enough to take in Kant and Spencer." Whether this is Herbert Spencer or the ex-Senator of the same name the context and speaker leave in doubt, and, singularly enough, we find Mr. Mead later on quoting Emerson's phrase, "hitch your wagon to a star," perhaps thinking it a misprint for Star-route, which would fully account for Spencer's appearance on the scene. Still another dark saying is attributed to Kant—one of the Boston Kants, we believe—"So act that the maxim of thy will may always be the valid principle of *universal legislation*." This was what Blaine himself took to heart as to all private bills, and he would probably like to apply the same maxim universally if he could. We do not follow the line of thought altogether, but is it fair for a School of Philosophy to allow itself to be used for campaign purposes in this way?

A municipal commission is now at work in Boston to try to discover some method of relief from excessive taxation in that city. The Boston *Advertiser* points out what we have little doubt is the key to the solution of the problem—the control of the Aldermen over city expenditures. The "legislative branch" there, as here, now consists in great part of impecunious, obscure, and consequently irresponsible men, who impose taxes, but do not pay them, and have, consequently, no interest in keeping them down. They have had in Boston, in great measure, the same experience of the impossibility of intrusting municipal administration to committees of such a body that we have had in New York, and the various executive functions are being slowly taken away from the Aldermen and vested in boards. But the taxing power is the great point. Until they lose that they will constitute a formidable obstacle to reform. The assessors, of course, think that the trouble is with the tax-dodgers, and one of them wants to have a law passed which will repress this vile practice. The only effective way would be to treat the tax-dodgers as the rich Jews were treated in the middle ages. By roasting notorious Dodgers on gridirons, and pulling out their teeth until they "squealed," the assessors might get hold of more of their ill-gotten gains. Every other way has been tried without success.

We understand that the Patent Office has awarded to Mr. Stephen D. Field, of this city, the priority of invention of the electro-dynamic motor, as against the adverse claims of Mr. Edison and Dr. Siemens. This is the motor which has been put in operation in Berlin for the propulsion of street cars. We are not sufficiently familiar with the details of the invention to say whether Mr. Field's motor differs essentially from those of the contestants in the interference case now decided. We advert to it because the decision is likely to clear the way for the use of the new motor on a large scale on the elevated railroads of New York. It is claimed for the invention that it will not only dispense with the locomotive and its noise, and smoke, and cinders, but will furnish power at a greatly reduced cost for street travel, and for all railways where frequent trains of comparatively light weight are employed.

An old lumberman living in Stevens' Point, Wis., expresses surprise at the proposition that the tops and other débris of logging should be collected and burned as a means of preventing fires, saying that no one would for a moment think of such a thing who had ever seen logging in heavy pine woods. None of those lumbermen who met the Forest Commission at Saratoga this week to consult about the best means of preserving the woods had anything to say about this means of preventing fires. Most lumbermen say it would cost too much, and at Saratoga it was thought that it would be better to have some one—presumably the State—employ a heavy force to patrol the woods. The *Northwestern Lumberman* of May 10 said:

"The only way to prevent forest fires is to collect and burn, under supervision, the dry brush and tree-tops. Fire cannot exist unless it has something to feed on. This journal has held for a long time that every lumberman operating in the woods should be required by law to take such care of his leavings that they will not hazard the property of his neighbors. This would be a good deal of labor, and it would cost a good deal of money, but if thereby even a half of the losses by forest fires were prevented, both the labor and money would be well expended, and this rule should not be observed by lumbermen only, but by others. In forests in which operations are not being carried on, there is a constant accumulation of dry limbs and fallen trees, and these the owner of the land should be obliged to remove in some way, providing his woods join others."

It appears then that it is not only those outside of the lumber business who think the law should require tops, etc., to be burned.

The accounts of the "summer resort" business this year are very dismal. What with the business depression and the coolness of the weather, few of the more expensive hotels have even paid their expenses thus far. But a good hot August, combined with the European cholera, which has already greatly diminished the tide of European travel, may yet save them from loss. The smaller and cheaper hotels have done better, but these have now multiplied to such a degree that it is difficult to see how the great majority of them can be made to pay, unless they are used as farm-houses during the rest of the year. Many of the railroad stations in the mountains this year have been heart-rending spectacles, owing to the crowd of huge wagons which come down to meet boarders and go back empty. The influence of the business depression has perhaps been most felt in keeping down the supply of men at the resorts. The steady customers, out of whom most of the houses at the resorts make their living, are women, and no house which does not attract a few men, at least on Saturdays, to give a little variety to the piazza, can long hold its own, and whether it can or not depends largely on what it furnishes the men to "do." The ordinary man on a summer holiday is not contemplative and will not sit still. The result is that the ordinary boarding house rarely attracts him or holds him long unless he is married.

Mr. Henry Hucks Gibbs, the leader of the silver agitation in England, has written a letter to Mr. E. Koch, of Cologne, which may be taken as a sort of obituary notice of bi-metallism in the Old World. The letter is written in reply to an article in the Cologne *Gazette*, in which the writer had made some sarcastic observations on the attitude of British bi-metallists, and of Mr. Gibbs in particular, who have lately been urging the "friends of silver" in Germany, France, Italy, and the United States to go ahead and adopt the double standard without waiting for England. Germany, says the writer in the Cologne *Gazette*, heartily seconds Mr. Gibbs's motion, and urges France, Italy, and the United States to go ahead and adopt the double standard without waiting for either Germany or England. Such bashfulness in making a start is much to be deprecated, since valuable time is lost, and the world meanwhile is drifting helplessly to the single gold standard. Mr. Gibbs replies to his German critic that the reason why he advises the bi-metallists of the continent to push forward and "rehabilitate silver" without waiting for England is that England will not join in that praiseworthy endeavor. "I have had," he says, "abundant opportunities of learning both what our statesmen think on the subject of the double standard and what the prevalent feeling in England is; and I am sure that, mostly from ignorance, but in some cases from a mistaken conviction, my countrymen are generally in all sincerity averse to the introduction of the double standard; and I see, therefore, no present hope of the restoration of silver to the place as standard money which it once occupied in this country." In other words, Mr. Gibbs acknowledges that there is no hope that England will ever do more than she agreed to do at the Paris Conference of 1881; that is, to hold a certain amount of silver in her bank reserves provided that the chief commercial countries of Europe and America would throw open their mints to silver and agree to receive it at a fixed ratio with gold. This, says the writer in the Cologne *Gazette*, is bi-metallism "of a very platonic character." It is too sublimated for imitation. If that is all that England has to say, the door of the Paris Conference may as well be closed forever. "If the international bi-metallist household," he adds, "ever had one table-cloth in common, it would have been cut by Mr. Gibbs's statement, for 'only with England, and only on the basis of 15½ to 1,' has been the watch-word and battle-cry of the German bi-metallists ever since the Cologne Bi-metallist Congress of happy memory."

It is needless to say that if international bi-metallism were practicable in any case it is not practicable without the concurrence of England. Since Germany never gave a sign at either of the conferences of her willingness to retrace her steps and join in the double-standard experiment, either with or without England, but on the contrary refused to do more than suspend for a few years her sales of silver, it is obvious that no hope can be entertained of bringing her into the bi-metallist campaign when the chief bi-metallist of England has given up the fight in his own country. In short, the end of the agitation has come, and each nation must henceforth choose its monetary system and standard according to its own lights and its own needs. This is what all except the United States have already done. We have no longer an international double standard to look forward to. We can have either the gold standard or the silver standard. We cannot have both, or any mixture of the two.

The House of Lords has added to its offences by throwing out a bill reforming the mode of electing Poor Law Guardians in Ireland, which had passed the Commons without a dissenting vote. This is in fact only one of frequently recurring instances of the difficulties with which Irish local legislation has to contend in the British Parliament. The tenant farmers of Ireland have absolutely no representation in the House of Lords at all. There is not a single Irish peer who has the least sympathy with any of their grievances, or who makes any pretence of looking after any interests but those of his own class, and yet the House of Lords frequently defeats Irish legislation to which the only objections are class objections, and sometimes defeats it through mere whim. Four or five years ago a bill authorizing the construction of a short narrow-gauge railroad for local traffic in the North of Ireland, the capital for which had all been raised on the spot, was defeated in the House of Lords through the opposition of one cranky English peer, Lord Redesdale, on the simple ground that he did not like narrow-gauge roads. The projectors had accordingly, for the time, to abandon their scheme. The case of the Poor Law Guardians will probably now have to be postponed for a year, and, of course, furnishes the Home Rulers with some fresh and very useful ammunition.

It is to be hoped that we shall soon begin to hear of cases of heroism from the French cholera districts. Thus far the accounts are filled with stories of shameful panic and cowardice, and indeed something like social disorganization has taken place at Marseilles, Toulon, and Arles, although the deaths only number thirty or forty in either of these places in the twenty-four hours. At Arles the City Councillors fled, leaving the town without a local administration, and the bakers and butchers fled also, and the carpenters, we are told, refuse to make coffins for the victims of the disease, and the dead have to be buried by drunkards. M. Paul Bert is reported to have said in a recent debate in the Chamber, that no country in Europe except Spain and Turkey was in so backward a condition as France, as regards sanitary matters, which we presume is strictly true. It is not very long since the communications of Parisian houses with the sewers were not trapped at all, and the ignorance of the population in all French towns touching the need of any such precautions is still profound. It is this ignorance, doubtless, which makes the cholera seem so terrible. It is not terrible any longer in countries which have learned the sanitary value of cleanliness, for they fight it, and fight it successfully.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 23, to TUESDAY, July 29, 1884, inclusive.]

DOMESTIC.

THE Democratic National Committee met in this city on Thursday and unanimously re-elected ex-Senator William H. Barnum, of Connecticut, Chairman. F. O. Prince, of Massachusetts, was chosen Secretary. Several sub committees were appointed, and the Committee adjourned to meet at the Delavan House, Albany, July 29.

The National Democratic Committee met in Albany on Tuesday. The Committee on Organization made a report which was not, however, given to the press. The Executive Committee was announced.

Governor Cleveland was formally notified of his nomination as Presidential candidate by the Democratic National Committee of Notification on Tuesday afternoon, at 3:30 P. M. in the drawing-room of the Executive Mansion at Albany. The National Committee was also present, and the ceremonies were very impressive. Governor Cleveland stood in the centre of the room, and Colonel W. F. Vilas, of Wisconsin, made a vigorous address to him, calling attention to his notable record as an executive officer. The Secretary of the Committee then read the formal address, which was very brief. Governor Cleveland's response was very dignified, and met with prolonged applause. In it he said: "I am a Democrat because I believe that this truth lies at the foundation of true Democracy. I have kept the faith because I believe, if rightly and fairly administered and applied, Democratic doctrines and measures will insure the happiness, contentment, and prosperity of the people. If in the contest upon which we now enter, we steadfastly hold to the underlying principles of our party creed, and at all times keep in view the people's good, we shall be strong because we are true to ourselves, and because the plain and independent voters of the land will seek by their suffrages to compass their release from party tyranny where there should be submission to the popular will, and their protection from party corruption where there should be devotion to the people's interests."

The National Prohibition Convention assembled in Lafayette Hall, Pittsburgh, Pa., on Wednesday. Four hundred and forty-six delegates were present and the hall was crowded. The meeting was called to order at 11 A. M., and prayer was offered by the Rev. Dr. A. A. Miner, of Boston. The address of welcome was delivered by C. L. Rose, of Pittsburgh, and Gideon T. Stewart, Chairman of the National Committee, responded in behalf of the Convention. The temporary organization was effected by the choice of William Daniel, of Maryland, as Chairman. Professor Samuel Dickey, of Michigan, was elected permanent Chairman. On Thursday morning the call of States was made for nominations. Mr. Babcock, of California, nominated Dr. R. H. McDonald, who was subsequently withdrawn. G. C. Christian, of Illinois, presented the name of ex-Governor St. John, of Kansas. These nominations were seconded with enthusiastic speeches by delegates from other States. Several other nominations were made, but afterwards were withdrawn. A motion was made to suspend the rules and nominate Mr. St. John by acclamation, but it was temporarily withdrawn, and the Convention at 1:20 P. M. took a recess until 3 o'clock. At the second session the work of the Convention was speedily concluded by the nomination of ex-Governor St. John for President, and William Daniel, of Maryland, for Vice-President. Mr. St. John has accepted the nomination. The platform arraigns both parties for their attitude on the prohibition question, and advocates "that Congress should exercise its undoubted power, and prohibit the manufacture and sale of intoxicating beverages in the District of Columbia, in the Territories of the United States, and in all places over which the Government has exclusive jurisdiction. That hereafter no State shall be admitted into the Union until its Constitution shall expressly prohibit polygamy and the manufacture and sale of intoxicating beverages."

Two Prohibition Conventions were held in Indianapolis, Ind., on Thursday. The point of difference was that one favored the nomination of a State ticket, while the other favored consolidated action looking to the election of members of the Legislature favorable to the calling of a convention for a new State Constitution, as provided in the platform of the Republican party, leaving all persons free to vote as they pleased on the general ticket, and without antagonizing either of the existing parties. R. S. Dwiggins was nominated for Governor by the former.

The New York Democratic State Committee met at Albany on Wednesday, and Eugene Kelly, of New York, was chosen unanimously to go on the national ticket as elector-at-large, to succeed William Purcell, resigned. An Executive Committee of the State Committee was appointed, with Edward Cooper, of New York, Chairman.

The West Virginia Democratic Convention on Thursday nominated for Governor E. Willis Wilson, the choice of the anti-monopoly and anti-ring element of the party. The proceedings were very disorderly, and the opposition to the ticket named is so bitter that it is thought it may endanger its success.

There was a lively meeting of Blaine Irishmen in Chickering Hall in this city on Monday. The first speaker was a Rev. Mr. Pepper, of Ohio, said to be an Irish Methodist. He denounced Cleveland as the candidate nominated by the press and aristocracy of England, and spoke of Blaine as a hero and philanthropist. All allusions to a vigorous foreign policy were cheered with immense gusto. Other orators were a Fenian judge from Ohio; James Corkeny, of Trenton; Henry Carey Baird, of Philadelphia; Edward O'Meagher Condon. A series of characteristic resolutions was adopted.

At 10 A. M. on Saturday the Greely relief squadron weighed anchor at St. John's, N. F., manœuvred, and steamed out into St. John's Bay. The flagship *Thetis* led, followed by the *Bear*, *Alert*, and all the harbor steam-tugs and steam-launches, with the flags of Great Britain and the United States at half-mast, and crowded with leading citizens. On all the public buildings and mercantile premises flags were draped. The party will probably reach Portsmouth, N. H., on August 2.

The total expense of the Greely relief expedition is estimated by officials of the Navy Department at about $700,000. The original estimate was $500,000. It is believed that the Government can dispose of the vessels for an amount equal to that paid for them. A large quantity of the stores is suitable for use in the navy.

It is rumored that Cuban dynamiters are actively engaged in hatching plots tending to the destruction of the principal cities of Cuba. A general order, promulgated by the Dynamite Centre at Cardenas, has been received by a branch society in Key West, Fla., urging the completion of their labors so that simultaneous explosions may be made throughout the island, commencing in November next.

The aggregate receipts of the internal revenue for the fiscal year ending June 30, 1884, were $121,590,039, a net decrease as compared with the preceding year of $22,963,305.

Crop reports from Ohio, Indiana, and Kentucky are to the effect that wheat is the best in quantity and quality that has been gathered in years. Corn has suffered from drought, but the rains have rescued it, and the yield will be an average one. Oats are a good crop. Tobacco has suffered more from drought than anything else, and in some localities is a failure, the rain being too late. The situation of the cotton crop in Texas is critical on account of the drought.

It was reported on Friday that there had been a death from cholera on board a Mississippi River steamer, bound from New Orleans to St. Louis, and that the family in which the death occurred had come directly from Toulon, France. The case was thoroughly investigated by Government officers, and proved not to have been cholera.

A child, three years of age, died in New Orleans on Wednesday, the symptons being those of a sporadic case of yellow fever. A thorough investigation was made and that conclusion was not sustained. The Board of Health published it as "suspicious (*sic*) of yellow fever."

The Spanish or Texas fever has appeared among cattle in Kansas, Missouri, and Nebraska, and many of them are dying. Twelve car-loads arrived at Chicago on Tuesday from Kansas, City, Mo., of which 70 head had died in transportation.

The Commercial Bank of Brazil, Ind., suspended on Tuesday with liabilities of about $140,000. Its nominal assets are $170,000.

President Arthur arrived in this city on Monday. He is on his way to Kingston and Northern New York.

Ex-Attorney-General Daniel Pratt, of this State, died in Syracuse on Wednesday, aged seventy-eight. He was elected Attorney-General by the Democrats in 1873.

Rear-Admiral George F. Emmons, of the United States Navy, died at his residence in Princeton, N. J., on Wednesday, at the age of seventy-two. He served with distinction during the civil war. He was commissioned Commodore in 1868 and Rear-Admiral in 1872, and was retired the following year after thirty-four years of active service, of which twenty-three were on the water.

Ex-Governor Walter Harriman, of New Hampshire, died on Friday of heart disease, aged sixty-seven years. He was Secretary of State of New Hampshire from 1865 to 1867, and Governor of the State from 1867 to 1869.

FOREIGN.

The Devonshire (England) Club on Wednesday night gave a banquet to Mr. Joseph Chamberlain, President of the Board of Trade. The latter, in a speech denouncing the House of Lords, regretted that the Marquis of Salisbury had precipitated a conflict between the two houses of Parliament, which, however, he said, would decide once for all the supremacy of popular rights over personal privileges. Mr. Chamberlain made the point that the Marquis of Salisbury was the bitterest opponent of the Reform Bill of 1867, and had since that time exhibited no signs of conversion. Lord Salisbury's recent professions on the Franchise Bill were disingenuous afterthoughts. The pretensions of the House of Lords were arrogant and monstrous. The Liberal party, Mr. Chamberlain said in conclusion, would pursue its work in the calm and conscious strength of an assurance of victory.

At a Liberal meeting in Manchester, England, on Saturday, 40,000 people were present. Mr. John Bright made a great speech. He said he believed the victory of the people would be complete, as it had been before. They had met with the object of compelling a house representing nobody directly to accept a bill passed by a house representing millions of people. Unless the English people were a fraud and a sham, which he doubted, they would know how to deal with a titled hereditary chamber, whose arrogance and class selfishness had long been at enmity with all the higher interests and instincts of the nation. If the Franchise Bill was rejected in the autumn he believed they would be entitled to ask the Ministers to give a definite statement

of their views in the case. They were unable to anticipate that statement, but the view of the English people would be that as their forefathers had had the power to curb a despotic monarchy, they of the present day had an equal power to curb an arrogant, and he thought, speaking of a majority of the Peers, an unpatriotic oligarchy. Mr. Bright's speech was greeted with loud and prolonged cheering. Resolutions favoring the passage of the Franchise Bill were adopted unanimously.

The announcement last week of the adjournment of the Egyptian Conference till October was premature. Another meeting was held on Wednesday, at which M. Waddington formally presented the French counter-proposals. A further session was held on Thursday without an agreement being reached. M. Waddington offered a provisional modification of the law referring to the liquidation of the Egyptian debt and also conceded the reform of the Egyptian land tax, upon the condition that Earl Granville accepted the rest of the French project.

Earl Granville, as a provisional scheme for the settlement of the Egyptian question, proposed a two years' adoption of the main points of the English project, including a reduction of the interest on the Egyptian debt and a decrease of the tax on land in Egypt.

At a meeting of the Egyptian Conference on Monday, M. Waddington, the French Ambassador, offered for the acceptance of the Conference a year's provisional arrangement, based upon a tax on foreigners in Egypt, the suspension of the sinking fund, and an economic administration. He also abandoned his proposal to reduce the interest on Suez Canal shares held in England. Earl Granville, British Foreign Secretary, asked for an extension of the provisional arrangement to two years. The Austrian, German, and Russian delegates intimated their approval of the leading points of the French proposals in relation to the government of Egypt. At a meeting on Tuesday the delegates reported that they had not yet received final instructions from their home governments. Another adjournment was therefore taken.

The Egyptian Minister of Finance, under orders from England, has issued a circular insisting upon the immediate payment of the arrears of taxes now outstanding. This will compel the cultivators of the soil to sell their crops standing. In the case of cotton the crop will have to be sold three months before the harvest and at a sacrifice of 40 per cent. below the normal value. It is believed that the object of the circular is to prove to the Egyptian Conference in an effective way the existence of widespread misery in Egypt, and thus lead it to acknowledge the necessity of an important reduction of the rate of taxation.

In the House of Commons on Monday the Under Secretary for the Colonial Department said that the Government were ready to confirm the Queensland scheme for a confederation of the Australian colonies and the annexation of New Guinea and other Pacific islands as soon as the colonists shall have finally determined upon the necessary steps to accomplish this.

The annual conference of the Conservative National Union was held at Sheffield, England, on Wednesday. A thousand delegates were present. Lord Randolph Churchill presided, supported by the Duke of Norfolk and others. The Marquis of Salisbury was conspicuous by his absence.

Lord Randolph Churchill has determined, for the sake of unity, to retire from the Chairmanship of the British Conservative Union, and will nominate Sir Michael Hicks-Beach as his successor. Parliament will adjourn from August 9 to October 23.

The Mudir of Dongola telegraphed on Wednesday that he had defeated 5,000 of the followers of the Mahdi near Debbeh and captured 300 Remington rifles. The rebel losses were very heavy. The Mudir's reports are received with suspicion at Cairo, and his loyalty is not trusted. The Kabbabish tribe has declared against the Mahdi.

It was reported on Monday that 500 persons were recently massacred at Agig on the Red Sea. A merchant who left Kassala June 21, and arrived at Cairo on Monday, says, before starting he read a letter from General Gordon to the Mudir of Kassala, dated June 11. According to this General Gordon was safe, and had abundant supplies of provisions and ammunition. He was short of money, however, and was raising funds by issuing bonds. He was hemmed in on all sides by rebels. As soon as the Nile rose his intention was to equip steamers. At Kassala, the merchant says, there were supplies of provisions sufficient to last five months.

Henry M. Stanley, the African explorer, arrived on Monday at Plymouth, England. He considers that he has completed the work of establishing satisfactory trading stations along the Congo River from its mouth to Stanley Pool, 1,400 miles by river. Mr. Stanley considers that General Gordon can during the present season ascend the Nile in steamers from Khartum to Gondokoro, a distance of 500 miles, in eight days; thence proceed to Bahar and Elgahazal, and join Lupton Bey, who commands 400 troops, having in their possession £40,000 worth of ivory. Gordon could then proceed with this addition to his force to Zanzibar. Should the soldiers refuse to take this journey, or should some other course prevent the plan, Gordon could cross to Uganda, reach the Stanley stations, and proceed down the Congo. Mr. Stanley considers that routes traversed by Herr Schweinfurth, Sir Samuel and Lady Baker, and Italian and Austrian missionaries cannot be insurmountable to the soldier, traveller, and explorer. He believes that the sending of a large English force to relieve Gordon would be a most perilous undertaking.

The annual report of the Northern Spinners' Association, of England, states that the cotton trade has not been prosperous during the past year. It draws attention to the competition offered by the growing spinning industry in India and declares that this competition is becoming serious. The trade also suffers constantly and heavily, it says, from the presence of dampened sand in the bales. Moreover, there has lately been a serious admixture of inferior cotton in bales purporting to be of higher quality. The report urges the importance of a strict examination of the bales when opened.

In the rifle contests at Wimbledon, England, on Wednesday the Canadians won the Kolapoor Cup by a score of 665. The English team scored 660 and the Indian team 576. The Elcho Shield was won on Thursday by the Irish rifle team, the scores being Ireland 1,583, Scotland 1,476, England 1,474.

The cholera scare at Arles reached a panic on Wednesday. The majority of the inhabitants had fled from their homes. The condition of affairs there is deplorable. The water supply has been cut off owing to an accident to the hydraulic apparatus. Nearly all the bakers and butchers have left the city. The supply of food is consequently scarce and difficult to obtain. The panic throughout the city is simply indescribable. The epidemic appears to be extending. Many people have become insane through fear.

It was officially announced in Paris on Thursday that the cholera epidemic at Marseilles and Toulon was decreasing. The health of Paris is good. Isolated cases continue to be reported in various parts of France, some widely distant from the infected district. A meat famine is threatened at Marseilles, owing to the fact that many butchers have shut up shop and others find it difficult to procure supplies.

Reports on Monday showed that the mortality from cholera was decreasing in the cities of France, but increasing in the country among the peasants. The consensus of opinion is that the conduct of the clergy throughout the panic has been admirable. The priests and Sisters of Charity have been indefatigable in their exertions, often doing the work of the municipal authorities in disinfecting houses.

The classification of the deaths from cholera in France, according to the nationality of the victims, gives the following results: French, 798; Italian, 322; Spanish, 13; Greek, 9; English, 1; Austrian, 1; German, 1, and American, 1. On Tuesday it was announced that the situation continued to improve.

In some remarks concerning the revision of the Constitution on Friday, before the French Senate, Prime Minister Ferry created a profound sensation by warning the Senate, that unless the question of revision should be settled now, there would be a more serious conflict before the end of the year.

The French Government decided on Monday, a majority of the Chamber of Deputies concurring, to abandon revising the power of the Senate in relation to the budget. This would enable the Senate to pass the remainder of the Constitutional Revision Bill. At a meeting of the Republican majority of the Chamber of Deputies on Tuesday they refused to concur until the Senate had formally voted on the subject. The Senate later in the day rejected the above section and passed the rest of the Revenue Bill. It is believed that the Deputies will concur.

The negotiations between Prime Minister Ferry of France and Li Fong Pao, the Chinese Minister, in regard to the indemnity were suspended on Friday, the Chinese representative adhering to the last offer of 20,000,000 francs. M. Ferry conceded China eight days' delay. If in the meantime an agreement is not reached, the French squadron will seize Foo-choo.

President Grévy, of France, is seriously ill, but it is believed that the danger is passed.

The electoral campaign in Germany for members of the Reichstag is being actively carried on. The Liberal platform opposes governmental interference in the matter of insurance and limits the Government's assistance to colonial extensions.

The Emperor of Russia has appointed a commission to revise the laws relating to Finland in the direction of a complete suppression of the local government. The Diet of Finland will be limited to a consulting rôle. The reasons for this project are that the Nihilists are making Finland the basis of plots against the Czar and his Government, and that the plots are connived at by the Finnish authorities and people.

It was reported from Madrid, on Saturday, that the negotiations between Spain and America relative to a new commercial treaty were at a standstill. The pretensions of America clash with Spanish interests in Cuba. Spain is reluctant about allowing closer commercial connection between her colonies in the West Indies and America. The latter is already taking eighty percentage of the exports from Cuba.

The inquiry into the conspiracy to blow up the palace during the Czar's visit to Warsaw shows that elaborate and far-reaching plans were adopted. Evidence is adduced to prove that the conspirators, after murdering the Czar, intended to provoke a rebellion in Poland and Western Russia, to plunder the Jews and rich tradesmen of Warsaw, and to seize the arms in the arsenal. The Czar has not, however, renounced his intended visit to the palace.

General Cáceres has declared himself provisional President of the Republic of Peru, and has expressed his willingness to hold the power until he can resign it to General La Puerta, in order that the latter may call an election.

THE INDEPENDENT CONFERENCE.

THE Conference of Independents last week exceeded both in the number and character of the delegates the expectations of all those concerned in getting it up. We believe it represented a force in politics which is fully sufficient to turn the scale in this State, as well as in Massachusetts, Connecticut, New Hampshire, and Ohio, all of which are necessary to give the Republican candidate the victory. The probabilities are, however, that it really stood for a greater mass of Republican discontent than will ever show itself in any organized way. Everybody knows among his acquaintances scores of Republicans who mean to bolt the Republican ticket, without making any formal announcement of the fact, simply in order to avoid the worry of discussion and the attacks and remonstrances of sorrowing friends. In other words, we have no doubt whatever that not over half the Independent movement, formidable as this is, appears above the surface. The other half will not show itself until election day. In this State, in 1882, the most sanguine and extravagant estimates of Cleveland's majority put it at 75,000. All the shrewdest and most practised observers put it at 50,000. It actually reached 192,000, showing what a vast body of revolt may exist in the ranks of the Republican party without the knowledge of party managers or arithmeticians. These managers were doubtless able to estimate accurately enough the extent of the Half-Breed or Garfield defection, but there was evidently fully as much more that they knew nothing about, and could not account for. In the Democratic party these surprises can hardly occur. The discipline is sterner, and the independent thinking rarer; but among the Republicans the number of those who vote silently and without letting any one know why is very large, and is increasing.

These silent voters will, however, be reached and influenced by the words and action of the Conference just as much as if they sent delegates to it. The delegates who attended yesterday were in fact, to a degree rarely seen, men who exert influence in their several localities on the class which does its own thinking—some through the mere force of their character, and others through their intellectual gifts of one sort or another. It is probably rare to see in any one room in the United States so many men whose say in politics is heeded by so many others. In fact, one has only to know a little about them to be satisfied that the Blaine managers have made a great tactical mistake in meeting them with abuse and ridicule. It was, for instance, a blunder for the *Tribune* to say that the opposition of James Freeman Clarke, the minister and moralist—one of "the good gray heads" who have for half a century been the glory of Massachusetts—was of no consequence, because his coachman's vote was as good as his, and would be cast for Blaine. The coachman carries no one with him. Dr. Clarke carries hundreds, and hundreds more who revere Dr. Clarke for his virtues and services, are likely enough to make the Republican candidate suffer for any slight put upon him by Mr. Blaine's friends. A great many illustrations of this might be cited. What the Republican ticket needs is votes, not cheap victories in newspaper slangwhang over his enemies and detractors. The candidate has no time to live down the assaults on him between now and November; but he has time, perhaps, to conciliate or win over some of his assailants, or at all events to avoid increasing their number, by restraining the license of his newspapers and putting on a sober and injured air. He cannot say, nor can any rational man say, that there is nothing in objections to a candidate's character, of which such a body of men as met at the University Club Theatre, feel the force. He must confess that there is something wrong with a personal history which arrays thousands of clergymen, professors, lawyers, and educated moralists of all professions in organized hostility to him, and he is himself not such a fool as to suppose that if such hostility be powerful enough to merit any notice whatever, it can be disarmed or made powerless by abuse or ridicule of those who feel it.

The action of the Conference in restricting itself to reasoned advice will commend itself to the judgment of most observers. A separate ticket, carrying the names of the Democratic candidates, would doubtless conciliate a good many Republicans who like to have it to say that they never voted the Democratic ticket—a prejudice which is doubtless very respectable. But this would involve the creation of a separate campaign organization—a work of enormous labor and expense, and hardly to be undertaken unless an essential condition of success. The time has come for all friends of good government to remember that parties are but instruments. The American people are their first and great concern, and the ticket which this year promises best for American honor and prosperity is the ticket for patriotic men to vote.

INTIMIDATION AT THE SOUTH.

GENERAL LOGAN and Senator Hoar lay great stress on the assumed fact that either the colored voters in Mississippi, the Carolinas, and other Southern States are intimidated, or that if their votes are cast they are not properly counted. There is a strong presumption that this is true. We shall assume for the purpose of discussion that it is true. The chapter of carpet-baggery and kukluxery need not be recapitulated in order to show how this state of things has come about. It is well known that we have had three Republican Presidents since the condition so much deplored came to pass, and that the case which attracted most attention and led to the gravest crisis in our political history—the disputed election in Louisiana in 1876—took place under General Grant's Administration, so that really there have been four Republican Presidents during the régime of intimidation, and yet no change for the better has been effected. The question will naturally be asked how the election of Mr. Blaine will improve things down South if his predecessors in office have not been able to effect any change? If neither General Grant, nor Presidents Hayes, Garfield, and Arthur could alter the conditions under which the elective franchise is exercised at the South, is it probable that Mr. Blaine will be able to do so, and if so, how?

The reconstruction acts, including as their principal feature the measures by which the suffrage was conferred upon the freedmen, are to be viewed in a two-fold aspect, first as regards the national Government, and second as regards the local governments of the South. That it was necessary to confer the suffrage upon the colored people at some time was perfectly clear. It was necessary to bring them into harmony with our institutions at whatever cost, and we hold to the opinion that the best time to begin was when it was actually begun. We think the inevitable misery attending the introduction of this new element into Southern politics would have been as great had the change been delayed until some ideal advancement of the colored population in point of education had been reached. The first plunge in the stream of equal rights had to come some time, and it is commonly agreed among the students of political philosophy that the best cure for the vices which slavery breeds is the exercise rather than the contemplation of freedom. A well-known paragraph from Macaulay applied to England under the Stuarts, is equally applicable to the condition of the blacks at the close of the war:

"There is only one cure for the evils which newly acquired freedom produces; and that cure is freedom. When a prisoner first leaves his cell, he cannot bear the light of day; he is unable to discriminate colors or recognize faces. But the remedy is not to remand him into his dungeon, but to accustom him to the rays of the sun. The blaze of truth and liberty may at first dazzle and bewilder nations which have become half-blind in the house of bondage. But let them gaze on, and they will soon be able to bear it. In a few years men learn to reason. The extreme violence of opinions subsides. Hostile theories correct each other. The scattered elements of truth cease to contend, and begin to coalesce; and at length a system of justice and order is educed out of the chaos. Many politicians of our time are in the habit of laying it down as a self-evident proposition, that no people ought to be free till they are fit to use their freedom. The maxim is worthy of the fool in the old story, who resolved not to go into the water till he had learned to swim. If men are to wait for liberty till they become wise and good in slavery, they may indeed wait forever."

To have accomplished reconstruction without conferring the suffrage upon the blacks would have been equivalent to never conferring it without the consent of the whites. Those who remember with what difficulty it was conferred upon them by some of the Northern States after the war will readily see that it could not have been given to them by any internal or local action on the part of the Southern States, but must needs be forced upon them by irresistible external pressure.

The other aspect relates to the local governments of the South—State and municipal. It was perfectly certain that resistance would be made to the exercise of the taxing power (which is virtually the Government everywhere) by ignorant field hands, whether controlled by Northern adventurers or left to their own devices. We are far from defending the policy which has been pursued by the Southern whites in their fixed

determination to keep the taxing power under their own control. We only advert to it to show that it was one of the inevitable concomitants of the transition, or rather the revolution, which the war brought in its train. It was one of the miseries and punishments of the slave system, in which the North participated for two centuries and which the Northern people upheld long after slavery had ceased to exist among themselves. That it will be eradicated in time we have no doubt, but the cure will come through the perseverance of the colored men themselves, through the political training which they are acquiring from year to year, through the daily exercise of freedom, through the growth of their own courage, and partly through the evidence given by the more intelligent among them—such men as John R. Lynch, of Mississippi—of their capacity for self-government. It will never come in any other way. It can never be permanent if it comes from without and not from within.

MR. BLAINE AS A LEGISLATOR.

A good many Republicans who are going to vote for Mr. Blaine because he is "magnetic" or because he is the regular nominee of the party, are now occasionally much embarrassed, in their inevitable discussions with Independents and Democrats, by the want of other and better reasons than these for supporting him. The question "Why do you think Mr. Blaine a statesman?" is particularly embarrassing. Very few of them indeed can tell, without some assistance from a Blaine editor. One of them, who had apparently been roughly handled in a controversy about Blaine with a Democrat, wrote to the Philadelphia *Press* the other day, to inquire "what good in particular Mr. Blaine ever did while in Congress," the Democrat having promised that if this question were satisfactorily answered he would vote for Blaine in November. The *Press* accordingly goes to work to provide an answer, and its attempt is very interesting, because it is very rare indeed, if not unknown, for a Blaine editor to try to give the particulars of Blaine's statesmanship. It is all the more interesting because the *Press*, together with the New York *Tribune*, does nearly all the real organ work of the Blaine movement in the Eastern States. What it has to say about Blaine's exploits in Congress will therefore be listened to in very solemn silence.

Blaine was in the House twelve years and a half, during six of which he was Speaker. It was in the other six, therefore, that he had to make his mark as a legislator. The *Press*, in its cold prudent way, does not mention any bills originated by him, or of which he had charge, or of which he was a conspicuous and leading advocate, but it says he was "one of the most active, conspicuous, and influential members," and at the very first session, "in the discussion of the important law and revenue questions then before Congress, bore himself more like a veteran legislator than the usually silent and distrustful novice serving his first term." Moreover, Thaddeus Stevens paid him a high compliment for a speech he delivered "on the ability of the American people to suppress the rebellion." He was, too, "active as a member of the Post-office Committee in securing the system of postal law now in use," and he discussed the Fourteenth and Fifteenth Amendments. On the question of protection to American industry he was sound as a bell, and on the first day of February, 1866, gave utterance to the remark: "In theory and practice I am for protecting American industry in all forms, and to this end we must encourage American manufactures and we must equally encourage American commerce." The originality of this has been disputed, but, we believe, never successfully. If Mr. Blaine was not the first to make it, no one has been able to show who did. He also made a powerful speech against the Butler plan of paying the national debt in greenbacks.

This is all there is to say about his career as a legislator during the first six years and a half. Of his six years of Speakership the *Press* says, with much simplicity, that "his influence was not unfelt in the important legislation of that period." This, we believe, is strictly true. He kept a sharp eye on all the railroad bills in particular. How he made his influence "not unfelt" in the passage of the Little Rock and Fort Smith Bill he has himself told in one of the Mulligan letters; what a keen interest he took in the legislation affecting the Northern Pacific Railroad he has told in another; and what was his governing motive he revealed clearly enough. He was laying the foundation of his fortune during this period, and he saw clearly how his influence on legislation as Speaker would enable him to do it. As the *Press* remarks, "his influence and agency appear in the whole body of legislation as moulded by committees of his appointing." One striking illustration of this, which the *Press* does not mention, appeared in the case of the Committee on Civil-Service Reform, during his last term as Speaker, that is, in 1875. On this committee, which consisted of eleven members, Mr. Blaine put two friends of the reform, and these only lukewarm—Messrs. Willard, of Michigan, and Woodford, of New York. The other nine were bitter enemies of it, and for the time being they killed it. One of them was the Hurlbut whom he afterwards sent to Peru as Minister, a man who had been convicted, when holding a high command during the war, by a commission composed of the late James T. Brady, of the New York bar, and General W. F. Smith, of the army, of fraud, bribery, forgery, and falsification of letters. Another was "Ben" Butler. Under the lead of this Committee the House refused to make any appropriation to pay the expenses of the Civil Service Commission, and thus furnished President Grant with an excuse, of which he promptly availed himself, to abandon the reform altogether. Blaine's motives in making up this committee in this way were well understood at the time. The Hartford *Courant*, whose editor was then in Congress, saw through the whole thing, and thus commented on the composition of the Committee:

"Mr. Blaine is most to be congratulated in the adaptation of means to an end in the construction of the Committee on the Reform of the Civil Service. There can be no doubt about what that will do, Congress being determined not to surrender its recently-acquired privilege of selecting the agents of the Executive departments, and being determined that civil appointments shall be made as a reward for party service, and that the farce of the reform of the civil service shall end."

And yet that editor, General Hawley, is today commending on the stump this very Blaine to the American people as a man fit for one of the highest trusts in the world.

In the Senate, according to the *Press*, Mr. Blaine tried to get the silver dollars made equal in value to gold, and he tried to stop the immigration of "the cheap-working Mongolian." It does not mention his demagogic attempt to save the devastators of the Government lands from prosecution by the Interior Department, and his production of the novel theory that the Secretary of the Interior, Mr. Schurz, having been born in a small country, was somehow disqualified for interfering with robbers born in a large country. For other information about its hero the *Press* refers its correspondent "to some one of the large number of biographies already published or to be published." It is folly to suppose, however, that the inquiring Democrat will be satisfied with this showing. He must have known how the inquiry would end, and his vote will doubtless be cast for Cleveland. In fact, our advice to everybody who means to vote for Blaine is not to attempt to give his reasons for it.

TIPS AND FEES.

A paragraph going the rounds of the press, and, to judge by internal evidence, not originating in New York, states that the custom of giving fees and "tips," formerly confined to waiters, is getting unpleasantly common in this city. It is said to have appeared in evidence in a "recent trial" that "barbers habitually scrape customers who do not fee them; elevator boys expect tips for accommodating passengers, drivers of stages not only look for fees to persons who sit on the roof for a smoke, but stop their vehicles near the sidewalk for profitable patrons to get in or out. Conductors of street cars sometimes accept retainers for informing passengers when a particular street is reached, domestic servants in fashionable families expect fees for the slightest services rendered to guests, and even clerks and messengers in some of the great stores need the stimulus of a 'tip' to move them to active service in behalf of customers." The New York reader will perceive that there is a touch of exaggeration in this picture. It is still not customary, for instance, so far as we know, to fee horse-car conductors or clerks and messengers in stores; nor is it *de rigueur* in New York, whenever a fashionable friend's servant brings round the potatoes or the butter, to slip a quarter in the honest fellow's palm.

There is no doubt, however, that feeing and "tipping" in New York, which is here as elsewhere a necessary and useful branch of the art of living, has made some healthy progress in the last quarter of a century, in the direction known among scientific people as differentiation and specialization. The old American theory of the "tip" was that either a fellow-citizen was not to be "tipped" at all,

or that he was to be given a quarter. Why a quarter was hit upon by our forefathers as the precise sum which was proper for a gratuity is not now known, though it may be suspected to have been because the quarter represented the old shilling. If this is so, the donation of the quarter was really a curious sort of English survival in a strictly American period, the shilling having been an English unit, which, by the way, still lingers on in American speech, though long since eliminated from the currency. At any rate down to the time of the war, and during the African hotel service period, a quarter was the coin universally handed as an honorarium to the grinning darkey who whisked the arriving or bowed out the departing stranger.

The great objection to the quarter was that it was merely a minimum unit of donation. A man who would take a quarter for a service made no scruple about receiving more; he would always take with readiness two or three quarters, or the dollar of our fathers, and he did from the wealthy and benevolent often receive such sums, but below a quarter he received nothing. By a curious tacit understanding, extending over the country, which had the force of written law, the minimum of a gratuity was fixed at a quarter. It was not that it was supposed that any sum less than a quarter would be returned to the giver, but it was felt to be beneath the dignity of a real American to offer less; it implied either poverty or at any rate meanness.

The quarter, as the "tip" and fee unit, still prevails, we believe, in the West, but owing to the development of New York into a modern capital, governed by the laws which prevail in all capitals, it has to a great extent disappeared here, the custom substituted for it being that of proportioning as far as possible the size of the fee or "tip" to the service rendered. This is no doubt a European theory, and it prevails much more in "circles" infected with European ideas than it does in those where the pure American tradition is kept alive, if, indeed, there are in New York any longer any such circles. But speaking generally, however the case may be in Brooklyn or Harlem, the unit rule with regard to waiters in New York is abandoned. A man may, for instance, in a restaurant, without loss of self-respect, give a waiter twenty cents, fifteen cents, or even, if he dines with great moderation and self-restraint, ten cents; and we have known a man of large means to give a waiter five cents without the latter's subsequent behavior indicating any loss of esteem or regard. The case is the same, so far as our observation extends, in other kinds of service. Even the ferocious fellows who transport trunks at the railroad stations from the street to the baggage-room, and then surround the traveller with lowering and determined faces, have no fixed fee. We have ourselves tried every variety of experiment with them, from giving them a quarter for each piece transported to bidding them good morning without any transaction of a pecuniary nature, and have always escaped unharmed.

But this brings us to the serious point in the American "tip" and fee system, even as reformed by the proportional or percentage rule. The original theory rested on the idea of a gratuity. The fee was something given, not as a matter of right, but out of the goodness of heart of the donor. The waiter, or porter, or boot-black, or whisk-broom official felt this and acted in a manner indicating rather an anticipation of an opportunity for demonstrations of gratitude than base greed for money, and determination to have it if possible. There are now many signs, however, that these classes are getting the idea that the "tip" or fee is a matter of right—one of which the stranger will endeavor to defraud them if they do not protect themselves; under the influence of this idea, they are, undoubtedly, by assuming a truculent and unconciliatory attitude on the subject, impairing the amicable relations which marked the period of the quarter. This is especially noticeable now about Christmas time, when the "tip" and fee custom is reinforced by the gift custom, and when all classes engaged in any regular service of any kind, who feel that they are in danger of not getting a fee of some sort, assume a demeanor sadly at variance with the traditions of the time. This is the time when the elevator man, especially if the elevator is a dark one, and no one else is in it, reminds you, not in a suppliant voice, but in a cold, hard, business-like tone, that Christmas comes but once a year; perhaps adding with significant familiarity, "Don't you forget it." In a large club up town there is always put up about the end of the year a blank sheet of paper for the members to subscribe an annual fee to the waiters, the understanding being that those who do not give are marked men. Every one knows what the letter-carrier does about New Year's. We have never trusted ourselves on the top of an omnibus for the sake of smoking with the driver, but in that lonely and dangerous position we should think it highly probable that any conversation with him would produce strong hints of the hardships of his life and the need of money.

All this indicates the danger of the "tip" and fee system in a democracy, where the feeling about accumulated wealth and the rights of man is strong—the danger that the classes benefited by it will pervert it from its true purpose into a species of blackmail. This would take all the poetry out of it, and if we ever reached the condition typified in the picture presented in the paragraph already quoted, a "movement" of some sort would probably be started to do away with it. But how could such a movement succeed? A general strike of all the classes interested in "tips" and fees would paralyze the industry of the country. Our dinners would not be cooked; our beds would not be made; our letters would not be delivered; the railroads would not be run, and disaster and ruin would stare us in the face. They already feel their strength. Let us pray that they may never learn to act together.

THE LORDS AND THE FRANCHISE BILL.

NEARLY all the Liberal chiefs in England have now had their say on the subject of the rejection by the Peers of the Franchise Bill, Mr. Bright's speech at Manchester on Saturday being the last of the series. None of them, not even Mr. Chamberlain's, has gone so far as to propose the abolition of the political power of the Lords, or the curtailment of their privileges, or the creation of new peerages to vote down the old ones. Measures looking to one or the other of these ends have been mooted in Radical newspapers, but have found little favor even among the classes which the Franchise Bill is intended to benefit. The belief is everywhere entertained that the Lords will yield, and it is not the British way of accomplishing desired political changes to use more ammunition than is actually required for the purpose.

Aside from the spirit of conservatism which penetrates all classes of British society, the Liberal leaders understand perfectly the danger of turning the political activity of the titled classes from the hereditary to the elective chamber. Under present conditions the heads of the 500 houses who represent the landed interest, and the great names which surround the throne and stand for so large a part of the nation's history, are content for the most part with the restricted influence to which the Upper House has gradually declined. Their social importance, which by the majority is rated even more highly than political consequence, has not declined, and so long as their distinction is acknowledged and their pleasures are not interfered with, nine-tenths of them would prefer to have the *status quo* remain undisturbed, even though the Lords should become for all practical purposes a cipher in the government of the country. So long as their nominal concurrence in legislation is requisite, and is solicited with the customary forms, they are content that it should be nominal. They know that their real power is less than that of the American Senate, because there is a limit to the resistance which they can oppose to the Commons. They acknowledge to themselves that they are not an independent body. They are generally lazy, and are quite satisfied to be the figurehead of a great and powerful empire. Very few of them have the ambition to be more than figureheads. So long as their outward prestige and their property are not involved, it is of little concern to them who is the helmsman and who are the engineers and stokers of the ship of state.

But this simulacrum of power could not be abolished without producing a great change in British society. The type of aristocracy is still the House of Lords. The right to sit there and to pass upon every measure that becomes a law of the United Kingdom is the ever present sign and mark of superiority which distinguishes the British Peer from the nobility of every other country, and which confirms the estimation in which he is held at home and abroad. Take this away from him, and he would be "a poor stick" indeed if he did not make an effort to recover his prestige and consequence by such avenues of preferment as would still be open to him in common with all British subjects. A seat in the House of Commons would then be the highest social prize, as a seat in the Lords is now. The heads of the great families

would enter the race with all the advantage which wealth, titles, land ownership, and local renown confer—advantages which would be formidable in any case and probably irresistible in the earlier contests. It is a proverb that the average Briton dearly loves a lord. There is no country where the possessors of titles and privileges have so easy a time or where their supremacy meets so little challenge. The inhabitants of the darkest and most squalid districts of East London are always ready to throw up their hats for a lord, and, as a rule, would vote for him in preference to Mr. Bradlaugh.

The Liberal party, therefore, are in no haste to call the popularity and latent strength of the Peers into activity by closing the door of the hereditary house. They will wisely follow the beaten path in dealing with the Franchise Bill. The Peers know how to yield as well as how to resist. They know how far public opinion will sanction their opposition to the Commons, and when the limit is reached the bill will receive their concurrence, and some means will be found, as in other cases, to avoid the appearance of too great humiliation. By dealing gently with them, and putting them clearly in the wrong, it seems quite certain that Mr. Gladstone will recover the prestige which he had partly lost by the mishaps of his Egyptian policy.

HEINE'S MEMOIRS.

PARIS, July 13.

THE memoirs of Heinrich Heine have appeared at the same moment in French, in German, and in English. It was a disputed question whether the poet had left any memoirs at all. His numerous biographers have expressed on this point contradictory opinions. What is now published is a mere fragment which was written in 1854, and was found in the papers of Mme. Heine, the widow of the poet. It is the second *rédaction* of an older work, which, says Heine, had been partly burned. Even in this fragment there are parts missing; twenty-five pages have been torn by some member of the Heine family to whom the manuscript had been communicated. The Heine family did not immediately and did not always recognize the genius of a somewhat unruly and inconvenient relative; and the poet, on his side, did not, in his memoirs, speak of his own family, or, at least, of some members of it, with sufficient caution; he did not attempt to conceal its humble origin, its religion. "Nul n'est prophète dans son pays," says a French proverb. You might add sometimes that no one is a prophet in his own family. Mme. Camille Selden, who was one of the confidantes of Heine during his long illness, says positively that when he wrote his memoirs he obeyed a feeling of resentment against some members of his family. The real memoirs of Heine are still to be found in all his works; yet it seems to me that the critics have spoken a little too lightly of the fragment of the memoirs just published. M. Bourdeau, who has written the introduction to the French edition, says: "These memoirs of Heine will add little to what we know already of his youth." M. Émile Montégut, in an article of the *Revue des Deux Mondes*, says, in a note, "The first parts of the memoirs of Heine, which appear at the moment when these pages are written, add but little to what the poet has already said of his youth." We have been much charmed with this "little"; it is with it as with many of the poems of Heine; he can express a great deal in few words. The story of the childish and unconscious love of Heine for Sefchen, the daughter of the executioner, is very characteristic; it shows the genius of Heine in its embryonic state, with all its wonderful qualities, and also with its defects. The nature of Heine's relations with his mother and with his father is analyzed with a delicacy which is truly marvellous, as well as the development of Heine's own nature, under the peculiar circumstances in which he was placed.

The article of Emile Montégut on Heine deserves attention, as Montégut has been intimately acquainted with many contemporaries of the German poet, and his criticism has always a very original and personal flavor. He saw little himself of Heine; he tells us, however, that he had promised an article to him a few months before his death, which took place in 1856, twenty-eight years ago. Heine had read an article of Montégut in the *Revue des Deux Mondes* on "Young Ireland," and some traits of this article had given to him the impression that Montégut was a suitable man to write something on his own writings. He wrote a very amiable note asking him to come and see him. Montégut, of course, went immediately to his house. "I found him," says he, "alone and in bed, half dressed, having before him a long roll of paper; he had filled the first page with his pencil in a singularly firm and clear writing, in which it would have been difficult to discover the slightest weakness or the least trembling of the hand." Montégut was much struck with the fact that malady had struck down Heine, but had not destroyed his beauty nor even his air of youth; he was struck also with his German accent, which long years of Parisian life had not been able to cure. "Even this defect," says Montégut, "had a sort of grace, and was in relation with the peculiar turn of his humor and the habitual color of his thoughts; had it not been with a Germanic accent that he had in old times celebrated the Greek gods and announced to his contemporaries the equivocal good news of a religion of pleasure which would cure the soul and its sadness, and take from the flesh the anathema of Christianity?"

Heine first spoke of Germany. He confessed that the divination of the poet had been completely baffled in this respect. He had never thought that the transformation of Germany could be worked by other than parliamentary or revolutionary means, and the fiasco of the Parliament of Frankfort in 1849 had destroyed all his hopes. Montégut politely intimated that perhaps Germany would find some other means. "No," said Heine, "they have had the opportunity for doing something—they have lost it; they will now do no more." He spoke, also, of Prussia; he was persuaded that this Power, though it was ambitious, would never be able to realize its dream of supremacy: it would find too many obstacles in the other Powers of Germany. It is a little singular that Heine, who was somewhat of a prophet for France, was constantly deceived in what related to his own country. His emotion was perhaps too strong in what concerned his own race and his own people; he was more calm, more disinterested, and consequently less blinded in what concerned France. Immediately after 1830 he prophesied the return of the Bonapartes, which certainly seemed very improbable at the time. After all, his opinions were always more poetical than rational. Can there be anything more poetical than the story of the drummer Le Grand, who was living in the house of the parents of Heine, at Düsseldorf? The child tells us how this French drummer, who did not know German, taught him the history of his time with his drum only—the French Revolution, the bloody days of the Terror, the great battles of Napoleon. He could drum the "Marseillaise"; and when Le Grand wished to speak of Germany, he merely said, "Dum, dum, dum." The history of the retreat of Russia becomes very eloquent under the fingers of the drummer Le Grand. But Le Grand is nothing but Heine; his poetical genius finds these original expressions. France seemed to Heine the land of liberty; when he crossed the frontier, he told the Commissaire who asked him to which nationality he belonged, "I am a Prussian *libero*." He did not breathe freely in his own country. "I did not like," says he in his famous articles sent to the *Gazette* of Augsburg, "this mixture of philosophy, of Christianity, and of militarism—this mixture of beer, of lie, of Brandenburg sand." He spoke as a rebel; he insulted his own country; he felt a perfect horror for the German romantic school, for the Middle Ages; and at the same time his genius could not help being romantic. There is no real method, no real logic in him. All his abuse of Germany is forgotten when he meets, on the road to Havre, some German emigrants: "A sudden sentiment filled me, such as I had never felt in my life. . . . Yes, there was my own fatherland; I had met it on the road. On these cars was sitting fair Germany. . . . If I had often had with my happy fatherland a small domestic quarrel, as happens in the greatest families, all memory of these differences was lost when I saw my fatherland unhappy, in exile. . . . Ah! I did not know how much I loved it. I was like a man to whom physiology has not taught the value of blood: if you bleed him, the man falls."

Let us return to the visit of Montégut to Heine. The French critic confesses that he was more interested even in the person of Heine than in his thoughts, as his thoughts were already known to him. He remembered during his long visit all the time a phrase of the 'Reisebilder'—"Sick people are really always more distinguished than people in good health; the sick man only is a man; his members tell us a story of suffering, they are spiritualized." The time was no more when Heine pursued with his sarcasms the pale followers of what he called Nazarenism; his ideas in "Les Aveux d'un Poëte," which had appeared in the *Revue des Deux Mondes*, had returned to Judaism; his hands were transparent, luminous, with a feminine elegance; though he was fifty-six years old, and had suffered during eight years from the most cruel malady, he looked almost young. "It is the first time," says Montégut, "that I felt strongly that an imperishable youth is the privilege of the natures which are essentially poetical. Since then my course of life has allowed me to verify it several times, and I have never found this impression erroneous." Montégut has been somewhat forgotten lately perhaps. He has written very little; his reputation has been diminishing in his own lifetime; he is, however, one of the most brilliant critics of our generation; he has not bowed before the modern idols of naturalism, of realism; he has continued to live in the higher spheres of art. His appreciation of Heine is a good specimen of his manner; he shows with great skill how the definitive form of the genius of Heine was found very early; how all the originality belongs to the first period. Heine was all Heine at the age of twenty-five, and life added not much to him; his source of inspiration was only renewed when the approach of death began to be felt.

But what is very striking in the criticisms of Montégut is the lesson of morality which he draws from the life of Heine. "Generally," says he, "we are happy to be able to put to the account of fatality the accidents which are found in the lives of celebrated men, but

here this pleasure is entirely refused to us. No fatality threw its weight on Heine, except the fatalities which he created for himself. All the first and, in consequence, all the fundamental circumstances of his life are in unison with his childhood, which was spent happily in an easy mediocrity. Except the eccentricity of situation which resulted from a Jewish origin in a German country, I see nothing of which Heine could have accused destiny." Besides, this inconvenience, in the case of Heine, was but slight. He was of an excellent Hebraic extraction: his father, though he was not wealthy, was the brother of the rich Salomon Heine, of Hamburg. Heine never had to complain of his relatives; they did not perceive his genius very rapidly, but they did recognize it in the end. They did not oppose his vocation; as soon as it was proved that he was not fit for business, he was left entirely free. His uncle became his most generous protector: "The banker of Hamburg deserves to be remembered by posterity, for it is to him that we owe the Heinrich Heine whom we know. Without the money of the banker of Hamburg, there was no journey to England possible, nor to France—no season at the seashore; and, consequently, we should have been deprived of the adorable book of the 'Reisebilder.'" It was with the help of this uncle that Heine was able, between 1819 and 1825, to make his law studies at Bonn, at Göttingen, at Berlin. Salomon Heine never resented the tricks, the *carottes* (the word is Heine's own) which he too often played on his uncle. The law could not enslave our poet any more than commerce. The poet had already created a world of his own; and it is quite true to say that when Heine wrote in 1816 his 'Two Grenadiers,' he was already the great lyric poet whom the whole world has since admired. When he arrived at Berlin he was already, for many, an old acquaintance. The world smiled on him, but there was something in him which could not be subdued: "Do not play with the serpents—their embrace is too strong." Heine played all his life with serpents, and they finally made him their prisoner and their prey. We hope that Montégut will give a complete analysis of the poetical and of the critical work of Heine; few men are as able to describe such a complex, such an extraordinary genius.

Correspondence.

INDEPENDENT SENTIMENT IN IOWA.

To the Editor of The Nation:

Sir: Apparently, the State of Iowa is overwhelmingly for Blaine. I say apparently; for while here, as elsewhere, the noise and the demonstration are all on the side of the Blaine forces, here also, as elsewhere, there is to him, on the part of intelligent and thoughtful voters, a marked spirit of opposition. Men in the State of Iowa who, ever since the organization of the Republican party, have supported its nominees for the Presidency, will not support Blaine in November. Said one of these men to the writer, not many weeks since: "I cannot vote for Blaine. If Cleveland or Bayard is nominated by the Democratic Convention in July, he shall receive my vote." And such is the quiet determination of scores of Iowa business and professional men.

Two things, moreover, are signified by this determination on the part of considerable numbers of the Republican voters of this State: first, that the efforts of the Massachusetts and New York civil-service reformers for honest government are beginning to be felt and appreciated in the West; second, that the intelligent classes, the land over, have had quite enough of the methods of dishonest and sensational politicians. The reasons for including Mr. Blaine among those thus harshly but justly designated, as they exist in the minds of the Iowa Independents, are briefly these:

1. Mr. Blaine has been convicted of a deliberate falsehood in that he asserted, in a speech in Congress, that he paid for his Little Rock and Fort Smith bonds the same price that others paid for theirs; that the "company never parted with a bond to any person except at the regular price fixed for their sale"; whereas it appears, from a memorandum in his own handwriting (and which he has never denied to be what it purports), that he bought no Little Rock and Fort Smith bonds at all, but received them, to the amount of over $100,000, *as a gratuity or commission for legislative services.*

2. Mr. Blaine, so far as he can be judged by his course in Congress and his official acts as Secretary of State under Garfield, is an eminently unsafe and dangerous man to whom to intrust important executive functions. He is an able party leader, but in no right sense of the word a statesman. His name, so far from being *identified*, in either house of Congress, with any important legislative measure, is not even *associated* with the *consideration* of one. As Secretary of State, he undertook to discuss with Earl Granville the Panama Canal question, in evident utter ignorance of the Clayton-Bulwer treaty, upon which alone any such discussion could properly be based, and in a tone and temper so offensive as to be highly discreditable to American diplomacy. His intervention in the settlement of the Chili-Peruvian difficulty was officious and meddlesome to a degree, and defensible on no ground of national expediency even, much less of necessity. Instead of strengthening the friendly feeling at the time existing between the South American republics and the United States (its much-lauded object), it served rather to weaken it. It was a departure from the well-settled American policy of non-intervention in the wars and politics of foreign Powers, and so felt to be by the South American States.

These reasons for refusing to support the Blaine ticket at the coming election are not new, but they are potent, and recognized as such by the Independent voters of Iowa.

I. B. Richman.

July 22, 1884.

QUARRELS IN COLLEGES.

To the Editor of The Nation:

Sir: Before the evil discussed in your article on "College Controversy" is completely understood, one other source of it must be taken into the account. Politics, in their modern and most obnoxious form, have invaded the quiet groves of Academe. It is becoming common for the board of trustees and even the faculty to be manipulated by some adroit member, who has imbibed the spirit and mastered the methods of the Machine. He busies himself in "fixing things." Meetings are called on purpose to consummate what he has planned, though his agency in the matter is cautiously concealed. He is constantly scheming to accomplish this or that. He is not satisfied to carry a measure on its merits: it adds a peculiar pleasure for him to reflect that he saw certain members, laid his train, and worked up the case. Points he could easily gain by regular, open process, he slyly and laboriously compasses by indirection. The board often finds at the end of its session that it has been used to put through some project of this industrious manager.

Now, it is to be said to the credit of college presidents, faculties, and trustees that they are generally above all this. So far as they are aware of it they despise it; but often they do not suspect it. They cannot afford to descend to this style of tactics. It is beneath them. This very fact gives the managing member his opportunity and insures his success. The majority of fair men, with open methods, are distanced and circumvented by one or two who employ politics. They bear it with growing impatience for a time, and then protest or denounce. This, of course, precipitates a quarrel.

You see that the disease which has nearly eaten the virtue out of our party politics, and which is turning republican government into a broad burlesque, has attacked the government of our colleges, and with promise of like results. The remedy is the same in both places—sufficient courage on the part of those who perceive the evil and who abhor it, to expose it, agitate for reform, and persist till honest, open methods prevail in all kinds of public administration.

M.

A CARD FROM MR. HAMERTON.

To the Editor of The Nation:

Sir: I see a paragraph in a Chicago literary paper, the *Current*, in which the editor says: "Mr. Hamerton declines to be considered as any longer among the *Current's* contributors." This seems intended to imply that I have formerly been a contributor to that paper. Will you allow me to say that I cautiously kept aloof from it until I could see how it was conducted, and that the style of writing employed in an attack on England generally, which appeared in the *Current* for April 12, convinced me that it was not the kind of periodical with which I could allow my name to become in any way associated?

The editor of the *Current* says:

"It is just possible that Mr. Hamerton has in mind an American lecture tour, and it is very thoughtful in him to so place himself that there may be no mistaking as to which class of Englishmen he belongs. He will be received accordingly."

In reply to this menace I beg to state that I have never had any intention of visiting America, and that if I ever do (of which there is no likelihood) it will not be to lecture, for which I feel no vocation, but to see a few private friends.

—Sincerely yours, P. G. Hamerton.

Autun, July 13.

Notes.

A. D. F. Randolph & Co. announce 'William Tyndale's Five Books of Moses, called the Pentateuch, reprinted from the edition of 1530,' with notes, etc, etc., by Dr. Mombert. The volume will be illustrated with photo-engravings of the texts, and of the unique autograph letter of Tyndale.

Cupples, Upham & Co. will publish at once as a companion volume to 'Poems in Prose' a translation of Turgeneff's 'Annouchka,' one of the works that he originally wrote in French, by Franklin Abbott.

Ginn, Heath & Co. announce an American edition of Axel Gustafson's 'The Foundation of Death,' which in connection with the temperance question has attracted much attention abroad.

We have received from George Routledge & Sons their handbooks of "Florence" and "Venice," by Augustus J. C. Hare, which, from the æsthetic point of view, at least, are models. The contents are divided in the usual way according to localities or "excursions," and include all of note that a man of taste would need

to know in regard to the historic and artistic treasures of these cities. The volumes are rather poorly illustrated, but are furnished with maps and indexes, and are interleaved with the inevitable quotations from Ruskin, Perkins, Vasari, etc.

The three hundredth anniversary of the death of William the Silent is the occasion of making his career the one hundredth subject in the *Monthly Reference Lists*. The other subject of the July issue is "The English Reformation."

The "Third Annual Report of the Society of American Taxidermists" is particularly noticeable for the first thorough bibliography of the subject of taxidermy. It is a continuation of a list begun by Frederick A. Lucas in the second annual report, and is chronologically arranged (1689–1884) and very full, covering sixteen closely-printed pages.

The July "Bulletin of the Mercantile Library of Philadelphia" is also distinguished by a very useful index of indexes, entitled "Finding Books," which is much more complete than anything yet published. It covers indexes to periodicals, historical, chronological, and scientific works, and to individual authors, and secondly concordances and dictionaries of quotations and extracts.

In consequence of a rumor that there is some prospect that libraries or private persons in this country may purchase that part of the famous Ashburnham MSS. still owned by the Earl since his sales to the English and Italian Governments, Mr. Harrison Wright has translated and published, and to some extent circulated, the report made last year to the French Minister of Instruction and Fine Arts by Leopold Delisle, the Administrator-General of the National Library at Paris. In view of the evidence massed in this pamphlet, there can be no doubt that the MSS. remaining from the Libri collection were stolen from the French libraries, as was the case also with a considerable number of the so-called Barrois collection, which also is still unsold. In many cases the thief mutilated the original by tearing out parts, or falsified those which he succeeded in carrying away. Should the French libraries ever obtain these fragments their value would be much enhanced because they could be restored to their original places in the torn volumes, to the great advantage of learning. It is certainly to be hoped that none of our great libraries or our rich bibliophiles will be tempted by the rarity of the prize to make their rooms receptacles for stolen goods, to the mere possession of which a stigma of dishonor now attaches; and Mr. Wright deserves gratitude for his timely translation of this thorough exposure of the iniquity of the whole transaction from the time of Libri's first secret sale to the highly honorable refusal of the Italian Government to include the suspected numbers in their late purchase of the Libri collection.

Students of cholera have been in two divisions: one, a small minority in late years, holding that it may arise spontaneously; the other, that as seen in western lands, it invariably follows an antecedent case. But all entirely agree that, however it may originate, it is certainly propagated by the sick, and that the public health is most surely preserved by measures of prevention directed against such agents rather than towards any presumed epidemic influence. One of the clearest demonstrators that its progress is an indication of human travel is Dr. J. C. Peters, of this city, and a group of his papers on this subject, running from 1866 to 1875, acquires renewed interest now that the epidemic has leaped from the Mediterranean to the Seine and the Mersey, and may any day arrive in the lower bay. He has tracked out nearly all, and has charted some of the modern epidemics, and his contributions to the topographical history of cholera have had an important bearing in determining the probability of its invariable spread from man to man. A reprint of his contribution to McClellan's Report on the Epidemic Cholera of 1873 would be popular and instructive reading at present.

Another of our larger libraries has issued its catalogue. The College of New Jersey has only 60,000 volumes, but they have been in the main well chosen, and the collection, which as libraries grow in this country may be doubled in fifteen years, is already valuable. The catalogue—of subjects only, not of authors—is the work of the librarian, Mr. Frederick Vinton, formerly of the Boston Public Library, and afterwards of the Congressional Library. It will increase the use of the books by students, for it is accurately made and carefully classed. The scheme differs in one respect from the one most employed of late in the larger catalogues, approaching the style of town libraries. It is usual to have the classes, English fiction, English drama, French drama, French poetry, and so forth. In this way the whole of English literature or of French literature is given in one place. Mr. Vinton, on the contrary, brings together all of drama, all of fiction, all of poetry, in whatever language written, arranging the titles under each of these heads in the order of languages. It obviously is of little practical importance which course is followed. The inquirer, as soon as he knows either method, can easily find what he wants. Cataloguers, therefore, may be allowed to suit their own fancy, provided they do not intentionally or inadvertently follow both methods at once. Of course, a bibliographer of Mr. Vinton's experience does not make any such mistake; but the question will certainly occur to some readers why, if we are to look for Dunlop's 'History of English Fiction' under Fiction, section English, we should not look for Morley's 'History of English Literature' under Literature, section English. Mr. Vinton adopts instead English literature, French literature, German literature as main classes. No doubt he can justify his preference, but it is a prima-facie objection to any arrangement that it needs to be justified.

'Hints on Catalogue Titles and on Index Entries,' by Charles F. Blackburn (London: S. Low & Co.; New York: Scribner & Welford), is a work of curious interest to indexers. From his preface on, the author alternately sneers at and praises the advance in the librarian's art in America, while at the same time he reveals his really extraordinary ignorance of what has been accomplished here. Mr. Blackburn is a maker of sale-catalogues for second-hand booksellers, and of any other kind of catalogue he seems to have slight knowledge. His book is not at all about catalogue titles or index entries; it is about titles in second-hand catalogues and about index entries, or rather cross-references in second-hand catalogues. About cataloguing as an art, or about the kindred art of indexing, as these are understood in America, Mr. Blackburn knows little and cares less. His horizon is that of his employer, the seller of second-hand books—a most useful person, no doubt, but still a person of egoistic motives, while the motives of the genuine librarian are altruistic. So little does Mr. Blackburn know about the American librarians, that he thinks "that a second-hand book shop is our only school for librarians"; he declares that "first edition" is never seen on title-pages, although its use in France is very common; he thinks that Mr. Frederick Locker's most amusing 'Patchwork' is "most likely a volume of poetry"; and he actually avows a willingness to catalogue as "uncut" only a book which is in fact unopened. It is also to be noted that Mr. Blackburn sprinkles French and Latin words freely through his pages. Nevertheless, apart from the invaluable hints it contains for the maker of sale-catalogues of second-hand books, it has one excellent feature—"a rough vocabulary of terms" in all languages as found in the sale-catalogues of the second-hand booksellers of the world, which is of distinct utility to all who are wont to search these storehouses of wisdom.

Prof. Andrew Ten Brook, the translator of Gindely's 'Thirty Years' War' recently reviewed (*Nation*, 993–994), writes us the welcome intelligence that in case this work is received with public favor, he will engage upon a translation of biographies of Waldstein and Gustavus Adolphus, by the same author, as soon as they shall be ready. Such a work would be of high value to history, and, as we learn that 'The Thirty Years' War' is already passing into a second edition, there would seem to be sufficient encouragement to justify the undertaking.

The name of Max Müller is more familiar to the American reader than that of Wilhelm Müller, his father. But the latter, although dying in his thirty-fourth year, more than half a century ago, had already achieved in Germany a permanent fame by his fervid and beautiful lyrics. Himself a student volunteer in the great uprising against Bonaparte, he was inspired, like Byron and Fitz-Greene Halleck, by the struggle of the Greeks in the following decade, and wrote his once well-known series of stirring war songs, which kindled a sympathetic enthusiasm for that heroic people. A movement is under way in Germany for the erection at Dessau, his birthplace and home, of an appropriate national monument to this scholar and poet-patriot. Among the names of the committee recently formed in England for the same purpose appear Mrs. Jenny Lind Goldschmidt, Theodore Martin, J. A. Froude, and Professor C. A. Buchheim. Those admirers in this country of Wilhelm Müller, or any who might wish to honor the son through the father, may forward contributions directly to the publishing house of Messrs. Williams & Norgate, 14 Henrietta Street, Covent Garden, London, or through Professor H. S. White, at Ithaca, N. Y.

Commenting on a model of a street in old London which has excited great admiration at the Health Exhibition and not a little *laudatio temporis acti*, the *Builder* gives several reasons why such a street would not suit the present metropolis, one of them rather curious. Under the jutting verandas or shed roofs that protected the open shop fronts shelter was at any time attainable. Such verandas, with all their picturesqueness, could not be permitted now, says the *Builder*, unless all the shops had them, because if the shelter were partial such crowds would collect under them in a shower as absolutely to stop traffic. The article contains some sentences on the vastness of London that would not be out of place in an essay of Macaulay. London contains a fifth of the population of England. The number of its inhabitants exceeds the whole number of the inhabitants of Paris, Berlin, Vienna, Rome, Dresden, and Turin. The English spoken in its eastern districts differs from that of some of its western districts as widely as the English of the time of Queen Victoria differs from the English of the time of Queen Elizabeth.

The titles of some books are apt to be very misleading to indexers. In a recent number of the *Athenæum*, Craddock's 'In the Tennessee Mountains' is placed under the heading "Geography and Travel." This is much like the mistake made by the German cataloguer when

he placed Mr. Swinburne's attack on Mr. Robert Buchanan, called 'Under the Microscope,' among the books classed as "Naturwissenschaften."

One of the most valuable additions to Baedeker's collection of handbooks for travellers is the lately-published 'West- und Mittel-Russland,' with seven maps and thirteen plans. The word "middle" is here used in the widest extent to which it could be stretched, as even Kazan, in the remote east of European Russia, is included within the scope of the book. The extraordinary accuracy which has characterized the whole series is equally striking here, and is the more to be admired as the subject is a country with whose language most foreign writers on it do not consider themselves bound to be familiar. The transliteration of all Russian names is systematic, and every name is also given in the original characters. The introduction embraces historico-chronological sketches, not only of Russia, but also of Poland, the Baltic Provinces, and Finland. The volume comprises five hundred pages, of which St. Petersburg, with the environs, occupies one hundred and ten, and Moscow fifty.

The last annual supplement to Meyer's 'Konversations-Lexikon,' forming the twenty-first volume of the third edition of this comprehensive cyclopædia ("Jahres-Supplement 1883-'84," of which latter year only the first quarter is represented), is slightly less extensive than its last predecessors, comprising only 1,004 pages, but is crowded with articles of scientific, historical, and statistical interest. The difference in extent is compensated for by a general index for the five supplementary volumes, as well as for the supplementary parts of volume xvi., which concludes the main work. The issuing of this general register is a distinct indication that the publishers, though they do not state it, consider now this edition of their cyclopædia, with its supplements, as completed.

The fourth volume of Ernest Havet's 'Le Christianisme et ses Origines' (Paris, 1884) completes that work. The first appeared about the close of 1871, after a year's delay of publication in consequence of the German invasion of France. During the composition of the whole the surpassingly radical views of the author, though he has reached the age of three score and ten, have undergone no alteration in the direction of moderation. His opinions enunciated in the third volume concerning the late origin of all the Psalms, in which he goes beyond anything ever attempted by the most destructive German Biblical criticism, he boldly upholds in his latest preface against the attacks of his reviewers. He complains that they have been rejected without a serious consideration of his arguments, and chiefly on the general ground of his alleged incompetency to deal critically with the literary chronology of the Hebrew Scriptures, from ignorance both of the ancient idiom in which they were composed, and of the modern language—the German—in which the best critical treatises on that vast and complex subject have appeared. He consoles himself with his own conviction of being in the right, and with Horace's

> "Populus me sibilat, at mihi plaudo
> Ipse domi."

Another book of a similar tendency, just completed by the appearance of its second volume, is Seinecke's 'Geschichte des Volkes Israel.' This German's inclination to lower the date of every single book or document of the Old Testament is almost as strong as M. Havet's, and has also been severely animadverted upon even by critics of the most advanced school. His knowledge of the Hebrew Bible and of the Biblico-critical literature, however, is incomparably better, and his racy exposition in the first volume (1876) of results obtained by late free investigation created quite a stir among students in this interesting field of study. Seinecke's 'History' begins with the earliest traditions of the Hebrew people, and ends with the final destruction of its independence by the sword of the Romans. A distinctively Christian spirit, almost passionately hostile to purely Hebraic views, pervades the work. Two infinitely superior productions on the same subject, Wellhausen's 'Geschichte Israels' (vol. i., 1878), and Stade's 'Geschichte des Volkes Israel' (begun in 1881), still await completion.

—General Charles F. Stone publishes in the *Magazine of American History* for July a very interesting account of a council of war held at the headquarters of General Scott in May, 1861. The article is of especial value for the light it throws on the vexed question of the military policy of Scott at the outbreak of the war. The opinion of General, then Colonel, Stone and of General Totten had been asked in regard to the force and the time requisite for a successful advance upon Richmond. Finding a concurrence of opinion among military officers, General Scott took up the subject, and gave his views at some length and with considerable warmth. He said that the question had unfortunately ceased to be a political question, and had become purely a military question, and, consequently, it must be settled purely in accordance with military principles. "You must allow," said the General, "the soldiers to do what they know they ought to do; and you must be careful not to force them to do what they know they ought not to do." Secretary Cameron said: "General, you shall have all you want," whereupon General Scott replied: "Thanks, Mr. Secretary, everything I want is all that I want. Thanks; well, then, I want the best practical naval constructor in the United States sent to Louisville, Ky., to design and see constructed *gunboats*. These boats can easily be finished before the first frost. Our Southern friends, seeing the Government apparently content with guarding the frontier, may not believe they are to be attacked, and *may* relax their preparations. In any case, *our* preparations being made on sound principles, I would have, by the first day of October next, assembled at the junction of the Ohio and Mississippi Rivers *an army of* 150,000 *men;* and I would have here *another army of* 150,000 *men*. I would send that Western army, accompanied by gunboats, down to the Gulf of Mexico. At the same time, I would send this army of 150,000 men hence to Richmond by the right road. If you act thus, if you allow the soldiers to do what they know they ought to do, I will answer for it that the Government of the United States shall have its flag and its authority recognized throughout the land, over every inch of its territory, by the 4th of March next, or, at the latest, by the 4th day of July following. If you do not thus act; if you make the soldiers do what they know they ought not to do; if you push these three-months men into battle just as they are all thinking of going home; if you push the two or three years men into battle just before they shall be organized, you will be beaten in the first general action of this war. You will consolidate what is now an insurrection into a rebellious government—which rebellious government you may be able to put down in two or three years, but I doubt it." It would require not a little mathematics, and still more imagination, to figure out the cost to this country of the simple rejection of that advice.

—No. 7 of the second series of the Johns Hopkins University studies in historical and political science, entitled "Institutional Beginnings in a Western State," by Jesse Macy, is a highly interesting contribution to the local history of Iowa, and probably may be regarded as illustrative of what took place in other parts of the newly-settled West. Iowa was colonized by persons who went across the river either to work lead mines or to occupy the land, in direct violation of the laws of the United States. The country was unorganized territory, and, in default of government, these bands of emigrants constituted themselves Land Associations, each with its own regulations, methods of procedure, and guarantees. The anomalous position of these communities finds a striking illustration in the proceedings concerning the first murder trial, May 20, 1834. The prisoner chose his jury and his counsel, and was condemned to death in the usual form, the sentence to take place in one month. Before the execution application for pardon was made to the Governor of Missouri and to President Andrew Jackson, but both refused to interfere because they had no jurisdiction, the latter characteristically suggesting that the pardoning power probably lay with those who passed the sentence. Iowa had a population of 25,000, it seems, before there was any government other than this self-originated one; and when the territory was legally organized, it became necessary to reconcile the fact that these settlers had no title to their homes, in law, with the fact of their occupancy. Men who had been able to found a social system had, of course, no difficulty in keeping their own; but the process was interesting, for it had the simplicity and effectiveness of the vigilance committee without its violence. Similarly, although a Legislature got together and passed laws for the territory, it was only by a very gradual process that the local institutions which had grown up became assimilated to the statutory form:

> "The people of Iowa needed homestead laws; they organized claim associations, and made for themselves homestead laws in each neighborhood. They needed schools; they paid no attention to the elaborate system put into their statutes: they built for themselves school-houses and established schools better suited to their needs. They needed cart-roads, and made them for themselves, constructed their rude bridges or provided ferries, without regard to any general statute. Sometimes, though not often, a crime was committed, and the little community administered such punishment as seemed fit."

Mr. Macy's pamphlet would have been much more valuable had its treatment been more systematic and detailed; but, notwithstanding a certain crudeness and confusion in it, the substance is of high historic value, and a surprising proof of the elasticity of our institutions, of the practical sense and organizing power of the people, and of the utilities of the freest local self-government in the past, even if in some cases it traversed, and, as the author says, "obliterated," the national statutes.

—English composers are continually complaining that there is little poetry in their language that invites a musical setting, and they admit that their German colleagues are much more fortunate in this respect. As far as conversation is concerned, it cannot be claimed that German is a more musical language than English, and the thought lies near, therefore, that the German poets, being surrounded by a more musical atmosphere, were unconsciously influenced by it, and adapted their accents to the needs of composers. It was a German who proclaimed the theory that only in connection with poetry can music find its most satisfactory expression; and it is in German poetry that music and its influence are most frequently used as a theme or an allusion. This will be seen by comparing two little volumes recently issued—Carmela Koelle's 'Music in Song, from Chaucer to

Tennyson,' and S. J. Milde's 'Die Musik im Lichte der Poesie.' While neither collection claims to be exhaustive, the former contains six times as many lines, although a certain number of pages are devoted to poets of other than German nationality, from Homer to the present day. A critical examination of all these poetic rhapsodies on music results in a sense of disappointment. If we wish to study the characteristics of human emotions and motives of action, the pages of the poets are as eloquent as actual experience; but of music the true nature and influence has been suggested by few poets. If a poet likes anything very much he calls it "musical," very much as a musical critic habitually calls those pieces "poetic" which he happens to like, or borrows from a sister art the terms color and tint to correct a deficiency of adjectives of admiration. Among the composers who have written a few verses on their art are Schumann, Berlioz, Weber, and Wagner; but they seem to have reserved for their prose writings their best thoughts, except for some striking epigrams of Weber and the last song of *Isolde* in Wagner's "Tristan," which, as a pantheistic apotheosis of music, has no equal in the world's literature. This passage is not included, unfortunately, in the German collection.

—Koelle's volume includes a few prose passages that are not well chosen. When Carlyle speaks of music as "a kind of inarticulate, unfathomable speech, which leads us to the edge of the infinite and lets us for a moment gaze into that," he resorts to mystic, meaningless, metaphysical jargon which is not half as poetic as the explanation given by Darwin of the vagueness and depth of the sensations excited by music, which he thinks calls up in us indefinitely the experiences of a long-past age, when our ancestors used musical tones of varied character to express their emotions of love, jealousy, rivalry, and triumph. A passage quoted from Kingsley oddly speaks of a perfect throat that "could never, even by the thousandth part of a note, fall short of melody (!)"; and George Eliot had evidently forgotten her lessons in harmony, if she ever took any, when she wrote of "a perfect accord of descending thirds and fifths (!)." A thousand times better than such vagaries is this passage from Beaconsfield's 'Contarini': "The greatest advantage that a writer can derive from music is that it teaches most exquisitely the art of development. It is in remarking the varying recurrence of a great composer to the same themes that a poet may learn how to dwell upon the phases of a passion, how to exhibit a mood of mind under all its alterations, and gradually to pour forth the full tide of feeling." To return to the poets, Shakspere's insight into the function of music ranks him here, as in most other respects, above all other poets. He knows that music "charmeth sleep," "killing care and grief of heart"; it "hath holp madmen tc their wits," and "will make wise men mad." "I never heard so musical a discord, such sweet thunder," might be used as a text for a chapter on modern dramatic music; and in the lines—

> "If music be the food of love, play on:
> Give me excess of it"—

lies a whole volume of meaning and suggestion to the student of musical æsthetics.

—For some centuries Christendom has been attempting to convert the East to its own faith, without any remarkable success. Now the Orient has begun to reverse the process. Lady Caithness has had a translation of the Buddhist catechism made and printed. She has even determined to establish a temple in Paris, where Buddhist rites shall be regularly celebrated. Perhaps it is already in operation. The Parisians are, like the Athenians, "always seeking after some new thing." Why should not the new religion flourish in the city where Comte's Pantheon was not too ridiculous to find worshippers, and Saint-Simonism had some vogue—the city of Fourier and of Enfantin? After all, there is much in Buddhism to win acceptance with those whom Christianity for a time dissatisfies. The theory at least suits the pessimist. All existence, the Buddhist tells us, is suffering, since it includes old age, sickness, privation, death; and the sting of death is, not sin, as St. Paul said, but desire: desire for youth, strength, life, possessions. Cease to desire, renounce self, and there is no more suffering. Christian moralists teach the same Barmecide doctrine; but Christian morality is bound up with God and immortality, and does not satisfy those who are feeling that diseased longing for annihilation which nowadays in a certain number takes the place of the more common indifference to the future. From them the new doctrine may collect some followers; but to sympathize with part of a creed is very different from practising a rite. The pessimists of Paris are the last persons who are likely to be persistent in attending services of any sort. The permanence of the new cult is possible, because a single congregation may be renewed by curious strangers as fast as it dwindles by the departure of those who find its secrets as commonplace and its consolations as ineffectual as those of their previous faith. This may keep a single gathering alive for a time, but the spread of the sect is incredible. We can only anticipate disappointment, therefore, for the venerated aged priest in Ceylon who is meditating, it is said, in his hermitage the conversion of Europe to Buddhism. Even the English Colonel and the other Englishmen who have succumbed to his arguments and his zeal will not more than make up for the converts to Christianity whom our missionaries have taken away from the seekers after Nirvana.

—The most interesting thing in the last *Rundschau* is the translation from a Russian review of a sort of autobiographic sketch of Ivan Turgeneff, which he gave during his last visit to Russia to a friend, who put it on paper. Turgeneff states that he was an *enfant terrible*, who often got his mother into great difficulties. One day the poet Dmitrieff called at her house, and Ivan was called upon to declaim one of his poems. Ivan looked at the venerable bard, and burst out with, "Your poems are good, but those of Ivan Andreyevitch Kryloff are better." Another time he told an aged, ugly Princess that she looked exactly like an ape. To Russian poetry he was introduced by a servant, who read to him Kheraskoff's 'Rossiad' over and over again in the garden. Besides this he read but little, as in the opinion of his parents there was no such thing as a Russian literature. In Berlin, subsequently, he spent his time between reading Hegel and training a rat-terrier. Before he devoted himself to a literary career, he had entertained plans of taking up law or politics. In 1850 he was banished from his country for an article on Gogol's death, and remained abroad twenty years. He was fond of domestic life, but, having no family of his own, lived with the Viardot-Garcias, the musicians, in Paris. He was fond of Mozart, while Wagner was incomprehensible to him. To the theatre he went only three or four times a year. Of the French authors, he visited annually Zola three or four times, Victor Hugo twice, Daudet as often. For Flaubert he had much sympathy, but rather as a man than as an author. "Émile Zola, who is so popular in Russia, is undeniably a clever and talented man; but, frankly, he is as ignorant as most educated Frenchmen. Beyond French literature his knowledge does not extend, and he does not desire any more. It is impossible to talk with him about Russian, English, or, especially, German literature." In an introductory note, the editor of the *Rundschau* cites an anecdote which shows that Victor Hugo is in the same predicament. One day, in conversation with Turgeneff, he remarked that he could not find anything at all remarkable in Goethe's works, and that he especially disliked "Wallenstein's Lager." When Turgeneff pointed out that this play was written by Schiller, he replied: "All the same: Goethe and Schiller are of the same calibre; I assure you, even if I have not read it, I know what Goethe may have said or Schiller written." Lately, however, there has been a change. Some of the journals follow the literary movement with intelligent interest; an edition of Goethe's 'Campagne in Frankreich' is used as a school-book; and Daudet, for example, who does not understand German, remarked to Rodenberg (in 1870) that his twelve-year-old boy easily read German, and often translated from German newspapers what was of special interest to him.

—Among recently published volumes of German verse, Karl Kösting's 'Der Weg nach Eden' (Leipzig: Ernest Günther; New York: Westermann) deserves mention for its original and rather ambitious subject. 'The Way to Eden' is in the guise of an epic poem, a politico-historical retrospect of the last hundred years. The scene is laid alternately in America and Europe. The story begins with the kidnapping of a Hessian schoolmaster by the German mercenaries of George III., in the American War of Independence, and ends with the battle of Sedan, the adventures of the schoolmaster's descendants being merely the text for the author's philosophical sermons. One of the sons, Gottschalk, originally a missionary to India, becomes there converted to Buddhism, and thenceforward preaches Nirvana at considerable length, while his brother Hellmuth, after having been a German revolutionary, fights for liberty in the American War of the Rebellion. Some of the incidents of the war are told with a good deal of spirit, and the writer's familiarity with American scenes and history is throughout as evident as his knowledge of the modern philosophical currents of Europe. 'Der Weg nach Eden' certainly promulgates the gospel of pessimism as effectually as do the productions of "Hieronymus Lorm," "Dranmor," and other German poets of the present day; but while Herr Kösting's 350 pages of rhymed iambics occasionally lack finish, and are wholly unrelieved by a gleam of humor, his philosophy, at least, is intermingled with animated descriptions of events in many lands and of various times. However, few German poets have ever sinned as much against Apollo as does Herr Kösting in the ten ponderous pages devoted to an exposition of Buddhism and the atomic theory of the universe combined.

—In the death of Prof. Ferdinand von Hochstetter, which is announced as having taken place on the 17th inst, geologists will mourn the loss of one of the ablest of their brotherhood, and science generally an expounder of rare sagacity and erudition. An expert chemist, physicist, mineralogist, geologist, and palæontologist, Professor Hochstetter, although only fifty-five years old at the time of his death, had accomplished an amount of work which would have done high honor to the name of one of twice his scientific years and experience. He belonged to that band of investigators which, under the lead of Haidinger, Hörnes, Fuchs, Neumayr, Suess, and Hauer, won for Austria the

first place in the field of geological inquiry, and placed the Geologische Reichsanstalt of Vienna above all other similar institutions of the world. Hochstetter's labors cover all departments of geological research, and are marked alike by depth of observation and accuracy of detail. As geologist to the *Novara* circumnavigating expedition under Scherzer (1857–60) he enjoyed rare facilities for extending his observations into regions hitherto but little known or described, and as a result gave to the scientific world many important points bearing upon the subject of geological dynamics, notably in the department of vulcanology. Hochstetter was a prolific writer, and one who, in the midst of his purely technical labors, found leisure to devote himself also to the popularization of his favorite science. His justly popular treatise on the earth ('Die Erde,' 1875) has been, in great part, incorporated in the more comprehensive, and, in many respects, unique work dealing with the same subject, by Hann, Hochstetter, and Pokorny. Hochstetter was in 1860 appointed to the chair of mineralogy and geology in the Polytechnic Institute, and in 1876 to the curatorship of the new National Museum of Natural History, then in course of construction and only recently completed.

LIFE OF FREDERICK DENISON MAURICE.—I.

The Life of Frederick Denison Maurice, Chiefly Told in his Own Letters. Edited by his Son, Frederick Maurice. In two volumes. Macmillan & Co. 1884.

In the 'Life of Frederick Denison Maurice' the world has received the picture of a character and the account of an influence. The man himself, as even the dullest of us must perceive, was of deeper import than his work, and his character explains the quality and the limits of his influence. It is, therefore, well worth while to listen with attention to the language in which competent observers have described their impressions of Maurice's genius:

"I have so deep a respect," writes John Stuart Mill, "for Maurice's character and purposes as well as for his great mental gifts, that it is with some unwillingness I say anything which may seem to place him on a less high eminence than I would gladly be able to accord to him. But I have always thought that there was more intellectual power wasted in Maurice than in any other of my contemporaries. Few of them certainly have had so much to waste. Great powers of generalization, rare ingenuity and subtlety, and a wide perception of important and unobvious truths, served him not for putting something better into the place of the worthless heap of received opinions on the great subjects of thought, but for proving to his own mind that the Church of England had known everything from the first, and that all the truths on the ground of which the Church and orthodoxy have been attacked . . . are better understood and expressed in the [Thirty-nine] Articles than by any one who rejects them. I have never been able to find any other explanation of this than by attributing it to that timidity of conscience, combined with original sensitiveness of temperament, which has so often driven highly gifted men into Romanism. . . . Any more vulgar kind of timidity no one who knew Maurice would ever think of imputing to him, even if he had not given public proof of his freedom from it, by his ultimate collision with some of the opinions commonly regarded as orthodox, and by his noble origination of the Christian Socialist movement."

Mr. Gladstone has said:

"I read through the whole of the 'Life of Maurice.' The picture of him as a Christian soul is one of the most touching, searching, and complete that I have ever seen in print. He is indeed a spiritual splendor, to borrow the phrase of Dante about St. Dominic. His intellectual constitution has long been, and still is, to me a good deal of an enigma. When I remember what is said and thought of him, and by whom, I feel that this must be greatly my own fault."

To understand the full effect of these words one must bear in mind the lines of Dante which Colonel Maurice thus renders:

> "The other—wisdom guiding from his birth—
> Shone with a spirit's splendor o'er the earth."

Mr. Justice Stephen writes:

"I knew Mr. Maurice well. I wholly and entirely disagreed with him as far as I understood him, but it was impossible to know anything of him without seeing that he had within him that which rendered anything mean or consciously false morally impossible for him, and his biography seems to me to show that this was the natural and appropriate result of his creed, though I suppose most people will agree with Mr. Gladstone's remark: 'His intellectual constitution has long been, and still is, to me a good deal of an enigma.'"

Put side by side with these the words of Sir E. Strachey, who, from youth up, was Maurice's pupil and admirer:

"He was in those early days, as always, the strongest man I have ever known, if it be strength to do steadily to the end the work that is set before a man, undeterred by any doubts or difficulties, however great and many; yet I am sure he would have said—and I believe that it was true—that the strength was not his own, but that of a higher will than his own, working through his weakness. It was the strength not of self-assertion but of self-surrender, the strength of Paul and of Christ; it was the consciousness of the prophet and the apostle that he was called to a work which he accepted as the business of his life, but which he could only do by a strength greater than his own. It has been well said that no words can more exactly describe the mission of Maurice than those of St. John: 'A man sent from God. . . . The same came for a witness to bear witness of the Light.' With all his humility, with all his consciousness of his weakness for the work, he never doubted his mission, but felt and knew that he was sent from God to bear witness of the light."

Turn last to the description of Maurice's position given by the person who, in one sense, knew him best, namely, by Maurice himself:

"'If you only act on your conviction,' your mother once said to me, 'that Christ is in every one, what a much higher life you might live, how much better work you might do.' There was in that sentence the clearest divination of what I feel and know to be God's purpose in all His teachings and discipline which I have received, and of my failures. I was sent into the world that I might persuade men to recognize Christ as the centre of their fellowship with each other, that so they might be united in their families, their countries, and as men not in schools and factions; and through forgetfulness of this truth myself I have been continually separating myself from relations, letting go friendships, and sinking into an unprofitable solitude."

Here then we have the evidence of five remarkable witnesses. In each case the point of view is different. The language they use is in each instance very characteristic of the particular writer. It would be quite impossible for any one of them to have employed the terms used by the other. Yet for all this an intelligent critic will perceive that Mill, Gladstone, Sir James Stephen, Sir Edward Strachey, and Maurice himself indirectly, and with some of them unconsciously, indicate the one central and, so to speak, essential point in Maurice's character. His own words contain the solution of the many enigmas presented by his character and position. He believed himself, with the full strength of absolute conviction, to be a prophet sent into the world that he might persuade men of certain truths about Christ and God. Account for the phenomenon as you will, the fact is undoubted that in England of the nineteenth century there lived a man gifted with intellectual subtlety such as falls to very few in any generation, who was, from his youth up, filled with unalterable faith in certain theological beliefs, or, as he no doubt would have said, facts, and with the equally firm faith that he was sent into the world for the one purpose of declaring to men truths which were as manifest in themselves as that the sun shines at midday, and which yet were in constant danger of being forgotten; and, above all, the particular truths that Christ is in every man and that God is a father who is constantly addressing and teaching all mankind.

This is not the place for theological discussions, and we are not concerned either to defend or to impugn Maurice's religious theological beliefs. What we are concerned to do is simply to point out the mode in which his faith gives the key to his life. Once admit the existence of his faith in the truths, as he held them, which he was called upon to proclaim, and in his mission to proclaim them, and many things become explicable which must otherwise remain hopeless puzzles. He was, as a friend who knew him well has pointed out, essentially a man of the prophetic type. Now that we have before us the transparently honest record of his spiritual life which is afforded by his letters, we know what many persons must long have suspected, that scepticism, in the ordinary sense of that term, was never from youth to age a trait of his character. One may even say that he hardly felt at any time the force of what are popularly called the "difficulties" of orthodoxy; and one can now see that he was perfectly right in asserting, as he constantly did assert, that he never belonged to the class of Broad Churchmen, or Liberals. Now that the whole matter is before the world, one may make this assertion without casting any blame either upon Maurice or upon teachers from whom he radically differed; though, by a perfectly natural misapprehension, he was popularly looked upon as their ally or associate. He had, in fact, far more in common with a Quaker, or with a certain type of High Churchman, than with men such as Whateley, Colenso, Stanley, or Arnold. He was so convinced of the truth and importance of the theology which seemed to him revealed by the Bible, that with inquiries about the Bible, with historical difficulties and the like, he was hardly concerned at all:

"As to the ages of the antediluvians, being myself in great ignorance, I can offer very inadequate explanations. I have always heard that they came to be rather old gentlemen, and, not having any reason to disbelieve it, I supposed they were. If you like to write a tract on the juvenility of Methusaleh, I shall read it with great pleasure, and I dare to say shall be the wiser for it. I do not see my way on the subject, but as it is not part of the creed 'I believe that so-and-so was nine hundred and sixty,' I can tolerate dissent on the subject, provided it be supported by sound, unmistakable evidence."

The tone here is lighter than is usual with Maurice, but this very lightness is significant. It really means that historical criticism and its results were pretty indifferent to the writer, and, further, that he practically assumed the substantial truth of the Biblical narrative. The revelation which Maurice was sent into the world to declare was, to his mind, self-evidencing. It was not his mission to prove the truth, but to direct men's eyes toward it and let them see it. We must again repeat, to avoid misapprehension, that in making these statements we have no intention of defending or attacking Maurice's attitude. Our whole object is to show what this attitude was, and how it explains what may appear the contradictions of his character and life. His preoccupation with the truths he believed to be revealed through the Bible explains something like incapacity for understanding the true position of critics who were engaged in trying to ascertain what was the nature of the Bible itself, and what the validity of its claims to be inspired or to be even accurate history. Of the Broad Churchmen with whom the public associated him, he asked,

"What message have they for the people who do not live upon opinions or care for opinions?" And finding that, in his judgment, they had no "message" for the people at all, he seems at times almost to have forgotten that a man who tells the truth, even though the truth be merely the not (in itself) very important statement that there is no reason whatever to believe that Methuselah lived nine hundred and sixty years, is vindicated by the mere fact that he is dispelling delusion, or, in other words, diffusing light. The same prophetic position which really divided him from the Liberal divines was, in the main, the cause of his apparent alliance with them. He, together with the Broad Churchmen, came into collision with a whole mass of received, if not orthodox, doctrine. It is vain to group any class of men under a short formula, but one may say, with a rough approach to truth, that Maurice attacked received opinions, as, for example, beliefs about eternal punishment, because popular notions on theological subjects appeared to him opposed to the theology really revealed through the Church and the Bible, or, in other words, to the revelations of Himself which God has made and is making to every man; whereas the Liberals, who attacked the same doctrines, attacked them because such Liberals—*e. g.*, Whateley, or, in a later time, Colenso—held the doctrines to be untrue and resting on no valid evidence whatever. Moreover, Maurice's whole belief in the constant guidance of himself and every man by the spirit of God inevitably led him, as it always has led men of prophetic natures, to constant, and, to speak plainly, aggressive protests against stereotyped popular formulas which concealed, or seemed to conceal, a living truth.

At this point we come across a trait in Maurice's character about which there appears to be, and to have been throughout his life, some confusion in the minds both of his admirers and of his assailants, namely, his so-called "humility." That there never was a man who in all the private or personal affairs of life was more unselfish, less grasping, and less exacting than Maurice is to any one who reads his life, as patent as any fact regarding the character of another man can be. If to deny one's self, to give way to others in all things where one's own interest is concerned, to be keenly and even exaggeratedly alive to one's own defects, to think much of other men's goodness and hardly to recognize one's own, be termed "humility," certainly Maurice was the humblest of men. But though words fail us to express our sense of that "spiritual splendor" which shines through his life, and which was as conspicuous in his youth as in his old age, we find it quite impossible to believe that "humility" is the right term by which to describe the character of his moral excellence. He was self-conscious, though self-consciousness took with him the form of the most honest self-depreciation. He was the most aggressive of men in every contest in which he felt himself bound to intervene, and there was hardly a contest involving considerations of morality or of religion in which he did not feel himself called to take a part. He held himself "sent into the world," to use his own expression, for a particular purpose, and the execution of this purpose necessitated perpetual warfare. The plain truth that a prophet is a denouncer, and especially a denouncer of wickedness or error in high places, is one illustrated by every part of Maurice's career. There was something more in this than the mere collision of goodness with wickedness. Many excellent men and persons much of Maurice's way of thinking, such, for example, as Mr. Macleod Campbell, have gone through life, on the whole, peacefully and, except on rare occasions, uncontentiously, because they have thought themselves bound to share only in controversies or discussions which nearly concerned their own moral or religious convictions. To Maurice this quiescent attitude was impossible, and the source of the impossibility was his sense of a mission from Heaven to act as a prophet.

It is the inability to see this feature in Maurice's character which makes Mill in his criticism so completely miss the mark. The idea of timidity in the ordinary sense of that word is as little suggested by anything in Maurice's life or language as humility. Mill's mistake on this matter is the more remarkable because in other respects he comes at least as near the truth as any of Maurice's critics. Mill appreciates his wide perception of unobvious truths better perhaps than any one who has attempted to analyze a character as singular as it is striking. He also perceives that sensitiveness of temperament which is occasionally, as in the historical case of Savonarola, found in curious combination with denunciatory energy, and here we touch upon that which gave the great impressiveness to Maurice's whole nature. He was essentially cast in the prophetic mould. But his exquisite sensitiveness of conscience, his "sensibility," if one may use a term borrowed from the last century, kept him free from all the personal egotism which has again and again marred the effect of even prophetic greatness. He had that within him, says Sir James F. Stephen, which rendered anything mean or consciously false morally impossible for him. Hence sprung not only the modesty, the unselfishness, and the charm of his private life, but the generosity and nobility of his public career. A certain want of calmness and, judging from that curious production, 'Eustace Conway,' a want of insight into the ways of the world, made him occasionally fall short of absolute controversial fairness. Neither Mansel nor Colenso was treated by him with that judicial equity which even opponents experienced at the hands of Bishop Thirlwall. But if the fervor of burning conviction was almost inconsistent with the serenity which is necessary to absolute impartiality, Maurice's errors were the errors of generosity. Principle and habit led him to stand up for the weak, for the attacked, for the maligned. The vehemence of his assaults was reserved for persons whom he believed to be supported by public opinion and protected by popular favor. Moreover, there was in him that kind of candor which is closely allied to strength. In nothing is this shown better than in a case where, one may venture to say with some confidence, Maurice's judgment was at fault. The contention that "subscription was no bondage" is intelligible when one reflects that Maurice was really comparing subscription not with freedom but with the heavier burdens imposed on his father and other Nonconformist ministers by the public opinion of small sects or congregations. But the contention itself is, as every one must know who has had the misfortune to have felt the actual effects of subscription as it existed not twenty years ago at the English universities, absolutely false. From the moment that Maurice perceived that subscription was not in fact to others what he had found it to himself, he openly admitted his mistake. "The Liberals were clearly right in saying that the Articles did not mean to those who signed them at the universities or on taking orders what I supposed them to mean, and I was wrong. They were right in saying that subscription did mean to most the renunciation of a right to think, and since none could renounce that right it involved dishonesty. All this I have been compelled by the evidence of facts sorrowfully to confess. I accept the humiliation." In this complete admission of mistake we have an example of that "strength" attributed to Maurice by Sir Edward Strachey. Nor shall we go far wrong if we attribute the strength to the conviction of being called to a work which he accepted as the business of his life. Whether the intense personal conviction which has inspired every man who rightly or not has deemed himself to be a prophet, is or is not a sufficient guarantee of the reality of a prophetic mission, is not a subject appropriate for discussion in a newspaper; our only point is to maintain that the evidence of competent observers, the language used by Maurice himself, every feature of his life, proves that by temperament and by conviction he belonged to the race of the prophets.

RECENT NOVELS.

The Crime of Henry Vane. A Study with a Moral. By J. S. of Dale. New York: Charles Scribner's Sons.

Tinkling Cymbals. By Edgar Fawcett. Boston: James R. Osgood & Co.

The Fate of Mansfield Humphreys. With the Episode of Mr. Washington Adams in England. By Richard Grant White. Boston: Houghton, Mifflin & Co.

A Country Doctor. By Sarah Orne Jewett. Boston: Houghton, Mifflin & Co.

"'THE Crime of Henry Vane' may stand firmly and impregnably upon its truth," is the conclusion of an admiring notice. Such an opinion indicates the need of some study of the question, what is truth in fiction? Certainly it is not the narration of exact fact which is believed upon the personal veracity of the narrator. Imagine a note appended to a page of 'Vanity Fair' or of 'Silas Marner'—"This occurrence actually happened." Something beyond the word of the witness is needful to produce the conviction upon which the sense of reality, the perception of truth, must depend. Antecedent probability is a long phrase, but it describes conveniently the whole basis on which the superstructure of fiction must be built. What the world has agreed to believe it believes. Time was when it believed in monsters and chimæras dire. Then it accepted the gallant adventure. Now it looks in fiction for the development of human character amid the incidents of modern life, and it accepts as truth only what the common experience of mankind has taught as likely to happen to common men in common life. To be more explicit, Mr. Trollope's autobiography has supplied a wonderful instance of the imperative force of imaginative truth conceived as that which the world has found to be probable, when compared with the statement of veritable fact. Barchester Towers, Mrs. Proudie, and the Warden are such positive realities that most people find it far easier to believe in their actual existence than in the author's own assertion that he had never known a cathedral town, a bishop, or even a canon, when he created them.

Now to the case in hand. Such and such a man will do so and so, and, believing in him, we shall joy in his joy or grieve in his grief; but any sudden change in character or conduct, without clearly adequate cause, shocks first reason and then feeling, and we say this is not truth. The twenty-first birthday brings to Henry Vane the possession of his moderate fortune, and, in the refusal of his first love, the discovery that he cannot have life his own way. Almost instantly follow the death of his only, dearly-loved sister, the death of his father, bankrupt of an immense fortune, and the hopeless insanity of his mother. Returning to America, with a self-denial and a pertinacity that are heroic he secures the costliest care for his mother, redeems the name and the fortunes of

his father, and is himself, at the end of three years, in an independent position. It is quick work, but it is so far consistent. Now he re-enters the gay world, and at once falls in love with Miss Baby Thomas (*sic*). He is distinctly warned that she is as good as engaged to a man rich and well born, but walks open-eyed into an extreme intimacy: "She suffered him to love her; . . . a new declaration of his passion every day; . . . her hand would grow cold as it lay between his own"—till she tells him she is going to marry the other man. Next morning, finding a convenient pistol, he shoots himself. "The man was a fool," said his acquaintance. Not a fool, but an impossibility. Men have died for women, but not men of the strain Vane had showed in the outset—for women, but not for an inanity like Miss Baby: "She rattled off questions; . . . she was sweetly pretty; . . . she had evidently thought little, read less, and been taught nothing at all." Her one intellectual preference is the fifth canto of the 'Inferno,' (!) her one piece of music, from "Francesca." In such a situation, the only thing that saves a man from being utterly contemptible is the overpowering charm of the woman. This J. S. may have meant, but he is utterly incompetent to conceive or convey it. He does not even supply a decent motive for her duplicity. Compare Irena, in Turgeneff's 'Smoke.' Her beauty, her fascination so win the reader, that the men whose lives she has ruined never fail of our respect.

The "elegant style" is also approved in the notice already quoted. There are to be found in almost every book words or phrases which the critics have agreed to call *determinant*. They settle the question of merit or demerit finally. The reader shall decide the elegance of one extract. After he is reminded of the tragic sorrow of Vane's early losses, the author says of him: "He could not always be brooding over the addled eggs of the past."

'Tinkling Cymbals' has the same merit as 'An Ambitious Woman,' in that it holds the reader to the end. It is, however, at once more coherent in itself and less even in execution. The novel has taken the place of the old comedy; to be successful, it must be carefully kept within its own line. Caricature, like the figure of Dr. Pragley, or of the mother-in-law, takes it at once to the region of farce, and in that, however amusing, illusion is not possible. The parts of good and bad are reversed in this story, but the hero dies with only a dubious sign of conversion. The heroine's beauty and high courage are worth admiration, and it is better than poetic justice that she should have another chance of life. Yet one novel can be made to contain only its own measure. The world believes in later love and in happy second marriage, because it has seen them; but the funeral procession and the wedding bells cannot be put with dignity into the same dozen of pages. Mr. Fawcett cannot afford to neglect his English. "Flinchless," and "wafture," and "the indulgent period" would have a doubtful sound anywhere, and all the more in a style that turns easily to large phrases. The scene is chiefly Newport, but the book about Newport is still to be written, even after these superlatives. It is quite right to say there is nothing like it in the world—that there are nowhere within the same space so many such houses and grounds, such luxury of life; but to talk of "beautiful manorial majesty" or "palatial homes," in connection with even the most spacious cottage *orné*, is absurd.

'The Fate of Mansfield Humphreys' up to the point when, entering the vestry of Toppington Church with his bride, he disappeared from the *Atlantic*, has been so much discussed that the author has found it worth while to carry on the history a year or two further. Whether in so doing he has not stepped out of pure fiction into what might be called social polemics, is of the less consequence, since no one can be sorry to know more of so charming a creature as Margaret Duffield, whom the sequel makes not one whit less attractive. The introduction of Colonel Waterstock was a hazardous venture. It is too near playing into the hands of the opponent, for how can we disown the Secretary in 'Democracy' after our champion himself has drawn such an extreme specimen of the scheming villain? Lest these later chapters might still leave some doubt as to the real motive of the book, Mr. White has added, in lieu of a preface, a lengthy but most entertaining "Apology," made up largely of *pièces justificatives*. It contains a detailed account of his adaptation of personal experience and information to the purpose in hand, as the serious way in which British critics took what was meant for a little burlesque led him to carry his merry trifle to a sober conclusion. To show to both Americans and English the injustice that has been dealt out to New England by old England ever since the War of Independence, that is, by three generations of writers, needed all the skill and all the opportunity which Mr. White has had at his command. Such a concrete presentation of his righteous resentment has secured him a hearing on both sides that would hardly at the outset have been accorded to his scathing review of our English critics in the Apology. Every traveller who has tarried long in England could add examples to illustrate his theory that the Englishman's American is a pure convention, the type *he chooses to believe in*. When that type appears in the flesh before the Toppinghams, of course they accept it. They have never seen an American, and Mr. James describes all England when he says of Lady Barberina, "she never thought about what she had never seen." Except on the line from Liverpool through London to the Continent, and on a beaten track to Scotland, Americans are as seldom seen as an Englishman in the old country towns here, to which Mansfield Humphreys sends his father-in-law to study America. Even in Cambridge it is repeatedly said, "Americans very rarely come here."

Mr. White calls for at least a truce in the so-called international literature, but the end is not yet. To see ourselves as others see us, even if they see us unkindly, is so constant a desire of the ordinary human heart that it must make a part of national feeling. Meanwhile Mr. James and Mr. White can felicitate each other upon the unanimity of their conclusions.

It is a positive pleasure to think how many young voices will be reading aloud Miss Jewett's delightful sketch of 'A Country Doctor,' this summer. We say sketch, for though the book has been heralded as a novel, it is as strictly a sketch as any of those which have won for her a now most enviable fame. Mrs. Burnett and George Fleming are the only names that could be placed before hers, of those who are now in the full tide of work. Both of these have had, in their lives and in their work, a large foreign element, while Miss Jewett's is as purely and finely New England as Whittier's poetry. Her instinctive refinement, her graceful workmanship, place her second only to Miss Thackeray. Her country doctor is unmistakably a loving portrait from life. We like him and his friend all the better for a reminiscence of the Doctor May and the Doctor Spencer of thirty years ago. Not that they are in the least copies—only examples of the same type. By the side of Doctor Leslie is a most gracious figure, first a wayward child, then a girl of eager heart but steady will. So far as the story follows the thread of her fortune, and develops her character, it might be called a novel; but plot in the ordinary sense it has none. When, at the close, the heroine, "in an ecstasy of life and strength and gladness," said, "O God, I thank Thee for my future," she looked forward to no happiness of wife or mother, but to the profession—still unusual, though no longer isolated—for which she had patiently trained herself in medical school and hospital.

The fact that such writers as Mr. Howells, Miss Phelps, and Miss Jewett should within four years so carefully study what is practically the same subject, makes it worth while to compare their stories closely. Passing any question of relative literary merit, and taking them all as widely-read and much-liked books, there are remarkable points both of likeness and difference between them. In the first place, no one of the heroines works for her living. Doctor Breen "was rich enough to have no need of her profession as a means of support." Of Doctor Zay it it is said "loftily" by the old lady, 'Doctor is quite independent of her practice.' Between Doctor Leslie and her aunt, Nan Prince is sure of a fortune. They are all beautiful. Mr. Howells gives us "the tender curve of her cheek, the soft round of her chin." Doctor Zay "was the eidolon of glorious health." "There was a sort of golden halo round Nan's pretty head." In costume and carriage they are all of the choicest. Doctor Breen only studied simplicity, but "she did not finally escape distinction in dress and manner." Doctor Mulbridge "grew more and more conscious of her elegance and style, now that she stood before him." Doctor Zay has almost a superfluity of violet muslin, of skin of seal and leopard; she has "a glorious poise," and moves "with a swift and splendid motion." As Nan walked up the broad aisle of St. Anne's Church, "the rows of heads all looked commonplace by contrast. . . . There was something so high and serene in Anna Prince's simplicity and directness." They are further alike, that each has had the best special training for her career that the times afforded. That they count two out of three for homœopathy may go for what it is worth.

As to motive, we come to marked differences. Dr. Breen turned to her study in the heart-sick reaction from the treachery of her friend, the faithlessness of her affianced. She is watching her first patient at Jocelyn's. Dr. Zay "always had a taste for science, she inherited it besides." Her father was a physician, but died when she was only fifteen. She has practised four years in a Maine village. "She don't fall short of three thousand every year of her life," is the assertion. Nan's father, whom she never knew, was also a physician, but it was her constant sympathy, her affectionate admiration for her guardian, the "country doctor," which determined the restless longing of her finely-endowed nature toward the same career as his own. Either motive is a likely one, but the last is the more natural and more healthful.

Of three women, not one of whom is over thirty, it is hardly time to speak of conclusions. So far as they are known to the story-teller, Dr. Breen has married an able, active man; and, a childless though happy wife, she devotes her skill to the women and children in her husband's factories, "though the conditions under which she now exercises it certainly amount to begging the whole question of woman's fitness for the career she had chosen." Dr. Zay, upon the last page, yields to a lover whose expected fortune may make possible what he ardently promises, that she shall not give up her profession. Nan has had her opportunity, which she gravely, reverently puts by as a blessing which was not for her. "She had come to her work as

Christ came to his, not to be ministered unto but to minister."

Once more a difference. Mr. Howells may not quite have intended it, but his heroine first turns to her lover in the profound dejection of the discovery of failure in herself—her heart, her strength are not equal to her demand upon them. Dr. Zay's lover gains his advantage when she is physically exhausted with a night of watching and a struggle with delirium tremens. Does this mean that neither would have yielded if she had been strong? Nan stands waiting in all the success of her hope. Yet Miss Jewett has felt obliged to supply even her with another motive than the love of her profession for refusing marriage. Nan believes that inherited tendencies bar her from it. "Qui s'excuse, s'accuse." Does not this amount to an agreement among the three that home and hope of children draw a woman more strongly than anything else can?

Space fails us for the inferences this extended comparison suggests. Supposed cases are not logical arguments: they are only illustrations; but when independent illustrations strikingly agree, it is more than an accidental coincidence. To put the case fully in all its bearings, Doctor Breen should be successful; Nan's lover should be a strong, masterful, yet tenderly sympathetic man. But the great fact remains, no one yet ventures to represent a woman struggling as most men struggle to gain a footing in the professions. No one ventures to present her without the attractions that are distinctly feminine, and the want of which (that is, those that correspond) would be only a temporary hindrance to the man. There is a deep and—considering the future—an almost painful significance in the conviction, put concretely in Doctor Breen's case, implied throughout 'Doctor Zay,' and stated so plainly and so appealingly by Nan, that the duties of home, as falling upon the wife and mother, are incompatible with the practice of a profession. We believe all experience proves it, and what may seem examples to the contrary are either where the possession of wealth or powers so exceptional as to be outside all rules, have smoothed the way, or where the profession has been taken up after the home had been made, its traditions developed, its happiness secured.

As a last word, we suspect much that has been said of the theories in 'A Country Doctor,' and even our own analysis, have gone beyond the author's intentions. Such theory as it contains has grown out of the personages. It is not they who are fitted to the theory, as Miss Phelps's figures are. If there is at no point in the book the dramatic force of 'An Only Son,' recent fiction contains nowhere a picture of such gentle, measured sweetness as the reconciliation between aunt and niece at Dunport.

THE EARLY DISCOVERERS OF AMERICA.

The Discoveries of America to the Year 1525. By Arthur James Weise, M.A. New York: G. P. Putnam's Sons. 8vo, pp. xii.-380. 1884.

THAT book-making expedient which consists of stringing excerpts on a scant thread of comment, so that the narrative can be offered as one "told by the actors," usually constitutes a six months' task of a practised literary joiner; but Mr. Weise tells us it has taken him eight years to make his book, and that he has followed this method because "the judgments of those who examine it will not be biassed by any conclusions of his own." The reader who examines the book finds it not destitute of a sufficiency of snap-judgments, if not conclusions. Mr. Weise's tone is dogmatic in the extreme, and he passes upon controverted points with a rush; nor is there any indication that he has adequately surveyed or weighed the world of argument and presentation which constitutes the literature of his subject, for his footnotes do not disclose acquaintance with a tenth part of it. We fail to see how, as a new contributor to this field of discussion and inquiry, Mr. Weise has added anything at all.

He opens with the Atlantean story of Plato and its congeners, and treats them with all the gravity that an investigator might bestow upon the documents of the *Calendar of State Papers*. He closes his book with a comical asseveration that the word Manhattan is of French origin, without showing where the French called the natives *manants*, except as anybody might call them "dwellers"; and that the word Norumbega is a perversion of "L'Anormée Berge," which, he says, again without showing where, the first French explorers applied to the region of the Hudson. This effort at historical criticism is as whimsical as anything in Diedrich Knickerbocker. Through a score of pages he iterates the words "Manants" and "L'Anormée Berge," as if his opinion was to be established by insistence in lieu of argument.

This dogmatism and insistence is his fashion. He almost never allows his readers to have any idea that the field of inquiry which he essays is full of mooted questions. There is no indication in anything he says, for instance, that the voyage of Verrazzano had ever been questioned, though the late Henry C. Murphy made a plea against it sufficiently powerful to induce Mr. Bancroft to omit, unfortunately, as we think, all mention of it in the revised text of his 'History.' The sea of Verrazzano has always been a mystery with those even who acknowledge the voyage, but Mr. Weise, with the customary assurance of the half-informed, pronounces it at once the Chesapeake. That Verrazzano accompanied Aubert to Newfoundland on an earlier voyage in 1508, rests wholly on a document about a certain Jean Varassen, which was given by Desmarquettes, in his 'Mémoires de Dieppe,' in 1785. Desmarquettes himself was by no means sure that Varassen was Verrazzano, and Estancelin, a Dieppese himself, failed to find any evidence that he was; and no responsible student of the subject has before had the temerity to pronounce otherwise.

Not content with his fanciful derivation of Norumbega, Mr. Weise undertakes also to place that locality at the Hudson, regardless of the fact that Hieronymus Verrazzano, who worked up his brother's material in a map, was guilty of calling the name Aranbega, when he ought to have known at first hand that it was "Anormée Berge." All investigators of the subject agree in fixing Norumbega in the region of the Penobscot; but Mr. Weise does not intimate it, and resorts to amusing arguments to support his new theory. Mercator in 1541 published some engraved gores for a globe, and on them he represents the river of Anorumbega, as he calls it, as studded with little islands. Just such little eyelet-like islands stand profusely on all the maps of the time in this river and along the coast. To Mr. Weise's conception these little islands are the "Anormée Berges," while it was to the palisades on the banks that he traced the word a few sentences before. He finds an equally valid support in the Map of Henri II:, so called, which he places about 1548, unmindful of the fact that Mr. Major has deciphered an inscription upon it which puts it definitely in 1546, and ascribed it to Deceliers, another Dieppese. On the same page he seems unaware of the Mercator map of 1538, which Mr. Brevoort owns and has described. To reconcile the description of Allefonsce, which requires no contortions for the Penobscot, he is forced to the shift of making the Hudson debouch between Montauk Point and Watch Hill, if his interpolations (p. 355) mean anything.

A similar careless emphasis characterizes his few words about the La Cosa map of 1500. He says La Cosa had seen Cabot's maps. That La Cosa used in some form Cabot's result has been long understood; but where did Mr. Weise learn that La Cosa had seen the Venetian's own drafts? "La Cosa," he continues, "had nothing else than his imagination to guide him in delineating the coast between the field of the English discovery and South America," and "his extension of the mainland from the one to the other has no geographical significance." Does he know how far Cabot guided La Cosa? If the latter saw Cabot's map, he guided him to some fixed extent, and La Cosa at least must have known how far Cabot came down the coast, which is now so much a matter of dispute. It would be a little safer for Mr. Weise to consider that if La Cosa saw Cabot's charts, he might not be imaginative at all, as indeed he was not in any case. The coast of the La Cosa map does not, as he says it does, extend "from the one to the other," for La Cosa was cautious, if his critic is not, and distinctly breaks his line of connection by a vignette, uncertain if the strait may not yet be discovered thereabouts, which everybody was looking for. La Cosa further believed that the current drafts of the Asiatic coast and the descriptions of Marco Polo were much better guides for him to follow than the imagination which Mr. Weise assigns to him. It is very likely that Cabot had done the same, as we know Ruysch did eight years later. There is just the same lordly way of settling questions when he speaks of the Behaim map, which indicated to Magellan the strait which that navigator went to find. Mr. Weise asserts that this map "was evidently one drafted to exhibit the field of the explorations of Cabral (1500) and other Portuguese navigators along the eastern coast of Brazil." How did Mr. Weise solve a question which anxious students of our early cartography have long puzzled over? How does he know that this map was not made before 1500?—for ever after Columbus in 1498 became aware by the floods from the Orinoco that to the south of the West Indian Archipelago there must be a vast continental territory, conjecture had been rife as to its limit and direction. Behaim was simply expressing by analogy, so far as anybody to-day can determine, the extension of a continental main to the south to balance, as it were, the African extension which Da Gama and his immediate predecessors had proved on the other side of the Atlantic. Behaim might as well have made his map before as after 1500, just as Da Vinci (if the map at Windsor Castle is his) and Schöner and the maker of the Lenox globe did, long before Magellan proved the existence of the Strait at the South.

It is not easy to see that Mr. Weise understands the conditions of the case when he comes to speak of the application of the name America to the New World. After referring to the well-remembered baptism of the region that Vespucius claimed to have explored, which took place at St. Dié in 1507, he goes on to say that "in a short time America became a popular designation for the continent in the Western hemisphere," and that Schöner, who at a considerably later day was the first publicly to question the propriety of the name, undertook in 1520 "to lessen the importance of the discoveries made by the Spanish and Portuguese by placing on a globe an inscription designating South America, *America vel Brazilia sive papagalli terra*," and that, in doing this, Schöner showed "a spirit of ill-will." It happens that Schöner, as Mr.

Weise does not seemingly know, had already five years before (1515) made a globe in which he called South America simply *America*, and nothing else; so that if there was any scorn in "the land of parrots," Schöner worked up to it gradually. That, however, may not be what Mr. Weise means, for a callow inexactness characterizes much that he says. It may be he means that in confining the name to South America Schöner showed his ill-will. If this is the offence, Schöner simply did what was the universal custom of the time; he applied the name to all that Hylacomylus intended to apply it to when he gave it to the territory bordered by that long line of coast from Honduras to near the bay of Rio Janeiro, which Vespucius claimed that he had tracked, and which was the only stretch of coast in the New World then known which seemed to have definable continental proportions. The fact is, that the name America was made to cover both continents slowly, and not "in a short time"; and we know no earlier application of it to both North and South America in any map than in that of Mercator in 1541, while the earliest instance of a well-defined, unmistakable entity for North America as a continent is in the Münster map of the previous year (1540), and he also, perhaps in a spirit of "ill-will," which he was not conscious of, inscribed on South America only the alternative names of Brazil and America.

The one marked exception in Mr. Weise's book to his habit of utterly ignoring the existence of views opposing his own, is in the case of the alleged voyage of Vespucius in 1497, which he accepts. There has been no more serious question in the whole story of early American explorations. From the days of Cabot, who distrusted Vespucius's story, to our own, it has been the earnest endeavor of every student to preserve the substantial honesty of the story if he could. All sorts of allowances have been made. Humboldt charitably laid much of the confusion in the account to the proof-readers of those days. Others have found this or the other way of reconciling, as best they could, the statements of Vespucius's narrative with known incidents and with each other. Few have gone to the extent of the downright, merciless castigation which Santarem has bestowed on the Florentine. If historical evidence is worth anything, in the network of confusion which is left about the question after all has been said, the case is at least not proven. No one of any marked consideration as a scholar has unflinchingly accepted the affirmative, except Varnhagen, who has persistently and ably written special plea after special plea upon the subject.

In this state of the case, there was a chance for intelligent criticism; but if Mr. Weise had been inclined to try his powers, we might well distrust the critic who accepts for fact a hypothetical chart of 1501–1504, which Lelewel published in 1850, and confounds it with the actual Cantino map of 1502, which Harrisse within a year has made prominent.

To make out his case, Varnhagen discards the text of the 'Quatuor Navigationes,' printed at St. Dié in 1507, and which there is good reason to believe was translated from a French version, which had had the sanction of Vespucius himself. In the place of this Latin text Varnhagen follows an Italian text, which is undated, and which, without any evidence to be adduced, and only by inference, he considers the original text. There is absolutely no proof to suppose it any nearer in substance to the actual text of Vespucius's letter, in whatever language that may have been written—and this is uncertain—than the Latin one is. This last we know positively was published in 1507, and it is considered in the opinion of dispassionate inquirers the earliest printed text. Varnhagen chooses to think this undated Italian text preceded the Latin and was printed in 1506, because he found a copy of it bound up with another tract of that date. So Harrisse found one bound up with one dated 1516; and the argument is as good in one case as the other. But the chance which satisfied Varnhagen satisfies Mr. Weise; and, without unfolding the case, he simply stigmatizes as "assumptions" the views of Varnhagen's opponents. The question has not by Varnhagen been taken out of the category of the uncertain; and Mr. Weise, in this as in every other part of his book, has added nothing to the subject, and has narrowed the reader's vision, whichever way one may turn among a group of subjects the most difficult to be elucidated.

Summer. From the Journal of Henry D. Thoreau. Edited by H. G. O. Blake. Boston: Houghton, Mifflin & Co. 1884.

THE series of which this volume is the second will, when completed, comprise the entire annals of a New England year; and hence it may be unfair, or at least unnecessary, to inquire by what calendar the season of summer is restricted to the forty days between June 1 and July 10. Thoreau himself says that summer has begun when the lady's-slipper and the wild pink come out, and he reports that by the Indian almanac ripe berries mark midsummer; but there is nothing to show that he regarded the last rose as a sign that the season was at an end. In fact, this volume covers, not summer, but the time of blooming flowers and birds in full song; for if with us the warmth and the tide of life come with a rush at the close of May, the summer lingers long past its prime, like an Arctic night; and of this portion of the year the present instalment contains no notes.

To pass by the extreme brevity of the time included, however, and come to the book itself, there is nothing strikingly novel in its pages either in the way of observation of nature or of thought. The flowers, birds, and animals are named and described, and some of the more general climatic or landscape characteristics noted, all in the piecemeal style of a random pedestrian; and they derive their interest from the quality they have of being, as it were, a part of the ceremonial of nature-worship as practised by a man who was a priest born to the rite. If, as Thoreau narrowly remarks, "the priest is a fungus of the graveyard," it is quite as true that he was himself a semi-vegetable outgrowth of the wild soil of the unreclaimed field and forest. He lacked humanity in the sense that he was incapable of society, did not understand social duty, did not care for social ends. It is of interest to see what such a being, a literary man who made his hermitage in nature instead of among books, really filled his days with; and, fortunately, in these diaries Thoreau wrote enough to let us know that his secret life was not different from that which appears in his acknowledged books: he was concerned with the flowers, the nests of fishes and birds, the habits of squirrels and skunks and woodchucks; and when he ceased to observe and began to think, he mounted the demi-natured hobby of transcendentalism and rode it, not in a coterie like others, but all by himself. We wonder at the keenness and patience of his observation, at the occasional subtlety and penetration of his mind, and now and then at the literary felicity of his phrased thought; whether he sees or reflects or writes, it seems an operation of instinct rather than a thing of premeditated purpose; but, with these fine faculties, how did he materially advance science, truth, or letters? In fact, his life was, from one point of view, a long self-indulgence of the kind that is justified only in the case of genius which by so doing develops itself. Chaucer loved the flowers and the small birds, and in the Maytime he threw aside his books and went out free to enjoy the liberties of nature, of which his poet's right had made him citizen; but he returned to the row of red and black volumes in the study, and to the affairs of life in the cabinet. And in the same way many another poet since the father of English song, with quite as much sensibility to nature as Thoreau, has found his life capable of more than the satisfaction of an unscientific curiosity of a particularly rambling kind, or of æsthetic feelings in which the physical element predominated. Were the claims made for the Concord School less pretentious, there would be no need to emphasize this aspect of the life of its naturalist; but, of all of them, Thoreau is one of the most overrated; and when there is so patent an illustration of the narrow range of his misanthropic spirit and the inutility of his employments as these diaries afford, it is desirable to point out the cardinal fact that his life was from year to year a repetition; was destitute of growth; was, so to speak, a mere change of seasons. Whether his genius was such as to make his life necessarily such and to justify it, is a question on which we cannot enter; it is enough at present to note the fact.

To get at the heart of his writings, to feel their charm, one would better neglect as far as possible the human element and attend only to the natural scene presented, as if in a country walk. Then, despite the diffuseness of this volume and its wearisome iteration of facts, it will recall very vividly the look of the most beautiful New England season, the perfect days of June, the fervid days of July, with the swift changes of their detail almost from hour to hour until all life has budded and flowered, and is ready to bear fruit. Here and there, too, one gets a bit of the pastoral, realistic as Howells's picnics, æsthetic as the processions of "Patience":

> "Probably the first [pond-lily] a day or two since. To-morrow, then, will be the first Sabbath, when the young men, having bathed, will walk slowly and soberly to church, in their best clothes, each with a lily in his hand or bosom, with as long a stem as he could get. At least I used to see them go by and come into church, when I used to go myself, smelling a pond-lily, so that the flower is to some extent associated with bathing on Sabbath mornings and going to church, its odor contrasting with and atoning for that of the sermon."

The cold-water part of this deliciously rural picture seems to be somewhat apocryphal even in Thoreau's case, as so late in life as July 8, 1852, we find him reflecting: "I am inclined to think bathing almost one of the necessaries of life, but it is surprising how indifferent some are to it. . . . One farmer who came to bathe in Walden one Sunday while I lived there, told me it was the first bath he had had for fifteen years."

Other tell-tale confessions there are of certain crudities in Thoreau's make-up—what is to be said, for example, of a voiceless poet, such as Thoreau is claimed to have been, who, when he attains utterance, calls the cricket's chirp at noon "the iced cream of song!"—but in spite of them there is in general the breath of an open heaven in all he jots down, however trivial it may be. He belongs to the type of Selden and Walton in his enduring qualities; and with all his unsociability, his crankiness, his inefficiency, the petty curiosity that took the place of science and the vaporing that too often took the place of thought, one feels that he could not be spared as the woodsman of genius, the sympathetic and intelligent annalist of a wild life that in its fulness and variety is too rapidly passing

away from the fields and forests and quiet ponds of eastern Massachusetts.

Key to North American Birds. Containing a concise account of every species of living and fossil bird at present known from the continent north of the Mexican and United States boundary, inclusive of Greenland. By Elliott Coues, Ph D. Second edition, revised to date, etc. Profusely illustrated. Boston: Estes & Lauriat. 1884.

THE first edition of the 'Key' was published in 1872, and furnished to beginners and amateur ornithologists a concise handbook of North American ornithology. In its conception and execution it was an innovation in our zoölogical literature, the author for the first time introducing into zoölogy the system of artificial "keys" which have been for so long a time an important feature of botanical handbooks. The fact that an edition of over two thousand copies was long since exhausted shows that the book met with generous favor, and unquestionably it has been a great help to the rising generation of ornithologists and bird-lovers. Its chief fault was that of over-conciseness; for, while in the main the leading distinctive characters of species were happily expressed and thrown into prominence, too little space was given to the various phases of plumage characteristic of age and sex. The introduction gave an extended account of the external anatomy of birds, but very little about their internal anatomy or the principles of classification. The classification adopted, as regards the highest subdivisions, was to some extent vitiated by a false basis, as the author now freely admits. In fact, he so well appreciated the defects of the old 'Key,' that he has long had in view a second edition, greatly enlarged and improved. Besides this, the rapid—in fact, unprecedented—advance in our knowledge of North American birds during the last decade would have sufficed to render any handbook of the subject now antiquated. The new edition is therefore essentially a new work, identical with the former only in name, spirit, and aims, so greatly has it been enlarged and remodelled. Branches of the subject not treated at all in the first edition now occupy hundreds of pages. The number of pages and illustrations is more than doubled, and the matter quadrupled; but, through the use of thinner paper and smaller type, the volume is but slightly increased in size. The illustrations are improved by the rejection of some of the poorer ones and the substitution of new ones in their place; among those added are about one hundred, drawn and engraved by the best talent expressly for the work.

The first considerable increment to the text is the author's "Field Ornithology" (forming Part I.), originally published in 1874 as a separate work, and here reproduced with little change. This, as the title implies, gives detailed directions for work in the field, and the preparation and preservation of specimens, and has long held an important place in the equipment of the young collector. Part II. of the work—"General Ornithology"—takes the place of the introductory matter of the original 'Key,' but is far more comprehensive, the part relating to the same portion of the subject—the external anatomy of birds—being wholly rewritten and greatly enlarged. In addition to this there is an exposition, occupying over twenty pages, of the "Principles and Practice of Classification," giving the rudiments of the subject, in easily understood phrases, from the modern standpoint of evolution. This forms a highly important feature of the work, and will cast much light where light is greatly needed. Under the heading, "Introduction to the Anatomy of Birds," and occupying nearly one hundred pages, are set forth the leading points in the structure of birds, with special reference to systematic ornithology. The author laments that his present treatment of the subject is necessarily too brief to be fully satisfactory; but since it forms the first systematic presentation of the subject by any American writer in anything like the detail here given, or in any form so readily accessible to American students, it is entitled to, and will doubtless receive, a cordial welcome. Many of the numerous illustrations were drawn expressly for this volume by Dr. R. W. Shufeldt, U. S. A., well known as a prominent writer on avian anatomy.

The main body of the work—forming "Part III. Systematic Synopsis of North American Birds"—presents, with satisfactory fulness, descriptions of all the (about 900) species and subspecies of birds found in North America north of Mexico, including also Greenland, which is faunally a part of North America. This also includes the characters of the genera, families, and orders, with analyses of the species under the genera, of the genera under their sub-families, and with artificial keys under the orders and families, which serve to guide the student to the sub-families. The attempt made in the first edition to carry the student at once to the genus is now abandoned. Under each species and subspecies is given a statement of its geographical distribution, and a brief epitome of its leading traits as regards migrations, song, nesting, habits, etc., including descriptions of nest and eggs—all with the author's usual and well-known aptness of expression. To make room for other matter, the bibliographical references given in the old 'Key' are here omitted, perhaps in some degree to the inconvenience of the student. The nomenclature adopted is strictly that of the 'Coues Check List' of 1882; while the technical names are accented for pronunciation, and have their meaning defined, the authorities for the names as adopted are omitted—the new 'Key' and the new 'Check List' being to this extent complementary works. The concluding Part IV. consists of a "Synopsis of the Fossil Birds of North America," corresponding to the Appendix of the old 'Key,' and brings the subject down to date. This part of the work has been revised, as before, by Prof. O. C. Marsh. Attention should also be called to the Historical Preface, which sketches the progress of North American ornithology from its earliest beginning to the sixth decade of the present century. This long period of over two centuries is happily divided into "epochs," and the epochs into "periods," named in honor of the various writers who have most strongly left their impress upon the science. The character and influence of the work of each prominent writer are duly weighed, and the writer himself set on his appropriate pedestal in the ornithological temple of fame.

While the faults of the original 'Key' were so far from serious that the work proved a most useful compendium of North American ornithology, and as such has had a large degree of usefulness, the new 'Key' presents the subject under an aspect so much broader, and in so much greater detail, that it cannot fail to be a great boon to the amateur and the beginner, and a work of great convenience to even the professional ornithologist. The publishers have generously coöperated with the author in respect to illustrations, paper, and typographical execution, in respect to which the work is entitled to high praise, and reflects great credit upon the University Press of Cambridge, to which was intrusted its entire mechanical execution. The copious index of over thirty pages sufficiently evinces the author's own care and thoroughness respecting the details of bookmaking.

Hadden's Journal and Orderly Books. A journal kept in Canada and upon Burgoyne's campaign in 1776 and 1777, by Lieut. James M. Hadden, Roy. Art. Also, orders kept by him and issued by Sir Guy Carleton, Lieut.-Gen. John Burgoyne, and Maj.-Gen. William Phillips, in 1776, 1777, and 1778. With an explanatory chapter and notes by Horatio Rogers, Brevet Brigadier-General U. S. V., etc. Albany: Joel Munsell's Sons. 1884.

"RARELY has so brilliant an array of British officers been marshalled under one commander as that which followed Burgoyne across Champlain, on his memorable expedition of 1777. Among them were several English and Scotch lords, four members of the House of Commons, and upwards of thirty men, not including the Germans, who subsequently became general officers." The whole force did not at any time, including the sick, exceed 8,000 men, of whom about half were British regulars. It is to make us better acquainted with this force that this book has been written. Hadden's journal and orderly books make up but a small part of it. Hadden was a young lieutenant of artillery who served throughout the expedition. He kept a careful journal, written in a neat hand, and illustrated with maps of his own drawing; but it terminates with the battle of Freeman's Farm, nearly a month before the surrender. It contains little, if anything, which is novel, or that would be of interest to any one but the most technical student. It derives its chief value from the fact that only two other journals by participants in the same campaign have found their way into print.

The journal and the books of orders accompanying it came into the possession of General Rogers nearly ten years ago, and with them as a basis he now offers us a book which presents a complete picture of Burgoyne's army, of interest not merely to the historical student, but to the general reader as well. In a long "explanatory chapter" he gives the names and numbers of the British and German regiments comprising the army, a statement of their organization, equipment, and discipline, something of their history and that of their chief officers, and some comments on the campaign and the cause of its failure. The journal and orders then follow, exactly as they were written, but accompanied with copious foot-notes, which give a biographical sketch of every officer whose name is mentioned in them. These notes make the book an invaluable contribution to the history of the Revolution, and, instead of Hadden's journal, it might more properly be called a biographical index of Burgoyne's army. These biographical data have never before been collated, and some idea of the labor and research involved in compiling them may be formed from the list of authorities to which reference is made, and which comprise more than three hundred volumes. Following the journal and its notes is an appendix containing more extended sketches of the principal officers, Carleton, Burgoyne, Phillips, Sir William Howe, Lord Petersham, and others, including La Corne Saint-Luc, the leader of the Indians, of whom so much was expected and so little realized.

That an army so brave and so well officered as that of Burgoyne could achieve such complete failure can only be accounted for on the ground "that there was something radically wrong, both in its leader and in its composition." Burgoyne was distinguished for "not doing the right thing at the right time," the British and Germans were jealous of each other, and the "Government itself was the real cause of the failure of the expedition," as it promised Burgoyne coöperation from New York and then neglected to give Sir William Howe his orders to

that effect. The remarkable fact is recalled that the despatches to Howe were prepared but were not sent, because the Secretary for War, Lord George Germaine, was in a hurry to go to the country and would not wait for fair copies of them to be made; and when he came back to town they were forgotten. Still more extraordinary was the fact that this same Minister of War had been dismissed from the army when a young man for cowardice in battle. It is not, however, to give us a history of Burgoyne's campaign that General Rogers has, so to speak, framed his book around Hadden's journal and orders. That history has already been thoroughly written and discussed. But in writing it little has been said of the *personnel* of Burgoyne's force. It is precisely this omission which General Rogers now supplies, and in a manner so complete that Burgoyne's officers become as well known to us as those of the patriot army.

Arminius Vámbéry. His Life and Adventures. Written by Himself. New York: Cassell & Co. Illustrated. 12mo, pp. 370.

It is a score or more of years since the Asiatic travels of the lively and talkative Hungarian Jew, Vámbéry, or Bamberger, were published. In the second number of the *Nation* we reviewed one of his linguistic works, and have had occasion to refer to him more than once since. It is by no means quite certain how far his descriptions of Central Asia are to be credited. The smooth-tongued Hungarian, if he had the talent of his race for languages, and its restless love of adventure, had also a proclivity for getting into trouble, and extricating himself by the subtleness of his tongue. After his return his advocacy of English influence in the East, and his attacks upon Russia, stirred political animosity until it was even asserted that he never had made the expedition he narrated so entertainingly. There were certainly errors in his descriptions. In his first account he placed a great forest infested with insurgent tribes between Bokhara and Samarcand, in a fertile spot occupied only by gardens, and he described his view of Samarcand, from a high hill which is not to be found by more recent travellers. Errors, however, were to be expected in a book written from memory; the preservation of his disguise as a dervish rendering it impossible for him to take notes without imperilling his life. His story was, on the whole, an interesting and valuable contribution to our knowledge of central Asia, before the advance of Russia stopped the slave trade and made travelling possible.

The picture that we get of the author is a lively and typical one. Vámbéry began life under every disadvantage; but the poor crippled dressmaker's apprentice had an insatiable appetite for learning languages, and a pleasing address; he ran away when he was about a dozen years old to become a tutor, with some anomalous additional duties of cleaning boots and waiting on the guests. But nothing daunted him, and as soon as he had accumulated a handful of florins he was off for the university. Compelled to live on charity, he struggled on with a passionate hunger for linguistic studies and a nomadic hatred of the confinements of city life, until his ability was recognized, and assistance from the Hungarian Academy enabled him to carry out his pet project of seeking at the Asiatic fountainhead of his race a purer form of the Turkish tongue, more closely allied with his own national Magyar speech—a hope which it is needless to say was not realized, although on his return his researches were rewarded with a professorship in the Hungarian Academy.

The present volume, unfortunately, is little more than an entertaining compilation from his previous works. Nearly half the book is taken bodily from his Asiatic travels, with hardly any changes beyond slight modifications of style and correction of errors—a fact which we do not find mentioned anywhere in the pages. The introductory account of the author's life contains little that is new, and altogether it seems a clever but not very scrupulous piece of book-making.

Universal History. The Oldest Historical Group of Nations and the Greeks. By Leopold von Ranke. Edited by G. W. Rothero. New York: Charles Scribner's Sons. 1884.

No reader who has paid any considerable degree of attention to history needs any introduction to the name of Von Ranke. Even the schoolboys of forty years ago will identify it with Macaulay's brilliant essay upon his 'History of the Popes.' For nearly half-a-century this writer, with the wonderful German industry and thoroughness, has devoted himself to special branches of the science, holding during that period the first rank as an authority. And now, in his advanced age, he has grappled with the task of depicting, as he expresses it, the "general historical life which moves progressively from one nation or group of nations to another." The German edition, as the translator informs us, has reached four volumes like the present, extending to the sixth century of our era, and if the author fulfils his intention of bringing it down to our own time, the work will comprise some six or seven volumes. The reception of the present volume will decide whether the translation is to be continued. Under the peculiar conditions of American copyright, the sale in this country will hardly have much influence upon this question, but the permanent value of the book will probably determine it for us, especially in view of the translator's assertion that "no similar attempt to present a connected view of universal history exists in the English language." For undoubtedly the best way of reading history is to obtain a bird's-eye-view, whether of the whole or any particular period, and then to fill in the details by special studies.

The first four chapters of the present volume are devoted to Egypt, the Twelve Tribes of Israel, Tyre and Asshur, and the Medo-Persian kingdom, and the other eight chapters to Greece down to the Græco-Macedonian kingdoms, with a "glance at Carthage and Syracuse." Beginning, that is, with the dawn of authentic history, it covers those nations of which the life is separated by a gulf from modern times. Even Greece under the Turkish rule shows few traces of the splendor which has left such a precious inheritance, and the civilization of the rest has disappeared. Nevertheless their influence may be traced through the busy world of to-day, and it is in this that the author finds the justification of his work, as his readers will find their interest and instruction.

BOOKS OF THE WEEK.

Mark Loan: a Tale of the Western Reserve Pioneers. Cleveland: William W. Williams. 1884.

Have Just Ready:

The Baby's Grandmother.

By L. B. Walford, author of 'Mr. Smith.'

16mo, Leisure Hour Series, $1.00; Leisure Moment Series, 30 cents.

Among the Chosen.

16mo, American Novel Series, No. 5, $1.00.

Johns Hopkins University,

BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

J. T. TROWBRIDGE'S NOVELS.
NEW UNIFORM EDITION.

CUDJO'S CAVE.

Like 'Uncle Tom's Cabin,' this thrilling story was a stimulating power in the Civil War and had an immense sale. Secretary Chase said of it: "I could not help reading it; it interested and impressed me profoundly."

THE THREE SCOUTS.

Another popular book of the same stamp, of which the Boston *Transcript* said: "It is impossible to open the volume without being struck by the quick movement and pervading anecdote of the story."

THE DRUMMER BOY.

A story of Burnside's Expedition. Illustrated by F. O. C. Darley.

"The most popular book of the season. It will sell without pushing."—*Zion's Herald.*

MARTIN MERRIVALE: HIS X MARK.

"Strong in humor, pathos, and unabated interest."—*English Journal.*

NEIGHBOR JACKWOOD.

A story of New England life in the slave-tracking days.

COUPON BONDS, and other Stories.

The leading story is undoubtedly the most popular of Trowbridge's short stories. The others are varied in character, but are either intensely interesting or "highly amusing."

NEIGHBORS' WIVES.

An ingenious and well-told story.

12mo, cloth, price per volume, $1.50.

Sold by all booksellers and sent by mail, postpaid, on receipt of price.

LEE & SHEPARD, Publishers, Boston.

NOW READY.

MR. BLAINE'S
Railroad Transactions.

Selections from recent issues of the *Evening Post* (including letter of Mr. William Walter Phelps), reprinted in pamphlet form in response to demands for back numbers, which are exhausted.

PRICE, 5 cents each, postpaid. In quantities, $3 per hundred, postage or expressage extra. If addressed and stamped singly, $1 per hundred extra for postage. Remittance to accompany orders. Address

Corner 5th Ave. and 23d St., N. Y. City.

The Nation.

NEW YORK, THURSDAY, AUGUST 7, 1884.

The Week.

EVERY day seems to increase the amount of reliance which the managers of Mr. Blaine's canvass place on the Irish vote, though what it is due to, beyond the talk of the dynamiters in a few of the large cities, it is hard to see. The recognized leaders of the industrious and quiet people who compose the great bulk of the Irish-Americans in the United States give no countenance or encouragement to the idea that there is anything so attractive about Blaine for Irishmen as to break up their old habit of voting with the Democrats. That Cleveland has, as Governor of this State, done anything to incur the hostility of the Irish as Catholics or as Irishmen, has been emphatically denied by some of the foremost Catholic laymen in the State. If the Irish attachment to the Democratic party could be overcome by formal efforts and offers to that end on the part of the Republicans, the result would have been achieved long ago. There has been no year since the outbreak of the war in which the Republicans have not made impassioned and really cogent appeals to the Irish voters, the logical soundness of which could not be gainsaid. The Republican party was for twenty years emphatically the friend and defender of the poor and ignorant, the party which had most consideration for people in the condition of the great majority of the Irish immigrants. There was no difficulty in proving this. In fact, pity and sympathy for this class furnished the Republican party for a long time, and until it was taken possession of by rich speculators, with a large part of its inspiration, and yet they never made any impression on the Irish-Catholic vote. In every Presidential canvass since 1860, there have been rumors of a great Irish secession from the Democrats, but the total result was apt to be three or four Irishmen in search of places in the Custom-house or of regular work in running primaries. The great bulk of the race in this country has been almost as steadfast in its adhesion to the Democratic party as to the Catholic Church, all rumors and promises and hopes to the contrary notwithstanding.

The reasons of this it would take more space than we can afford to explain. But they are to be found mainly in the fact that the Republican party is, and always has been, in the tone, temper, and political and social ideals of the great bulk of its members, a thoroughly Protestant and New England party, separated from the Irish-Catholic by a gulf which dates back three hundred years, and which will never be bridged over till the Irish religious traditions have received a distinctly American coloring, and until the Irish temperament has been modified by long residence in a practical, business, and self-governing community. The Blaine effort to bridge it over by affecting great hostility to England is one of those bits of transcendent humbug by which the whole career of the candidate has been marked, and which must fail, owing to the necessity he labors under of satisfying the American public that he really wishes to live at peace with all mankind. There is probably nothing more amusing in the arts by which he has kept himself afloat than this affectation of what we may call a Platonic hatred of England. He hates her, in other words, just enough to get the Irish vote, but not enough, he will explain to Englishmen and peaceable Americans, to do her the smallest harm, or prevent his entertaining the heartiest wishes for her safety, honor, and welfare. The Irish know perfectly well, or at least the great mass of them do, that if Blaine got up a quarrel with England on their account, he would not have his party at his back, and that without his party behind him his quarrel could not last long or get beyond the paper stage. They are deplorably gullible, but it is to be said to their credit that they have never yet taken a joint interest with anybody else in a demagogue. All their demagogues have been their own exclusively, and have played Irish tunes and watched over Irish interests only. They have never put up with one who was an Irishman in the morning and a New Englander the rest of the day, or who was a Congregational deacon and a pious Catholic on alternate Sundays.

The committee of five appointed by the Republican National Committee have issued the following circular:

"The undersigned have been requested by the Republican National Committee to act as a Finance Committee for the District of Columbia in the collection of funds to be used by said National Committee in the present political campaign. We have agreed to act, and have organized by the selection of A. M. Clapp as Chairman, W. H. Loudermilk as Secretary, and Green B. Raum as Treasurer. On and after this date we will be prepared to receive and receipt for such sums as persons may wish to contribute to the campaign fund of the Republican Party. The rooms of the Committee, No. 1421 New York Avenue, will be open daily from 8:30 A. M. to 9 P. M."

This circular is to be sent to all the Government clerks, and the Committee have hired quarters in the centre of Washington, close by the Treasury which pays out the salaries from which the "contributions" are to come, and fitted them up like a bank, with a counter, and pigeon-hole windows, and books, and a cashier. The machinery could hardly be more perfect, unless they had the salaries docked as the money was paid by the Treasury. This is what they no doubt would do if they could.

The circular, it has been repeatedly announced, was to be contrived so as to evade the following provision of the Civil-Service Act of January 16, 1883:

"Section 11. That no Senator, or Representative, or Territorial delegate of the Congress, or Senator, Representative, or Delegate elect, or any officer or employee of either of said houses, and no executive, judicial, military, or naval officer of the United States, and no clerk or employee of any department, branch, or bureau of the executive, judicial, or military or naval service of the United States, shall *directly or indirectly, solicit or receive, or be in any manner concerned in soliciting or receiving*, any assessment, subscription, or *contribution* for any political purpose whatever, from any officer, clerk, or employee of the United States, or any department, branch, or bureau thereof, or from any person receiving any salary or compensation from moneys derived from the Treasury of the United States."

It has frequently been stated, and not denied, that there are on the Republican National Committee several members who are also members of the classes prohibited by this act from soliciting or receiving, or being in any manner concerned in soliciting or receiving assessments, subscriptions, or "contributions" from clerks. If the fact is so, then the machinery so artfully designed to evade the provisions of the Civil-Service Act, simply has the effect of furnishing written evidence of a violation of it. We "have been requested by the Republican National Committee," they say, and we "have agreed to act," and are willing to receive such sums as the persons who get the circular may "wish to contribute to the campaign fund of the Republican party." A clearer admission that they act as the agents of the National Committee could not be desired. If the circular had read, "We, the undersigned, as agents for the Republican National Committee, will receive and turn over to the National Committee any contributions from department clerks, the Civil-Service Act to the contrary notwithstanding," the responsibility of the National Committee would not have been any clearer. The circular is a written admission of criminality put on record in advance.

This is a matter which it appears to us the civil-service reformers ought to take up. For a prosecution under the act, they need proof of the following points: First, the fact that some member or members of the National Committee are office-holders in the prohibited class; this is a matter easily ascertained. Second, proof of their being "directly or indirectly" "in any manner concerned" in *soliciting contributions* from the clerks. The circular contributes prima-facie proof of this. No proof of payment is required—solicitation is enough. The penalty for this offence is a fine not exceeding $5,000, or imprisonment for not more than three years, or both, in the discretion of the court; and, after the warning of the Curtis case, the courts would not be inclined to deal leniently with an organized attempt to evade the act. The matter is one for which there is no time like the present. It is while the blackmailing is going on that a blow should be struck, and the people to do it are those who have effected an organization for the express purpose not merely of having civil-service reform acts passed, but of having them enforced.

The astute Clapp Committee are taking advantage of the fact that the clerks do not yet send in money for the campaign, to prove

that there is nothing compulsory about the assessment machinery. The compulsion, however, will come later. In about a month's time, it is announced, domiciliary visits are to be paid, and the clerks are to be earnestly "labored with." Notwithstanding all this, it is probable that the Committee will get less money than ever before. In the long run, what will make the clerks feel safe in not paying will be the certainty that their offices cannot be taken away from them for non-payment. The working of the examination and promotion system has already made the subordinate clerks feel much more secure than formerly, and their sense of security will undoubtedly be reflected in the diminished receipts of the Clapp Committee.

The woman suffragists have issued an address in which they formally and unreservedly give in their adhesion to Blaine, on the ground that their only hope is in the Republican party and its candidate, and "the noble women of his family circle." From the Democrats they expect nothing, and they condemn, though apparently more in sorrow than in anger, the defection from the Republican party of their old leaders, Messrs. George William Curtis, Wentworth Higginson, and James Freeman Clarke. Of the "Honorable Benjamin F. Butler" they speak with respect, but say that he at the head of his Greenbackers and Anti-Monopolists "would be powerless to help them." About Blaine's character, or, in fact, any candidate's character, they do not seem to care one cent, which makes one feel despondent about the great political purification that we have been led to expect when Woman entered the political arena.

The Springfield *Republican* published in 1880 some very interesting and well-informed letters about Mr. Blaine's railroad transactions, from a Boston correspondent. One of these gave an explanation, which we had overlooked when touching on the matter the other day, purporting to come from Mr. Mulligan direct, about the Northern Pacific Railroad transaction. Our readers may remember that Mr. Blaine came into possession, by "a strange revolution of circumstances," of an interest in this which he sold to Fisher and others for $25,000, but did not deliver the stock. They then dunned him for a whole year for the return of the money without effect. At last he paid up, and Mr. Mulligan said the way they made him pay up was this: One of the three purchasers of the Northern Pacific interest, Mr. Elisha Atkins, was also a director of the Union Pacific Railroad, and thus learned of Mr. Blaine's receipt of the $64,000 from that company for the Little Rock bonds he had to take back from his Maine clients. This fact Atkins communicated to his partners in the Northern Pacific "flyer," and, armed with it, they compelled Blaine to settle. But why he did not deliver the stock, and what he did with it after getting "control" of it, has never been revealed publicly. The Congressional investigation was just reaching this point when he had his sunstroke.

The Buffalo *Commercial* finds great reason to pity the Independent Republicans who have committed themselves to the support of Cleveland, because in Hendricks they "find a sharp sting in the tail of the Democratic ticket," and "don't like to talk about him" because he is "a rank Copperhead, inflationist, and chronic reactionist." It is quite true that the nomination for the Vice-Presidency makes the Democratic ticket less palatable to the Independent Republicans than it would otherwise be. But this is not the fault of the Democratic Convention so much as of the law which makes it imperative to vote for the President and Vice-President on the same ticket. It is not the Democrats alone who have taken advantage of this to force objectionable candidates on the voters. Mr. Chester A. Arthur's nomination in 1880, to please Roscoe Conkling, was to the Independents in this State as unsatisfactory to the full as Hendricks's can be. He represented in their eyes nearly everything that was most objectionable in American politics, and was a man far inferior to Mr. Hendricks in all kinds of equipment. Moreover, all things considered, we think there is hardly any Independent who would not sooner see Hendricks President of the Senate than Logan. If there was any sign of another civil war, perhaps Logan would be the safer man, but as things now are he compares very unfavorably with Hendricks. He was as unsound on the currency question, and is, about civil-service reform, although he supported the Pendleton bill, just as unsafe as Hendricks. As a presiding officer of the Senate he would, unless some great change came over him, be much inferior to Hendricks, and, indeed, to everybody else now prominent in public life that one can think of. In fact, considering what the choice is, the Independents are fully justified, considering the kind of person who heads the Republican ticket, in trusting to luck about the Vice-President. A mixture or average made up of Blaine and Logan would, from any point of view, be far inferior as a beverage to a mixture composed of Cleveland and Hendricks.

The latest story about Butler is that he would like to go back to Washington as a Democratic Congressman. His hesitation in not declaring his plans is no doubt caused by his not knowing which way to turn. His prestige as a Massachusetts Democrat is gone; he has lost control of the Machine, and though he might, by running for Governor, cause a world of trouble to both parties, he would gain the support of neither. His running for President on a Greenback-Labor-Reform ticket might draw off Democratic votes from Cleveland, but it might also in one or two close States damage Blaine seriously, and Blaine is not sure enough of his States to make him grateful to any one who jeopardizes a single one of them. Another disagreeable feature of the situation is the fact that Cleveland has not issued his letter of acceptance, and it would be rather silly for Butler to announce himself as the candidate of the laboring man against his foe the monopolist, and then to have the wind taken out of his sails by Cleveland's letter.

Butler's position illustrates not only what an awkward dilemma an habitual demagogue may get into, but also the absurdity of the whole labor delusion. The politician's laboring man is a creature of the imagination; his real demands not being known, the various statesmen who fish for his vote fashion them after images suggested by their own desires. We are solemnly assured by Blaine, the representative of protected manufactures, that what the laboring man wants is more tariff; on the other hand, the Greenbackers insist that he wants an inflation of the currency; and in the same way Butler feels that what the laboring man really wants is Butler. There is consequently nothing left, even if he wished to do so, for Cleveland, in preparing his letter, but to assume that what *his* laboring man wants is what he has undertaken to represent—good government, or the fair administration of the laws without discrimination or favor. This is really pretty much all a President can do for labor. He cannot issue greenbacks, or fix wages, or alter the hours of toil. He could denounce the monopolists in his messages, but denunciation of monopoly by a President does not produce legislation. The lobby of Congress, the committee-rooms, and sometimes, even that of the Speaker, are the places where the stealthy silent work of monopoly is done; and the floor of Congress is the place where it must generally be undone.

The struggle going on in the Hocking Valley of Ohio between striking coal miners and their employers has reached the stage of violence, a train having been fired into by the strikers, and the non-union miners having been stoned and otherwise maltreated. This state of things presents no feature of novelty. It is the most common sequel of a strike where the laws of trade prevent the employers from acceding to the demands of the employees. It is very rarely that the former will expose their own property and lives to the danger of mob violence if there is any other course open to them, and it is not to be supposed that the proprietors of the Hocking Valley mines would run such risks if it were possible for them to pay the wages demanded and make both ends meet. Violent measures cannot cause coal or iron to sell for more than the market prices. In such cases we hear a great deal of objurgation against the law of competition which grinds the faces of the poor, and condemns a large part of the human family to misery, but nobody has ventured to bring forward any substitute for it, or to tell how the fruits of the earth would be more equitably distributed if it were conjured out of the universe. Nor is it common in such cases to make much account of the other poor men who want to work in peace for such wages as are offered.

Judge Van Brunt's decision that the Emigration Commissioners have full discretion under the law to keep out paupers, gives the "assisted emigrant" craze its final quietus. The alarm displayed in certain quarters over the danger of the assisted emigrant's turning out a pauper was due to an assumption that the law gave no remedy. But it does. The Commissioners have au-

thority to prevent all real paupers from "landing," and Judge Van Brunt holds that this does not mean that if they set foot on land, they cannot be sent back, but that the term must be liberally construed, and that a pauper does not free himself from the jurisdiction of the Commissioners by merely leaving the vessel; otherwise he might be "landed" and be legally free to go where he pleased, though actually put in quarantine for the express purpose of preventing his landing.

The experiment was tried last week of opening a Newark Savings Bank with prayer. The Security Savings Bank is one of the successors of the defunct Newark Savings Institution, whose managers are now on trial for violation of trust. Proceedings were begun by the President calling the managers together, and advising them that as the institution was one of trust, they should all pray to be delivered from temptation. The Rev. Father Taylor, of the First Baptist Church, thereupon rose and prayed earnestly, not only for the success of the bank, but for the "honest administration of the trust by the managers." This was appropriately followed by the opening of a hundred accounts and the deposit of $50,000. There is certainly no objection to opening a bank with religious exercises, nor to reminding a trustee that his position is one of trust, and not designed to furnish him with an easy road to wealth; but prayer is not enough: the trouble with all the banks nowadays is the irresponsible control the president seems to have over everything connected with them. This cannot be corrected by prayer only.

The existence of the Concord School of Philosophy seems to be explained in part by the fact that it is not a school of philosophy in the old and accepted sense at all. It might just as well be called the Concord Summer Lyceum or the Concord Lecture Bureau. It serves to protract the New England lyceum period, hitherto confined to the winter months, into the hot weather, but it does not undertake to develop a philosophical system of any kind. All previous schools of philosophy, from the days of Aristotle to those of Comte, were based on some definite intellectual plan, involving premises, argument, and conclusions, and the premises, argument, and conclusions of one excluded those of another. You might be an Aristotelian or a Platonist, but you could not be both at once any more than you can in politics be a Democrat and a Prohibitionist. So you might be a Stoic or an Epicurean, but a choice was necessary. A Hegelian cannot be a Kantian, any more than a Presbyterian can be an Atheist. To judge by the proceedings of the Concord School, the great service rendered by Emerson—without whom it would never have existed—to philosophy lay in inventing a sort of eclectic method, in which you could take a Kantian premise and Aristotelian argument, or vice versa, and derive from them any conclusions that seemed desirable. This was what Emerson practised successfully all his life, and so great was his authority that he persuaded his followers that the resulting mélange was the pure milk of philosophy, and not, as sceptics thought, a mixed American drink. The trouble with his followers seems to be that they have adopted his method without his unction and authority. Consequently, each persuades himself or herself without persuading the others, and the result is that the eclectic character of the so-called school is revealed more clearly than it could be in Emerson's day. This may be a positive advantage in the end, for the Concord schoolmen and schoolwomen get gratuitous fame in a way that Emerson never did. Their performances show a weakening of philosophical dogma like that we see in religious dogma in the churches.

The total failure of the Conference, and the accounts given of the unyielding attitude of the French, make it seem somewhat likely that there was no expectation entertained on either side that it would come to any satisfactory conclusion. The French had to have a conference and make a bold front at it to satisfy the bondholders that they were doing their best for them, and the French Chauvinists that they were not going to yield an inch to England. The British Ministry were equally interested in satisfying their supporters that they were doing something about Egypt, and the Conference rendered them the great service of getting the Egyptian question for the moment out of the way so as to leave plenty of room for excitement over the Franchise Bill. The popular indignation against the House of Lords is now fairly started, and will last for two or three months at least, so that the Egyptian question may be considered shelved, and the Tories are again furious with Gladstone for having outwitted them.

The general result is that England is now saddled in a greater degree than ever with the burden of governing Egypt, and for an indefinite period, and will have to settle all the problems which that burden involves without consulting anybody. Earl Granville says no other Conference will be called till he thinks it necessary. The chances seem to be that an earnest effort will be made to pacify the Sudan by opening it up with railroads during the coming winter, and by getting the Abyssinians to do some of the heavy fighting with the Mahdi. Stanley, who has come back from the Congo, gives it as his opinion that Gordon's despondency is due to biliousness; that he has three excellent lines of retreat southward, and is in no danger whatever.

The experience of the French with the tariff is in many ways curiously like our own. They have just had a debate over their sugar duties which reads very like a tariff debate in Congress. One of the orators said he had in his legislative career voted for twenty-six bills about sugar, and that this was the twenty-seventh. The reason of this multiplicity is that what the Legislature is aiming at through sugar duties, is not the raising of revenue, which is a very simple matter, but the satisfaction of various conflicting interests. First it has to content the man who raises the beet-root; then the man who makes sugar out of the root; then the refiner, and finally the colonial sugar-planter. One or other of these is always complaining bitterly, consequently a new sugar bill is brought in every year or two. It is now discovered, too, that the German beet-sugar man, who has not had a tithe of the protection enjoyed by the Frenchman, is, apparently for this reason, able to beat the Frenchman out of the market. M. Ribot, in a speech in the French Chamber, July 10, said that in France 100 quintals of beet root produced and had always produced five of sugar, and there was no sign of doing any better. In Germany, on the other hand, they had secured a yield of 8.28, 9.24, 9.55, and even 10 quintals of sugar to the 100. One of the discoveries they had made, for example, was that it was a mistake to plant beets on manured land; that wheat should be sown first and then the beets the second year, with phosphates. Moreover, they had to discover a kind of wheat which could be sown on the manure without growing rank enough to lodge, and they discovered it—so true is it that necessity is the mother of invention. The well protected Frenchman did none of these things, but simply called for more tariff when his market was not good.

The abolition of public or official prayers by the French Legislature has led to much very heated discussion. Its authors maintain that it means simply that the state has no religion and has nothing to do with religion. But some of the bishops declare that it is a formal repudiation of God, or a denial of his existence by the state. M. Paul de Cassagnac, who says he is a pious man, sides with the unbelievers or "laicizers," as they prefer to be called, but for a reason peculiar to himself—viz., that he does not pray for the Republic lest his prayers should be answered, and a form of government which he hates should profit by them. This is probably the oddest expression of belief in the efficacy of prayer yet produced.

Mr. Stuart Cumberland's latest feat in mind reading has been, according to the *Pall Mall Gazette*, to divine the thoughts of the Prince of Wales. Mr. Cumberland was blindfolded, and the Prince of Wales was requested to "think of an animal." While the heir of England's throne was wrapt in thought, Mr. Cumberland took his hand, and by means of it traced something which the *Pall Mall* reproduces and assures its readers is an elephant, explaining that the "irregularities in the contour of the animal" are due to the fact that neither Mr. Cumberland nor the Prince is an artist. No explanation of the process is given, but is it fair that the public at large should be exposed to publications of a sort chiefly calculated to exercise an unhealthy influence on the development of pictorial art? To give the sanction of Royalty to misrepresentations of the facts of nature is surely no part of the duty of the Press.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 30, to TUESDAY, August 6, 1884, inclusive.]

DOMESTIC.

THE Democratic National Committee of Notification met ex-Governor Hendricks, at the Grand Union Hotel, Saratoga, on Wednesday, and formally notified him of his nomination to the Vice-Presidency. The ceremonies took place in the hotel parlors, a large number of ladies and gentlemen being present. Col. W. F. Vilas, of Wisconsin, Chairman, made a brief speech, and the formal address signed by the Committee was then read. Mr. Hendricks made a reply which was greeted with frequent applause. In the course of it he said: "Gentlemen, you have referred to the fact that I am honored by this nomination in a very special degree. I accept the suggestion, that in this candidacy I will represent the right of the people to choose their own rulers—that right that is above all, that lies beneath all. For if the people are denied the right to choose their own officers according to their own judgment, what shall become of the rights of the people at all? What shall become of free government if the people select not their officers? How shall they control the laws, their administration, and their execution? So that in suggesting that in this candidacy I represent that right of the people, as you have suggested, a great honor has devolved upon me by the confidence of the Convention." Mr. Hendricks visited Governor Cleveland at Albany, on Thursday, and had a brief consultation with him on political affairs.

A large and enthusiastic mass meeting was held in Chickering Hall on Wednesday evening, under the auspices of the County Democracy, to ratify the nomination of Cleveland and Hendricks. Speeches were made by Frederick R. Coudert; Governor Waller, of Connecticut; General Charles Hooker, of Mississippi; General Thomas F. Bourke, and Colonel John R. Fellows.

Collector W. H. Robertson, of this city, and Postmaster Gilbert Robertson, of Troy, sent to the Republican State Executive Committee on Wednesday their resignations from that Committee. Both gave as a reason for their action that they should violate the civil-service law by remaining on the Committee. Their resignations were accepted, and new appointments made.

Stephen B. Elkins, a member of the Republican National Committee, has resigned the Presidency of the First National Bank of Santa Fé, N. M., which he has held for thirteen years, in order to give more time to the duties of the campaign.

The National Labor Committee at a meeting in Chicago recently passed resolutions approving the course of Governor Cleveland as having been in the interests of the workingman, deciding not to present candidates for President and Vice-President, but to organize for the purpose of securing earnest and faithful representatives of labor in the State and national legislatures, and adjourning the meeting of the proposed National Labor Convention to July 30, 1888.

The Republicans of West Virginia united with the Greenbackers on Wednesday, and nominated for Governor Edwin Maxwell, Greenbacker and Republican; Auditor, J. H. Burtt, Greenbacker and Labor; Treasurer, Spencer W. Sturm, Greenbacker; State Superintendent of Free Schools, W. H. Kendall, Greenbacker; Attorney-General, John A. Hutchinson, Republican; Judges of the Supreme Court, W. H. H. Flick and J. H. Brown, Republicans; Presidential Electors-at-Large, John Frew and John Cooper, Republicans.

Congressman Converse (Dem., Ohio), who worked so hard to get the wool duty restored, was defeated for renomination by Joseph H. Outhwaite on Wednesday at Columbus.

The Clark County (O.) primary meetings for the nomination of a Congressman have given a large majority for Captain Bushnell, thus throwing ex-Speaker Keifer out of the race.

President Andrew D. White, of Cornell, has written a letter declaring that he will vote for the Republican nominees.

Judge William J. Bacon, a Republican since the time of Fremont, caused considerable excitement in Utica political circles by declaring in a Republican ward meeting that he would not vote for Blaine, whom he believed to be dishonest.

Congressman William W. Culbertson, of the Ninth Kentucky District, attempted suicide at the National Hotel in Washington on Wednesday morning by shooting himself in the head. He is recovering. The deed was the result of dissipation.

The decrease in the public debt of the United States during July was $3,993,289.

A Treasury statement shows a total contraction of the circulating medium of the country, outside of the Treasury, of about $32,000,000, during the seven months ending June 30, 1884.

During the year ending June 30, 1883, the total value of the exports of merchandise from the United States amounted to $740,513,560, as against $823,839,402 during the preceding fiscal year—a falling off of $83,325,842. The imports of merchandise amounted to $667,714,563, as against $723,180,914 during the preceding fiscal year—a falling off of $55,466,351.

The Sixth Auditor has prepared a statement of the receipts and expenditures of the Post-office Department for the quarter ended March 31, 1884, showing that the expenditures were $11,628,959, and the receipts $10,843,568, leaving a deficiency of $785,391. For the corresponding quarter last year there was a surplus of $1,119,877.

The Chief Engineer of the Army has received the annual reports of all the engineer officers in charge of coast and harbor defence. They reiterate their assertion of last year that the Atlantic coast and lake fronts are in an almost totally defenceless condition. General Newton, the Chief Engineer, it is understood, will, in his annual report, urge immediate provision for the adequate protection of harbors by batteries and fortifications of modern design.

The commission of cattlemen sent to Maxwell, Neb., by the Governor of that State to investigate the cattle disease, reported on Thursday that they found 100 cattle in the vicinity of Maxwell and Brady Station dead, and as many more sick. The infection is confined to cattle which grazed on a small strip of land over which 2,000 Texas cattle were driven. It was ascertained by a series of experiments that the disease was not contagious.

The Greely relief fleet was sighted early Friday morning off the Isles of Shoals. Secretary Chandler accordingly ordered a change in the original programme, whereby the ships were allowed to come into port at Portsmouth, N. H., on that day. Secretary Chandler received the commanders of the relief squadron on the *Tennessee* at Portsmouth harbor in the afternoon. Mrs. Greely was conveyed to the *Thetis* to meet her husband. The meeting was very affecting, and all present shed tears. His mother met him soon after. At about 4 o'clock Secretary Chandler was rowed to the *Thetis*, went at once to Lieutenant Greely and affectionately took the explorer in his arms. The Secretary said: "You have come back to us almost from the grave. I hope your future happiness may reward you for the terrible experience you have had." The Lieutenant responded feelingly, thanking Mr. Chandler for his kind expressions.

The formal welcome to Lieutenant Greely took place at Portsmouth on Monday. The city was crowded with visitors. Greely came ashore about 11 o'clock, and was taken to a hotel, the physicians having decided that the survivors should not appear in the procession. Before noon the procession began to move, headed by the sailors of the relief squadron. Commander Schley, Lieutenant Emory, and Commander Coffin were received with tremendous applause as they passed along in an open carriage. Greely and his comrades reviewed the procession from a balcony of the hotel, and again at the grand stand. Secretary Chandler, General Hazen, Commodore Wells, and other distinguished men were present.

The corner stone of the pedestal for Bartholdi's statue of Liberty was laid on Bedloe's Island on Tuesday afternoon. William Allen Butler delivered the oration.

Archbishop Elder has written a letter to the clergy and laity of the archdiocese of Cincinnati in which he gives his reasons for not starting active measures for liquidating the indebtedness of the late Archbishop Purcell. "I have repeatedly consulted advisers in civil and canon law and in moral theology, persons whose learning, integrity, sense of responsibility, disinterestedness, and delicacy of conscience gave me the best assurance that I might rely upon their judgment. I have not found one who, on a consideration of the whole case, would advise me that I had a right to declare this a diocesan debt, binding in justice."

At Providence, R. I., on Friday, Jay-Eye-See beat Maud S.'s record of 2:10¼ by trotting a mile in 2:10. Maud S. beat the best record on Saturday at Cleveland, O., by trotting a mile in 2:09¾.

The passenger station, ferry bridges, annex station, and part of the car-sheds of the Pennsylvania Railroad Company in Jersey City caught fire from an explosion of a gas tank under Superintendent Jackson's office at 11:15 o'clock on Monday night. The gas tank exploded with a terrific report, and an instant later a sheet of flame spread through the station. The buildings were all burned. The loss is estimated at about $300,000.

The back part of the United States Hotel, situated on Pennsylvania Avenue, Washington, fell in without warning on Sunday evening. A number of persons were buried in the ruins, but all but two were rescued alive after hours of work.

Royal Phelps, a prominent business man of this city, died on Wednesday, at the age of seventy-five. He was for many years Vice-President of the Chamber of Commerce, and was a trustee of a number of prominent charities.

Thomas Dickson, President of the Delaware and Hudson Canal Company, died in Morristown, N. J., on Thursday night, at the age of sixty. He was born in Scotland, but in early life came to this country. He was a self-made man, who laid the foundation of his fortune in Carbondale and Scranton, Pa., as a manufacturer of machinery. His great work was the building up of the vast railway system of the Delaware and Hudson Canal Company, to the presidency of which he was elected in 1869.

FOREIGN.

The Egyptian Conference held a meeting in London on Thursday, and the discussion proceeded favorably. An adjournment was taken until Saturday. After a brief session on that day it adjourned *sine die* without arriving at any agreement, provisional or otherwise. This action is regarded as tantamount to a dissolution. Immediately after the adjournment of the Conference a meeting of the Cabinet was held to discuss the result.

Mr. Gladstone made an explicit announcement in the House of Commons on Saturday in regard to the failure of the Egyptian Conference. He said the delegates were unanimous in their views respecting the prospective charges in Egypt and the necessity of a fresh loan, but England and France differed irrecon-

cilably respecting the charges and the receipts. France refused to assent to any diminution of the dividends payable under the law of liquidation. England was unable to accept any plan which did not provide for the necessary charges of administration. The French plan, Mr. Gladstone said, would have entailed financial confusion in Egypt. He expressed the hope that the idea that the Government had ever proposed to constitute an international control similar to the dual control might be altogether dismissed. The Conference had, he said, adjourned indefinitely. The Government had no proposals as yet to submit to the House. The Anglo-French agreement had ceased to be in force, and England's responsibilities in Egypt had been greatly increased. The Cabinet council on the result of the Conference is said to have been stormy. Mr. Gladstone, it is said, firmly declined to formulate any policy for Parliament, as it would only lead to angry and fruitless debates in the few remaining days of the session. The Tories are indignant over what they call Gladstone's trickery in amusing the public with a conference which he never intended should amount to anything. The Liberals, on the other hand, accuse France of playing a treacherous game. France wanted a vote during the last hours of the Conference, but England declared that whatever vote was recorded she retained entire liberty of action. Thereupon Germany, Austria, and Russia declared that they would remain passive.

Mr. Gladstone asked the House of Commons on Tuesday to vote a credit for an expedition to relieve General Gordon, which was done accordingly.

The Irish Constabulary Bill was passed by the House of Commons on Saturday by a vote of 90 to 33.

The Manchester Ship Canal Bill has been rejected by the Committee of the House of Commons and by the Lords. The Committee which had it in charge thought it would greatly injure the interests of Liverpool. The expenses of the promotors and opponents of the scheme aggregate £260,000.

A vast reform demonstration occurred at Birmingham, England, on Monday. Mr. John Bright and Mr. Joseph Chamberlain, President of the Board of Trade, were in the procession.

Twenty thousand people were present at a great reform meeting in the same city on the following day. Mr. John Bright made a vigorous attack on the House of Lords. He said of the peers that they had entered the temple of honor not through the temple of merit, but through the sepulchres of their ancestors. He would allow the peers to retain their present powers during the first session that a bill should be presented to them, but he would absolutely preclude them from vetoing the Franchise Bill or any bill a second time. Mr. Joseph Chamberlain also made an attack upon the House of Lords, and a resolution was passed denouncing their rejection of the Franchise Bill.

The British National Conservative Union has elected Sir Michael Hicks-Beach Chairman, vice Lord Randolph Churchill, resigned.

The trial of McDonnell, Daly, and Egan, the dynamiters, was concluded at Warwick, Eng., on Friday. McDonnell, who pleaded guilty to the charge of treason felony, was released on bail to appear at any time if called upon. James Egan was sentenced to penal servitude for twenty years, and John Daly for life. Daly's defence of himself was very able. He argued that nothing had been proved against him, except that he had borne an assumed name. But the Queen moved about under an assumed name. Why had he not as good a right? He asked for justice, not mercy.

The Rev. Mark Pattison, the distinguished English essayist and teacher, is dead, at the age of 71. He was educated at Oxford, and was elected a Fellow of Lincoln College, in that University, in 1840, and became Rector of his College in 1861. Among his published works are 'Tendencies of Religious Thought in England,' 'Suggestions in Academical Organization,' and 'Life of Milton.'

The British steamer *Britannia*, Captain Ferrier, which left New York July 16 for London, was wrecked off Portland, Eng., at midnight on Wednesday, by collision with another vessel. The crew were saved. The *Britannia* was a freight steamer with a valuable cargo.

In the French Chamber of Deputies on Wednesday, Prime Minister Ferry brought forward the Revision Bill as passed by the Senate, and demanded "urgency." The vote of "urgency" was carried by 314 yeas to 48 nays. The bill was then referred to a Committee, which resolved by a vote of 15 to 4 to recommend its adoption. The Chamber passed the bill on Thursday by a vote of 294 to 191.

The opening session of the Congress composed of the two houses of the French Parliament, which assembled at Versailles on Monday to undertake the work of revising the Constitution in accordance with the abovementioned bill, was exceedingly uproarious, and broke up in great disorder. M. Le Royer's proposal to adopt the standing orders of the Assembly of 1871 was agreed to. As soon as this matter was disposed of, Prime Minister Ferry ascended the tribune for the purpose of introducing the scheme of revision. M. Andrieux and others were at once on their feet, and protested that M. Ferry was out of order. It was contended that bureaux ought to be elected first. As M. Andrieux ascended the tribune the members formed a semicircle around him and a scene of wild excitement ensued. The President thereupon put his hat on and suspended the sitting. At the meeting on Tuesday the first thing done was to ballot for a committee to which to refer the bill for revision. The Extreme Left refused to vote, and reproached the majority with exercising undue pressure.

Prime Minister Ferry gave audience on Wednesday to Li Fong Pao, the Chinese Minister to France, who requested an extension of the time for China to reply to France's demands beyond the present limit of August 1. M. Ferry refused to accede to this request.

The London *Times* had a despatch on Friday from Foo Choo, dated July 31, which said: "China has refused to pay the indemnity demanded by France. The time granted to China by France to decide upon the matter has been prolonged beyond August 1. A secret edict has been issued ordering the Chinese not to molest foreigners. French civilians and mandarins, however, assert that the lives of foreigners are not safe. The English flagship is landing sailors to act in defence of the foreigners in Foo Choo. War, to all appearance, is imminent." Natives and foreigners were reported to be leaving the city in a panic. On Saturday it was reported in Foo Choo that both countries had accepted the mediation of America.

The London *Standard* on Tuesday said: "We are in a position to state that the negotiations between France and China were definitively broken off on Sunday." The London *Times* published a despatch on the same day from Foo Choo which says: "Foo Choo is quieter. China has offered to pay an indemnity of 500,000 taels—about $700,000—which M. Patenotre, the French Minister, has refused. Twelve Chinese gunboats have been placed in position at Foo Choo."

A French yellow-book was published on Saturday which gives the following information concerning the recent negotiations between France and China. France at first demanded of China an indemnity of 250,000,000 francs for the affair at Langson. But after China ordered her troops to withdraw entirely from Tonquin, France only asked that China should compensate the families of the soldiers who were killed at Langson and pay the extra expenses which the Chinese attack had made it necessary for France to incur. China objected to the indemnity, but on July 19 consented to appoint the Viceroy of Nankin to enter into negotiations with M. Patenotre, the French Minister. Prime Minister Ferry telegraphed to M. Patenotre, July 30, to extend the respite if necessary. M. Patenotre replied that China had offered to pay an indemnity of 1,000,000 francs and he had refused it. On July 13 France informed Admiral Courbet of her intention to occupy Foo Choo and Kelung in case China refused the French ultimatum. Admiral Courbet was ordered to use force only if attacked.

There was a marked decrease in the number of cholera cases, on Thursday, throughout the infected district of France. Fugitives began returning to their homes in Marseilles, and the city gradually resumed a more lively appearance.

The lower classes in the cholera-infected districts of France dislike and oppose the physicians, because they have got the notion that the physicians have been instructed to help the cholera along in order to get rid of the surplus population. A paper read by a medical man in Berlin lauding the cholera as sweeping off beings unfitted for the struggle for existence has been widely reproduced in France, and has helped to prejudice the people against the physicians, several of whom have been attacked and ill-treated.

President Grévy, of France, has recovered from his serious illness.

The American artists in Paris are subscribing to a fund for the purpose of presenting that city with a bronze model of Bartholdi's statue of "Liberty Enlightening the World."

It is reported in Berlin that the Grand Duke Louis of Hesse will abdicate his throne in favor of his son Ernest, under advice of the Emperor William. His morganatic marriage with Mme. Kolamine and subsequent divorce have compromised his position.

Henri Laube, the German poet, littérateur, and theatre director, is dead, at the age of 78. He was one of the founders of the Stadt Theatre, Vienna, and was the author of a great many books in various departments of literature. His complete works were collected and published in fifteen volumes in 1875 and succeeding years.

Both Houses of the Parliament of Holland met in joint Congress on Friday, and passed, by a vote of ninety-seven to three, a bill naming Queen Emma Regent during the minority of the Princess Wilhelmina.

A despatch dated Dongola, July 25, was published on Thursday which said: "The Mudir, with two battalions of Bashi-Bazuks, a detachment of mounted infantry, some guns, and 4,000 armed volunteers, attacked and defeated a rebel sheikh, named Ahmet el-Hoda, who was entrenched in the Ambukol district among the ruins in the mountains. The rebels were driven completely out of the province, and Dongola is now safe and tranquil. A messenger from General Gordon has arrived with a letter for the Mudir, and is awaiting a reply."

Advices from Assuan state that a refugee merchant who has arrived there reports that the Bishareens stormed Berber on June 8. Very severe fighting ensued. The rebels have built a wall against General Gordon, whose steamers captured several of their boats laden with provisions.

The rebels attacked Suakim on Wednesday night in great force. They lost four men killed and had several wounded.

A serious uprising was reported on Thursday at Yemen, Arabia. The insurgents have declared for El Mahdi and have captured several villages, including Sana. Ten thousand troops have been ordered from Jeddah to suppress the revolt, which on Monday was reported to be increasing.

WHAT WE THINK ABOUT IT NOW.

THE Boston *Journal*, which has had a great deal to say about what is called "the Cleveland scandal," asks us to investigate the matter for ourselves, and says it "knows it can lead to only one result," relying on our unwillingness to "support a notorious libertine and profligate" as a candidate for the Presidency of the United States. There has been from the beginning but little to investigate, and that little we have investigated to our own satisfaction. It is admitted by Governor Cleveland's friends that twelve years ago he formed an irregular connection with a widow, with two children, the eldest fourteen years old; that she was a person of intemperate habits, and that the paternity of a child born subsequently was doubtful, but he accepted it, and made provision for the child; that after suffering much annoyance from her—one of the natural and common penalties of such errors—and after satisfying her brother-in-law, who appeared on the scene as her protector, that he had behaved fairly toward her, he laid the whole matter before Mr. Burrows, a lawyer of high standing in Buffalo; that Mr. Burrows advised him to leave it to him, and thereafter took charge of it; that he (Mr. Burrows), conceiving the mother, for the reason given above, unfit to have the custody of the child, placed it in an orphan asylum, the mother consenting thereto, and making, as we understand it, a legal surrender of the child for that purpose, and occasionally visiting it at the asylum afterward; that she subsequently stole and carried it off from the asylum; that Mr. Burrows was notified of the facts by the authorities of the asylum; whereupon, acting on his own responsibility and without Mr. Cleveland's knowledge, he employed a detective to discover and look after the child; that in one of the detective's visits he found the mother suffering from delirium tremens, and threatening to kill the child, which lay on the floor; that he carried her off then to the Inebriate Asylum for treatment, and she stayed there until she was cured, and no longer, and that the child was restored to its previous guardians. The lawyer who acted for the woman in one stage of the affair, has formally and in writing repudiated any charge of seduction or breach of promise of any kind. The family acknowledge that Mr. Cleveland treated her generously. So much for the charge of seduction and kidnapping which many newspapers have been spreading. It was produced originally by a cheap and nasty journal in Buffalo as salvation from impending death, and has little other evidence to rest on except the bare assertion of the Rev. Mr. Ball, a Baptist minister in Buffalo, who appears to dabble a good deal in politics. Mr. Ball has repeated his story several times, but he does not supply fresh reasons for believing it.

He also is the chief, if not the only, authority for the story that Mr. Cleveland is "a notorious libertine and profligate." Well, we may as well say frankly that we think there could hardly be a poorer authority. We mean no disrespect to the profession when we affirm that accusations of this sort brought by ministers are to be received with exceeding caution. They can know little personally of the immoralities of men who are not members of their congregation. What they learn about them is likely to be hearsay, the tattle of busy-bodies who are delighted to be able to tell the pastor of the wickedness which is going on among people who make no pretence of being religious, and they are apt to receive it with a credulity which is sometimes very unfortunate. Then there are, as we all know, ministers and ministers—some who are large-minded, cautious, and charitable men of the world in the best sense of the term, and others whose denunciations pass us by as the idle wind. So that while we do not mean to accuse Mr. Ball of dishonesty, we do say emphatically that he himself needs a good many certificates to his sober-mindedness and fair-mindedness and the purity of his motives before he can be allowed to make away with any man's private character in the midst of a political canvass. If Cleveland is a "notorious profligate and libertine," why did Mr. Ball not know it when he was elected Mayor of his own city in 1881, and when he was elected Governor of the State in 1882? And if he did know it, why did he keep silent?

But we are not dependent on Mr. Ball's weaknesses, whatever they may be, for Mr. Cleveland's vindication on this point. We take it for granted that in his case, as in that of other men, the way to find what are his best known vices, especially the private and personal ones, is to ask his neighbors in the place in which he lives. This is and must be the true seat of his notoriety, if notorious he be. We must assume that considering the size of the vote which he received for the Mayoralty of Buffalo, and the fact that his majority was largest in its best quarters, Cleveland cannot have been a notorious libertine and profligate, or a libertine and profligate at all, in a small place, without being notorious. And yet the Ball story has taken everybody, apparently, but Ball, by surprise. After his nomination some of the heartiest testimonials to Cleveland's excellence as a man and a citizen came from such political opponents as the Buffalo *Express* and the Buffalo *Commercial*. Both of them are now somewhat shocked to find that he is the kind of man Mr. Ball describes, but apparently never dreamed of it until Mr. Ball spoke. Is this not most extraordinary? Could it happen, except in a Presidential campaign?

"Well, but," we shall be asked, "does not the charge against Cleveland, as you yourselves state and admit it, disqualify him, in your estimation, for the Presidency of the United States?" We answer frankly: "Yes, if his opponent be free from this stain, and as good a man in all other ways." We should like to see candidates for the Presidency models of all the virtues, pure as the snow and steadfast as the eternal hills. But when the alternative is a man of whom the Buffalo *Express*, a political opponent, said immediately after his nomination, "that the people of Buffalo had known him as one of their worthiest citizens, one of their manliest men, faithful to his clients, faithful to his friends, and faithful to every public trust," and of whom the Buffalo *Commercial*, another political opponent, said that, in opposing him, "it would not detract one jot or tittle from the well-earned fame of the distinguished gentleman who honored the opposition by bearing its standard," a good son and good brother, and unmarried in order that he might be the better son and brother, against whom nothing can be said except that he has not been proof against one of the most powerful temptations by which human nature is assailed; or, on the other hand, a man convicted out of his own mouth of having publicly lied in order to hide his jobbery in office, of having offered his judicial decisions as a sign of his possible usefulness to railroad speculators in case they paid him his price, of trading in charters which had been benefited by legislation in which he took part, and of having broken his word of honor in order to destroy documentary evidence of his corruption—a man who has accumulated a fortune in a few years on the salary of a Congressman—then we say emphatically no—ten thousand times no. We should be ashamed of ourselves if we had any other answer to make, and are amazed to hear that there are scores of clergymen all over the country advising people who care for morality to choose the trickster and jobber because he is chaste before the honest man, faithful to every public trust, because he has been weak before a passion of which everybody knows the force.

We had supposed the reason of this was so obvious that it did not need to be stated. Cleveland's virtues are those which bind human society together, and in which states are founded and maintained. There has been no great benefactor of the human race who has not been truthful, faithful to his trusts, disinterested, self-denying. There have been very few who have been chaste. Blaine's vices are those by which governments are overthrown, states brought to naught, and the haunts of commerce turned into dens of thieves. The standard by which some ministers now propose to exclude Cleveland from high place would have prevented Washington, Franklin, Jefferson, Hamilton, not to go any further, from taking any prominent part in the foundation of the American Republic. It would have excluded from office in England nearly every great statesman or reformer of the last hundred years, except, perhaps, Romilly, Wilberforce, and Gladstone. It would have visited nearly every prominent politician in the Republican party since 1860 with popular odium. It would, had the Democrats chosen to apply it, have defeated one Republican candidate for the Presidency by charges worse by far than Cleveland's, in that they added the sin of broken vows to the sin of incontinence.

We are not defending incontinence. Chastity is a great virtue, but every man knows in his heart that it is not the greatest of virtues, that offences against it have often been consistent with the possession of all the qualities which ennoble human nature and dignify human life and make human progress possible.

It ought to be preached and practised by every man to the utmost of his ability, but no one ought to preach it with any other motive than the spread of virtue, and least of all for the purpose, as in the present case, of making some of the basest of vices—the vices which sap everything that is valuable in society and politics—seem respectable. Preaching of this sort, at this time, is cant, and cant in its most loathsome form, for it fills every household in the land with filthy suggestions and insinuations, turns the press into a common sewer, and converts scores of editors into hypocrites, who must blush in secret over their own ridiculous sermons and their simulated righteousness. We will not for our part support the Republican party at this crisis in an attempt to capture the Presidency for a trickster, as Joshua captured Jericho, by the aid of a harlot. Great as its faults are, it deserves a less ignominious end than this.

THE SILVER PROBLEM.

In frequently calling attention to the danger involved in the forced coinage of silver on Government account, it is not our purpose or desire to magnify the evils which threaten the commercial community, or to imply that those evils are very near to our doors at the present time. That they are approaching, and that every monthly addition to the stock of silver in the Treasury brings us nearer to the crisis, is acknowledged upon all hands, and this fact is sufficient justification, if any were needed, for keeping the subject constantly in view. The reduction of the Government's available gold balance to $19,000,000 betokens, in our judgment, the nearer approach of the time when it will be no longer optional with the Treasury to make its payments in gold or in silver, but when it may be forced to pay silver. If the public should be convinced of this, and should begin to hoard gold in anticipation of a premium upon it, their action would, of course, tend to hasten the apprehended result.

The course of after events, in case the Treasury is obliged to pay out its silver, cannot be predicted with absolute certainty. The probability is that the same results would follow that followed the issue of legal-tender notes in 1862—that is, we should have two monetary standards, one of gold and one of silver, just as we formerly had one of gold and one of greenbacks; that the former would rule as to our foreign trade and the latter as to domestic trade; that the "premium on gold" would at first be slight, and that it would gradually rise to the difference between the values of gold and silver as metals, and would continue until the people should have suffered sufficiently from the annoyance and loss attendant upon two varying standards to demand a new resumption act. This is the probable course of the silver disease, and the treatment it will eventually receive. We cannot see that anything is to be gained by postponing it, or by pretending that it is far distant, and that a long time will be consumed in reaching its worst stages. The people must learn for themselves what is implied by a depreciation of the standard of value, just as people in former times learned what was meant by it when it was resorted to by profligate or bankrupt princes.

The banks of New York at present do not receive silver on deposit or accept it in payment of Clearing-house balances. The Treasury is a member of the Clearing-house by its own choice, and has bound itself to conform to the rules of the Association, one of which is that all balances shall be paid in gold or legal-tender notes. It has agreed also to give thirty days' notice of its intention to withdraw. In the event of its withdrawal it would pay all claims upon itself over its own counter, and receive all its dues in the same way. We will suppose that it begins to pay silver, gold, and greenbacks indiscriminately, but at its own option, not at the option of the receiver. This would be equivalent, in the estimation of the public, to making all its payments in silver. Consequently there would be a premium on gold, as regards payments at the Sub-Treasury, measured by the inconvenience of getting Sub-Treasury money converted into "bankable funds." But since legal-tender notes are redeemable in gold or silver at the Government's option, it would not be practicable for the banks, for any long time, to enforce their own rule, which excludes silver from their holdings. They might, and probably would, receive special gold deposits and keep special gold accounts, but they would be compelled to recognize as a dollar that which constitutes the basis of both the greenback and the national-bank note. In view of this inevitable result, it is most likely that the banks would anticipate it by rescinding the existing rule and conforming their business to the requirements of the Government, as they did when the legal-tender notes were first issued.

The effect of lowering the standard of value will be felt first by those who work for wages, and who receive fixed incomes. Their wages will not be raised, and their money will not go so far as it did before. It will not buy so much. The mercantile and trading classes can raise the prices of their goods, and will be compelled to do so, as they did during the war, but workingmen cannot raise their wages except by a struggle with their employers. The premium on gold, when it makes its appearance, will be the exact measure of the workingman's loss, and as this will be slight and will increase only by slow degrees, he will probably not think it worth quarrelling over. None the less will it be a daily drain upon him. It will be a fresh illustration, following a countless number which have gone before, of the fact that fluctuations in the value of the circulating medium tend to make the rich richer and the poor poorer.

THE REVISION OF THE FRENCH CONSTITUTION.

The cholera in France has distracted attention during the last three or four weeks from the interesting and somewhat exciting attempt which M. Ferry is making to procure a revision of the Constitution—a process so delicate and difficult that, though a majority of the constituencies desire it, no Minister has since 1875 been strong enough to undertake it successfully. Gambetta sought to bring it about as a means of securing the substitution of general for district representation, but it had a large share in causing his downfall. Why so many constituencies desire it is plain enough. The present Constitution is really a monarchical instrument, and has never been submitted to the people in any formal and direct way. It was framed by an Assembly in which the royalists of various shades had a majority, and was really intended as a sort of preparation for a restored constitutional monarchy. The Presidency which Marshal MacMahon held, under a seven years' tenure, was an office which could be converted into kingship by a mere change of name, and then no other change would have been necessary.

It is very questionable, however, whether there is any good reason for a revision except the fact that, after emanating from a suspicious source, the Constitution has never been revised. It has worked as well as any constitution could work in the most logical country in the world, in which the art of party government is still in its infancy. The process of revision in France consists in a proposal from the Minister, adopted or approved by the Senate, followed by the conversion of the two houses into a constitutional convention. The ministerial programme was submitted to the Senate ten days ago, but the full text has not yet reached this country. The first fight occurred over the creation of a select committee or commission formed to examine and report on it, which is done by ballot, and resulted in the election of eighteen members, half opposed to all revision and half favorable to some revision. The next rock to be encountered is the question whether the Convention, now in session, can be restricted to any programme framed outside. This has been greatly debated, but not settled, and it is more important than it would be in this country, because French constitutional amendments are not submitted to the people. The decisions of the Convention are final. The Chamber of Deputies, or a considerable portion of it, has always maintained that its powers of revision are and must be limitless, and to get over this difficulty it was proposed in the Senate to bind both houses, by joint resolution, to confine the action of the Convention to a formal and prepared list of topics.

The danger of unlimited revision every rational Frenchman is fully disposed to admit. Some idea of the confusion it might involve may be obtained from a scheme of revision drawn up by a committee of Radicals in the Department of the Seine, which asks for complete autonomy for the communes, or townships, separation of church and state, equality of military service, the payment of electors for the time lost in voting, and obligatory trial by jury in all cases. These sound not irrational, but they are really only the shell of the cocoanut. The milk is to be found in a proposition which binds the state to assure a decent support to all its citizens. This of course is simply slightly disguised "collectivism," and would compel the state to assume control of all the land and instruments of labor in the country. In fact, the Convention would have to sit perennially in

order to discuss all the plans of social regeneration which "cranks" inside and outside would submit to it. According to the latest advices the Senate Commission had adopted all of the ministerial programme, except article eight, which proposes to give the Chamber the final and deciding voice in voting the appropriations. At present each house has equal power over the supplies. The bills originate in the Chamber, and the Senate may alter or amend. They then go, if altered, back to the Chamber, which may disagree, and if the Senate refuses to recede from its position, there is a deadlock, from which the Constitution provides no escape, and which, if persisted in, would cause the loss of the appropriation. Conservatives do not dislike this system. It has, they say, caused no serious difficulty hitherto, and fosters the spirit of compromise in which French political character is so sadly wanting; but the Radicals chafe under the control of the budget by a body which does not emanate directly from the people.

THE RECENT EFFORT TO CARRY FEMALE SUFFRAGE.

LONDON, July 15.

ALTHOUGH the stirring events of the last few weeks—first the Egyptian Conference, and then the prospect of a struggle between the two houses of Parliament—have thrown the women's suffrage question into the background, it may be sufficiently interesting to American readers to deserve a letter. This year has been the most memorable in its history, so far as England is concerned. For the first time it was treated as a serious and practical proposal. For the first time it affected, if it did not involve, the fate of a great measure and a powerful Ministry. For the first time those ladies whose agitation has filled Great Britain for the past ten years, seemed on the eve of grasping the prize which hung so long far above their reach.

The importance of the movement in England dates from Mr. John Stuart Mill. Not only did he give it the benefit of his passionate, if somewhat too fervid, advocacy; he served it even better by making it a part of that radical programme which he taught to a band of active and able disciples, such as Messrs. Cairnes, Stansfeld, Fawcett, Courtney, Morley, Dilke. These disciples (or such of them as survive, for Mr. Cairnes has been lost to us) have faithfully clung to the dogma that for the elevation of woman her admission to political rights is necessary; and from them it has filtered through into the advanced Liberals generally, and become accepted by most of the philosophical Radicals, most of the Nonconformist politicians, and a fair number of other Liberals who think it is part of a general platform of franchise extension. This is the first source of its strength.

But this, being confined to one section of one political party, would not have been enough for success. The second piece of good luck was its acceptance by a part of the Tories. Disraeli embraced it while he was still in the House of Commons, and continued down to his death in 1881 a steady though not very zealous adherent, assigning the safe and obvious reason that he could not see why women who held property and paid rates and had votes in municipal and school-board elections (which is now the case with unmarried female rate-payers) should be excluded from a Parliamentary vote. They would, he argued, add an element of stability and caution to the constituencies. Sir Stafford Northcote has adopted this doctrine from his former chief, and the authority of two such men has been sufficient to commend it to many of the Tory party. What were Disraeli's secret motives has been much debated. Some insist that, recognizing not only a tendency to conservatism in women, an admiration for rank, a fondness of display, but also their subjection to the influence of the clergy, he believed that the Tory party would gain, and gain largely, by their admission to the suffrage. This view derives plausibility from the fact that those Tories who are now the warmest advocates of the female vote are also the hottest political partisans, and frequently show little interest in any other questions affecting the welfare of women. Indeed, some of them have avowed that they look on the matter from a purely party point of view, and expect from women an effective addition to their party strength.

The third force which has been working for women is the belief of certain groups of social reformers—of the peace party, of the total abstainers—that women would exercise a wholesome moral influence on legislation, and, in particular, would be strongly opposed to the liquor traffic.

Lastly, the women who conduct the agitation have owed much to their own skill, their own zeal; to the sympathy which their courage and tenacity excite; to those arts of persuasion in which women excel. That tendency to escape trouble by saying yes rather than no, which is illustrated in the parable of the unjust judge, operates more powerfully on a man when the request is preferred by a woman. It is pleasant to give pleasure; still more pleasant when you please a lady; most pleasant of all when the assent involves nothing to be done. Now, of those who have promised to support female suffrage, a very large number never thought of its becoming a practical question. "Some day, perhaps," they said to themselves, "but not in our time. We may sign petitions; we may (if in Parliament) give our votes for it; but of course it won't be carried." Time went on, and of those who had thus lightly passed their word, some got accustomed to the idea and believed it sound, not because they had ever thought about it, but only because they had promised; while others, full of doubts and misgivings, do not now see how to escape from their pledges.

In this state of matters, the Franchise Extension Bill comes in this year, and the female suffragists see their opportunity. Two million of new voters, mostly ignorant, nearly all untried, are to be admitted. Why not women? They give notice of an amendment to the bill which will admit women who fulfil the conditions imposed on men. They have the support of a majority of the Liberal party in the House of Commons, pledged by its previous votes or declarations. They may expect an equal support from the Tory side of the House, because the notion that women will vote Tory has become generally accepted. The ball is at their feet; the game seems all but won.

The sense that so considerable a change is at hand produces, however, an alarm among those who had hitherto looked on with mere curiosity, and tells chiefly on the Ministry, who are responsible for the bill. Nearly all the members of Mr. Gladstone's Cabinet are either opposed to female suffrage or neutral. Some of them are so hostile that they would as soon drop the Franchise Bill as see it pass with the female franchise added. All of them feel that the addition would imperil the bill, not merely because it would afford the House of Lords a further pretext for rejecting it, but because many Liberals who have hitherto been zealous would cool off forthwith. Mr. Gladstone's own view, which practically counts as much as that of all the rest of his Cabinet put together, is that, whether the change be good or bad, it is too serious a change to be undertaken in this casual way, as an amendment to a bill brought in with a different purpose. Strange as it may seem, Mr. Gladstone has no decided opinion either way. He has kept his mind in suspense upon the point, because he thinks it will not call for a solution till after he has gone. Hence the Cabinet decided to oppose the proposed amendment; and when it was moved, the Prime Minister went so far as to declare that if it were carried he would drop the bill altogether. This appeal was decisive. Loyalty, not merely to party leaders but to the principle of enfranchising the humbler classes in the counties, overrode sympathy with the amendment in the minds of many who would otherwise have voted for it, while those who had given inconsiderate pledges found an easy excuse for withdrawing them. It seemed just possible that if Sir Stafford Northcote had made a strong counter appeal to the Conservative party, he might have carried enough of their votes into the female camp to enable the Liberal adherents of the amendment to defeat the Ministry. However, he made no great effort in that direction. A good many Tories voted for it; a good many Liberals stood firm to it, despite Mr. Gladstone's adjurations. The Irish Nationalists went for it, although it had been recommended on the ground that women would in Ireland be a good element in the constituency, neutralizing the "mud-cabin voters," as they are contemptuously called. But between the solid old Tories who disliked such an innovation, and the Liberals who feared for the future course of the bill, a decisive majority against it was found.

The ladies who conduct the agitation profess themselves nowise disheartened by a defeat which they ascribe to the peculiar circumstances of the moment. They say with truth that if all the Liberals who had expressed themselves as favorable in principle had voted for the amendment, it would have been carried, and conclude that next time, when the Government leave the matter open instead of making it a question of confidence, it will be carried. Those, however, who listened to the debate are by no means so positive. Mr. Gladstone, while reserving his own opinion, has been heard to say that in the discussion the opponents of women's franchise seemed to have the best of it. Most of the influential men, such as Lord Hartington, Mr. Goschen, and Mr. Chamberlain, are known to be hostile. If the working classes were in favor of it, its success would be assured; but they seem so far indifferent. Many of their clubs have passed resolutions in favor of it, probably from a sentiment in favor of all extensions of the franchise; but there is no real warmth of interest in the matter among them, nor among those who work local Liberalism over the country, and who are inevitably led to think of party success as well as of general principles. One meets in private society a good many men reckoned as supporters who intimate that they feel more doubtful now about the proposal than they did some years back; and this may be attributed to the fact that the difficulty of excluding married women if unmarried women are included, of excluding lodgers if householders are included, has pressed itself more and more upon practical minds. Moreover, the success of the experiment tried in giving women seats upon the school boards of the country has been very problematical. In London, at least, they have not added to the reputation or usefulness of our educational parliament. The protest recently made by a spirited lady who has allowed her furniture to be seized and sold rather than pay taxes, because she has no share in electing the House which imposes taxes, has

excited far more amusement than sympathy; nor have people found the parallel which she draws between her position and that of John Hampden, when he refused to pay ship money, a very close one. On the whole, an impartial observer would be inclined to doubt whether the victory of the cause has been brought any nearer by a struggle which gave the best promise of success it has yet enjoyed. Y.

Correspondence.

THE CLEVELAND SCANDAL.

To the Editor of The Nation:

Sir: I hope you will say something concerning the wretched social scandal now extensively circulating in the West, involving Governor Cleveland. I do not myself give any credence to the gross allegations, but many anti-Blaine men may be led to waver in their opposition to political corruption if they have any reason to fear that, in supporting Cleveland, they may be sanctioning or condoning social corruption. If, as I believe, there is no ground for these base charges, what condemnation sufficiently severe can be visited upon a so-called religious journal, the Chicago *Advance*, for printing the Rev. Mr. Hurst's letter, in which the charges are made in detail? Mr. Hurst purports to be a Baptist clergyman of Buffalo, and, if he has not positive, overwhelming proof of the iniquities with which he charges the reform Governor, he ought to wear striped clothes and have a daily hour of devotion at the whipping-post. If there is any truth in these statements, it would very seriously affect the canvass for Cleveland, and place him and his supporters in a very painful position. As this seems to far exceed the average campaign concoction, will you please favor me and several thousand others with your views upon these slanders, as I fully believe them to be? F. C. Eaton.

Cleveland, Ohio, July 26.

MR. BLAINE AND AMERICAN FICTION.

To the Editor of The Nation:

Sir: In the last number of the *Nation* (page 96, second column) I notice a remark to which I should like to add a note, both because it implies that the author of a much-abused historical (I use the word advisedly) novel depended for his material upon his imagination, and presumably a very malicious imagination, and also because it affords an opportunity to call attention to what *may* be a very singular coincidence—a literary phenomenon which for me has great interest. The writer in the *Nation* asks: "How can we disown the Secretary in 'Democracy' after our champion has himself drawn such an extreme specimen of the scheming villain?"

It will be remembered that the point on which 'Democracy' turns is the discovery by the heroine that the Secretary and ex-Senator had accepted a bribe, and that she came to this knowledge through the revelation of "Carrington," who was the confidant of Mrs. Samuel Baker, to whom, as his widow, the said Baker, a notorious lobbyist, had left his papers, among which were some that told the story of the Senator's rascality. The latter is aware that this secret of his is known to Carrington, and therefore interests himself in getting him out of the way, and succeeds in inducing a brother Secretary to send him to Mexico. Now for the coincidence, which can be verified by any one who will consult the Springfield *Republican* of April 13, 1880, page 4, the period referred to being that of the District of Columbia ring:

"He (Huntington) died, and left in his wife's hands a lot of papers, among which were some which interested Mr. Blaine. These papers were passed by Mrs. Huntington to a young man named Frank Gassaway. Mr. Blaine became greatly interested in Mr. Gassaway's welfare, and sought numerous important appointments successively for him. He finally obtained for him a Government position in California." X.

PASTORAL PRAISE OF THE REPUBLICAN CANDIDATE.

To the Editor of The Nation:

Sir: The value of a pastor's praise bestowed upon a Presidential candidate considered as a parishioner is to be estimated in the light of the actual conditions of the parish. The ideal differs from the real. A certain customary righteousness is asked for, but reformatory righteousness is not to be looked for there. Just as in the Republican party certain principles are adhered to which were wrought into the letter during the agitations that marked the early rise of the party, so the principles for which the Church once came into being and which have become conventional are there sustained still as a matter of course. The time for machine politics comes to the parish as it does to the party. It becomes understood that pastor and parishioner shall suppress what he feels to be the truth if the utterance of it shall break the unit rule. The main point is to seem to be satisfied with the management, and to be interested in the ordinary work of the society. The reformer is as much a crank in the parish as in the party. The Independent ceases to find the Church his home. In some of the great city parishes, where the bold pulpit thinker has made for himself a constituency, there are exceptions to the rule; but in most parishes unanimity is the praiseworthy thing.

It is the purpose of the parish and of the propaganda to put into the pulpit a submissively smart man. If his light is burning when he comes, he must be ready to have it snuffed out. The volume of what a pastor ought to say, which he must be willing not to say, brings him to view as a man of like passions with the politician of the naughty world. And the man in the pew would lose the pastoral benediction upon becoming independent. He must care for nothing as for the unit rule. He must not break the church with truth and justice, uprising new and fresh and reformatory. And the praise bestowed by a pastor would most often mean this of the parishioner: "He is politic." Demos.

THE ENGAGEMENT AT MARYE'S HEIGHTS.

To the Editor of The Nation:

Sir: On page 250 of his 'History of the Army of the Potomac,' Mr. Swinton undertakes to enumerate the Confederate force which, on the 13th of December, 1862, held the stone wall and rifle-pits at the foot of Marye's Heights against the assaults of Couch's Corps and Humphreys's Division. He says:

"This position was first held by the brigade of R. R. Cobb [this should be T. R. R. Cobb], reinforced in the afternoon by Kershaw's brigade, both of McLaws's division; and this small force, not exceeding seventeen hundred men, was all that was found necessary to repulse the numerous assaults made by the Union columns."

That Mr. Swinton is in error is proved by reference to the report of Brigadier-General R. Ransom, jr., commanding a division in Longstreet's Corps, by which it abundantly appears that the troops of this division, also, were engaged upon Marye's Heights and in the trenches at the foot during December 13. Moreover, a reference to the report of the Confederate Surgeon Guild will show that Ransom's division actually lost more men than McLaws's division, viz.: 508 to 481. Ransom's division certainly was engaged equally with McLaws's in repelling the Union assaults.

But just what troops were in the Sunken Road, bordered by the stone wall, and in the rifle pits which prolonged the Sunken Road, at the foot of Marye's Hill? This is difficult to determine. As nearly as I can make out, at the commencement of the action the stone wall was held by the 18th Georgia, on the right, with the 24th Georgia next, and Phillips's Georgia Legion, next (all of T. R. R. Cobb's brigade, McLaws's division), while the 24th North Carolina (of Ransom's brigade, Ransom's division), was on the left, extending to the plank road. About the beginning of the first attack, viz., by Kimball's brigade of French's Union division, after the Confederate skirmishers were driven in (say, at 12 M. or 12:15), the 27th North Carolina (of Cooke's brigade, Ransom's division) was thrown into the road and, on the repulse of Kimball's assault, the 46th North Carolina, of the same brigade, was also thrown in. The other two regiments of this brigade (15th and 48th North Carolina) apparently remained on the crest; but as they had a clear fire over the heads of the troops in the Sunken Road and rifle pits, it is difficult to see why they are said not to have taken part in repelling the Union attacks.

At some time during the afternoon, which I have not been able to determine, the 16th Georgia was brought down, which made Cobb's brigade entire, at the foot of the hill, except, perhaps, one battalion, the "Cobb Legion," which I have not been able to place. Apparently, also, about the time (say 1 o'clock) of Hancock's first charge (Zook's brigade), McLaws reports that he sent the 2d and 8th South Carolina (of Kershaw's brigade) into the road, "doubling on Phillips's Legion and the 24th Georgia"; while it would appear that the 3d and 7th South Carolina of this brigade remained on the crest, but participated in the musketry fire. After 4:30 P. M. the 15th South Carolina (also of Kershaw's brigade) was brought forward from the cemetery, and posted behind the stone wall, supporting the 2d South Carolina, which, as we have seen, went down the hill at an earlier point in the action. About 6 P. M. the 3d South Carolina (also of Kershaw) was sent down and posted on the left of the Phillips Legion. According to my computations, therefore, there were troops from two divisions, viz., McLaws's and Ransom's, in the position indicated, these divisions being represented by four brigades, viz.: Cobb's, Kershaw's, Cooke's, and Ransom's, the number of regiments actually behind the wall and in the rifle pits being eleven, viz.: 16th, 18th, 24th Georgia, with Phillips's Georgia Legion; 2d, 3d, 8th and 15th South Carolina; the 24th, 27th, and 46th North Carolina.

General Kershaw, in his report, expressly states that on his arrival he found Cobb's brigade occupying the entire front, and his own troops could only get into position by doubling on them. "This was accordingly done, and the formation along most of the line, during the engagement, was consequently four deep." Even subsequently to this it would appear that troops were thrown into the Sunken Road, while at least eight regiments would seem to have taken an active part in the musketry fire from the crest immediately about the Marye House.

I should be glad to have the information which I have, with something of difficulty and uncertainty, obtained from the Confederate reports, corrected or completed, so far as it is erroneous or deficient. Francis A. Walker.

Boston, Mass., Aug. 1, 1884.

Notes.

THE Index and title-page of Volume 38 of the *Nation* will be furnished with the issue of August 14, and separately on demand to any person whose subscription terminated with that volume.

'The Life and Public Services of Grover Cleveland,' by Pendleton King, prepared with the sanction of the Governor, is announced by G. P. Putnam's Sons.

The John W. Lovell Co. will issue about August 9 a 'Life of Grover Cleveland,' by Deshler Welch, a young journalist, and a personal friend of Governor Cleveland.

The more important fall publications of J. R. Osgood & Co. are Julian Hawthorne's long-promised biography, 'Nathaniel Hawthorne and his Wife'; Edmund Quincy's 'Stories and Sketches,' edited by Edmund Quincy, jr.; 'Tales of Three Cities,' by Henry James; Cable's 'Doctor Sevier'; and Fawcett's 'The Adventures of a Widow.'

'The Arnold Birthday Book' is the doubtful title of a volume announced by D. Lothrop & Co., which is to consist of excerpts from the verses of Edwin Arnold, edited by his daughter, together with new introductory poems for each month. The same house advertises the first account of the rescue of the Greely party, the story of which, presumably derived from newspapers, is added to their new edition of Nourse's 'American Explorations in the Ice Zones.'

Thomas Whittaker will publish early in the fall Bishop Littlejohn's Bishop Paddock lectures, delivered before the General Theological Seminary, under the title 'The Christian Ministry at the Close of the Nineteenth Century.'

In their Boston Directory for 1884, Sampson, Davenport & Co. have introduced a new and improved method of printing the names, which ought to be adopted by all publishers of directories. Instead of repeating the surname for each person of the name, ditto marks are used to designate all after the first entry of the name. This method brings out the given or baptismal names more prominently, and makes it more easy to find the surnames. It has also the merit of effecting a saving in the cost of printing.

A beautifully-printed pamphlet (J. & A. Churchill, London), presents, in a recent lecture by Dr. Morell Mackenzie, a résumé of what is believed about the annoying hay fever, that seems to have a predeliction for the English and Americans. In this country the pollen of the *Ambrosia artemisiæfolia*—a wretched weed whose name is wholly unwarranted by its real character—is charged with the most of the mischief. In the practical relation of the disease to the afflicted, avoidance seems more trustworthy than treatment; it is better to fly than to fight. The annual epidemic is just about breaking out, and the rocky isles of the sea and the recesses of the White Mountains will be restful refuges to the sufferers for the next six weeks.

Dr. Rollin H. Gregg, of Buffalo, has written a paper upon 'The Revelations of Fibrin,' whose object is to prove that bacteria and disintegrating fibrin are identical, that fibrin is practically indestructible, retrograding to the simplest form of life "through decay to granules," and "then on and up to the highest lives," and that the scientific world is in error when it supposes bacteria are independent organisms. He regards this as physical proof of the immortality of life, and from it claims, *a fortiori*, the immortality of the soul. It is probable that he has not distinguished between bacteria and fibrin threads, which notoriously resemble them, by staining and by the only sure test—cultivation of the former outside of the body.

Among the many methods adopted in publishing periodicals, one of the most curious is surely that followed by some Maine publishers. At first sight it appears that eight illustrated monthly magazines for family reading are issued in the two cities of Portland and Augusta. They have all, apparently, been running for several years; one is in its sixteenth year of publication, another in its twelfth year, and another in its fifth. The names of these magazines are all of an attractive nature, and one is astonished to find so much literary activity of this kind in one State. An examination of the magazines, however, reveals the curious fact that the eight are really two, and that different names are given to the same magazine. The *American Home Magazine and Illustrated Library*, the *Illustrated Household Magazine*, *Our Home and Fireside Magazine*, and *True's Illustrated Magazine and Home Companion* contain the same reading, with the exception of the advertisements. The second group consists of the *People's Illustrated Journal*, the *Illustrated Family Herald*, the *People's Literary Companion*, and *Golden Moments*. These also are the same except the advertisements and the supplements; two having the same picture supplements and two the same supplement of reading matter. It is not easy to understand what advantage is gained by this method of publication. Certainly no one will subscribe to more than two of the eight, for it is obvious that the first numbers received would reveal the fact that, though the names were different, the reading was the same.

The *State Chronicle*, of Raleigh (N. C.), published recently letters from the various principals of the private schools and colleges of North Carolina, in response to certain inquiries sent to them by it, which illustrates what ability the South has to do its educational work even without national aid. Of the thirty-three schools making the statistical report which the *Chronicle* had requested, twenty-three have been established since 1870. Thirteen of these schools date from 1880, and, in the opinion of the *Chronicle*, the number of good schools established in the last four years is greater than the number established at any time before the war within a period of twenty years. The private schools alone of that State possess, it is estimated, $1,000,000 worth of property and enroll 10,000 pupils. Other Southern States can doubtless show a progress in this respect as rapid and as effective as that of North Carolina. The fact is, the South has been making singularly persistent efforts to decrease its illiteracy ever since it became convinced that its percentage in this respect, considering the white population alone, was so much greater than that of the other sections of this country.

The most notable feature of the *Library Journal* for July is the prospectus of the proposed School of Library Economy at Columbia College, by Melvil Dewey, which makes an article of several pages. The school, which was established by vote of the trustees May 5, 1884, to be opened in October, 1886, or "at such other date as the Library Committee may fix," is placed under the control of that Committee. The fullest latitude is to be given in regard to the number and order of the courses and the time of attendance, apparently to meet the convenience of persons whose leisure for such studies is limited. The term "library economy" is defined as including "all the special training needed to select, buy, arrange, catalogue, index, and administer in the best and most economical way any collection of books, pamphlets, or serials." The instruction is to be given by "lectures, reading, the Seminar, visiting libraries, problems, and work." These methods are sufficiently plain on their face, with the possible exception of the last two, under which are included the settling of puzzling questions of reference, the decision of practical questions in hypothetical cases, with criticism of the results arrived at, actual employment in library work of a typical kind, such as card-cataloguing, etc., etc. The specific names of courses and those of the teachers will be announced later; but the comprehensive scope of the school is illustrated provisionally by a list of so-called subjects of study, among which are found, of course, all vexed questions of cataloguing, classification, construction, aids to readers, modes of charging, buying, binding, etc., and all known administrative methods of library management. Some of these subjects, however, have a queer look—such as the lectures on "judicious begging," for example, or on "raising funds" by means of "fairs." It is plain, however, that we are to have a technical school for libraries under auspices that promise the best conditions for its trial.

An association, we believe, of an entirely unique character has recently been organized in Philadelphia under the name of the "Bureau of Scientific Information," whose function, as defined by the circular announcing its formation, is "the imparting, through correspondence, of precise and definite information bearing upon the different branches of the natural sciences," and whose object is "the more general dissemination of the results of scientific investigation" and the facilitating of the work of the student in natural history. The associates in this enterprise, whose work is of an entirely gratuitous nature, are all members of the Academy of Natural Sciences—the oldest institution in this country devoted exclusively to the cultivation and furtherance of the natural sciences; and while, perhaps, the organization can scarcely be said to form an integral part of the body mentioned, it must yet be considered to constitute at least a close connection or affiliation with them. Among the more prominent names of the "Bureau" we find those of Prof. Joseph Leidy, President of the Academy; Dr. George H. Horn, President of the American Entomological Society; Dr. D. G. Brinton, and Professors Meehan, Rothrock, and Lewis. The Chairman is Prof. Harrison Allen, and the Secretary, Prof. Angelo Heilprin.

"Dr. Mackenzie, in his 'Lives of Scotch Writers,'" says the New American Encyclopædia, *sub voce* Crichton, "quotes from Pasquier an account of the exploits at Paris of a wonderful youth, which might have been applied to Crichton but that the year 1445 is given as the date of his appearance." The same sentence, such is the solidarity of encyclopædias, appears in Larousse's 'Dictionnaire universel,' yet it is an entirely superfluous remark, as "The Admirable Crichton" was born one hundred and fifteen years after Pasquier's prodigy, and Dr. Mackenzie's quotation could not in any way redound to the glory of his countryman. For the wonder of the fifteenth century was a young Spaniard, Ferdinand, of Cordova. He seems to have been merely a scholar, and not a man of the world, dancer, fencer, rider, musician, painter, as Crichton was. But as a scholar he received much attention, exciting the admiration of the students and the jealousy of their teachers; he was even taken for the Antichrist. He had an audience of Charles VII., and answered all his questions relative to chivalry; at Ghent he saw the poet Georges Chastelain. He turns up twenty years later in Rome, writing treatises of philosophy for Cardinal Bessarion; and there he died about twenty-four years later—not a very important career, but worth the little note which M. Julien Havet has given in his "Maître Fernand de Cordoue et l'Université de Paris au quinzième siècle."

The Berlin *Boersen Courier* announces that an illustrated edition of Heine's complete works will soon be issued by Siegmund Bensinger, in Prague. The text will be revised by Heinrich Laube, and the illustrations by prominent artists, mostly Viennese.

The Memoirs of the late Professor J. C. Bluntschli have just appeared in three volumes, under the title 'Denkwürdiges aus meinem Leben' (F. W. Christern). They were written in the years 1872-1882, and contain the record of half a century's experiences by a man who was equally active in politics and jurisprudence. Contrary to the usual course of things, Bluntschli began as a conservative and ended as a liberal, the reasons for this gradual transformation being fully stated in this work, which also contains full accounts of his intercourse with Bismarck, Metternich, and other notables. The three volumes relate respectively to different periods of the author's life: the Zürich period, 1808-1848: the Munich period, 1848-1861; and the Heidelberg period, 1861-1881.

After an existence of a little more than twenty years, the well-known Prussian political weekly, the *Provincial-Correspondenz*, has been discontinued. Its demise took place by direction of the Minister of the Interior, Herr von Puttkamer, whose organ it had been. The circulation of the journal was enormous, but was due less to the general interest attaching to more or less official utterances of the Government than to gratuitous distribution at the expense of the latter, as a supplement to official country newspapers. It was one of the most frequently quoted Prussian journals, its positive information being considered especially trustworthy, and its political speculations much commented upon. It was, of course, patronized with the object of "enlightening" and giving direction to public opinion, but the responsibility for its statements and explanations of late became too burdensome to the Ministry under whose auspices it was edited. Hence its discontinuance. According to a Berlin correspondent of the Munich *Allgemeine Zeitung*, a printed weekly letter edited by Dr. Klee, and sent in envelopes to the provincial press, has been employed for a year or two for the propagation of views favorable to the policy of the Government, with the object of preparing public opinion for measures contemplated in the future—which involves nobody's responsibility—rather than defending measures and actions of the Government already under discussion. That Prince Bismarck is, more or less directly, the source from which all this official inspiration has sprung, it is hardly necessary to state. The *Provincial-Correspondenz* was founded about a year after his accession to power, and it was almost throughout its existence under the editorial control of Privy Councillor Dr. Ludwig Hahn.

A history of the Royal Academy of Brussels, by E. Mailly, is announced. The first part is devoted to the external history of the Academy, while the second contains the bibliographical matter in which are enumerated all the Academy's publications, as well as all the addresses delivered before the institution.

A society has been formed at Tokio for the revival of Japanese art and its encouragement in the modern form. An exhibition of paintings, to which about 150 artists have contributed, has been prepared at Tokio, and the society, which already numbers a thousand members, has arranged to support a Japanese Art Museum at Paris, which is to be supplied, apparently, from the collection at Tokio. The movement may derive some aid from the interest which will be excited by the appearance of Mr. Anderson's volume on the 'Pictorial Arts of Japan,' soon to be issued in London, in which he describes in particular the admirable collection of ancient and modern paintings, the largest ever brought to Europe, which he gave to the British Museum. This work in itself will be peculiarly representative of one branch of contemporary art in Japan, as it will contain eighty woodcuts by Japanese engravers.

Thomas Y. Crowell & Co. send us reprints of Dante Gabriel Rossetti's 'Poems,' and Scott's 'Marmion' and 'Lay of the Last Minstrel,' each making a volume of about three hundred red-line pages, in the somewhat gaudily illuminated cloth binding which is the fate of standard authors. The first volume is not a complete edition, but a reproduction of the last form of Rossetti's earliest collection, if we remember rightly, the contents of 'Ballads and Sonnets' (about one-half of the poet's works) being omitted bodily. The volumes of Scott contain the notes, appendices, etc., common to previous editions. Belonging to the same series, apparently, is 'Red-Letter Poems, by English Men and Women,' from the same publishers. This consists of over six hundred double-columned pages of selections from the poets, from Chaucer to the youngest of living versifiers of note. The selection is made clearly (it is practically implied in the preface) not from the poets directly, but from other selections—Palgrave's, Ward's, and lesser works such as Gosse's 'English Odes'; and the brief biographies are similarly compiled at second hand from Ward's 'English Poets' or other like sources. To make such a book is an easy matter, but it is seldom that so little pains are taken to conceal the methods employed; and criticism upon it would be superfluous.

—A curious volume which has recently been put in type in Chicago, 'Rise and Fall of Political Parties in the United States,' by Rufus Blanchard (Chicago: F. C. Miller, 1884), no doubt owes its origin to a conviction of the publishers that something like this will be wanted in a "Presidential year." The occurrence of numerous errors of spelling in it is probably to be set down to the fact that it has been hurried through the press; yet publishers and authors need to bear in mind that the mutilation of proper names (as in the case of "Galatin," "McLellan," and others) is sure to prove misleading to young readers, many of whom would form their first impressions of these characters from such a work as this. Much more serious, however, are other misleading features of the book. At page 46 Mr. Blanchard refers to "a bill" "called the Alien and Sedition Laws," plainly giving the impression of a single act, whereas the two laws were enacted in different months. A similarity in the name (Whig) of two great parties in England and America respectively has led the author to pursue the fancied connection far beyond the limits of reason or historical accuracy. Equally misleading is the impression given by Mr. Blanchard as to the conditions of colonial coöperation in 1765. That the colonists then "suddenly" and permanently divided into two parties, is a view which does uncommon violence to the facts of history. Another astonishing declaration, which would be a stumbling block to the reader were it not so plainly and palpably nonsense, is on pages 50–51, where in almost the same breath the party of President Jefferson is pronounced to be "casting off its swaddling clothes," and to be "like a young man who had inherited his deceased father's estate and was starting out in life." No doubt the sum paid for the purchase of Louisiana was "insignificant" (p. 56) compared with present standards, but when in the next few lines Mr. Blanchard leaves the impression that it was so regarded at the time, he fails to take into consideration the outcry and excitement which it occasioned. The author again gives his readers occasion to start with surprise when he declares that in the war of 1812 the United States had "more than sustained her military reputation." More recent chapters contain scarcely less singular statements, while, of course, approaching much more delicate ground. Twice on page 187 "provincial governors" are referred to as belonging to the reconstruction period of 1865-70. It may probably be assumed, however, that the author, instead of having returned to the provincial period of the last century, intended to say "provisional." We must protest, moreover, against such violations of good English as "illy," "monarchal," "suspicioned," and the like, occurring in a volume which, like this, is intended for young readers. Contrary to the impression which the appearance of this work might give, the ground which it aims to cover was before occupied, and well occupied, by Alexander Johnston's admirable little volume, 'History of American Politics' (*Nation*, No. 758), published some years ago, but since revised and extended. Mr. Blanchard once mentions this work (though with his characteristic inaccuracy he cites the name as "Johnson"), and it is, in fact, a book which not merely supplements his own work, but renders the latter unnecessary.

—If all the remedies for cholera that have been recommended in the European papers during the last four weeks possessed only a modicum of value, the disease would soon be eradicated on this planet. If put to a vote, the most popular remedy would probably be that of a Frenchman who, during a previous epidemic, feeling ill one morning, rode through Paris, stopped at every café for a glass of cognac, and then slept thirty hours, after which he felt well again. Another equally simple device was adopted by a firm of iron founders at St. Petersburg in 1832. Each of the 500 workmen was compelled every morning to take a teaspoonful of powdered charcoal; and the consequence was, it is said, that not a death occurred, while people were dying all around them. M. Klaczko, of Vienna, recently made the following suggestion in a letter to M. Pailleron, the French author: "Galicia is rich in petroleum springs. It has been noted that districts in which these springs are frequent are never visited by cholera, furiously as the disease may rage in the surrounding neighborhood. The inhabitants ascribe this to their belief that the evaporation of petroleum kills the 'animal.' They point out that it kills all insects; and there are, indeed, neither flies, fleas, nor any kind of gnats seen in those parts." It would be interesting to inquire whether this phenomenon has been noted in our own petroleum regions. The Paris correspondent of the *Lancet* says that the medical men at Toulon, after trying various remedies, have adopted the following: "Hypodermic injections of ether in the stage of prostration, and atropine, also used hypodermically, to relieve the pain and cramps attending these cases. The inhalations of oxygen . . . have, according to Dr. Rochard, been attended with such favorable results as to encourage perseverance in them, particularly when the patients are plunged into a profound state of coma." Another correspondent states that at Marseilles the physicians smoke cigars and chew camphor. Koch's discovery that the disease is due to a special microscopic organism, if it has not yet enabled the physicians to control the disease with any certainty, has at any rate already suggested important changes in the views concerning prophylactic measures. Fumigation at the railway depots has been recognized as a useless proceeding, as it has been shown that the microbes can only be killed by a high temperature, dryness, or acids. The

method adopted at first by the Spanish authorities of stripping all visitors from France and sponging them with disinfectants, has also probably been discontinued by this time. An interesting question has come into dispute between Koch and Pasteur. Moisture being favorable to the microbes, Koch recommended that the streets should not be sprinkled; whereas Pasteur rejoins that this would make matters worse, as the wind would be apt to blow microbes mixed with the dust into the nostrils and mouths of people. Some important points in Koch's view are that germs are not transported by the air; that infected linen, after the eighth day, does not contain any more active microbes; and that these organisms may live in the water as well as in sewers and contaminated earth. He found that if choleraic evacuations are brought into contact with linen, paper, or moist earth, the whole mass is within twenty-four hours converted into a dense mass of bacilli. The value of the English system of sewage and water supply is shown in Danzig, where previous to the introduction of this system over 1,000 persons used to fall victims to the cholera, whereas in 1873 an attack of the same severity was followed by only 160 fatal cases. This fact is pointed out in the *Gegenwart* by Dr. Fr. Dornblüth, who has had much experience in the treatment of the disease. He explains why it is that people who suffer from dyspepsia, or some other weakness of the digestive apparatus, are much more liable to attacks of cholera than others. The cholera microbes can exist only in a substance of alkaline reaction, while they are killed or rendered harmless by acids such as are present in the stomachs of healthy persons. As the object is to get rid of the microbes as quickly as possible, he strongly disapproves of the habit of giving opium and similar drugs, and asserts that he who thus impedes the action of the intestinal canal at an early stage of the disease is almost certainly lost.

—We do not know whom the *Neue Preussische Zeitung*, or *Cross-Gazette*, means when it speaks of "the North American Minister at the Court of Corea," who, according to its information, in an official report declared Paul von Möllendorff to be the Bismarck of that remote Eastern country. Nor do we believe that Corea possesses a Bismarck. But Paul von Möllendorff, if the rest of the generally well-informed Berlin journal's communication concerning him is correct, is an interesting person. He is a great-grand-nephew of Frederic the Great's general of the same name; was born in Brandenburg in 1847, and studied Oriental languages in Halle, with the intention of entering the Prussian consular service. Finding that the Chinese Government was anxious to enlist young Europeans for employment in its customs administration in the newly-opened ports, he went in 1869 to Shanghai, and served the Celestials for several years, but subsequently became interpreter in the German Imperial service. In 1882, having won great favor with the Chinese Governor, who recommended him to the ruler of Corea, he repaired to the latter country, where, under the name, adopted in China, of Mu-Lien-To—obviously an imitation of Möllendorff—he was appointed Director-General of Customs, and has been energetically active in facilitating and regulating commercial intercourse with foreign countries. Various treaties of commerce, and among them the one lately concluded with the German Empire, are among the results of his administration. The peninsula has opened several ports to foreign traffic, allowing the establishment of commercial settlements and consular agencies. The treaty with Germany grants Möllendorff's countrymen specially favorable terms of intercourse, under the supervision of a German Consul-General.

—The German libraries are not supposed to be excessively liberal in lending out books or to have a very large circulation, considering their great number of volumes; but there are some persons who wish to curtail even the little liberty which they have. A Herr Kr., in the *Neue Preussische Zeitung*, would confine the use of the Royal Library at Berlin to those who have real scientific work to do, and exclude not merely all readers for amusement, who must be rare already, but all ordinary students. Others are urging that no books should go out of the building—that is, that the example of the British Museum, the French National Library, and our Astor Library should be followed. No New Yorker would urge such a course; nor do we imagine that students accustomed to the liberty of the great libraries of Boston, of Philadelphia, of Cincinnati, and the many smaller libraries dispersed through our country, would be willing, for the sake of always finding the book that one wants in the building, to renounce the greater convenience of being able to take books to their homes and use them in connection with their own books and papers. It is also suggested that if the consultation of books is confined to Berliners and those who are staying in Berlin, the members of the Chambers who come from other parts of the country will look twice at the heavy appropriations needed to carry on so great an establishment for the benefit of the capital alone. This way of viewing the question will be a little novel to Americans, since our city libraries seldom allow their books to go beyond the city limits, even when taken by citizens. In Germany no such distinction is made. If books go out at all, the librarians are as willing that they shall go to the extremity of the Empire as that they should go into the next street. We would not be understood as saying that this is entirely unknown in America. Our railroad libraries, some of our athenæums and college libraries do the same; but they are all semi-private. The only library supported by public funds that treats its borrowers with such liberality is that of the Surgeon-General's Office in Washington, which for that reason deservedly styles itself the National Medical Library.

—The Leipzig *Magazin*, in its issue of July 5, again shows gross typographical inaccuracy in its announcement of 'Poemas da Escravidao,' a Portuguese translation of Longfellow's "Pors on Slavery." It would seem as if the addition of the *Inland* to the *Ausland*, to which the *Magazin* formerly confined its province, had exerted a somewhat unfavorable influence on its foreign department; its articles on German subjects, on the other hand, becoming increasingly valuable. The number in question, indeed, contains an unusual variety of interesting matter. Thus Eduard von Hartmann has the first instalment of an article on "The Connection Between My Writings," in which he pleads for the right of being judged only by the sum total of his philosophical works, claiming for his 'Philosophy of the Unconscious' merely the rank of a "youthful production, with all the good and bad qualities of such a one." He adds, not unreasonably, "I have never been so immodest as to demand, like Schopenhauer, that my books must be read twice; I shall not prevent anybody from being contented with reading single works or chapters, but I wish that no one may form a complete and final opinion of my philosophy—and least of all express it publicly—who has not read my works in their connection." The three hitherto unpublished letters of Jean Paul Fr. Richter communicated by the *Magazin* are as characteristic as anything that emanated from his pen. The following remark addressed to De Villers, a French *émigré* and subsequent professor in Göttingen, has a timely interest in view of the recently published 'Wit, Wisdom, and Philosophy of Jean Paul Friedrich Richter': "I still entertain the beautiful dream and wish, that you may present me to your nation in a selection of conceits, reflections, outpourings of the heart. . . . Your time is too precious for translation; but I merely wish you to choose and correct." One of the letters, written in French and addressed to the Prince of Ponte-Corvo (Bernadotte), exaggerates Jean Paul's peculiarities of style almost to the point of parody: "Qu' une ligne de votre main veuille m'assurer la paix que méritent la poésie et la philosophie, parce qu' elles la propagent. La main vaillante verse le sang, la main bienfaisante tarit les larmes. Votre Altesse a les deux mains." Few Frenchmen, we fancy, would hesitate to ascribe this passage to Victor Hugo in his higher flights.

—In November, 1848, Littré and a few other friends of Auguste Comte instituted an annual subscription for the support of the great French philosopher, who had then lost his principal means of living. In March, 1850, Comte published a circular "addressed to each subscriber to the voluntary subsidy," in which he gave his reasons for accepting the fund, and an account of how he had used it. Eight of these circulars appeared in his lifetime. Since his death the subsidy has been continued as a sacerdotal fund, and the circulars, which have gradually grown to be detailed accounts of the work of each year, have been issued by the present Director of Positivism, M. Pierre Laffitte. The thirty-sixth circular gives an account of the work of 1883. From this it appears that the number of subscribers to the fund in that year was 252. During the last ten years the increase in the number of the subscribers has been considerable. In 1853 the number was 91, in 1858, the year after the death of Comte, 37, in 1872 it was 80, but since then the number has trebled. The number in 1883 is less than that of 1882, owing to the secession of several Brazilian Positivists from the main body. Up to 1877 these circulars represented the entire activity of the orthodox Positivists in all parts of the world, but in that year some of the English group separated themselves from the Paris direction, and have since continued under the direction of Dr. Richard Congreve. Last year M. Lemos, with some other Brazilian Positivists, ceased to recognize M. Laffitte as the head of Positivism. Adding those who adhere to Doctor Congreve and to M. Lemos, the number of complete Positivists must be at least 300, of which France and England furnish the greater part. Among the books mentioned by M. Laffitte as in preparation for publication this year is the 'Testament of Comte,' various legal reasons having hindered its appearance before. To it will be added in the same volume his correspondence with Mme. Clotilde de Vaux, his confessions, and his prayers.

—In Johann Gustav Droysen, who died a few weeks ago in Berlin, Germany has lost one of her veteran and most industrious historians. His activity as professor began half a century ago at the Berlin University, where he also closed his career, having taught besides at Kiel and Jena. A North-German by birth, he ardently espoused, while at Kiel, the cause of Schleswig-Holstein against Denmark, wrote the "Kiel Address" of 1844 in defence of it, was in 1848 sent by the Provisional Government of the Duchies to Frankfort to invoke the aid of the Germanic Diet, and soon after was elected by a Holstein constituency a member of the German Parliament. In this body he was a prominent

and active co-worker of Gagern in the endeavor to reconstruct the German Empire on a constitutional basis, under the hereditary headship of the House of Hohenzollern. When the attempt, and with it the whole work of the Parliament, failed, Droysen returned to his historical studies. He had begun as student of Grecian antiquities, writing, besides other works, a 'History of Alexander the Great' and a 'History of Hellenism,' and translating Æschylus and Aristophanes, but during the years of political agitation in the Duchies he had devoted his research to subjects of modern German interest, the principal fruits of his labor being 'Lectures on the History of the Wars of Deliverance' (from the Napoleonic yoke), and an extensive 'Life of Field-Marshal York.' In Jena, after the revolutionary movements of 1848–49, he composed the first volumes of his greatest work, the 'Geschichte der preussischen Politik,' continuing it after 1859 in Berlin down to the thirteenth volume, which appeared in 1881. He remained till his death, at the age of nearly seventy-six, indefatigably active as teacher and collector and editor of historical documents (under the auspices of the Prussian Government), and as writer on a variety of topics, German and Hellenic.

—After the termination of a Gothic war, about A. D. 334, the Emperor Constantine removed three hundred thousand souls of the Sarmatic nation to the West, and settled them as colonists in various districts of the Roman Empire. One of these settlements can be historically traced to the Hunsrück, an elevated tract situated between the Rhine and Mosel, and another to the highlands of Langres, in northeastern France. Hubert Marjan, in the last number of his 'Rheinische Ortsnamen' (Aachen: Alb. Jacobi & Co., 1884), makes a successful attempt to localize some of these Sarmatic colonies by a close investigation of the more ancient local names occurring in the Hunsrück and vicinity. By following the historic method of taking up and analyzing the earliest forms of each local name, he traces a Slavic origin for names like Brodenbach (from brod, *ford*), Traust, Riegenroth (from rêka, *stream*), Sarmersheim, which contains the national name of the Sarmatæ; Simmerbach (from zima, *snow*), Strimmig (from strymu, *steep*), Kunsköpfe or "horse-heads" (from konj, *horse*), etc. Other Slavic names are detected by the author in the Maifeld and the Eifel, but he fails to follow up his Slavic etymons through all the Slavic dialects to which the Sarmatæ could have belonged, as Russian, Polish, etc. Before him, A. Bacmeister, who was for a while the editor of the weekly magazine *Ausland*, had (in 1869) called attention to the frequency of Slavic names of places in the eastern parts of Würtemberg and throughout Bavaria.

LIFE OF FREDERICK DENISON MAURICE.—II.

The Life of Frederick Denison Maurice, Chiefly Told in his Own Letters. Edited by his Son, Frederick Maurice. In two volumes. Macmillan & Co. 1884.

WHAT has been the nature and the extent of Maurice's influence?

This is an inquiry which it is impossible not to make, and yet which it is very difficult to answer. Maurice's correspondence proves to demonstration that he was a teacher who stood far more apart from the generation whom he taught than was, during his lifetime, apparent to any one except to Maurice himself. With the different currents of thought or feeling which have influenced the intellectual and theological history of England during the last thirty years he had little sympathy or even concern. With the developments of the High-Church movement he had no connection, except by way of opposition. His attitude toward science, and still more toward all the popular sentiments and beliefs (many of them at bottom unscientific enough) generated by the progress of scientific knowledge or discovery, was that of a man who formed no judgment, and, it must be added, entertained little interest, about fields of speculation into which he had never entered. A critic who speaks from a good deal of personal knowledge, has well pointed out that the expression "love of facts," as applied to Maurice, leads to misapprehension. His keen moral insight, his earnest wish not to be imposed upon by words, made him most anxious to recognize men's real feelings. In this sense he may be said to have loved facts; but to ascribe to Maurice a love of facts in the sense in which the term may be employed of a distinguished scientific or historical investigator, is to credit him with a quality which was foreign to his whole genius.

Veneration for a noble-minded man makes it painful to dwell on the fact that he too, like every one, however good and great, suffered from the limitations of his nature. But respect for truth compels one to say clearly that, in dealing with Colenso and men like Colenso, Maurice displayed anything rather than what would be called love of facts, in the ordinary meaning of that expression. Colenso showed, or attempted to show, that many of the statements made in the Pentateuch were not and could not be true. Of the moral importance of the unhistorical character of certain statements as to the early history of the Jews, different persons may entertain the most different opinions. But grant that the Bishop was right in his actual contention, and any one who loves facts ought to concede that a man who shows the contradictions or inconsistencies of early traditions, whether Jewish or Roman, is engaged in dispelling error, or, in other words, in establishing the truth. To assert, with Maurice, that "the Bible is the great deliverer from ecclesiastical bondage, the great protester for human freedom," may be the enunciation of an important moral or religious truth; but it is in reality no reply at all to a critic who shows that certain narratives in Genesis or Deuteronomy cannot be historically true. We have no wish whatever to pursue this matter. It is, however, mere justice to men like Colenso to point out that Maurice, with all his generosity and moral greatness, approached the Bible from a point of view so different from theirs that he could not be really fair toward their attempts to investigate early Jewish history in the same spirit in which all modern historians investigate the early history of Greece or Rome. One must also add that, in the particular case of Colenso, Maurice was for once hardly just to the great moral qualities of his friend. One must also, in fairness to Maurice himself, note carefully that for good and bad he did not belong to the body of so-called Liberal theologians with whom he was constantly identified. Hence one cannot, either by way of praise or of blame, ascribe to his influence the progress of what some writers term "the new theology." Certainly no one would have repudiated more earnestly than Maurice himself the charge of promoting "new" theology of any kind. And this is not a matter on which one can treat lightly a good and honest man's invariable witness as to his own position: "I hold that for the reformation of the age, most especially for the elevation of the working classes, we want a firmer, fuller, more loving theology, such a theology as I find in the creeds of the Church." In this sentence a thoughtful student will find at once the point of contact and the point of difference between Maurice and the Broad Churchmen of his day, and will understand why, in fairness to him and to them, we cannot ascribe to him work done by teachers gifted with high qualities, but with qualities very different from the virtues, moral and intellectual, which distinguished Maurice.

Nor, again, can we, after the most careful consideration of Colonel Maurice's statements, come to the conclusion that the influence exerted by Maurice on the social movement of his time was exactly of the kind which it appears to his biographer. Colonel Maurice claims that the co-operative movement is due in great part to the labors of his father and the other Christian Socialists of 1848. That there was and is a connection between the two we do not for a moment doubt. But there appears to be some confusion in ascribing the economical doctrine, if so it can be called, of coöperation to the Christian Socialists, or in ascribing any particular Christian or religious doctrine to the founders or the promoters of the army-and-navy coöperative stores and the like establishments. These bodies exist in consequence of well-understood motives of self-interest. They are neither communistic nor Christian bodies. They might be founded, and have been founded, by men who had no religious or social object to promote, and who, to put the matter plainly, were solely anxious to make a penny go as far as a penny could honestly be made to go in the purchase of good and cheap wares. We are inclined, indeed, to think, though on this point we speak with some hesitation, that the Rochdale pioneers started before and certainly independently of the efforts of the Christian Socialists. But if this be so, it is impossible with fairness to ascribe the whole or the greater part of an economical movement to the labors, valuable as they were, of a particular body of religious or moral reformers.

Limitation is an essential part of definition, and the attempt we have made to limit the spheres within which Maurice's influence did not operate has for its object not to detract from the importance of the work he achieved, but to make clear to our readers what that work actually was. If, as we have pointed out in a former article, Maurice himself was by nature a prophet, his influence was naturally enough the influence of a prophet. He was not the founder of a party, he was not a great inquirer, he was not, we are inclined to think, the initiator of great specific social reforms. But he did more than probably any man in his generation to change the spirit of those whom his words or works reached. Of the kind of change which he has produced in current English theology no more curious proof can be given than the use that has been made in this article, as in other notices of Maurice, of the words "prophet" and "prophetic." Many of our readers must recollect a time when a prophet meant, in the ordinary parlance of educated men throughout England and America, little else than a foreteller or soothsayer, and when assuredly a work on the "prophecies" would have been assumed to be a book of which the object was to show the fulfilment or non-fulfilment of definite predictions. It is not too much to say that gradually and almost insensibly Maurice compelled every man who would give ear to him to see that the main function of the Jewish prophets was the promotion of moral or religious reformation, and not the enunciation of predictive riddles which may or may not still await a solution. Much the same may be said about his treatment of the expression "eternal." Whether Maurice was or was not right in all the inferences he based upon the meaning of the word "eternal," when employed in the New Testament, is a subject which we leave for the discussion of divines. But there is no one who has once come under Maurice's influence who

can doubt that, even if the word includes in many cases everlasting duration, it is an expression of very different import from any word merely expressing infinite time. Here, again, what Maurice has effected (together with others who have labored in the same field) is, so to speak, to introduce a new spirit into men's modes of reading the Bible and of thinking of the words used in the Bible. One may almost say that to many persons Maurice has changed the meaning of the word "eternal," or rather has forced them to see that it bears or may bear a very different significance in the mouth of Christ or of the Apostles from the sense given to it in current discourse.

The effect which he has produced in changing men's modes of thinking and feeling is certain to be underrated; for it always happens that when a teacher has accustomed men to a new idea, or has opened their eyes afresh to the true meaning of an old conception, they feel as if they had always understood what has at last been rendered intelligible. A thing which has been well explained becomes plain, and then the world fancies that it never needed explanation. And this is specially apt to be the case when a teacher tries to open men's eyes and make them see the truth, rather than to convince them of the truth by force of argument. The former was emphatically Maurice's method. It was the mode of teaching which naturally commended itself to a preacher the very ground of whose belief was that God himself was constantly addressing himself to mankind, and that the one essential duty of a preacher was to induce men to hear the voice of God. "You may do what you like," says Joubert, "mankind will believe no one but God; and he only can persuade mankind who believes that God has spoken to him. No one can give faith unless he has faith; the persuaded persuade, as the indulgent disarm." Every word of these sentences would have been reëchoed by Maurice, and there are few of Maurice's hearers who will not apply to him the dicta that "the persuaded persuade, as the indulgent disarm." "Yes," said Dr. Thompson, the Master of Trinity, "there is about that man θεῖόν τι πάθος. The words would not be so expressive as they are if their full force could be given in a translation. They convey the sense of a man speaking forth under the influence of a divine possession." When you add to this that with Maurice this "influence of a divine possession" was combined with that singular capacity which Mill has noted for discovering unobserved truths, you see at once why, though Maurice had very slight powers of oratory, he could command a kind of eloquence which sometimes left even men of calm or subtle intellects "trembling with emotion." One can also understand the cause for one very curious limit both to his sympathies and to his influence. Though a man of the best and purest life, he could enter into the sinfulness of the wicked at least as easily as into the fervor of saintly enthusiasm: but he never realized the secular-mindedness of the mass of the English world. The very review in which Sir J. F. Stephen has expressed his admiration for Maurice's character also gives expression to Mr. Justice Stephen's conviction that, for large numbers of mankind who know how to behave themselves with common sense and decency, the world is an uncommonly pleasant place to live in, and that life would continue to be agreeable enough even should mankind come to believe that the special hopes of saints and Christians were the dreams of enthusiasts. That the eminent Judge openly expresses a view of existence far more often acted upon than distinctly avowed is certain; yet we doubt whether Maurice ever realized that such a view could be sincerely entertained by many whose lives he himself would not have condemned. To such, whatever their numbers, he had no mission.

His position as a social reformer bore a close analogy to his position as a religious teacher. His absolute disinterestedness—a quality closely associated with intellectual clearness of vision—and his rare mental gifts made his advice of weight among his friends even on matters of practical business; but neither Maurice himself nor any one else ever supposed him to be a great organizer. One may even question whether he had any keen insight into economical laws. There is not a sign that he recognized the immense service rendered to the working classes by the Anti-Corn Law League. To the establishment of free trade in 1845 England owes it that she escaped the revolutionary movement of 1848. The overpraised statesmanship of Peel drove the country near to a calamity from which she was saved only by the energy of Cobden and Bright; and one may safely add that the workingmen would not have listened to the Christian Socialists if the Corn Laws had been in existence in 1849. But though Maurice and his friends never recognized the whole extent of the debt which they owed to the free-traders and the economists, it is also true that the influence of Maurice rendered a service to the country which differed in kind from the equally great service rendered by the free-trade leaders. Whoever doubts this should read with care the lately published volume of Mr. Greg's essays. They are the work of a very able and honest writer; they were mainly published between 1850 and 1852; they exactly represent the sentiment of that day; they are filled with absolute belief in a rather narrow economical creed, and betray in every line not only a detestation of the fallacies of Socialism, but a want of sympathy with the aspirations to which Socialism gave a crude expression. Maurice's mission was to make different classes of Englishmen feel new sympathies with each other. If he did not exactly found the coöperative movement, he certainly perceived, with the intuition of genius, the connection between coöperation and the development of sound social feeling. He was "evidently marked out," says an eminent professor of political economy, "by his whole nature, to exercise the influence of an apostle." This is the truth of the whole matter. Maurice did exercise among workingmen, and among men who wished to aid workingmen and hardly knew how to give them help, the influence of an apostle.

To assert how far or how deep the teaching of one particular teacher may have spread is quite impossible. Maurice's admirers may ascribe to him effects which are really due to other men's efforts, and it is at least equally probable that persons gifted with more self-assertion may have quite honestly been credited with results which were really due to the secret effects of a life which avoided every kind of fame. But no competent observer can fail to perceive that since Maurice began his social teaching the whole tone of sentiment in England with regard to the working classes, to their wants and their ideas, has undergone an astounding change. If an ordinary Liberal of 1852 could be brought suddenly into contact with the Liberalism of to-day, he would feel himself in a totally different world from that to which he was accustomed. Change is not necessarily improvement, and the economists of thirty years back had, it may be suspected, a firmer hold on some truths than the economists of to-day. But that, whatever be the errors of the present generation, they have wider and keener sympathies—that, above all, they feel the claims of the poor upon the rich far more keenly than did even the philanthropists of 1849-50—is clear. In other words, the present generation have gained new insight into the relation of men toward their fellows; and whoever will study Maurice's life with care will feel assured that this new spirit of good-will between rich and poor is due in no small measure to his work. Still, after all, in considering the subject of the influence exerted by such a man upon his own and other generations, one comes back with relief from general considerations to his own estimate of his own work, which, though it characteristically underrates his own labors, has also a touch of characteristic insight into the nature of his work:

"For [permanent reputation] I do not seek: not in the sense of despising it—for future esteem is better than present, even on moral grounds, because the chances are very great that the person who obtains that has proposed it to himself as an aim—but because I believe my business is rather to take advantage of passing occasions, and to treat of them with something of the earnestness and principle which are generally reserved for what belongs to all times. I look to my books dying after a few years, perhaps a few months—not of violent popularity, such as, of course, kills rapidly, but of more lingering, comparatively unnoticed existence. Still, I have no doubt at all that they are to do something, and that something will go forth from them into other men which will not die, but will be a portion of the life of their minds, and will prepare them for receiving truths much more clearly and perfectly revealed."

THE ACADIANS.

Acadia: A Lost Chapter in American History. By Philip H. Smith. Illustrated. Pawling: Published by the Author. 1884.

Over the Border. Acadia, the Home of Evangeline. By Eliza B. Chase. With Illustrations in Heliotype from Water-Color Sketches, by the Author. Boston: J. R. Osgood & Co. 1884.

TRULY, if those Acadian people who were carried away from their homes to strange lands had deliberately calculated the whole great act, in concert with "Fate," we cannot think how they could have contrived it better than just as it has been seen in the world's history. If we could suppose them to have determined, in that concert of counsels, to take, instead of their kindly hearthsides and their teeming farms, first the bowing of the head and the back to the pitiless mastery of hate and greed; and then the wasting by loathsome sickness in the ship's hold; and then the scattering among men of another tongue and another faith and other ways than their own; and then the base lives of wanderers and beggars fed grudgingly with food which no leave was given them to earn, or which they earned in scanty wages by toiling and sweating in other men's houseyards and fields and furrows; and then the dying, lonely and untended, and the leaving of their bodies to be hustled away, nameless, into some waste spot of earth—all this first, and then to their faithful the paradise of God; and then the rising of a fitting poet to sing their name and story in our world; and then a place in the best memory of men and in the fancy of the young—who or where were the others, in all time, that had their woes better wept, and their patience and their virtues better woven into undying song, than these Acadians? Avenged in this world they never were, nor were their losses ever made good to heart or hand of any of them. The last sight that they saw in their own land was of blazing barns and homesteads and churches, glaring upon sullen sea and cliff and shore-sand, and the last sounds of home were the lowing and bleating of frightened and forsaken herds and flocks, with the roar and crackling of the fires, and wailing and shrieks of families sundered forever; while they were followed far away upon the waters by the smell

of their own burnt harvests. So it was that they went away; and they never came back. Nor have their children ever come back.

The history of them in the world's great book would not, except for one thing, have had so much room as these next thirty or more lines that we give to it. The French and English, always fighting with each other at home as rivals and as Christians of differing faiths, of course always fought over the lands that they snatched in the New World. The French had got fast hold of the country on both sides of the St. Lawrence River and Gulf, and all round the Bay of Fundy (Baie Française), and all of Cape Breton and the rest of what is now Nova Scotia (then Acadia); and a rather slippery hold of a part of the coast of the now State of Maine. Peninsular Acadia (Nova Scotia) the two nations wrested one from the other again and again till 1713, when the English got and kept it; taking an oath of the French there, "on the faith of a Christian, to be entirely faithful and submit themselves to His Majesty King George, whom they acknowledged as sovereign lord of New Scotland or Acadia." In the King's name were promised them "free exercise of their religion, and exemption from bearing arms against the French or the Indians." French foes were still near, and had garrisoned forts close at hand; and in 1754, by which time the "neutral" French in English Acadia were counted at 17,000, it was determined as a measure of safety to send out of the country all who would not take an unconditional oath of allegiance. The troops then in the province were enlisted New Englanders, under Col. John Winslow, of Massachusetts; and these, acting by order of the English Governor, gathered the people who would not take that oath, drove them on board ship, and guarded them to the different places to which they were scattered—North Carolina, Virginia, Maryland, Philadelphia, New York, Connecticut, Boston.

How is it now that the world knows these Acadians so well, and that its heart gives a throb at the naming of them? Let us look at it a little, for they were not of a sort that the world commonly asks much about, or cares to hear much about.

They were not, we must say, warriors hardly overcome after long and stubborn fighting, like the last of the brave Messenian folk that lived through the famous siege of Ithomë, and were compelled to leave their own land, promising never to come back unless to slavery. Nor were they self-banished people, like the Phocæans of old, fleeing from the overhanging bondage of the Persian Cyrus; or, like our Pilgrims and Puritans of later time, running across the seas to find a place where they could have their own way and keep any and all others from having one jot or one tittle of any other ways whatever. What they were was this: they were just husbandmen and fishermen, of French stock, with the wives and children that belonged to them, who had changed their climate, but not their character, in settling themselves abroad, and had only stretched, without even a wish of their own to break, the strong bond that binds all Frenchmen to France. They had, by their ways of life and speech and building and tillage and harvesting, and catching and curing of fish, and their names and songs and laws and church holidays and family feasts, made the new land seem as thoroughly a bit of the old and well-loved land as they could make it. It had been snowy and icy, as they had never known, from memory or hearsay, old France to be, for in their settling down they had lighted upon meadows and shores where the winters were sharp and hard; but French husbandmen and fishermen the first of them had come over, and French husbandmen and fishermen to the last they and their sons remained. So long as they kept their country they kept it French. They were Roman Catholics for the great part, and steadfast in their faith as they and their fathers had held it.

Those shores that their fisher-people chose and used had, ever since the sea flowed round them, been offering inlets and coves, and larger harbors—some of them wide and deep and safe as any in the world, one of them almost matchless anywhere; and the best fish have always known and liked the waters thereabouts. Inland, there were hard-wood timber and soft-wood timber for ships and houses, and there were broad, level lands and hillsides with a deep, rich soil. The sky of all that country, unless where sea meets land, is a fair and open blue, and the sun shines kindly through a long, not overheated summer, to ripen the best grains and fruits of the cooler temperate zone. So fishers and tillers there alike were thriving, and were a happy people to see or hear of, except when the English, or the English Indians, brought slaughter and burning among them. The name of this country in English or French—Acadia or Acadie—is musical. To those who know the foremost tongues of the world, too, it brings up, by likeness, the thought of that other country, the Arcadia of old Greece. Without our thinking, it recalls the happy race of men that piped and sang amid their flocks and herds, and had their love-makings, and their makings of good cheer in the shade of spreading trees or of thickly leafed grapevines, in sight, as it were, and hearing of all the ages of speaking and reading men, so well have the melodious "makers" set forth in living words that merry life. By its bare sound, before we think, Acadia brings up the gladness and the tenderness that the other name recalls. Acadia—the Indian word smoothed out a little—lingers in memory as well and comes as daintily and prettily from the lips as the old Greek.

But if we reckon everything, as we have reckoned all the chief things, all never could have made for these Acadian people the place that their name and story hold now among men; not if we throw in the sadness of their being dragged forth, seven thousand of them, less or more, and sent away in ships—and throw in, too, the bitterness of their after lot. *Nil lacrima citius arescit:* tears dry full fast from off man's cheeks; and full as fast, almost, flits the remembrance of those who have sorrowed and those who have suffered. Millions, in the course of time, of others much like these have, by their foes, been treated much as these were treated, and neither we nor our neighbors are now going lingeringly, and full of thought and feeling about them, over their ground long after. The truth is, that these are Longfellow's people that are liked and pitied and remembered, and for whose sake their land has been sought out, and these two books (very unlike, indeed) and others doubtless have been written. Whatever has been said against the putting of English words into hexameters, such as can be made of them, and against the lightness or cheapness of some of the thought or wording of "Evangeline," that poem has made all the abiding interest and feeling about the Acadians. The real people seem to have been very much such as Longfellow has made the people of his poem; there is little history; there is no official record, and scarcely even any other record, of the driving-out. He has brought into his verse true names of old French dwellers in the land, and names of some who were driven forth, and the traces that are and will be sought, and the memories that will be called up, of the erewhile Acadians, in the hamlets and townships of Nova Scotia and New Brunswick, about the Basin of Minas and the Bay of Fundy, are those of the people of Longfellow's "Evangeline." At the stroke of time stood forth the *vates sacer*, the man who was to make the Acadians live in the memory of mankind. The real ground, the real land and sea, the real spot where town or hamlet or farmhouse was long since, with any leavings that may still mark the site—these will be looked for and will be seen by eyes that will see more in them than is there. So, too, such written things as state papers, public and private letters, hearsay—whatever may come to light—will be read and ransacked, though with little hope of finding anything worth the telling which has not been already somewhere and somehow told. Ballads there were never any in the case; ghost stories and the like there may have been—not many.

The two books whose names stand at the head of this article were written, though their titles do not show it to the first glance, because of Longfellow's "Acadians." Mr. Philip Smith's "Lost Chapter" is a curious thing. The author seems to have stereotyped it himself in some way of his own; to have himself drawn and cut in wood his illustrations, and to have himself printed the whole and published it; the binding, we believe, he does not claim to have done. The pages are not very handsome to the eye, and the "illustrations" are queer beyond any power of ours to describe; indeed, the author is a brave man to plunge into the sea of letters with such floats under his arms as the printing and woodcuts of this volume. We should have thought it well, had we been at his side, if he had left out the illustrations, for they have been, to our mind, depressing as never were those of the earliest Webster's spelling-book, or of the posters and broadsides or the newspapers of the earlier colonial times. He has certainly, however, out of the "upwards of fifty authorities which he has laid under contribution," gathered much desirable information, and, spite of some faults of style and grammar, and carelessness about order and dates, has made it readable. The "Legends," at the end, he ought not, for the credit of his "history," to have told in his own person, "I." With these qualifications we gladly refer to Smith's 'Acadia' any readers wanting more than the short summary of facts given some way back.

The other book is a woman's, and pretty and pleasant, very much because of its heliotype copies of her own water-color paintings; all of which are good and interesting, and some admirable. Her slight descriptions of Nova Scotian towns and country, to which a party of eight made a summer's jaunt, if easily written are easily read. We indulge summerers so cheerful and wholesome in some even trivial conceits, and overlook some wants in statistics, and even a now and then glaring blunder (there are not many blunders), as where she says (p. 141): "The French dominions were guarded by a chain of forts extending all along the Atlantic coast from the St. Lawrence to the Gulf of Mexico" (!) We are sure that our pleasant-spirited artist and author will smile if we ask her to give a few names of the more prominent French forts along the shores of Maine, Massachusetts, New York, New Jersey, Delaware, Virginia, North Carolina, South Carolina, and Florida, in the seventeenth and eighteenth centuries.

RECENT NOVELS.

Mingo, and other Sketches in Black and White. By Joel Chandler Harris. Boston: James R. Osgood & Co.

The Shadow of the War. Chicago: Jansen, McClurg & Co.

Godfrey Helstone. By Georgiana M. Craik. Harper's Franklin Square Library.

The Surgeon's Stories. Times of Alchemy. By Z. Topelius. Translated from the Original Swedish. Chicago: Jansen, McClurg & Co. 1884.

The Giant's Robe. By F. Anstey. New York: D. Appleton & Co.

Stage-struck; or, She Would be an Opera-Singer. By Blanche Roosevelt. New York: Fords, Howard & Hulbert.

A Palace-Prison. New York: Fords, Howard & Hulbert.

Quicksands. By Adolph Streckfuss. Translated by Mrs. A. L. Wister. Philadelphia: J. B. Lippincott & Co.

'MINGO, AND OTHER SKETCHES' does not discredit the fame of 'Uncle Remus.' It is not hard to account for Mr. Harris's success as a story-teller in negro and poor-white lingo. He is very close to the untutored spirit of humanity. He discriminates nicely between natural emotions in the widest sense and those which are a class inheritance. He uses rude or corrupt language to express only primitive passion and thought—fierce hate, unreasoning love, a dog's gratitude for kindness, a savage's impulse toward revenge; he never offends or wearies by palpable incongruity between idea and form. In this respect his perception is subtler and more truthful than Bret Harte's, with whom he may be legitimately compared. Both authors have keen instincts and insights, but Harris's are the finer and deeper. Harte's characters are by far the more picturesque, his incidents are more thrilling, but Harris's people wind themselves about our hearts and owe little to circumstance. Mrs. Feratia Bivins in "Mingo" is a perfect illustration of fitness between sense and sound. In acquiring a purer form of speech, her animosities, at once terrible and trivial, must have suffered modification; and no other tongue than Mingo's could have conveyed all the pathos and unconscious humor in his story, beginning: "Bimeby soon one mornin' I make a break. I wrop up my little han'ful er duds in a hankcher, en I tie de hankcher on my walkin' cane, en I put out arter de army." "Teague Poteet" and his comrades embody the Declaration of Independence and something more, for they convince us that the right to distil whiskey on Hog Mountain, without reference to revenue, is among the rights inalienable to man. The ladies of the Mountain, Mrs. Sue Parmalee, Mrs. Puritha Hightower, and Mrs. Puss Poteet are as delightful as are their names, and the only weak figure in this story is the conventional lover of Sis Poteet. In "Blue Dave," too, the conventional characters are lifeless, but there is compensation in the solemn importance of Brother Brannum and Brother Roach, and in the hunted, desolate negro, Dave. In "A Piece of Land" we are so sure of Miss Jane Inchly's soft heart that we can laugh at her sharp tongue; but the other characters are somewhat beneath the author's usual taste in selection, and they have not that air of spontaneous creation which is one of his shining merits.

If the romance were clipped out of 'The Shadow of the War' (and that could be done easily), a neat little bundle of political papers would remain. They are written with that impartiality which suggests the dawn of an era when the whole disgraceful period of reconstruction may be treated dispassionately. True, the newspapers have reported over and over again scenes almost identical in outline and similar in detail; but the newspapers do not make a handy volume, and that is perhaps the need which 'The Shadow of the War' supplies. Since experience has led us to believe that when perfection loves perfection disaster must ensue, we are despondent from the beginning over the passion of Maurice and Hortense. Then French names always surround plain Americans with an atmosphere of gloomy sentimentality. But the dénouement proves either that experience is not infallible, or that the author is a man of unfettered imagination.

'Godfrey Helstone' is a tiresome story, clearly born of the scribbling habit and not of creative impulse. The theme is love—not a wild, or wicked, or in any way fateful passion, but a decorous emotion, very useful in the development of altruistic schemes. There is some novelty in the effect wrought by scarlatina and a genteel enthusiasm for Godfrey on the constitution of a colorless young woman, though the combination of maladies seems to us rather droll than pathetic. But the book should be read in the serious and severe spirit of the writer. It is doubtless intended for those simple souls to whom the pestilence that stalketh in darkness is personified by an individual with a sense of humor.

The title of the last volume of Topelius's "Surgeon's Stories"—'Times of Alchemy'—carries the imagination back to the Middle Ages, when alchemy and its kindred superstitions really held sway. It comes in strangely after 'Times of Linnæus,' in which the modern scientific spirit seems to be implied. And, in truth, when one reads the book it seems a misnomer, because the alchemy does not give character to the epoch, but is only a survival from earlier periods, and is hardly more than an incident. The supernatural, indeed, runs through the entire series, in the magic ring which in this volume falls into the hands of the King just on the eve of his great enterprise; but it is no more characteristic of this volume than of its predecessors. The real subject of this story, as an historical novel, is the successful revolution by which Gustavus III., in 1772, reëstablished the power of the crown against a corrupt and contentious nobility. This historical episode is very well narrated, and so is the current chapter in the annals of the Bertelsköld family. The violent antagonisms and final breach between its members, and the final reconciliation, are related with great skill; even here, however, there is too much that is unnatural and melodramatic. On the whole, the volume appears to be weaker and less skilfully worked out than its companions.

As 'The Giant's Robe' is neither fantastic nor funny, extended comparison between it and 'Vice Versa' would be rather idle. It is a more solid and thoughtful work than Mr. Anstey's earlier novel, and will probably hold public interest longer. The plot is an excellent one; the characters are well chosen, and the expression, if not always free, is never inadequate, often happy. The author has already been accused of stealing his central situation, but his preface acknowledges a debt to the intrigue of a Christmas story. Fortunately it makes little difference whether the incident is borrowed or not, since the treatment is strikingly original and vigorous. Mark Ashburn's appropriation of his friend Holroyd's accepted manuscript is something more than a common theft for money and notoriety: it is the extreme expression of belief in his own literary talent; it is the forlorn hope upon which hangs the fate of his hitherto unappreciated 'Sweet Bells Jangled.' In the drawing of the vain, shallow, but not wholly worthless Ashburn, every stroke tells. While his literary hallucination lasts, he does infamous things, and is comparatively happy. Forced admission of his mistake about the quality of his genius brings some dim perception of the extent and variety of his errors, and pangs of remorse for the sorrow and suffering so uselessly heaped upon Holroyd. Then his natural impulse to help other people, chiefly that he may be comfortable, takes possession of him and he tells the truth. It is at best a melancholy tale, and would be oppressively so were it not judiciously lightened. As there is weakness in the prolonged absurdity of 'Vice Versa,' so there is strength in the suggestions of farce in the Ashburn family. Dickens could have elaborated them hilariously, but by repression Mr. Anstey seems to recognize the limitations of his own nature and to bow to the spirit of the times.

Perhaps 'Stage-Struck' is no worse than the author's earlier novel, 'Marked in Haste,' but unquestionably it is no better. They are about equally weak in design, slovenly in construction, flippant and coarse in style. The love affair between Annabel Almont, the aspiring singer from Wisconsin, and Noel Brakenston is silly in its beginning and both silly and repulsive in its end. The episode is important, but is incidental to the motive, which is to warn American girls against going to Europe with the opera-singing bee in the bonnet. To develop this laudable purpose, an army of more or less blighted songstresses is marshalled before us, leaving in the mind a confused picture of a wan legion of women, poverty-stricken, grossly insulted, while their beautiful visions of fame vanish in an ignominious scramble for bread. This general impression may be exactly what the author means to convey, but she should have taught her lesson definitely through the experiences of her heroine. Most unfortunately, the only lesson to be drawn from these defeats her intention and brings her discursive eloquence to nought. Annabel Almont's hopes are frustrated neither by the pressure of poverty nor by proved incompetence, but by a very cheap and ancient expedient. After reaching the climax of the story, the American girl in pursuit of that will-o'-the-wisp, a career, will only want to know if she looks like a person to be taken in by such a miserable fool as Noel Brakenston, and will tranquilly keep up the chase.

Several novels have been written which have entertained the public and at the same time inspired a popular movement towards reform of crying abuse. Such work demands a higher order of talent than that displayed in the 'Palace-Prison.' Here the voice of the novelist is drowned in the declamation of the reformer, the agitator. The pain and horror of Marion Page's life represent to the reader the pain and horror concentrated in lunatic asylums all the world over, and press upon him to the exclusion of other sensations. As a denunciation of past and present methods of treatment of the insane, the book calls for grave attention and close scrutiny. The author says that this accumulation of horrible incident is fact, largely based on personal knowledge. And outside of occasional hysterical apostrophe, the narrative has the air of truth. But considering the small capacity for story-telling displayed, he would probably have acquitted himself better of a clear duty to humanity by a simple statement of his facts not disguised in fiction. He could serve the public still further by giving the name of that "prominent physician," that "trustee of a large asylum," who declined to commend the 'Palace-Prison' because "its publication will have a tendency to depopulate asylums and reduce their maintenance fund." If there are such persons in positions of public trust, the sooner they are pointed out the better, and if there are none the statement may with justice be held a libel on many honorable men.

In the selection of 'Quicksands' for translation, Mrs. Wister has shown her well-known discrimination; and she has, as usual, embodied

the original foreign spirit in good English form. 'Quicksands' is a frank romance, making no shamefaced compromise with realism. The hero, Egon von Ernan, is superlatively daring and accomplished, and in the heroine, Elise von Osternan, the virtues strive for mastery. It is no blemish that most of the people talk by the page, making opportunities to express lofty moral sentiments. One does not think, "What bores! no human being ever talked in that strain"; but rather, "How truly beautiful and refreshing it would be to meet human beings who talked just in that way!" The first situation is capital. The contrast between Egon von Ernan, meditating suicide to escape from a superabundance of this world's goods, and Gottlieb Pigglewitch, prompted to the same act through lack of them, is very effective. We are not moved to tears by Egon's rhetorical cynicism, or by the life and sorrows of the wretched Pigglewitch. On the contrary, the sense of comedy, not tragedy, in the situation is uppermost, and the bargain struck between the two despairing mortals excites the liveliest curiosity about coming complications. Though the story hardly fulfils its first promise, the intrigue is carried on very well, especially until the surprising candidate takes leave of Castle Osternan, and in Berlin resumes his identity as Egon von Ernan. Many of the subordinate characters are old in German fiction, but, being necessary to the development of the plot, and being kept in due subjection, they are not tiresome. We are so impressed by the romantic nature of everybody and everything, that we regard Bertha von Massenburg with all the disfavor properly accorded to the proud, unrighteous sisters of Cinderella. Until the book is closed, it never occurs to us that her device for keeping Egon and Elise apart was a very trivial one for a clever woman of the world. It is only after reflection that we see any improbability in the *blasé* Egon's swift and sure conversion to the paths of rectitude. And no amount of reflection would convince us that Elise, as Frau von Ernan, could degenerate into a terrible curtain-lecturer, or that she and Egon could be less than happy ever after.

Stephen Hopkins, a Rhode Island Statesman. A Study in the Political History of the Eighteenth Century. By William E. Foster. [Rhode Island Historical Tracts, No. 19.] Providence: Sidney S. Rider. 1884. Two parts in one. 8vo, pp. 196 and 289.

THE American boy who looks at the facsimiles of the signers of the Declaration of Independence never fails to notice, in strong contrast with the firm, handsome signature of John Hopkins, the unsteady characters in which the name of Stephen Hopkins is written; and he is told, perhaps, that these painfully-formed letters are no indication of instability of purpose, but that the writer, a steadfast patriot, was afflicted with the palsy. He understands then why it is that the man who stood to his own colony as Hancock did to his, made so little mark in the history of the Revolution. The Revolution was, as was natural, the work of young men; and the Revolutionary leaders for the most part survived to take a large share in the administration of the new republic. Stephen Hopkins was already at the end of a long and honorable career. Signing his name to the Declaration was not his last public act, for his name is still met upon the records of the two or three ensuing years, and he did not die until 1785. But his health was fatally impaired, and he lived in retirement during the principal part of this time.

This was a misfortune for his State and his country, as well as for his own fame, as his biographer has well shown. Rhode Island, as is known, was one of the chief obstacles to the formation of the "more perfect union." Under the government of the Confederacy, it was largely her obstinacy that blocked the wheels of government and brought the union to nought. And after the new Constitution had been established, the State-right sentiment of Rhode Island was so intense that she did not accede to the new government until it had been in operation several months—the last of the thirteen to surrender her individual sovereignty. But Stephen Hopkins, her leading and most influential citizen, was committed, in a higher degree than most of our public men, to the policy of union. He had been a member of the Albany Convention of 1754, and was a consistent champion of a national policy. It was Rhode Island—and no doubt largely through his influence—that took the initiative in calling the First Continental Congress of 1774 (see part ii., p. 123), as it was Providence, his native town, that took the lead in instructing its representatives after the passage of the Stamp Act. And Mr. Foster points out (part ii., p. 154) the significant fact that, slow as Rhode Island was in coming into the Union, "so long as there was any active Federalist party Rhode Island was a Federalist State." And at the time of the Virginia Resolutions of 1799 "she was now among the very foremost of the States which effectively sustained the supremacy of the national Government." This he attributes largely to a posthumous influence of Hopkins: "So thoroughly had the leaven of national sentiment done its work . . . under the influence of Stephen Hopkins and his intelligent colaborers, that now, when the final year of the century was reached, his State was found occupying this very notably advanced ground."

The life of Stephen Hopkins possesses, therefore, an interest which is peculiar and almost unique among the great men of the day. His career culminated in the act of independence, instead of commencing with it, as—in the eyes of posterity—that of most of his colleagues did. And his life, spent honorably and usefully in the affairs of a New England town and a New England colony, in each of which he was the first citizen, presents, as the title-page well puts it, a most profitable "study in the political history of the eighteenth century."

As a citizen of the town and State, Stephen Hopkins was identified with every measure of public improvement through a long series of years; and, to a student of democratic institutions, the chapter (chap. v.) which describes the different spheres of his activity, is one of the most instructive in the book. Here we find him a leader in the commercial development of Providence, in the building of streets and markets, the establishment of schools, library, and college, the post-office, and the fire department. He was also a prolific writer. "He left behind him at his death an invaluable collection of papers and discussions, not merely in the form of correspondence, but of reports, memoranda, and notes, bearing on such topics as the Stamp-Act discussions; the Albany Congress: the various plans of union subsequently discussed; the gradual progress toward armed resistance on land and sea, and the equally gradual assumption of national powers by the colonies acting together. Some small portion of this material, not collected with the rest, remains to us. The greater part is a total loss." This loss, we are told in a note, is due to the great storm in September, 1815, when "the tide swept through the house where they were lodged, and they were carried off and lost in the multitude of waters."

The political condition of Rhode Island in the colonial period, as one of the elements in the causes of the Revolutionary struggle, is illustrated with great distinctness in the work before us. The diversity of character and interest in the smallest of the colonies is another illustration of the truth taught by Greek and Italian history, that it is not always the large States that afford the most instructive data for political history. The rivalry between Providence and Newport is well known: Providence a farming community, Newport "the centre of the life of the colony, so far as its wealth, its learning, and its culture were concerned" (part ii., p. 6). Then there was King's County, now Washington: "More strictly, perhaps, than in any other portion of New England, could the term 'aristocracy' be applied to the ruling class of this region; and it resembled, in fact, nothing so much as the society of the plantation counties of Virginia." This aristocracy, we are told elsewhere (p. 144), was loyalist, and was forced to leave the country, while that of Virginia took a leading part in the Revolution. Kent County, further north, was rural; while Bristol, on the eastern shore, having originally been a part of Massachusetts, "still possessed the commercial instincts and enlightened public spirit with which it had grown up." These local characterizations are very interesting.

Of course the principal interest of the book gathers about those years of preparation for the great contest, in which the trained powers of Stephen Hopkins found their best exercise, and Mr. Foster makes a positive contribution to our knowledge of this most important period. Hopkins appears to have understood the situation and its requirements with remarkable clearness; his published writings, from which several passages are cited, expressed the best sentiments of the country with great vigor and ability: "As he was apparently Franklin's strongest coadjutor in connection with the Albany plan of union, and as he was afterward one of the most strenuous of John Adams's collaborators in advocating independence, so now at this early stage [1765, etc.] he is found in the closest association with the two men who most thoroughly represented the advanced sentiment of this early year—James Otis and Samuel Adams" (part ii, p. 45). It is worth while, in closing our notice of this admirable work, to call attention to the fact that it was Stephen Hopkins who, in the year of the First Continental Congress, proposed the measure by which "the General Assembly ordained 'that for the future no negro or mulatto slave shall be brought into the colony,' and that all previously enslaved persons, on becoming residents of Rhode Island, should obtain their freedom. 'In this decided action,' once more, as has been so often seen to be the case with movements led by Stephen Hopkins, Rhode Island,' says Arnold, 'took the lead of all her sister colonies'" (p. 100).

Academy Lectures. By J. S. Hodgson, R. A., Librarian and Professor of Painting to the Royal Academy. London: Trübner. 1884.

WHY the realm of print and paper should be invaded by this volume is not made clear by any internal evidence. The author does, in the preface, offer an explanation, which is, that, from Sir Joshua Reynolds's day to our own,

"it has been the duty of members of the Academy to devote a certain portion of their time annually to teaching the students, while the professors elected to fill the chairs of painting, architecture, and sculpture have supplied the theoretical instruction necessary to complete the practical lessons of the schools; and so it has come to pass that from time to time, during more than 100 years, a modest volume, entitled 'Academy Lectures,' or 'Lectures on Art,' has struggled into that partial vitality which is supplied by type and printers' ink."

But surely it is not needful that if there must be the tragedy of an Academy lecture there need

be the farce of printing it to follow. Professor Hodgson completes the explanation by saying:

"Madness of a certain kind possesses every man who finds that he has brains *in him*. He immediately wants to knock his sublime forehead against the stars. He may know perfectly well that printing is the grave of reputation; that there is no such translucent medium as solid metal type; that you can see a wise man or a fool through it to the most subtle trick of his eyebrows; that there is no tell-tale like your printer's devil, who will blab out every secret; and yet he rushes in."

In the case of the present author the brain would seem to have been intended for other uses than art lectures. His supply of the "theoretical instruction necessary" does not appear to be superabundant, for a more commonplace series of dissertations on the problems of art we have seldom come across. Ill-digested reading and the affectation of incomplete and ill-founded education are manifest throughout its pages.

The opinions of artists on art are, on the whole, the most valuable criticisms we have, but the artist is not necessarily a thinker in literary form, and especially he is most unlikely to be a sound theorist. The concrete judgments of a painter ought to be worth hearing; yet it rarely occurs that a good painter is a good reasoner, or that his abstract opinions have a value equal to his reputation as a painter. But when a man with a literary education so superficial as Professor Hodgson's attempts to cover mythology, archæology, philosophy, history, and all branches of study which he can drag into a nearer or more remote connection with art, he does little besides blunder. The crude rehash of conflicting theories in his speculation on "Art as Influenced by the Times" is shown especially in the lecture appropriated to Greek art, which is turgid and involved as literature and incorrect as theory or fact.

"A primitive race had placed the *abode of Jove* under the Dodonian oak; the *more polished Dorians* transferred it to the summit of Olympus. The rude dances and songs of peasants who assembled in the forest to sacrifice a goat in honor of *Phœbus* [!] developed, in the course of time, into the most complex and beautiful creation of thought, to which the sacrificial goat τραγος gave its name—a name still current in the speech of Europe in the word 'tragedy.' And so the temple, which was originally *an open shed by the roadside*, where *a billet of wood did service for the god*, became ultimately a stately edifice of marble, supported on fluted columns, where pilgrims from every part of Greece placed their offerings at the feet of a colossal statue, fashioned by the genius of Phidias and plated with ivory and gold."

Can anything be more exasperating than this blundering pedantry in the chair of a professorship of the Royal Academy? And this:

"When we say that Greek art flourished in the service of Greek religion, we are uttering a truism, since *Greek religion was art* as poetry is an art. What stood for religion in the mind of the Greek was *probably only that exalted state of the imagination* which it is the proper province of the poet and the artist to produce."

But to come to the lecturer's proper field, the theory of art. "The art of painting," he says, "represents objects; it places them visibly before us as we see them in nature, and communicates, first of all, ideas of truth—that is to say, we appreciate the fidelity of the representation; and, next, it conveys to us all the ideas which are *associated with* those objects, such as form, color, proportion, etc." But what is representation without form and color? and what its fidelity if not in observance of proportion as well?

"But, in addition to this, painting is able to touch the chain of association by which all our thoughts and feelings, our knowledge and our emotions are linked together; it suggests ideas of relation. The phenomena of nature *are made to correspond with those emotions*, and that knowledge is enlisted into the service of the painter to enhance his effects. A striking illustration of this is supplied by Turner's picture of the old *Téméraire* towed to her last berth. It represents a sea, a sunset sky, a steamboat, and an old man-of-war; and all the ideas which we associate with sea, sky, and vessels are there. But, in addition to these, the painter has succeeded in conveying the emotions which are aroused in our minds by thoughts of glorious achievements and of departed greatness. He has availed himself of our knowledge of the achievements of the old ship in many a hard-fought battle to enhance the impression. This class of ideas is unquestionably the highest with which art has to deal. We prize a picture very much in proportion to its suggestiveness, to its power of communicating other ideas than those which properly belong to the objects represented. Beauty must be placed amongst these ideas of relation, since it is not an absolute quality inherent in objects. It is only evolved when two or more ideas come together. The body of the child is beautiful through its innocence and helplessness; that of the athlete, through its fitness for feats of strength. The idea of beauty never presents itself as an absolute thing; it is a relative idea. *A thing is always beautiful to us because of something else.* I think we may lay it down as a broad rule that, where we have ideas of relation suggested to us in pictures, there we see the operation of the imaginative faculty, since there is none other that can produce them; and, consequently, when a picture conveys to us ideas of beauty, there imagination has been at work. The utmost which knowledge of means and dexterity of execution can do for us is to give an idea of truth and of form, color, etc., which belong naturally to the objects represented. The moment we receive ideas of beauty, or our emotions are touched, we are in the presence of the imaginative faculty. *If we admit this, we must pronounce Dutch art to be imaginative, since it is full of beauty and it is also emotional.*"

"It [Dutch art] reveals an unexpected charm in common things, and invests objects of themselves uninteresting with a power that appeals to the heart. A pewter pot by Metzu is raised above the glories of earthy pewter and human propensities for beer into an ideal region."

This conclusion, no doubt, Professor Hodgson fully believes in, though it is difficult to see how it has anything to do with the pot-pourri from Ruskin which leads up to it. Of Michael Angelo we read that

"He was capable of strong affections, and these were bestowed upon an old servant and on a youth whose only title to the honor lay, probably, in the qualities with which Michael Angelo's own imagination invested him. From the evidence of his own poetry we can see that he appreciated intensely the import of spiritual truths. The outward, visible phenomenon was nothing to him without its relation to the spirit; the swan without its image in the waters was an abnormal fact."

Da Vinci "*rehabilitated* the ideal in physiognomy; the face was to him a transparent mark [mask ?]; beneath it he saw the workings of the soul." Of Correggio we learn: "That man's mind is an inscrutable mystery: one can trace in it no deep convictions, no profound musings on the mystery of things. He was a sort of wizard; light corruscated about his mind which shed a glamour on everything he saw."

Ruskin has contrived for us what he calls the pathetic fallacy. If he had anticipated the effect of his eloquence on men of the strain of the Professor of Painting of the Royal Academy, he would have made its antithesis the bathetic; but he could never have anticipated that such uneducated maunderings would come to the light with the imprimatur of the Royal Academy of Arts.

Todte und Lebende. Erinnerungen von Carlos von Gagern. Erste Reihe. Berlin: Abenheim'sche Verlagsbuchhandlung; New York: Westermann. 1884.

ONE cannot reasonably dispute Von Gagern's claim that he is well qualified to appear in the rôle of a cosmopolitan. Of German birth; educated at Jena, Berlin, and Leyden; one of the enthusiastic reformers who lost both their cause and country in 1848; a venturesome partisan in the Carlist wars; for some years a journalist in New York; since 1858 a Mexican officer, sharing in the smiles and frowns of the fortune which has been the lot of his adopted country—at one time in high favor, at another in disgrace: now a prisoner at Puebla, anon a captain at Querétaro; since Diaz came to power discharging a military mission in Europe in behalf of the Mexican Government—he may, with good right, present himself as an illustration of that cosmopolitanism into which, as he maintains, mankind is gradually developing. He quotes with approval the Arabic proverb, "Journeyings are conquests; they add new provinces to the kingdom of knowledge." Presenting himself thus in the guise of a travelled and broad-minded observer of men—believing, as he says, that "progress is the quintessence of the history of the world"—he offers us this first series of his reminiscences.

The first impression which the book makes—an impression which deepens as one goes on reading—is that there is a questionable propriety in the author's putting the name of some well-known person at the head of the different parts of his narrative. We meet with the caption "Alexander von Humboldt" or "Benito Juarez," and we naturally expect to get some additions to our stock of knowledge about those personages. But we get very few—in fact, none of any importance. What is stranger, there is little pretence of imparting any fresh information about them. Their names are evidently mere pegs upon which the author hangs his own hat. He invites us into his picture gallery. We take up his catalogue and see that No. 1 is "Ludwig Jahn." We look, and lo! it is only a picture of our host, as a boy. No. 5 is put down as "Baldomero Espartero." We catch the glitter of a Spanish uniform, and hope that we shall indeed see the famous leader; but no, it is Von Gagern again, masquerading as a revolutionist. So throughout the list. Each portrait, however named, only succeeds in giving us a new attitude or expression of the same subject.

It is true our author has warned us of his intention to follow such a method. He would not be thought one of that plodding class of writers who keep diaries and preserve letters, and then make a book by stringing together their documents, like pearls upon a thread. For his part, whatever notes and correspondence he had at one time preserved, he has lost. What he is aiming at in his sketches is this: "Each one of them furnishes a centre, about which a part of my own life has crystallized. They have, in consequence, enlarged themselves into an autobiography, altogether inadequate and by no means presenting a strict chronological order." It is in this way that he professes to follow the direction of Confucius, "Seek man in men." But the "man" is always Von Gagern. We cannot but think that this warning of the preface is not enough to prepare one fairly for what follows. Proper treatment of the reader would demand that this explanation should have been printed at the head of every chapter; rather, the book should have been frankly called what it is, after all, admitted to be in the preface. It only leads to disappointment and exposure to try to hide in the shadow of mighty names.

With this understanding, then, that the book is only a fragmentary autobiography, not a series of biographical sketches, a brief summary of its contents may be given. We get a glimpse or two of Ludwig Jahn, the eccentric advocate of the introduction of physical exercise into the schools and the army, a subject on which he was almost a monomaniac. He is counted the father of all the "Turners," and at the great festival at Brooklyn in 1871 of the Turnerbunds of North America his name and services were appropriately commemorated. "Das Rütli" was a reform club at Berlin, made up mostly of students

at the University, which came to grief in '48. Noteworthy names among the membership are Bruno Bauer and Kriegar, known later in the *Kladderadatsch*. To Humboldt our author appears to have had no more important relations than consisted in having lived two doors away from him in Berlin, and in having received certain letters from him, which, the writer "sincerely regrets," are lost. Attention is called to the interesting fact that in the archives of the Mexican Government there is treasured a brief essay, in Spanish, on the natural resources of Mexico, written by Humboldt while in that country in 1803, and addressed to the Viceroy Iturrigaray. This seems to have been a sort of plan and anticipation of the famous "Essai Politique." The fourth sketch of the book tells us something of Siebold, the explorer and botanist of Japan, a brother-in-law of the writer, but serves principally to explain Von Gagern's residence at Leyden, to introduce an outline of the politics of Holland, and to reprint a tale of the author's, founded on his Japanese studies—'The Stonecutter of Nagasaki.' The chapter on Baldomero Espartero shows us very little of that chieftain, but narrates the decidedly interesting and dangerous adventures of the writer among the guerilla fighters in Spain. Wislicenus, a Halle professor, in disgrace for heretical opinions, figures only as a cover for the statement of Von Gagern's own religious experiences and views. These last are sufficiently pronounced: he is a dogmatic atheist, an avowed disciple of Feuerbach. He apologizes for having so long held to the belief in a God, saying that "it is hard to free one's self from those errors and prejudices which are taken in with one's mother's milk and inculcated during the first years of education." There is no need to look in the three chapters on Santa Anna, Miramon, and Juarez for any contributions to our knowledge of those men. Nothing beyond the pettiest details is given. As before, these names are but guideboards pointing us to the experiences of the author. It would be interesting to follow his fortunes, which took many surprising turns and brought him into many peculiar situations, but it cannot well be done in such an epitome as this. The short chapter on Henrietta Sontag admits us to the triumphs which that singer met with in Mexico, cut short by her tragic death at Vera Cruz, of cholera, in 1854.

The style of the book is admirably suited to its contents—light, flowing, varied. It is German modified into cosmopolitan. Professor Martineau says: "It is seldom possible to read many pages of a German philosopher without suspecting yourself a fool." Von Gagern, however, appears to have what the same writer calls "the fortunate gift of French men of letters—the art of making their readers think better of their understanding and less awfully of the subject discussed." A good, thick stratum of self-conceit crops out here and there. This may have been due to the necessity of combining the German and Mexican in one. The author says that he was once toasted as "The most Mexican of Mexicans." To add to the fairly large native stock of self-confidence with which most Germans enter the world the immense conceit of a Mexican, is to pile Pelion on Ossa.

Elizabeth Fry. By Mrs. E. R. Pitman. Boston: Roberts Brothers. 16mo, pp. 269.

THE materials for the life of Elizabeth Fry are little else than the two-volume memoir by her daughters, Mrs. Fry herself having destroyed in middle life the too communicative diary of her early years which she had kept before her marriage. Enough remains, however, to give an interesting picture of an elevated but morbidly sensitive girlhood; and to this part of her heroine's life Mrs. Pitman's somewhat colorless narrative does not do justice. Her work suffers from the crying fault of most American biographers of smoothing away the little excrescences of character which gave individuality to the person described. She tells us what Mrs. Fry did (and it was a great work), but not what she was. Moreover, Mrs. Pitman's facts are not entirely free from error. To take two or three conspicuous examples, she speaks of Mrs. Fry's mother as the granddaughter of Robert Barclay, the author of the 'Apology for the People Called Quakers.' It was not, however, her mother, Catherine Gurney, but her grandmother, Catherine Bell, who held that relationship to Robert Barclay, and through him to the ancient family of Barclays of Ury. Mrs. Pitman speaks also of Mrs. Fry's twelve children, but her daughters, who must have known, say that she had only eleven. What is more important is that she attributes to Mrs. Fry an emphatic belief in the "complete separation" of criminals, forgetting that it was one of the marked features of her system to have the prisoners work and study together in the daytime, in a healthy, natural manner, and be separated only at night, and that she often opposed solitary confinement on the ground that it was bad for the mental health of the prisoner, and required an ability and self-control on the part of the jailers which it was too much to expect from men of their class. This is a very important question in prison discipline, and it is a pity that Mrs. Pitman should have slurred it over.

It is not easy to see in Mrs. Fry's girlhood the promise of the executive ability and far-sighted penetration which she afterward showed in her career as a reformer. She was rather an obstinate and dull child, and very timid, afraid of the dark and of bathing, crying quickly if people looked at her, and so much alarmed at a gun that she gave up a pleasure expedition with her father and mother because there was a gun in the carriage. Her parents seem to have been too indifferent to these peculiarities. Elizabeth was evidently a very affectionate child, but she was too much afraid of her mother to tell her when she was ill; and her early religious impressions were gloomy, and her lessons forced upon her in a distasteful way. She was not in good health, and the loss of her mother when she was twelve no doubt depressed her still more. But at seventeen she had grown healthier and happier, and she felt an innocent love of music, dancing, riding, and little flirtations, all of which troubled her mightily afterward, when she had retired to her room. Her natural love of youthful pleasure she felt ashamed of, calling herself "all outside flippery," "a contemptible fine lady," etc. She was conscious of dawning talents, but she was "in a state of fermentation," and thought she was "going to be religious or some such thing." She was in the mood for it, and very soon she did experience religion. It was hard for her to settle into Quaker ways. It went to her soul to part with her gay scarlet riding habit; and she tells how she would turn and run away rather than say the formal "thee" and "thou"; but the change was at length accomplished, and permanently altered her life. A little later she married a wealthy Quaker merchant, Joseph Fry, but without any very strong attachment, if one may judge from her letters, and with some religious misgivings. This was a youth which seems pathetic enough now, but was very common in those days of repression. The odd thing is that it should have produced such a woman; that, notwithstanding the cares of a large family, she should have been able to revolutionize and humanize the prisons, not only of England but of Europe and the penal colonies. Her never-failing enthusiasm and her executive skill in organizing the assistance of others counted for much; the ripeness of the time, which had outgrown but not discarded its barbarous old institutions, had still more to do with it. Altogether, it was a remarkable life, in which self-sacrifice finally triumphed over self-consciousness, and a high purpose made her brave and strong.

The Battle of Stone's River, near Murfreesboro', Tenn. By Alexander F. Stevenson. Boston: James R. Osgood & Co. 8vo, pp. 197, with maps.

THIS seems to be a conscientious and clear narrative of the battle of Stone's River; but, coming as it does after the histories of the Comte de Paris, Van Horne, Cist, and others, we naturally feel that, to justify its publication, its plan should include a critical comparison of accounts already written, and a summing up of evidence which may support the conclusions of the author. Mr. Stevenson's narrative, however, while recognizing the fact that grave inconsistencies are found in the official reports of officers engaged in the battle, and that the historical accounts which have been written give varied coloring, if not discordant statements, does not go further in offering a solution than to write a new narrative, for which his personal investigations and personal memory are the only authority. However welcome all readable narratives of great events may be when the writer was also a participant in them, no real assistance is given in solving doubtful problems or settling mooted questions unless the evidence is weighed in such a manner that the critical reader may have the means of forming an independent judgment. He must, at the very least, be furnished with such references to the conflicting reports and opinions as may enable him, without too great labor, to verify the author's conclusions and satisfactorily test their accuracy.

We have here touched upon the point in which Mr. Stevenson's account of the battle of Stone's River is palpably lacking, and which, in our judgment, must prevent it from taking rank as an important contribution to the discussion of critical events in the history of the late war. The grave questions of the responsibility for the early disaster upon the right of the national forces, and that concerning the conduct of at least two division commanders on the field, are left substantially as they were before, with only an additional opinion added to those which are already before the public. The book, however, as a monograph on a great and fiercely-contested engagement, in which the ebb and flow of success on either side give dramatic interest to the struggle, will be found an interesting and vivid story. To those who were engaged, and to the friends of those who fell there, it will have peculiar attractions.

Titles of the First Books from the Earliest Presses established in different Cities, Towns, and Monasteries in Europe, before the end of the Fifteenth Century, with Brief Notes upon their Printers. Illustrated with Reproductions of Early Types and First Engravings of the Printing Press. By Rush C. Hawkins. New York: J. W. Bouton; London: B. Quaritch. 1884.

THIS sumptuous work is a production of the press of Theo. L. De Vinne & Co., of this city. It is of the large-paper quarto form, and both in paper and printers' embellishment is as near perfection as the most fastidious bibliomaniac could desire. The title fitly defines the contents;

and "to the end that the work may be of some use to investigators, there have been reproduced, by the photolithographic process, several pages and parts of pages of books which it is believed are not to be found in any other bibliographic work." These reproductions fill twenty pages of the book, and, with two engravings of the printing press (as used in 1507 and 1520), make up the sum of its illustrations.

There are peculiarities pertaining to the work of the first printers—of letter, orthography, and abbreviation—through which bibliographers are enabled to fix the place, printer's name, and date of a book, when no exact indication is stamped upon the page. In many instances, however, the "first book" of a "first press" is a matter of uncertainty. It is recorded of Thierry Martens, the first printer of the Low Countries, that he printed more than two hundred known editions, of which as many as fifty exist in single examples only, and it is argued, with a show of probability, that some editions from his press have been entirely lost. Mr. Hawkins admits that some of his "first books" may have been preceded by others at present unknown; and for himself, while modestly foregoing any claim to originality, save in the convenient chronological arrangement of his list, he feels compelled "to leave those books heretofore designated as the earliest productions of the first presses in the positions to which they have been assigned by reliable bibliographers." In chronological order the first place to be mentioned is Mentz, in Germany, and the first book the Gutenberg Bible, to wit:

"BIBLIA SACRA LATINA, 2 volumes, folio; 2 columns of 42 lines each. Vol. I., Old Testament, 374 leaves. Vol. II., New Testament, 317 leaves. [Mentz: Jo. Gutenberg, 1450–55.] Without title-page, pagination, or signatures."

In connection with this "first book printed with movable metal types," Mr. Hawkins locates the copies known to exist in Europe and America—seven on vellum and twenty-one on paper. New York is the fortunate possessor of two copies of this precious masterpiece, one being contained in the Lenox Library, and the other in the collection of Mr. Hamilton Cole. At the sale of the library of Mr. Henry Perkins in London in 1873, a vellum copy of this Bible fetched $16,490.

Not until ten years after the completion of Gutenberg's Bible did the new art find practisers outside of Germany. In 1465 it was introduced into Italy, and before the close of the century printing-presses had been set up in seventy-one cities, towns, and monasteries in that country. In some places it was a leading industry. Venice alone, previous to 1501, had recorded more than two hundred printers and about three thousand editions of books. The typographic art was carried to France in 1470, to Holland and Belgium in 1473, to Spain in 1474, to England in 1477, and, before the end of the fifteenth century, had been established in eighteen countries of Europe, and, as Mr. Hawkins's list shows, in no less than two hundred and thirty-six places. When it is remembered that the first printers had to cut and cast their own types—to construct, so to speak, whatever was required to make up a printing-office—their achievements appear to this generation wonderful indeed. By not a few masters the business was conducted upon a grand scale. Anthony Koberger has been styled the "Prince of Printers." In Nuremberg he kept twenty-four presses at work, and employed no less than one hundred journeymen. He also had a spacious printing-house in Lyons, and had besides, says his historian, factors and agents in every considerable city in Christendom, and maintained sixteen open shops, with a vast number of warehouses, all of which were stored with the most correct editions published.

In fixing the birthplace of the art of printing at Mentz, Mr. Hawkins was required to pay some attention to the "Harlem legend," and he comes to the conclusion that "up to this time not a single printed sheet or page in any way connecting Coster with the invention of printing has been discovered." He believes the claims of Harlem "have been manufactured out of unsubstantial hearsay, and sustained by many years of boastful assertion." Taking into consideration all procurable evidence, he finds "but one logical conclusion, viz.: that John Gutenberg was the inventor of printing with movable metal types."

The History of the Episcopal Church in Connecticut, from the Settlement of the Colony to the Death of Bishop Seabury. By E. Edwards Beardsley, D.D., LL.D. (Fourth Edition.) Houghton, Mifflin & Co. 2 vols., 8vo.

PERHAPS no one was ever more thoroughly possessed of the true reviewer's spirit than the Rev. Sidney Smith; and it was under the guidance of that spirit that he was led to remark, on hearing an account of how a bishop had been in the most unprovoked and unjustifiable manner attacked and bitten by a dog in the street, "I should like to hear the dog's side of that story." For this little narrative was an ecclesiastical history; and the reverend critic knew very well that impartiality, which is so apt to be the offspring of indifference, is not the specially distinctive note of that class of historical works.

These excellent volumes are certainly not to be recommended to inquirers wishing to know "the dog's side" of the story it professes to give. How "the Church by law established" in England insisted on introducing itself among those who had expatriated themselves in order to get away from it; how by patient continuance in doing after their own way its adherents forced those of the colonial establishment to "first endure, then pity, then embrace" it—all this is told with intelligence and laborious research, in a correct and dignified style, and with an obvious purpose to be faithful to historical truth. But it is nevertheless the story of a sect, by a sectary—able, honest, and learned, but a minister of the church whose history he is telling. "The hatred and uncharitableness of the standing order" (i., 306) towards Episcopalian clergymen at the time of the movement for independence are dwelt upon very largely, and with at least adequate vehemence; but the excuse which seemed to their fellow-citizens to justify harsh conduct toward them, in their avowed and insulting sympathy with the public enemy, and their constant communication with him—all this must be found in other books than these. That impudent and lying priest, Samuel Peters of Hebron, is characterized by no unkinder adjective than "imprudent" and "indiscreet"; and the vile calumnies by which, in his 'History of Connecticut,' he sought to foul his own nest after flying from it to England, inventing, as he did deliberately, the fictitious "Blue Laws," by which, as ninety-nine men out of a hundred will certify, a woman was forbidden to kiss her child on Sunday—of these Doctor Beardsley has nothing more severe to say than that "his writings would have been received with more respect had he restrained his harshness, and never embellished them with ludicrous and apocryphal statements." But here Doctor Beardsley, we think, is wrong.

It is a fact very honorable to the author, and to the religious communion which must supply him with readers, that so solid and substantial a work should have reached a fourth edition in these fifteen years. The printer's work, of course, is admirable. The binder, however, in lettering the back, has been led, by his anxiety to abbreviate, into a misnomer. He calls it a 'History of the Church in Connecticut.' It is not that. The title-page is correct.

BOOKS OF THE WEEK.

Alglave, É., and Boulard, J. The Electric Light. Translated from the French. D. Appleton & Co.
Among the Chosen. American Novel Series. No. 5. Henry Holt & Co. $1.
Baldwin, Henry. The Orchids of New England. New York: John Wiley & Sons. 1884.
Bowen, Herbert Wolcott. Verses. Boston: Cupples, Upham & Co. 1884.

The Development Theory.

The Study of Evolution Simplified for General Reading. By Prof. J. Y. Bergen, jr., and Fanny Bergen. 16mo, cloth, Ill., $1.25.

By reason of their very fulness and wealth of illustration, as well as for the necessary frequent uses of technical terms, the classic works of Darwin and the other great founders of the modern view of the origin of species fail to command the attention of the non-scientific world. The lack of simple and inexpensive illustrated books, which place the outline of the evolution hypothesis clearly before the general reader, has aided in continuing popular ignorance concerning the theory. To assist in supplying this want, as well as to furnish to those who require it an elementary text-book on this subject, is the task which the authors of the present work have set for themselves. Professor Bergen is the Principal of the High School at Peabody, in which position he is ably assisted by his wife, his colaborer in the preparation of this volume. Both have had great experience, have made diligent study of the subject, and produced a work admirably suited to the purpose.

The Nation.

NEW YORK, THURSDAY, AUGUST 14, 1884.

The Week.

THE Civil-Service Reform Association at its meeting on Wednesday week passed the following resolution:

Resolved, That Messrs. Everett P. Wheeler and Frederick W. Whitridge, the counsel for the New York Association of this League, together with any other counsel whom they may associate with themselves, be requested to examine into the truth of current rumors as to alleged violations of law by Federal officers, in acting as members of committees by whose authority contributions for political purposes are solicited from other Federal officers and Federal employees; with power, if they shall find such rumors well founded, to take such action on behalf of the League as they may deem proper for the vindication of the law.

Messrs. Wheeler and Whitridge will no doubt look closely into the operations of the Clapp Committee, and its principal, the National Committee, and we shall know before long whether there is or is not any legal redress for what they are attempting to do. If there is not, then the provisions of the Civil-Service Law against assessments cannot be enforced; and the sooner the country knows it the better. Meanwhile, we are surprised to see that the Civil-Service Commission itself does not call the attention of the clerks to the criminal sections of the law. A sort of general notice has been given them that they cannot be removed for non-payment of assessments; but they do not seem to have been reminded by anybody that if there are United States officials on the National Committee, they themselves run a very great risk of committing a penitentiary offence if they send in "contributions." Section 14 of the Act provides that "no officer, clerk, or other person in the service of the United States shall, *directly or indirectly*, give or hand over to any other officer, clerk, or person in the service of the United States, or to any Senator or member of the House of Representatives, or Territorial Delegate, any money or other valuable thing on account of or to be applied to the promotion of any political object whatever." The punishment for this offence is just the same as for collecting assessments—a fine not exceeding $5,000, or imprisonment for not more than three years, or both.

This is the law of the subject, which has been already before the Supreme Court of the United States in the Curtis case; there is no hope of its being declared unconstitutional. A man who violates it and is tried will have to be punished. Under it an assessment or "contribution" paid by a clerk is, on the one hand, blackmail, on the other, a bribe designed to secure him in his office; and the theory of the law corresponds with what everybody knows to be the facts of the matter. This is what the Supreme Court of the United States has said about such operations as the National Committee are now "indirectly" conducting, and as to the intention of the law:

"A feeling of independence under the law conduces to faithful public service, and nothing tends more to take away this feeling than a dread of dismissal. If contributions from those in public employment may be solicited by others in official authority, it is easy to see that what begins as a request may end as a demand [*i. e.*, blackmail], and that a failure to meet the demand may be treated by those having the power of removal as a breach of some supposed duty growing out of the political relations of the parties. Contributions secured under such circumstances are quite as likely to be made to avoid the consequences of the personal displeasure of a superior as to promote the political views of the contributor; to avoid a discharge from service more than to exercise a political privilege."

Such was the language of the highest tribunal in the country in the Curtis case, not two years ago.

Mr. Thoman, of the Civil-Service Commissioners, declares that the Clapp Committee and the National Committee are violating the Civil-Service Law by sending their circulars into the departments. The section to which he refers is as follows: "Section 12. That *no person* shall, in any room or building occupied in the discharge of official duties by any officer or employee of the United States mentioned in this act, or in any navy-yard, fort, or arsenal, solicit in any manner whatever, or receive any contributions of money or any other thing of value for any political purpose whatever." Now, he says, it may be argued that this refers to solicitations in person; but he does not think so. He can probably furnish valuable evidence to the Civil-Service Reform Association. If what he says is true and can be proved, the assessment raid in Washington can be broken up and some of the "assessors" sent to jail. A prosecution under the statute would do very little harm, even if it did not succeed in the end.

The best proof that can be given of the effectiveness of Mr. Schurz's arraignment of Blaine is the savage way in which the organs have opened on him. Their theme now is his "impudence," though impudence ought to be to them the most delicate subject in the world. There is one thing, and one thing only, which will not only silence Schurz, but all the rest of Blaine's assailants, and cover them with confusion, and that is a satisfactory explanation of the Mulligan letters, and an account of where the money came from with which Blaine satisfied the people in Maine to whom he had sold Little Rock bonds. He said himself it did not remain in his hands forty-eight hours, but he has never told where it came from. Why not tell, and also tell where he got the Northern Pacific "interest," and what he did with it? Surely the Presidency is worth the small trouble this would give him, and then Schurz, and the dudes and pharisees, and the British, and Cleveland, and the Cobden Club, would all vanish like mist before the rising sun. Why put up with so much "free trade" when nothing is needed to get rid of it but the slight inconvenience of laying "a Christian gentleman's" private affairs before a proverbially indulgent and kind hearted public?

The Philadelphia *Record*, a paper having a very large circulation, publishes a new railroad story about Mr. Blaine, which, it says, comes from an officer of the Philadelphia, Wilmington and Baltimore Railroad Company. It is that when Mr. Blaine was Speaker he had a pass on its lines; that the pass was not transferable. Mr. Blaine gave it to his secretary, and it was taken up. Mr. Blaine insisted that it should be returned to him. To accomplish this, letters were written by several persons acting in the interest of Mr. Blaine, intimating in terms which were unmistakable that if the road wanted Mr. Blaine's friendship the pass must be given back, and it was recovered. The company was at the time vitally interested in legislation before Congress. If this story really comes from an officer of the company, he ought not to keep back his name. Mr. Blaine's friends may fairly complain of the story as not being sufficiently specific without some indication of who the friends were who wrote the letters. The *Record* is a reputable paper, and the story if substantiated a damaging one. Even Mr. Blaine's friends will hardly admit that getting a pass back by threats of this sort would be legitimate "private" behavior in a Speaker of the House.

It is undoubtedly a relief to the better class of Democrats to know that Butler will run as an independent candidate, and that in all probability Kelly will do something to help him. There are thousands of good, quiet people all over the country who have been deterred from leaving the Republican party by the fact that to their imaginations Democracy means simply Tammany Hall and all that is most odious and corrupt in the history of this city; while the alliance of the party with Butler in Massachusetts did a great deal to convince people that no good thing could come out of it. Now, at least, it is plain to be seen that Butler and Kelly hate Cleveland and the Democrats who surround him, because they know he represents good government as opposed to the kind of government they want; and that they are really Blaine men in disguise, and not Democrats at all. "We love him for the enemies he has made."

That Butler's running will take away votes from Cleveland cannot be doubted; but they will be votes which could not be counted on in any case, and represent simply corruption and jobbery, or, at the very best, unreason and delusion. The dupes of a demagogue like him do not constitute a force in politics which any decent party can possibly rely on, because they must be got by influences which a decent party cannot stoop to use. With Butler in the field we have for the first time since the war a simple issue between those who desire good government

and honest administration, and those who either live by jobbery and corruption, or can be brought to think that government can usefully and happily be carried on by such means. In such a fight we had, for our part, much rather the issue were not in any way obscured by attempts to get any of the demagogues and corruptionists to masquerade as reformers, "just for this time," and then to have them turn up after the election bringing odium upon the cause by clamoring for spoils. We had far rather be beaten in a fair struggle with a united Blaine, Butler, and Kelly opposition, than not have the struggle take place. Not that we anticipate defeat, for probably the pretensions of Butler will be so unmasked before the campaign is over that he will cut in the national field the same ridiculous, forlorn figure of a political buffoon that he now does in his own State. Think of "Ben" Butler as an Anti-Monopolist, and as objecting to Cleveland for not being a good enough man for him to support!

Another good sign of the times is the addition of General Daniel E. Sickles to the picturesque collection of Governor Cleveland's political enemies. The General has "little confidence of Democratic success, and certainly no enthusiasm." He is unable to see how any Democrat can be enthusiastic over Cleveland, and is convinced that the party managers who refused to conciliate Butler and Kelly made a grave mistake, because those two men have an influence which it is difficult to overestimate. It does not seem to be at all difficult to overestimate it, for the Blaine organs and Butler and Kelly themselves are doing it every day. There are many signs that Kelly is beginning to see that he has overestimated it, for his associates are turning away from him so fast that his own ultimate conversion to Cleveland is pretty generally predicted. Just what Butler's influence will amount to and in which direction it will prove most damaging, is a great problem. That it is likely to hurt Blaine fully as much as Cleveland, becomes more evident daily. One sign of this was shown the other day in the action of an anti-Cleveland Workingmen's Club in Hudson County, New Jersey, which shifted its allegiance unanimously from Blaine to Butler. Steve Elkins will need to exercise great vigilance, or all the other Blaine workingmen will get away from him in the same manner.

A very interesting review of the present condition of the Presidential canvass is published in a Washington letter to the *Sun*. The writer is evidently a person who shares the hostility of the *Sun* to both Blaine and Cleveland, and he is also one of those correspondents who weaken their own work by assuming an omniscience which is incompatible with the limitations of human intelligence. For example, he says at the outset that Blaine is giving his managers much anxiety by his despondency; that he makes few suggestions about the desired aggressive campaign, and that he has little hope of his own election. This information is probably largely the result of the writer's imagination; for even if it were true, it is difficult to see how it could have come into his possession. Neither Blaine nor his confidential advisers are men who would go about telling correspondents secrets of that kind. The other parts of the letter are, however, entirely reasonable, and their information accords with the conclusions of the most careful observers. He says that accurate reports from California, Michigan, Nevada, Kansas, Illinois, Wisconsin, Indiana, and Ohio are all unfavorable to the Republicans, and not especially favorable to the Democrats. The disturbing causes in all these States are the temperance and labor elements. In California the Democrats have a better prospect for carrying the State than the Republicans have, and their only danger is the consolidation of the labor vote on Butler. Nevada is thought to be assured to Cleveland. Kansas is in great confusion on account of the prohibition question and the candidacy of Mr. St. John, and the result may be a plurality for Cleveland. A like result is possible in Illinois. In Wisconsin and Michigan the defection of the German-Republican vote from Blaine is very marked, and both States are in danger of being lost by the Republicans. Indiana is a good deal more likely to go Democratic than Republican. Ohio is most uncertain because of its Prohibition and German votes, and can only be secured for the Republicans by very hard work, if it can be secured at all.

It has been evident from the outset that the Western States were by no means as certain for Blaine as his friends have claimed. There have been no signs that the "wild enthusiasm" which was said to be consuming the people out there about the Plumed Knight actually existed. Everybody who has watched the course of Western voters in recent elections knows that the decisive elements have been the prohibition and the German votes. Some of Mr. Blaine's advocates seem to have had an idea that his peculiar magnetism would draw both these elements, but nobody else was able to take that view. He has never had any prospect of securing much of the German vote in any part of the country, and his cordial relations with the Maine Prohibitionists have had the natural effect of uniting the Germans of the Western States into a solid mass against him. The candidacy of Mr. St. John will take away from him the support of thousands of Western temperance Republicans, and the inevitable result must be to weaken him seriously in States which have hitherto been considered as surely Republican. These facts are ominous enough to account for the depression which is visible in the Blaine organs, and we should think them serious enough to arouse those organs to the necessity of withdrawing their batteries from the exclusive bombardment of George William Curtis and the other "kickers," and devoting them to the real business of the campaign.

The Rev. J. A. Ecob, D.D., of Albany, gives the *Christian Union* at much length his reasons for voting for Blaine. They are both interesting and curious. The first is because "he is peculiarly gratified by the method of his nomination." The second is because "he believes in the man," and thinks he is "a Christian gentleman," and also "a man of genius and learning"; "a truly great man," and "a man of culture and power," who "has not been quietly for the right, but openly, aggressively, mightily for the right." The third is because he is "peculiarly American," a friend of civil-service reform, and a lover of South America. The last is the usual one—for "the sake of the party back of him." The letter is long, and Dr. Ecob is a professional teacher of morals, and yet he makes not the slightest allusion to the memorable falsehood in Congress on the 25th of April, 1869; to the shameful scene with Mulligan, in which the "Christian gentleman" broke his word of honor just like a bunco steerer; to the use of his decision as Speaker to aid him in getting an interest in a railroad which he had helped by legislation; to "the strange revolution of circumstances" by which he got hold of an interest in the Northern Pacific Railroad, which he had also helped by legislation; to the attempt to bully Peru in aid of a guano scheme; to his killing civil-service reform in the House by the tricky and nefarious composition of his committee. Now, we could have forgiven a Doctor of Divinity who, being a friend of Blaine, and determined to vote for him, refused to acquaint himself with the charges against him, and kept silent. But what is to be said of a Doctor of Divinity who, undertaking in print to persuade people to vote for Blaine, utterly ignores these charges?

The accounts of Mr. Ball, "the highly respectable Baptist minister" who wrote the filthy and disingenuous letters which appeared in the Boston *Journal* about Governor Cleveland, continue to grow worse. He appears, indeed, to be a sort of politico-clerical adventurer. He is not a Baptist minister at all, a leading Baptist minister in this city informs us, but a "Free-Will Baptist." He has wandered about a good deal, being various things by turns and nothing long. He once had a place in the Custom-house, and has tried his hand at journalism in this city; was once in Owensville, Ind., from which place, the Indianapolis *Sentinel* says, he had to depart hastily, owing to "an insult to a Christian lady." In Buffalo he seems to have been running a little independent machine of his own, the services of which he has offered for money to both parties indiscriminately, and not much money either, for he takes as little as $25 at a time. Moreover, he has, we are informed, a remarkable detective love of ferreting out low and disgusting scandals and mysteries. It is thoroughly discreditable to the Boston *Journal* and other papers to have allowed this man to use their columns to fill the land with a string of indecent perversions, and to have followed the lead of the wretched little sheet in Buffalo which first spread them broadcast. That paper is now actually living on "the Cleveland scandal," or "The Terrible Tale," as it calls it. It devotes both its news and editorial columns almost exclusively to it, and evidently cannot afford to let it drop. In truth we have had no more disgraceful episode in party history than the descent of a portion

of the Republican press into this mire. That it should have considered it necessary, shows the strain which the Blaine record puts on his apologists.

The situation of business is more encouraging than it has been at any time during the present year, but this result has been achieved rather by a lessening of the means of production than by increased demand. So many furnaces and factories have stopped work or reduced their time, that prices have stiffened and the markets have ceased to be clogged with unsalable goods. This condition does not indicate a speedy return of good times. It merely shows that the worst phases of the business depression have been reached and probably passed. This is especially the feature of the dry-goods trade. The iron trade, however, continues in an unsatisfactory state. Steel rails have fallen to $28 per ton, some sales having been made as low as $27 25. As pig iron is quoted at $20, the margin of profit for producing rails must be extremely small. The duty on foreign rails has ceased to be of any importance to the American manufacturer, as none could be imported at present or at considerably higher prices, even if admitted free. The aggregate consumption of iron is, however, not much less than it was last year, and is somewhat greater than it was six months ago. The condition of the cotton and grain crops continues satisfactory, although there is something to be desired in the way of warm weather for corn.

Wall Street seems to have "discounted" the effects of an active fall trade in the recent bull movement in stocks, which may or may not have reached its culmination. Day after day the most experienced observers have been predicting a reaction and a decline. Day after day they have been disappointed. In the stock market, more than anywhere else, it is the unexpected which happens. Beyond the fact that there is some limit to a rise as there is to a fall, nothing is really ascertainable. The prospect is good for a heavy railway traffic during the autumn and early winter, and there is a fair probability that rates may be maintained among the lately warring roads west of Chicago. The prospect is not so good for the trunk lines, owing to the bad fix of the West Shore Road, which, being dispensed from the necessity of paying either dividends or interest, is able to be very "ugly"—perhaps it would be nearer the truth to say that it is unable to be otherwise. Opinions in Wall Street are divided on the question of the possible effect of silver payments on the stock market, one set holding that silver means inflation and higher prices, while others think that it would bring upon the market a great quantity of securities held abroad.

The standing rule of the New York Clearing-house which prohibited the payment of balances in silver, was rescinded shortly after Congress passed the act providing that no national bank should be a member of a clearing-house where "silver certificates" were not received. Nevertheless the practice of paying only in gold or greenbacks remained unchanged. It is well understood now that if the Treasury is driven to silver payments the banks will yield to the same necessity, and obey the law in letter and spirit, for, although no law can require them to take silver certificates which are not legal tender, it will be more convenient to take them than to cart silver to and fro in settling daily balances. The effect upon the public mind and upon public policy of making payments in silver can only be ascertained after the experiment is made. Our correspondent, Mr. S. M. Macvane, of Cambridge, Mass., whose letter we publish elsewhere, is of opinion that the continued accumulation of silver in the Treasury vaults will soon convince even the blindest of the folly of paying $2,000,000 of gold per month in order to hoard silver in dark receptacles, where it is as useless as it was in the mountains of Nevada, and that therefore every resistance should be made to the policy of putting it in circulation. It should be borne in mind, however, that the accumulation of silver dollars has not thus far had any effect upon Congress, and that, although new vaults for storing it have been repeatedly called for, the necessary appropriations have been cheerfully made. The forced coinage of silver is a tax of course; but a tax which nobody feels is not apt to produce popular discontent, and it remains an open question whether the further accumulation of silver in the Treasury vaults would have greater effect in the way of stirring up opposition to further coinage than a little practical experience of the miseries of two standards of value.

The earthquake, or, as the *Times* respectfully calls it, the Seismic Disturbance of Sunday, did no serious damage beyond the interruption of a good many Sunday dinners. The area of its action on terra firma was really far less than its subsequent area in the press the next morning, taking into account, of course, the difference between the superficial extent of even the largest morning papers and that of the globe. Out of thirty-one news columns of the *Tribune*, the earthquake took up nearly nine, or very nearly a third of the whole news department of the paper, and this in the middle of an exciting campaign, in which the interest of the country and mankind are at stake, and when the paper is said to be overrun with advertisements. The editorial attitude of the morning press toward the earthquake was marked by a good deal of dignity and reserve, but, considering the infrequency of earthquakes in this latitude, and the consequent impossibility of having any regular earthquake staff, the seismic writing of the *Times* and *World* will, we fancy, compare favorably with any of its kind elsewhere. The *World* thinks that "if all our people who heard the seemingly long-continued rumble which made itself audible shortly after 2 o'clock yesterday afternoon, and who felt the vibrating motion which was distinctly perceptible in the houses, had understood that they were actually the effect of that dreaded and mysterious convulsion, an earthquake, there would have been a panic throughout the city," but accounts for the fact that there was no panic by declaring that "the majority of them supposed the noise to be distant thunder." The *Times's* position with regard to the earthquake is that "history and the researches of scientific men indicate" that "it is not probable that the Eastern States will ever experience terrestrial disturbances like those which have caused great losses of life and property in many other parts of the world"; "nevertheless, whenever the earth trembles, a great majority of the people are stricken with fear and lose all presence of mind"; the shocks being so rarely felt that the "people are not prepared for them." They "do not stop to reason," and only perceive that "the solid earth" is "trembling and in motion." The two views obviously differ, but each is weighty; that of the *Times* appears to us to be the safer of the two, in the present condition of knowledge on the subject.

The steady adherence thus far of the Revision Committee of the French Congress to the ministerial programme appears to be irritating the Extreme Left, under Clémenceau, to the last degree, and the proceedings accordingly continue to be very tumultuous. Thus far nothing has been settled beyond the exclusion of monarchical pretenders from the Presidency, which is intended to block an old plan of the Orleanists, by which the Duc d'Aumale or, since the Comte de Chambord's death, the Comte de Paris, was to have been put into the Presidential chair at the first vacancy, and then, by easy stages, or on the first favorable opportunity, be turned into a King. The Bonapartists of course had the same plan for the Bonapartist candidate, whoever he is; who he is, is just now a little uncertain. Prince Napoleon claims precedence over his son Victor, but Victor has set up for himself, and the Napoleonic camp is divided between them. One of the greatest difficulties Victor has to contend with is the difficulty of telling where his income comes from. He has now a good yearly revenue, but keeps so silent about its source that his enemies maintain that it is in some way discreditable.

The latest information received respecting the course of the cholera in Europe indicates that the disease, if not diminishing, is certainly not progressing in a manner to give new grounds for alarm. The appearance of the epidemic in Italy and Switzerland was to be expected, but the number of cases is insignificant when compared with former cholera periods. Moreover, the ratio of deaths to a given number of cases is much smaller than in former periods, and this would indicate either that the disease is of a less virulent type than the scourge of 1832 and 1854, or that the treatment of it is better understood. There can be no doubt that the medical faculty have a better grasp of the subject than they have had in earlier visitations, and that improved drainage and sanitary regulations have had great influence in staying the spread of the disease. Upon the whole, there seems to be little reason to apprehend the arrival of cholera in this country this year, while the probabilities are that it will disappear from the places where it now exists when cold weather sets in.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 6, to TUESDAY, August 12, 1884, inclusive.]

DOMESTIC.

AN earthquake shock of unusual violence for this part of the country was felt on Sunday afternoon in this city, in Brooklyn, and in New Jersey, as well as in a great many other places. It occurred at about seven minutes past two o'clock. In this city, by the general report of trustworthy witnesses, it lasted about fifteen seconds. It consisted of two distinct waves of vibration, felt strongly by persons who were on the ground floors of buildings at the time. The shock was felt from Richmond, Va., to Portland, Me., and from the Atlantic coast to Ohio. Its greatest strength seems to have been along the New Jersey and Long Island coast. No serious damage is reported. Two distinct shocks are reported from a number of places with a few seconds of intermission. A heavy rumbling sound accompanied the shock. Several slight shocks occurred on Long Island and at other points on Monday.

The Arctic-relief steamers *Thetis*, *Bear*, and *Alert*, with the bodies of the dead of the Greely expedition, arrived in the New York Harbor on Thursday night. At half-past ten o'clock on Friday morning the fleet weighed anchor, and moved slowly up the bay. Four of the bodies were on the *Thetis*, and seven on the *Bear*. As the *Thetis* passed Castle William at 10:40 o'clock, a detachment from Company B of the Fourth Artillery fired the national salute of twenty-one guns. The vessels came to anchor near Bedloe's Island. The Government tug *Catalpa* then steamed out from Governor's Island to receive the bodies. Secretary Lincoln, Lieutenant-General Sheridan, and General Hazen, arrived at Governor's Island about 11 o'clock, where they were met by General Hancock and an escort. The *Catalpa* reached the Island with the bodies of the dead about half past 12 o'clock. At the end of the dock the relatives of the dead received them. The coffins were each covered with an American jack. General Hancock and his distinguished visitors received the officers of the relief expedition and the bodies of the dead at the shore end of the dock. All the while minute guns were fired from Castle William. A procession was then formed and the coffins were borne to the hospital, where they lay in state. All the bodies but two were removed on Friday and Saturday by relatives, and taken to various parts of the country for burial. On Saturday those two, Private Charles B. Henry and Private Roderick R. Schneider, were buried with military honors at the Cypress Hills National Cemetery.

It is understood that Secretary Lincoln has decided upon the promotion of the survivors of the Greely party. Steward Biederbeck and Private Carroll will be made Sergeants, and Sergeants Brainerd, Frederick, and Long will be made Second Lieutenants. Lieutenant Greely, it is understood, has refused to accept the promotion to a Captaincy, except through the ordinary course, in order that the promotion of other officers may not be deferred. He will be ordered to Washington about the 1st of November, and will be occupied for a year or so with his report.

A story was published on Tuesday that the Greely party had lived for some time before their rescue upon the flesh of their dead comrades, and that Private Charles B. Henry, a young German, had been shot for stealing food and then was eaten. The story rests upon rumors, and is given the color of truth by the refusal of officers of the relief expedition to deny or confirm it.

Secretary Folger has directed the Sub-Treasurer at New York to settle his balance with the Clearing-house, not in silver certificates, but in legal tenders, so far as may be. The "so far as may be" is understood to mean so long as the surplus legal tenders in the Treasury available for that purpose last, or until the gold reserve in the Treasury is sufficiently reinforced, either by the hoarding which will follow when the legal tenders are used for the Clearing-house balances, or from the increase of the Treasury's store of gold consequent upon the flow of gold in this direction.

The Secretary of the Treasury has instructed the Collector of Customs at New York to allow no rags to be imported unless positive proof is produced that they come from non-infected ports, and are in themselves entirely free from infection. The fact that a vessel with a cargo of rags has a clean bill of health and has been given a permit to pass by a local quarantine officer, is not to be considered conclusive proof of the non-infected condition of her cargo.

Leading citizens and the Board of Trade of Helena, Mont., on Thursday telegraphed a petition to the Secretary of the Interior urging immediate action for the relief of 3,000 Piegan Indians at the Blackfeet agency, who, despite contrary reports, are actually starving. The death rate is great.

Captain Payne and 250 of his followers, intruders on the Indian Territory, were forcibly ejected from their settlement at Rock Falls, on Thursday, by United States troops. Payne and five other old offenders have been sent to Fort Smith, Ark. All other illegal intruders are to be similarly dealt with.

General Butler makes the following announcement: "I do intend to stand by the nominations of the Greenback and laboring men and the Anti-Monopolists, and I hope everybody will vote for me who thinks that it is the best thing to do."

Mr. Blaine was present at a Grand Army Encampment, Old Orchard, Me., on Thursday, and gave a public reception.

Governor Cleveland started on a two weeks' vacation trip to the Adirondacks, on Thursday, and it is not believed that his letter of acceptance will be published until his return.

William Purcell, the editor of the Rochester *Union*, who refused to support Cleveland, asserting that he was a "moral leper," has published a letter in which he says: "I now desire to say that information has come to me, from a source in which I place implicit confidence, materially changing the state of facts upon which the remark was made. Hence, in justice to Governor Cleveland, to myself, and to all others whom it may concern, I withdraw the characterization, and request that hereafter it be not attributed to me."

The fourth annual meeting of the National Civil-Service League was held on Wednesday in the Channing Memorial Church, Newport, R. I. Mr. George William Curtis made an address, in the course of which he said: "The immediate duty of the year before us is to urge to completion the repeal of the four years' laws, to secure the passage of other State reform bills, and to carry the reformed system still further into the municipal service. Unprecedented progress has been made in all these directions, but until this reform of administrative methods has become as much the irrevocable national and State policy as the personal freedom and equality before the law of every citizen, the work of this League and of the associations is not finished."

Before the opening of business in Wall Street on Monday the following notice was posted on the doors of the Wall Street Bank: "Owing to irregularities on the part of the cashier, this bank will remain closed until matters can be investigated." It was generally reported that the deficiency amounted to about $500,000, which the cashier, John P. Dickinson, had lost partly by making loans on poor securities. He could not be found on Monday. The deposits in the bank amount to about $1,000,000, and the capital stock $500,000, which will probably be wiped out. The bank's officers say that depositors will be paid in full.

The schedules in the assignment of Commodore Cornelius K. Garrison to John T. Terry were filed on Friday in the Court of Common Pleas, this city. They state: Liabilities, $1,471,228 06; nominal assets, $17,697,928 38; and actual assets, $3,974,818 90.

A fire in John Roach's ship-yard at Chester, Pa., on Saturday night, destroyed shops the loss of which, with their contents, will be $250,000. The property is fully insured. The work on Government and merchant vessels will not be interrupted.

Capt. Henry N. Throop, said to be the oldest steamboat man in this country, died at his home in Pultneyville, N. Y., on Thursday, at the age of eighty-seven. He was the first white child born in Ontario County. Fifty years ago he built the lake steamer *Express* at Pultneyville, and later the widely-known schooner *Rival*, which figured conspicuously in the Canadian rebellion of 1837.

FOREIGN.

Prime Minister Ferry, of France, addressed a formal note to Lord Lyons, British Ambassador to France, on Wednesday, in which he declared that England continued to be bound by the protocol of disinterestedness signed at the Constantinople conference, and that she must again consult the Powers in the event of any change in the financial arrangements of Egypt.

At Versailles on Wednesday the Committees of the Congress of the two houses of Parliament, to which all the proposed amendments to the Constitution were referred, accepted M. Andrieux's amendment declaring that all monarchic pretenders were ineligible to the Presidency. The Committee acted in this matter in accord with Prime Minister Ferry. The Congress on Thursday discussed the Committee's report on the Revision Bill. The monarchical Deputies urged that a parliamentary system was only possible under a monarchy. The Radical Deputies demanded the abolition of the Senate. M. Andrieux declared that the Congress was omnipotent, and that the Government had no right to submit a limited Revision Bill. On Friday the Committee's report on the Revision Bill was still further discussed, and the uproar was so great that M. Dauphin was obliged to leave the tribune. The discussion was declared closed and a vote was called for. A member attempted to make a speech, but was restrained by the President. The uproar was then renewed. The President was compelled to suspend the sitting. The Congress afterward resumed its session, and commenced the discussion of the articles of the Revision Bill. M. Barodet's amendment for the convoking of a constituent assembly was rejected by a vote of 493 to 286. Thereupon M. Barodet and six of his partisans quitted the session, after making a formal protest.

On Saturday two amendments proclaiming the sovereignty of the Congress were defeated. The first article of the scheme of revision was adopted on Monday by a vote of 523 to 139. Paragraphs decreeing the republican form of government to be immutable, and declaring monarchical pretenders to be ineligible to the Presidency, were also adopted by large majorities.

The London *Times* on Thursday published a Foo-Choo despatch which said: "A high authority here asserts that peace is certain. The American Minister is to arbitrate. A settlement will probably be reached which will be acceptable to both parties, but it is believed that the settlement will be temporary only on the French side. The Chinese know that the French are anxious to act elsewhere." On Saturday, however, it was announced that France had refused mediation.

It was also announced from Shanghai and Paris on Saturday that the French squadron under Admiral Lespès, consisting of five vessels, had, on August 5, bombarded and cap-

tured the town of Kelung, on the Island of Formosa. This was done because the negotiations between M. Patenotre, the French Minister in China, and Li Hung Chang only resulted in the offer on the part of China of an illusory indemnity. The time given to China to accept the French ultimatum expired on August 4. France was obliged, therefore, to support her demands by seizing the guarantee. M. Patenotre informed Li Hung Chang that the duration of the French occupation depended entirely upon the Tsung Li-Yamen, which can shorten it by paying an indemnity of 80,000,000 francs in ten yearly instalments.

The reports about the capture of Kelung are conflicting. One account says the town was taken without a blow. Directly the cannon from Admiral Lespès's flagship signalled, the men landed from the various ships, and the town was taken possession of in the name of France. A majority of the populace fled. Four thousand Chinese troops retired into the interior. The British Vice-Consul went on board an English gunboat, having previously sent a protest to Admiral Lespès against the French occupation, and pointed out that Kelung was protected under treaty with England. Admiral Lespès then issued a proclamation to the inhabitants, declaring that their lives and property would be safe under the French flag. Despatches on Monday asserted that the French bombarded Kelung for an hour, and dismantled the forts, and that they then retired without entering the town.

Admiral Lespès's report, published in Paris on Tuesday, was that on August 5, with three vessels, he attacked and destroyed the forts of Kelung. On August 6 parties landed from the ships and completed the destruction of the war materials in store there. The French are now masters of the port, the roadstead, and the mines. Two men were killed and four wounded during the operations.

M. Patenotre, French Minister to China, in a note to the Chinese Government at Pekin referring to the capture of Kelung, says it was not an act of war, and that the port will be returned to China when an indemnity has been agreed upon. Should China resume hostilities along the frontier of Tonquin, the Minister states, war will be declared, and the French squadron will bombard other ports whether they are open to international commerce or not. The Tsung-Li-Yamen has protested to the Powers against the operations of the French fleet at Kelung.

A despatch from Madagascar, dated July 25, published on Wednesday, says: "The French are displaying the greatest activity in drawing mules from Réunion by requisition. General Willoughbey is at Tarafatte with 10,000 Hovas, who are mainly relying on their fortifications and torpedo pits. Measures have been taken to retire, if necessary, to Ambozi, fifty miles inland. One-half of the French troops that have reached Madagascar from Tonquin have been sent to Majunga and will form a second army. It will march from Majunga to the capital. The native Premier is disposed to make peace, but he fears that he will lose his head."

The report has been confirmed that Colonel Flatters and Captain Massons, the leaders of the French expedition to the Sahara Desert, escaped massacre. They are now prisoners in the hands of the Tonaregs tribe. This expedition, numbering 106 persons, set out on March 5, 1880. In April, 1881, it was reported that they had been massacred.

The French Government Commission which has been making experiments similar to those of M. Pasteur in seeking a cure for hydrophobia has reported that its investigations decisively confirm the correctness of the distinguished scientist's theory.

The official record shows that since the outbreak of the cholera in the South of France 2,200 of the inhabitants have died of the disease. Although the disease is decreasing in the cities, the area affected is widening and the death rate in villages is increasing.

Dr. Koch, the great authority on cholera, stated in a lecture at Berlin on Friday that he was convinced the delta of the Ganges was the real home of the disease. The religious pilgrimages in India greatly promoted the spread of the cholera. An improved water supply, Dr. Koch thought, was the best means of checking the disease.

Owing to the extreme heat, the English cholera has appeared in Lancashire. Two hundred persons were afflicted on Saturday.

Earl Granville, British Secretary of State for Foreign Affairs, has instructed Sir John Savile Lumley, British Minister to Italy, to thank Italy for the support which she gave to the British proposals in the recent Egyptian Conference. Italy has expressed her pleasure at England's display of friendly sympathy.

The Earl of Northbrook, First Lord of the Admiralty, has been appointed to go as a High Commissioner to Egypt, with special powers. He is to prepare himself by personal examination to advise the Government what steps should be taken in Egypt.

In the House of Commons on Monday evening Sir Stafford Northcote moved an address to the Crown, praying that the House might be informed of the details of Lord Northbrook's mission to Egypt. He expressed his gratification at the collapse of the Conference. Mr. Gladstone said that the Earl of Northbrook was sent to Egypt to make inquiry and advise the home Government concerning the new position the Sudan disasters and Egypt's financial troubles had created. Mr. Gladstone reminded the House that even had the Egyptian Conference succeeded in adopting the French agreement, it was entirely and absolutely dependent upon the will of Parliament. The powers to be given the Debt Commissioners under the agreement, he said, were entirely of a negative and restraining character, and had in view the prevention of an excessive outlay.

The autumn expedition to the Sudan will proceed up the Nile by way of Dongola. Suakim has been abandoned as a base of operations. The project of constructing a railway from Suakim to Berber has likewise been abandoned, and the plant has been taken to India.

The British Government has ordered one thousand row-boats for use on the Nile expedition for passing the cataracts. Six thousand men and a thousand tons of coal will be sent to Wady Halfa, which will be made the base of operations.

Colonel Kitchener has gone to Debbeh and Suakim. He telegraphed back to Dongola demanding four mortars with which to dislodge the enemy, who are at a post near Debbeh, and are becoming troublesome.

Mason Bey telegraphed to Cairo on Monday from Massowah that Gallabat had fallen into the hands of the rebels.

The Berlin *North German Gazette*, Bismarck's organ, published on Thursday a notable article against England. It says: "Recent events have sharpened public opinion in Germany to the drift of the English policy, and are dissolving the belief in the friendly sentiments of the English for their German cousins. The attempts to excite hate between France and Germany are now happily seen through both in Paris and Berlin. Henceforth, if England's interests are opposed to the French, she must not look to Germany, but must act alone."

Negotiations between England and Mexico for a new treaty of commerce will soon be resumed.

Mr. John Bright has written a letter in which he says: "America, France, Germany, and Russia, which are protected countries, are suffering more in the present condition of trade than England. The English working classes were never so prosperous under the protective system as they are now. Protection will never be tried again in this country. Mr. Blaine, in advocating protection, talks after the same fashion as the English Tories forty years ago."

William Morris, the author of the 'Earthly Paradise,' has issued a prose pæan on the coming triumph of socialism in England. He says intelligent middle-class men are finding themselves socialists unknowingly. The only thing necessary to effect the ordered civilized revolution, the author says, is the organized determination of workmen to end the wage of slavery by nationalizing the means of production and exchange.

The half-yearly meeting of the Anglo-American Cable Company was held in London on Wednesday. The report presented showed a falling off in the receipts to the amount of £13,377 as compared with the first half of the year 1883. The report proposed the setting apart of £75,000 for a renewal fund, and the declaration of a second quarterly dividend of 17s. 6d. percentage on ordinary stock, and of 35s. on preferred stock. It was adopted.

General Sir William John Codrington, G. C. B., died on Friday, in England, at the age of eighty. He entered the British army when only seventeen. He went with the Coldstream Guards to Bulgaria in 1854, and distinguished himself at the Alma and at Inkerman. He was made Major General by brevet at Varna. In November, 1855, he was made Commander-in-Chief of the army. He was present with the army from its arrival in the Crimea till the evacuation in 1856. He was promoted to the rank of General in 1863, and in 1877 was placed upon the retired list.

Sir Erasmus Wilson, LL. D., F.R.S., the well-known British medical writer, is dead. He was born in 1809. His specialty was diseases of the skin.

Jessie Vokes, one of the well-known family of burlesque actors, died in London on Thursday.

Sir John Lubbock will not be able to attend the meeting of the Royal Society in Montreal, owing to a severe attack of the gout.

The Cunard line steamer *Oregon* arrived at Queenstown on Wednesday, having made the best eastward record, her time being 6 days, 12 hours, and 54 minutes.

The Netherlands and American Navigation Company's steamer *Amsterdam*, 3,000 tons, Captain Lucas, from Amsterdam July 19, for New York, with 242 passengers and a crew of 48, went ashore on the east end of Sable Island, N. S., in a dense fog on the night of July 30. The news reached Halifax on Wednesday night, when the Government steamer *Newfield* landed 230 of her passengers and crew there. When the vessel struck she was thirteen miles from the shore, but, the weather being calm, the boats conveyed the passengers safely to land, except one which was swamped and three persons were drowned. She was valued at $200,000 fully insured, and her cargo at $300,000, partly insured. A portion of the latter was saved, and there is some hope of saving the vessel.

The Emperors William and Francis Joseph had a cordial meeting at Ischl on Wednesday.

The Belgian Chamber of Deputies has adopted by a vote of 73 to 44 the bill providing for a renewal of diplomatic relations with the Vatican.

Germany has rejected the proposal of Portugal for a European conference for a discussion of the question concerning the Congo country.

The Medical Congress was opened in Copenhagen on Sunday in the presence of the King and Queen of Denmark, the Council of State, and the King and Queen of Greece. The Congress includes 350 Danes, 100 Swedes, 100 Norwegians, and 800 persons of other nationalities.

THE TRUE MEANING OF BLAINE.

THE address of the Massachusetts Independents is one of the most vigorous pieces of political writing which have issued from any political organization since the early days of the Republican party. It furnishes a curious and refreshing contrast to the political platform and manifesto of the last fifteen years, with its moral platitudes and its economical see-saws, its foggy generalizations, and dreary air of humbug and insincerity. There is no mistaking what the Massachusetts Independents mean, and there is only one omission in their address. It should have contained the account which Senator Hoar gave in the Senate, in May, 1876, of the political corruption which he had then recently witnessed, but which he has apparently now forgotten. For if he had not forgotten it, he could not have indulged in the curious bit of abuse of the Harvard professors, for being dissatisfied with Blaine, with which he garnished a Blaine speech in Boston a few weeks ago. The Independents have got the substance of it, but here are the *ipsissima verba*, and they are very interesting reading. The speech in which this passage occurred was delivered at the impeachment of Belknap, and before the appearance of the Mulligan letters:

"My own public life has been a very brief and insignificant one, extending little beyond the duration of a single term of Senatorial office; but in that brief period I have seen five judges of a high court of the United States driven from office by threats of impeachment for corruption or maladministration. I have heard the taunt from friendliest lips that when the United States presented herself in the East to take part with the civilized world in generous competition in the arts of life, the only product of her institutions in which she surpassed all others beyond question was her corruption. I have seen in the State in the Union foremost in power and wealth four judges of her courts impeached for corruption, and the political administration of her chief city become a disgrace and a byword throughout the world. I have seen the Chairman of the Committee on Military Affairs in the House, now a distinguished member of this court, rise in his place and demand the expulsion of four of his associates for making sale of their official privilege of selecting the youths to be educated at our great military school. When the greatest railroad of the world, binding together the continent and uniting the two great seas that wash our shores was finished, I have seen our national triumph and exultation turned to bitterness and shame by the unanimous reports of three committees of Congress—two of the House and one here—that every step of that mighty enterprise had been taken in fraud. I have heard in highest places the shameless doctrine avowed by men grown old in public office, that the true way by which power should be gained in the Republic is to bribe the people with the offices created for their service, and the true end for which it should be used when gained is the promotion of selfish ambition and the gratification of personal revenge. I have heard that suspicion haunts the footsteps of the trusted companions of the President.

"These things have passed into history. The Hallam or the Tacitus or the Sismondi or the Macaulay who writes the annals of our time will record them with his inexorable pen. And now, when a high Cabinet officer, the constitutional adviser of the Executive, flees from office before charges of corruption, shall the historian add that the Senate treated the demand of the people for its judgment of condemnation as a farce, and laid down its high functions before the sophistries and jeers of the criminal lawyer? Shall he speculate about the petty political calculations, as to the effect on one party or the other, which induced his judges to connive at the escape of the great public criminal? Or, on the other hand, shall he close the chapter by narrating how these things were detected, reformed, and punished by constitutional processes which the wisdom of our fathers devised for us, and the virtue and purity of the people found their vindication in the justice of the Senate?"

Now, the true significance of Blaine's candidacy is that it represents a symptom of a far more advanced—in truth, of the final—stage of the disease the ravages of which in the body politic Senator Hoar thus graphically described eight years ago. The appearance of Blaine as the Republican nominee means simply that the disease has spread from Congress to the nominating convention, and has depraved the palate of a large body of the voters, and has even, as we see in Mr. Hoar's own case and General Hawley's, infected some of the doctors. Blaine, as we see him, is the very product of the corruption which began almost as soon as the war closed. Wherever one is able to lift—be it never so little—the veil which concealed his activities between 1862 and 1876, we find him engaged in some scheme for making money out of politics, of which he did not wish the public to know anything. He has now issued forth into broad daylight, and is making a final and desperate attempt to get the whole party to adopt him just as he is, and by electing him to proclaim that it sees nothing wrong in such a career as his. It is no secret that Tweed and his ring, the very year before they were found out, entertained a precisely similar ambition. They hoped to capture the National Convention, and through its aid to obtain from the voters a certificate of character which would enable them to carry on at Washington, with improved facilities, on a larger scale, and without disguise, the games by which they had secretly enriched themselves in New York. In truth, to sum up, it is because the Blaine movement is symptomatic that it is so dangerous, and that the address of the Massachusetts Independents is so timely and impressive.

There is one other aspect of the matter, which the address suggests strongly, and to which we should like to call the attention of some of Mr. Blaine's honest supporters. We have been hearing a good deal, during the last week or two, of the importance of having in the White House a President who would furnish a model and set a good example to the young men of the country. We cannot, however, as politicians have so often pointed out to civil-service reformers, have a perfect man in the Presidency, or any other office. He is sure to have some flaws and weaknesses, or, in other words, cannot possibly set a good example in everything. Now, in what, we would ask, do the young men of the United States to-day most need to have a good example set them? In other words, what are the sins which most easily beset them? What American shortcoming is it that we hear most denounced in the pulpit, in the press, and in private conversation? Is it not the sin of lying about money matters—that is, concealing or denying the receipt of money you were not entitled to, of taking money you were not entitled to, of making money in unlawful and shameful ways, of helping others to make it, and of entering into combinations to get money dishonestly out of those who are supposed to be rich enough to be able to stand it, or who will not miss it, like the Government or corporations? Is it not desperation in concealing dishonesty, and audacity in defending one's self when found out? Finally, has there been a single prominent defaulter, or peculator, or corruptionist of the last twenty years who was not "magnetic," and big-hearted, and would not have run well for office as a "good husband and father" and "Christian gentleman"? We ask sober-minded Blaineites who have not made up their minds fully, to ponder these questions. They will find, them as food for reflection, most nourishing.

A POLITICAL REMINISCENCE.

NOT very long since, to wit, on the 7th of May last, the Chicago *Tribune* said:

"Had some friend of Mr. Blaine as much entitled to confidence as William Walter Phelps, and equally familiar with all of Blaine's private affairs, made as plain and clear a statement of the case then as Mr. Phelps has made recently, the *Tribune* would have accepted it at that time, as it does now, notwithstanding the prevailing public distrust of public men of that day."

The history of the "syndicate of editors" opposed to Mr. Blaine in 1876 has not been written as fully as it deserves to be. We believe that the following narrative is in all essential particulars correct:

Mr. Richard Smith, of the Cincinnati *Gazette*, had, in the latter part of April, 1876, forwarded to Mr. Medill, of the Chicago *Tribune*, for his information and advice, a private letter received from General Boynton, the Washington correspondent of the *Gazette*, containing a statement of the various charges which the Democrats were preparing to publish against Mr. Blaine, in case he should be nominated at Cincinnati. Mr. Medill had insisted that these should be looked into and disproved before the leading Republican newspapers could with prudence advocate the nomination of Mr. Blaine. The result was that Mr. Medill agreed to go as far as Cincinnati to meet the *Gazette* correspondent and examine certain records which the latter was to bring from Washington.

At the Cincinnati conference there were present Mr. Medill, Mr. Richard Smith, General Boynton, and some other gentlemen from Chicago and Cincinnati. The matters considered were (1) some new facts in regard to the Crédit Mobilier, and a meeting of those involved in this scandal which Mr. Blaine called at his house just before his demand on the floor for an investigation of that subject; (2) Mr. Blaine's acquisition of Fort Smith and Little Rock bonds, a matter about which there had not as yet been any public stir; (3) the exhibit which certain Supreme Court records made of his ownership through the Kansas Pacific lobby of certain bonds of that road, then the Union Pacific Eastern Division; and (4), upon presentation by Mr. Medill, the $64,000 transac-

tion of Mr. Blaine with Tom Scott or the Union Pacific Railroad.

According to the account given by Mr. Medill afterward, he had created a great sensation at the conference. The matters related by Boynton had been exhaustively considered, and unanimously decided to be of a character which, if unexplained in advance of the Convention, would make Mr. Blaine's nomination exceedingly imprudent and ought to render it impossible. It was therefore agreed that a friendly letter should be written Mr. Blaine, asking him to explain the matters under consideration. At this point, as Mr. Medill afterward related, he took from his pocket-book a copy of the resolution on the books of the Union Pacific Railroad in regard to the purchase of the seventy-five bonds of the Fort Smith and Little Rock Railroad Company, and went on to explain that he had information to the effect that this was a transaction with Tom Scott by which Mr. Blaine had practically unloaded a lot of comparatively worthless bonds upon the Union Pacific Company, these being bonds which came into Mr. Blaine's hands from friends of his in Maine. Mr. Medill, on his return to Chicago, also related with considerable elation the effect produced on the Cincinnati gathering by the play of his trump upon the strong hand held by Boynton, and the readiness with which all present accepted his view that, while the Kansas Pacific matter, if not thoroughly explained, ought to preclude Mr. Blaine's nomination, the $64,000 transaction was much the more damaging, since that involved both the matter of receiving the Little Rock bonds in return for his assistance as Speaker of the House, and the subsequent palming off of these bonds when they were worthless on the Union Pacific Road.

According to Mr. Medill, General Boynton had repeated to those present the explanations which Mr. Blaine had made to him in Washington in a long interview, just previous to Boynton's starting for Cincinnati, in which the subject of the charges which the Democrats expected to make was talked over at length. These explanations were not regarded as satisfactory by those present, and it was finally agreed that Mr. Smith should write to Mr. Blaine a friendly letter in regard to the conference and everything which had taken place. Mr. Smith was further charged with presenting the Kansas Pacific bond matter to Mr. Blaine, and asking for a full explanation. It was also agreed that Mr. Medill should write his understanding of the $64,000 matter, and ask for Mr. Blaine's statement of the case. Both these matters were presented to Mr. Blaine by letter, and he was assured that their purpose was friendly, and that they were written as a matter of precaution, in the interest of the party, in order that all such questions should be settled in advance of nomination, and no risks be run of entering upon a defensive campaign. Afterwards Mr. Medill made known that Mr. Blaine treated the letters addressed to him with contempt, and that both Mr. Smith and he (Mr. Medill) were convinced that he could not satisfactorily explain the charges. Mr. Medill was also very emphatic in his denunciation of Mr. Blaine's conduct, in not simply failing to notice the letters sent him, but in giving to the correspondent of the *Inter-Ocean*, Mr. W. E. Curtis, a special despatch, or the material for it, falsely assailing Mr. Smith and Mr. Medill for being in a conspiracy to defame him in the interest of General Bristow. This despatch to the *Inter-Ocean* was printed some weeks subsequent to the Cincinnati conference, and was called out by the publication from Indianapolis of the Harrison version of the $64,000 matter.

This despatch to the *Inter-Ocean*, dated Washington, July 12, 1876, is as follows:

". . . Mr. Blaine and his friends have been aware for some time that there was on foot a conspiracy to assail his character, and he has been warned of it from many sources. One of his friends stated to your correspondent to-day that this story of the bonds was arranged some time ago at Cincinnati at a meeting of Bristow's friends, at which Joe Medill, of the Chicago *Tribune*, Richard Smith, of the Cincinnati *Gazette*, Halstead, of the *Commercial*, and General Boynton, Washington correspondent of the Cincinnati *Gazette*, and others were present. The supposed facts were there put in shape to invite credulity, and it was resolved to have the story appear simultaneously in various newspapers of the country about the 1st of June so that Blaine would have no time to counteract the force of the attack. The Indianapolis *Sentinel* man was somehow let into the secret, and, being unable to contain it, exploded prematurely and upset the whole thing. Mr. Blaine invites the fullest investigation into this or any other charge against him."

An examination of the files of that day show that the subject attracted general attention at the time. Mr. Medill himself, who now feels so much regret that no one near Mr. Blaine had taken occasion in 1876 to explain this $64,000 business, thus replied through the Associated Press to the *Inter-Ocean* despatch:

"It is true I was invited to Cincinnati about a month ago to read some statements quietly circulating in Democratic circles in Washington with reference to Mr. Blaine's alleged connection with some Union Pacific Railroad bonds. It was said that the Democrats were holding back the scandal to explode it at the time of the Cincinnati Convention, or after it in case Blaine was nominated. The whole charge, so far as my informant had learned it, was related in the presence of four gentlemen. It was agreed that Blaine should be confidentially apprised at once of the nature of the scandal. Any other course would be wrong. Mr. Richard Smith consented to lay the whole matter before Mr. Blaine in a private letter. He did so nearly a month ago. If Mr. Blaine has answered his letter I have not heard of it. If any correspondence has passed between myself and Mr. Blaine in regard to the foregoing matter Mr. Blaine is at liberty to make it public."

In a despatch to the *Inter-Ocean* Mr. Halstead, then in Washington, is thus quoted in regard to his alleged presence at the Cincinnati conference:

"You haven't got that quite right, but you have got it near enough to make old Joe prance. I was not there. They did not invite me. Medill needed to be converted to Bristow, but I did not."

In another publication, made two days later, Mr. Halstead thus tells what he knew of the matter:

"The story has its foundation, probably, in the fact that the editors of the Chicago *Tribune* and the Cincinnati *Gazette* have been in possession of particulars, believed to be authentic, about Mr. Blaine's railway business that, in the present temper of the public mind, might prejudice his interests as a Presidential candidate. They have, in a friendly and earnest way, sought, and so far as we are advised, have not obtained, satisfactory explanations. But there has been no arrangement for exploding this bombshell on or about the 1st of June. It was felt that in the absence of clear proof of the legitimacy of Mr. Blaine's transactions, his nomination would not be advisable, as it will not do for the Republican party to present a candidate to the people for whom apologetic and mysterious explanations have to be made. Mr. Blaine has been treated with a consideration in this matter which his zealous friends do not seem to appreciate. Whatever the motive for the disclosure at Indianapolis of a story that Mr. Blaine is very prompt to deny, neither he nor his friends can attribute it to those who were privy to it and quietly seeking for the exact truth about it, in determining its effect upon his candidacy and the chances of his election if nominated."

Mr. Richard Smith made a number of editorial allusions to this conference, and to Mr. Blaine's failure to explain any of the charges which in the most friendly spirit had been brought to his attention. Of these editorials the following extract from the *Gazette* of May 3, 1876, is sufficient for present purposes:

"Of the result of that conference Mr. Blaine was fully advised by Mr. Smith, but Mr Blaine's explanation was not full and conclusive. In fact, he did not explain at all, nor has he to this day attempted to explain, the transaction then under consideration, except to work upon the surface, as he did with reference to the $64,000 operation. The truth is, Mr. Blaine did not answer the letter sent to him with reference to that conference. Furthermore, the first publication with reference to the Cincinnati conference was in a despatch from Washington to the Chicago *Inter-Ocean*, and that information must have proceeded from Mr. Blaine. In that despatch the Cincinnati conference was spoken of as a Bristow conspiracy against Mr. Blaine, when, in fact, Bristow knew nothing whatever about it, while Blaine knew all about it. Besides, it is not usual for conspirators to advise the person against whom they conspire of all they do. Mr. Blaine knew perfectly well it was not a conspiracy against him, or in the interest of anybody, but a conference of Republicans who intend to support the nominee of the Cincinnati Convention, to ascertain whether, in view of the charges against Mr. Blaine, it would be safe to nominate him as the Republican candidate for the Presidency. That was the object of the conference, and it was so stated to Mr. Blaine, and the letters written to him he is at full liberty to publish at any time or in any place. Those letters will show not only the points which Mr. Blaine has not yet explained, the questions he has not answered, but also the names of the persons present, their object, and the motives by which they were moved."

If Mr. Smith, Mr. Halstead, Mr. Boynton, or Mr. Medill ever received any specific explanations from Mr. Blaine or any of his friends of the matters which were submitted to him for explanation, it would be very interesting to the public to read now the full details. If the letters of Mr. Smith and Mr. Medill remain unanswered to this day, it would be interesting to know that. In any event, the lamentation of Mr. Medill, quoted in the opening of this article, that no friend of Mr. Blaine attempted to be as good to him in 1876 as William Walter Phelps has been now, is quite grotesque, in view of the fact that he was the very first man to make use of the $64,000 matter against Mr. Blaine, and the very man who, as a friend of Mr. Blaine, attempted in 1876 to procure an explanation from Mr. Blaine himself. His me-

thod of reaching a definite result is as remarkable as that of John Phœnix in his famous railroad survey, who, after a long day's labor with chain and compass, inquired of a passing drayman the distance from San Francisco to the Mission of Dolores, put it down in his book, and went on with his survey.

PROTECTING AMERICAN CITIZENS ABROAD.

Mr. Belmont's interview published in the *Herald* on Friday recalls some facts relating to Mr. Blaine's treatment of the "suspects" in Ireland, in 1881, which will be curious reading to those who are now urged to vote for him as the great protector of the naturalized citizen abroad. Mr. Blaine, who is now angling for the Irish vote, would, of course, like to have it believed that he is a stanch friend of the rights of American citizens, and accordingly he inserted in his letter of acceptance the following passage:

"Citizenship of the Republic must be the panoply and safeguard of him who wears it. The American citizen, rich or poor, native or naturalized, white or colored, must everywhere walk secure in his personal and civil rights. The Republic should never assume a lesser duty, it can never assume a nobler one, than the protection of the humblest man who owes it loyalty—protection at home and protection which shall follow him abroad, into whatever land he may go upon a lawful errand."

The natural inference from this of course is, that were Mr. Blaine in a position in which he should be called upon to protect American citizens abroad, he would do so most energetically; that he would probably vie with Marcy himself and the Democratic statesmen of the last generation in asserting the rights of American nationality, wherever they were interfered with. His friends even go so far as to ask for the Irish vote on the ground that he will in some way, by protecting American citizens, help the dynamiters; and the articles in favor of Cleveland which have appeared in the English newspapers are explained as caused by the terror inspired among the English by Blaine's announcement of his intention to protect the citizen abroad as well as at home.

Of the merits of his bid for the vote of dynamiters we have nothing to say, but the record of what Mr. Blaine actually did for the protection of American citizens abroad while Secretary of State is of interest, not only to the Irish, but to every American, to every native-born as well as to every naturalized citizen—for there is no distinction between those classes in their rights abroad. Mr. Blaine's present declaration of his intentions must be judged in the light of his past performances, and it is evident from the readiness of his supporters to advocate his claims to an election on this ground that they have forgotten what he did do. And yet there is ample material for the formation of a fair opinion. While Mr. Blaine was Secretary, a question of great importance arose between this country and England, involving the rights of our citizens in that country, and Mr. Blaine has left behind him a very peculiar record on the subject

On March 2, 1881, the English Parliament passed a law "for the better protection of persons and property in Ireland," which provided that any person declared by the Lord Lieutenant to be "reasonably suspected" of having been guilty of treason, treason felony, or treasonable practices (wherever committed) since September 30, 1880, or of "any crime," of "violence or intimidation, and tending to interfere with or disturb the maintenance of law and order," since the same date, if committed in a "proscribed district," might be arrested and thrown into jail and kept there, at the pleasure of the Lord Lieutenant, without the privilege of bail or trial. By this act, passed in time of profound peace, the right of habeas corpus was destroyed, and any American citizen travelling or living in Ireland was liable to arrest and incarceration at the caprice of an individual. No state of belligerency or rebellion was proclaimed to the world, but the act was passed in the exercise of the same species of absolute authority which justifies torture in Turkey and sentence without trial in China. We do not say that the act was not justified under the circumstances—that is a matter of which foreign nations can hardly be judges; but it was a dangerous measure, of a sort not ordinarily resorted to except in time of war, and then with much hesitation. When it is resorted to it is needless to say that the vigilance of nations the rights of whose citizens are affected by it, are usually aroused.

At the time of the passage of the act a number of persons alleged to be American citizens were arrested in Ireland by order of the Lord Lieutenant, and thrown into jail as suspects. They were denied trial, and the question immediately arose, What was to be done about them? One of the first cases called to the attention of Mr. Blaine was that of a man named O'Connor. It was brought to his notice by the prisoner's brother, who had a letter of introduction from the Mayor of Baltimore, Mr. William Pinckney Whyte. On November 25, 1881, as appears from the *Congressional Record*, Mr. Blaine undertook to reply to this application, and his reply was simply that the incarceration of O'Connor, without trial or hope of one, was a matter of strict right.

"The act of Parliament," he said, "under which Mr. O'Connor is held is a law of Great Britain, and it is an elementary principle of public law that in such case the Government of that country, in the exercise of its varied functions—judicial and executive—administers and interprets the law in question. The right of every government in this respect is absolute and sovereign, and every person who voluntarily brings himself within the jurisdiction of the country, whether permanently or temporarily, is subject to the operation of its laws, whether he be a citizen or mere resident, so long as in the case of an alien resident no treaty stipulation or principle of international law is contravened by the proceedings taken against him. In stating this familiar principle no more is conceded to Great Britian than every country may of right demand, and it is one of the sovreign rights that the Government of the United States has always insisted upon and maintained for itself."

Such is the last authoritative utterance of Mr. Blaine on the subject of the rights of American citizens abroad. He retired from the Cabinet the next month. On April 5, 1882, the President transmitted to the Senate copies of correspondence relating to American citizens in Ireland, which showed that on June 2, 1881, Mr. Blaine had instructed Mr. Lowell that this Government would "insist" that they should "immediately upon arrest be informed of the specific crime or offence upon which they are held, and be offered an opportunity for a speedy trial before an impartial court and jury." This was Mr. Blaine's view of the matter in June. After deliberating upon the matter nearly six months, we find that he changed his mind, and came to the conclusion that the Coercion Act was just as binding on us as on an English subject; and that if the English Government, "in the exercise of its varied functions," chose to bastinado American citizen "suspects," we could not interfere. That he did come to this deliberate conclusion is proved conclusively by the fact that he never got a single suspect out of jail. They were liberated by Mr. Frelinghuysen, who insisted that they must be either tried or given an opportunity to leave the country. Is a man who "protects" American citizens in this way a fit person to be intrusted with the Presidency?

RAILROAD STOCK-WATERING.

The new volume of Poor's Railroad Manual, excellent as it is for the most part, has given a fresh impetus to the outcry against "stock-watering," especially at the West. Our own position on this subject has been that "stock-watering," so far as it is harmful, is harmful to the railways and their owners and not to the public, whose persons and property are carried by them, and that the evils, whatever they may be, are not such as can be met by legislation. This view is sustained in a remarkable manner by a new dissertation from the pen of Mr. Edward Atkinson, of Massachusetts, published in the *Manufacturers' Gazette* of August 9. Mr. Atkinson's paper is a continuation of a similar statistical treatise which he prepared some four years since, analyzing the cost of railway transportation and the progressive decline in the rates of freight charges since the year 1865. The facts and figures which he then adduced are fortified by the experience of the past four years, all of which goes to show that railway managers, whatever their intentions may be, are as powerless to tax the community in order to pay dividends on watered stock as they are, by taking thought, to add a cubit to their stature. This conclusion, it should be remarked, is not the main purpose of Mr. Atkinson's paper, but is incidentally reached in a broader discussion of the causes of the present commercial depression.

Of course it is not sufficient to show, as Mr. Atkinson does show, that the cost to the public of moving the chief staples of the country has been reduced on such roads as the Lake Shore and the New York Central (and necessarily on all competing lines) from 2½ cents in 1865 to 7-10 of a cent per ton per mile in 1883, and that the *profit* to the railroad has fallen to less than a quarter of a cent per ton per mile. Such a state of things might

be compatible with a sufficient profit in the aggregate to constitute a basis for stock-watering to an iniquitous extent. But Mr. Atkinson proves conclusively that "it matters not how much may be the nominal amount of the stock and bonds issued either before or since 1880. It matters not whether a half or two-thirds, or three-fourths even, of any railroad is represented by what is called watered stock, or not. All these enterprises are now brought face to face with the simple question, Is there enough material to be moved, adjacent to their respective lines, at existing rates of freight, by which an income on actual cost can be earned—basing such cost upon what it would now be if the roads were constructed to-day?"

It was hardly necessary to take all the pains which Mr. Atkinson has taken to maintain the thesis that "we have entered upon the final period in the history of railroads, to wit, the period in which they must be treated by their owners on a strictly commercial basis, for the purpose only of earning a moderate income on their actual cash cost." This is a situation which all railway managers, without exception, have now to face. Even the Central Pacific of California has been compelled at last to bow to the law of competition. Athough there may be a few roads still partially exempted from the force of this irresistible levelling agency, they are not beyond its reach. Their time for enjoying the sweets of monopoly is short, and any profit which may have been realized temporarily through the device of stock-watering will inevitably be swept away. Nor will it be necessary to invoke the power of the legislature to cure any evils resulting from the practice. No legislature could ever be induced to inflict the punishment which natural laws have inflicted upon stock-waterers in the past three or four years. The following paragraphs from Mr. Atkinson's paper are an admirable summing up of facts which have long been weighing heavily on the minds of railway managers in this country:

"The elimination of what has been called 'watered stocks and bonds,' against which the silly crusade of the so-called anti-monopolists has been directed, is in process of accomplishment by methods far more potent than any possible legislative acts, namely, by the triple competition to which railways are subjected: First, the competition of water ways; second, the competition of one railway with another; third, the competition of product with product in the great markets of the world. The charge which can be put upon the wheat of Dakota or Iowa for moving it to market is fixed by the price at which East Indian wheat can be sold in Mark Lane. The railway mileage January 1, 1880 (when the possibility of any further reduction in freight charges covering any profit whatever commensurate with a fair but very low revenue was practically reached), was 86,497, represented by over $5,000,000,000 of securities. January 1, 1884, it was 121,542 miles, represented by over $7,000,000,000 of securities. Since January 1, 1880, we have increased our population *twelve and a half* to *fourteen* per cent., our grain crops *five* per cent., our railway mileage *forty* per cent. Aside from grain, the increased production of other commodities has probably not averaged a greater rate than the increase in population.

"Having, therefore, reached the end of construction companies, of speculative building, and of the issue of two, three, or four dollars of security for one dollar actually paid, we are now entering upon a period of railway adjustment—that is to say, of earnings limited to a moderate rate of possible dividend on what the needed portion of the present railroad mileage would cost at the present actual prices of labor and materials, unnecessary parallel roads being deprived of all earning capacity.

"How much nominal property will be wiped out of existence, and how many individuals will suffer, it matters not, except to the sufferers. Hereafter the people of the United States will be served by 120,000 miles of railway, operated at the lowest possible cost, and which will be extended only so fast as prudence or necessity may require. This service, which would have cost producers or consumers $1,000,000,000 gold to $1,350,000,000 currency a year at the rates which were charged from 1866 to 1869 inclusive, is now performed for about $550,000,000 per year, a saving of $450,000,000 to $800,000,000 per year."

In view of these facts, it makes little difference, except to the stockholders, whether the statement in Poor's Manual, that the whole increase of share capital in the past three years, viz., $999,387,208, is water, be true or not. The *Railway Age* of August 7 disputes this statement, and shows, by a comparison of statistics given in the census of 1880 with Mr. Poor's statistics, that there has been a decrease of capitalization *per mile* during the past four years. It maintains, also, that there is no authority for putting the average cash cost of our railways as low as $31,400 per mile. But whatever the truth may be upon that point, it is perfectly clear that it cannot make one hair white or black to call a railroad worth $62,800 per mile when it has cost only one-half that sum to build it. Its earnings in the present and future stages of our railroad history will be limited, as Mr. Atkinson says, to a moderate rate of possible (not by any means certain) dividend on actual cost.

COLLAPSE OF ITALIAN OPERA.

A CABLE despatch received on Thursday stated that an application had been made for the appointment of a receiver for Mr. Gye's Royal Italian Opera Company in London. At the conclusion of the season the *Standard* remarked:

"It is generally understood that for some years past the production of Italian opera in London has been an unprofitable speculation. When two Italian houses were open there was reason to suppose that the supply was greater than the demand; but since Her Majesty's Theatre has closed, matters do not seem to have brightened. On 'Patti nights' the house has been full. From the time when Madame Patti took the town by storm, her supremacy has not been shaken; but it is known that the singing of Madame Patti entails an expense which sadly diminishes the receipts, if it does not completely swallow them up. The cost of maintaining so large a theatre with so full an orchestra is very great. The price of seats is correspondingly high, but audiences are not found to occupy them. Italian opera threatens to drop out of the list of London amusements."

In New York the Academy will probably lose its military manager next year, and for this season only a few weeks of opera are promised. As for the Metropolitan, Mr. Gye and Herr Pollini, of Hamburg, the two most prominent managers in Europe, refuse to embark in an enterprise which cost Mr. Abbey a fortune. What is to be done? It looks as if last year's operatic deluge were to be followed by an almost absolute drought this winter, unless the report should prove true that Mr. Theodore Thomas intends to bring an opera company from Europe and give all of Wagner's operas except "Parsifal" and the Tetralogy.

It was a favorite maxim of Richard Wagner that if art goes to the dogs, it is always the fault of the artists. Certainly the cost of popular singers has done more than anything else to bring about the present operatic crisis. The *carte blanche* given to Mr. Abbey to engage singers at any price has made them more unreasonable than ever, so that Nilsson actually demands a thousand dollars an evening more for next season than ever before, although her voice and her art are far from being what they once were, and her very limited repertory has been repeated to the point of weariness. Mr. Abbey not only ruined the operatic market for years to come, but his short-sighted policy made it impossible for any one to follow in his footsteps.

If Pollini had come to this country, he would probably have done what Mr. Irving did by combining the "star" with the "ensemble" system. Mr. Irving's extraordinary success showed once more that the American people may be relied on to support the best of its kind. Hitherto Italian opera has had one great advantage in the fact that it was a fashionable amusement—a sort of costume-show, both on and off the stage. But in London, at any rate, it has lost this advantage and will probably soon lose it here also. In that case, how would it do to look at opera for once from the German point of view—as a *musical* entertainment? Mr. Mapleson and his colleagues would doubtless reply that they have tried the "ensemble" system and failed to make it pay. But their notions of *ensemble* were rather peculiar. They simply discharged their "stars" and then abandoned the operas to the tender mercies of the "sticks" that had always been used to support the famous singers, and had only been tolerated on their account. Take a single illustration. A year or two ago "Fidelio" was given at the Academy. The rôle of *Leonore* in this opera is one of the most difficult in the whole range of operatic music, and even in Germany there are only three or four singers who can do it justice. Mr. Mapleson intrusted it to a novice from Cincinnati without voice or dramatic talent. The performance, of course, was a farce, and the audience consisted entirely of deadheads. "Lohengrin," in truth, is the only German opera that has been given with a tolerably adequate cast at our Italian opera-houses; and "Lohengrin," as everybody knows, is one of the most popular operas in the repertory.

The popularity of our Philharmonic concerts and the great success of the recent Thomas-Wagner concerts throughout the country seem to imply that there is a general desire to hear good German music, if there is a guarantee that it will be worthily interpreted. The failure of the German opera season in London this year does not argue

against this belief. The company was a poor one, and did not include any of the leading German singers. Even the chorus and orchestra were not first-rate; in fact, the enterprise seems to have been managed on the Maplesonian "ensemble" plan. This is not the way they do things in Germany and Austria. In Vienna not only are the small parts well taken, but all the leading rôles are, if possible, placed in the hands of first-class singers, and it is no unusual thing to hear Materna, Winkelmann, and Scaria in the same opera. If there is no state support forthcoming for the opera in America, it is, on the other hand, possible to charge much more for admission than abroad, while the expenses need not be much greater, if the singers are brought to more reasonable terms by the absence of competition. Italian opera, it is clear, does not pay. It draws only when Patti sings, and she quietly pockets all the receipts. Therefore, we say, give German opera a fair trial, not this year, but after careful preparation. In Berlin, during the last three years, 109 evenings were devoted to Wagner, and only thirteen to Donizetti, and not one to Bellini. Our audiences are not so well educated in musical matters as the Berliners, but they are quick to learn; and it would take but a few seasons of German opera to destroy the myth that there is more melody in Italian than in German music Schubert is the greatest melodist that ever lived, and there is more melody in one act of "Die Meistersinger" than in any three Italian operas. It takes an effort at first to discover it, but, when found, it proves a joy forever.

DECLINE OF THE GERMANS IN AUSTRIA.

THE elections held in the earlier part of last month to the provincial diets of Moravia, Lower Austria, Bukowina, and Austrian Silesia, mark another advance in the course of the so-called "conciliatory" policy inaugurated, five years ago, by Count Taaffe in the affairs of Cisleithan Austria. The conciliatory feature of that policy consists in an almost constant, though somewhat slow, yielding to the demands of the Slavs in matters dividing Slavs and Germans, or Slavs and Italians; in siding with the Poles in Galicia against the equally Slavic but non-Catholic Ruthenes; and in opposing anti-clerical, anti-feudal, and all radical movements and agitations. For its consistency in this course the Taaffe Cabinet receives the ready and decisive support, in the Reichsrath and elsewhere, of the Slavic Federalists—Czechs, Poles, Dalmatians, Slovenes—of the Catholic clergy, and of a large majority of the nobility. The prestige of the court is often used in favor of this coalition of conservative and federalistic elements, against which the formerly ruling German-Liberal or German-Constitutional party has for years been carrying on a passionate and unsuccessful warfare. This party, in large part guided by unpractical doctrinaires and visionary Austro-German patriots, and relying too confidently on the strength of its liberal principles and the manifest destiny of the German cause, has of late been rent by dissensions and weakened by defections, and sunk down to a hopeless minority in the Reichsrath or common Cisleithan Parliament.

Of the seventeen provincial assemblies of Cisleithania, the German-Liberals are most powerful in those of Lower and Upper Austria and of Salzburg, provinces of more or less unmixed German population. The capital of Lower Austria and of the whole Empire, Vienna, in spite of many heterogeneous elements, is their great stronghold. Tyrol, though German, is completely under the control of the Clericals; the Poles have obtained a decided supremacy in Galicia, the Czechs in Bohemia, the Slovenes in Carniola, the Dalmatians in their province. Nor was there any election held this time in those important crown-lands of the Empire or in Styria or Carinthia, where a Slavic minority contests the rule of the Germans. Moravia and Lower Austria were the great battle-fields—the former between Germans and Czechs, and the latter between Liberals, or the United Left, as they now designate themselves as an opposition party, and a multitude of contending factions. The agitations preceding the elections were very violent, though not approaching the fever heat which characterized and disgraced the recent elections beyond the Leitha to the Hungarian Parliament. Not a little demoralized by successive defeats, the Liberals went into the contest without hope of conquering new seats, yet with the expectation of everywhere maintaining the position previously held—even in Moravia, where the Czechs were favored by the support of the Governor, Count Schönborn (who himself appeared as a candidate to the Diet on their list), and by the activity of a "Middle party" lately formed by followers of Count Coronini among moderate-liberal landed proprietors, with the object of holding the balance of power between contending Nationalists. Even this modest expectation of the United Left has been disappointed by the result.

The Liberals have triumphed in Lower Austria—obtaining fifty-six seats out of sixty-eight—and especially in the cities, but with reduced majorities. Even in Vienna, where they have carried every electoral district, in bitter contests with Clericals, People's Party men, Democrats, Viennese Czechs, and Anti-Semites, the aggregate number of votes polled by their opponents is nearly double what it was in the preceding election. Of the thirty-one members of the next Diet of Silesia, only three will be representatives of the combined Czech and Polish minority of the people, but even this result involves a loss to the German-Liberals. In the province of Bukowina, candidates of the Government and of the Ruman inhabitants will divide among them almost all the seats, the German-Liberals having carried only four. All these discomfitures, however, are less grievous to the German party than their losses in Moravia, in the Diet of which, numbering 100 members, they have hitherto had a decided majority, and are henceforward to be represented only by 48 votes, the Middle party holding the balance of power between them and the Czechs, and being evidently inclined to use it in favor of the latter. This victory of the Czechs in a country geographically, ethnographically, and historically so closely connected with Bohemia, and yet so long successfully kept under German influence, is of the highest moment in the great nationality strife of Cisleithan Austria, and its importance is fully appreciated both by the victors and the vanquished. Already most extravagant speculations as to a new federalistic reorganization of the Empire are being based upon it in some Slavic quarters, while a portion of the Liberals are said to be ready to give up the useless opposition (on purely German national grounds) to the Taaffe Administration, and, joining Count Coronini and the Middle party, to try to become available as participants and leaders in a differently constituted majority of the future. Taaffe himself is believed to be favorably disposed toward a movement of this kind, not only because it tends to disrupt the great Opposition party, the United Left, but because it would offer him a chance of one day shaking off the yoke of the Clerico-Federalistic coalition, which is beginning to be too heavy for him to bear.

THE ADIRONDACKS TO-DAY.

MARTIN'S HOTEL, SARANAC LAKE, July 20.

THE changes in this section of the Adirondack country since I last saw it many years ago, are great, and, if equalled in the other border regions of this central mountain area of our State, the general result must be an enormous diminution of forest-covered land. Where there was, when I last passed this way, unbroken forest, or forest broken only by the effect of fire, for miles, now there is a large portion of the land under cultivation, though much of it is soil on which no one possessed of a moderate degree of energy and agricultural skill would spend the time and labor necessary to bring it into such a degree of cultivation as would make agriculture a profitable business. By far the greater part of the land west of the railway terminus of Au Sable seems to me such as would eventually be more profitable under a judicious forestal development than under any other species of farming. The soil is poor, rocky, and when cleared really only adapted to sheep-raising, and no farmer attempting to use it for grain-producing can meet the competition of Western lands; yet many thousands of acres have been cleared up and many of them planted with grain, on this line of entry into what ought to be an inviolable forest. As the water-shed which divides this section from the affluents of the Hudson lies south of this group of lakes, the importance of the preservation of the forest is not so great as in the case of the Schroon and more southerly lakes; but the diminution to any serious extent of the forest on this side menaces the waterfall of the whole section, and then the rivers that run north to the St. Lawrence, such as the Salmon, Chateaugay, Raquette, etc., have their own sections of country largely dependent on the equality of the water supply for manufactures and agricultural operations. So that the question of paramount importance to the whole State, the preservation of the sources of the Hudson, is not the only one to be considered. Every change that tends to sudden thaws, floods, and subsequent low water supply will affect the interests of the southern side of the St. Lawrence valley as much as the northern of the Mohawk, and the difference in the summer level of the streams since I knew this part of the State is plainly to be seen.

The destruction of forest without any relation or benefit to even this poor agriculture is equal-

ly noteworthy. Mountains which I remember well as covered with forest are now as bare and rocky as the lower White Mountain peaks, and the face of the most mountainous portions of the country I have just passed through is scarcely recognizable. It was not until I arrived at the Saranac Lake that I became aware of the identity of the localities I knew twenty years ago, and even here there is great change. The invasion of the forest is going on at a rate which, even if not accelerated, will leave no solid mass of forest of any considerable extent after another century, and this though the land offers no inducement to farmers as compared with Western countries—less, even, than districts in New England which are now given up entirely to sheep and cattle grazing. The greater part of this Adirondack country, it must be remembered, when once burnt over and the accumulation of mould of many centuries (which is its only soil) destroyed as it is by the fires, is absolutely worthless, even for forest culture. Here may be seen remains of forests, with stumps of huge trees still rooted among bare crags, every trace of moss and mould having been eradicated by the repeated fires. Between these tracts are occasional passages of fertile land, not great in aggregate extent as compared with the mountain land, and these are the only portions which attract agriculturists. In past years these found their market among the lumbering population, but as the available lumber country is now becoming rapidly exhausted, the lumber trade will lose all its importance in a few years, and the difficulties of communication would destroy the market value of the produce of these remote and isolated tracts. The newly discovered sanitary qualities of the Adirondack region are attracting many invalids, and even in the winter there is an increasing and already considerable number of visitors for health. This new interest complicates the question of forest preservation, and it must be studied with both the lumberman and the tourist to consider. At present the lumberman is doing all he can to destroy the commercial value of the forest by the exhaustive cutting of the pines and spruces, but the operation, if done carefully and under strict supervision, would do no harm, nor is there any reason why the lumbering should be stopped. It is not the axe but the fire-brand that destroys the forest, and the proper restriction of the tourist and sportsman in their recklessness of fire-making, as the cause of more devastation than the axe and plough combined, is as much in the interest of the lumberman as of the State. The increase of this class of visitors, the consequent increase of hotels and summer residences, each one the nucleus of a new clearing, the centre from which new fire invasions start, make this restriction every day more important. Hotels are now building in the very heart of the wilderness, and each one by the local demand it causes for the products of the soil, for its own uses and those of the attendant population of guides and boatmen, increases rapidly all the difficulties attendant on the final regulation of the question.

That portion of the responsibility of the great and profitless destruction which falls to the lumbermen is due to their reckless accumulation of the "brush wood" which the trimming of the trees causes, and which, being of the pitchy firs, is when dried as inflammable as powder, and prepares the ground for the match of the tourist, whose camp-fire leaves the kindling of the mighty conflagrations we see here at times.

It is absurd to talk of expelling entirely the lumbering industry, even if it were desirable, which it is not; but our future lumber supply, as well as our future sanitary refuge, our health, and recreative resort, demand that regulations shall be imposed which shall stop the clearings entirely, whether made for agricultural purposes or by the conflagrations. This implies severe legislation and an efficient and constant control, compelling the lumbermen to be at the expense of collecting and burning the loppings of the trees they cut, and causing the removal of all fallen trees and dead wood which may furnish fuel for such conflagrations. And these regulations must be such as inflict no needless burthens and cause no injustice to the population of the country, otherwise their realization will be impossible, and fires will be kindled maliciously. Any attempt at control must be well considered, and so complete as to assure the well-disposed of the inhabitants that their participation in the enforcing of the law will insure them against retaliations, and the careless or ill-disposed that their violation of it will bring a high probability of punishment. No more must be attempted than the sympathy of the mass of the residents will follow, and the law and the law agents must know the people and the country, and enlist the former in the measures to be taken. Precise and not too vigorous game-laws, also, should be passed and impartially enforced — the fisheries especially being carefully looked after. The law has for many years imposed a penalty on the introduction of pickerel in these waters, yet in utter disregard of it two of the residents about Long Lake put them openly into that lake, and the result has been the utter extermination of the trout in what was, when I first knew it, the finest trout river in the Atlantic States. The authors of this act are and have been always well known, but, with the exception of threats of border justice by the people of the country, no notice has been taken of it. Pickerel have also been introduced into the Saranac River, and must, if no steps are taken to prevent it, ere long get up into the Saranac lakes. The deer, too, are being thinned out by the sportsmen, in contempt of the laws, and are killed from May until March with no notice except that growing out of hotel jealousies and personal animosities. In one month—from May to June—four years since, a party of four persons, headed by a railway "magnate" of New Hampshire, killed twenty-two deer, and this at a season when the venison is not fit to eat and every doe leaves a fawn or two to starve. This magnate is known to all this section as a persistent and perennial deer-slayer in the forbidden months, and without molestation so far. The guides will not ruin their business by informing, and the people will take no trouble where they have no personal interests.

The prevention of fires is even more difficult than that of poaching. Unless guards are placed to watch the camping-grounds and inform on parties who leave camp-fires burning, conflagrations will continue.

It will be seen that if anything of moment is to be accomplished the legal measures must be comprehensive and thorough. At the recent meeting of the Forest Commission at Saratoga I see that some one recommended mounted patrols to watch the Adirondack forest fires! In a country through most of which a deer has difficulty in running, and travel is entirely by boats, this suggestion of a mounted police is indescribably funny, and only illustrates the impossibility of any person unfamiliar with the region giving or utilizing counsel. W. J. S.

THE PARTY GAME AND THE CONSTITUTIONAL CRISIS.

LONDON, July 28, 1884.

YOUR readers doubtless know the steps by which the present struggle between the Houses has been brought about: the threats of Lord Salisbury, the counter menace or warning (whichever one is to call it) of Mr. Gladstone, the private negotiations between the leaders on both sides when the bill reached the Upper House, the victory of Lord Cairns's amendment declining to entertain the Franchise Bill unless accompanied by a bill for redistributing seats, the second battle over Lord Wemyss's resolution, the announcement by the Government that in November next they will again pass the bill through the Commons and submit it to the Lords, daring them to defy a second time a large majority of the representative House. All this is now matter of history, so I shall only make some observations on those undercurrents of feeling which the debates do not fully express, before describing the character of the agitation which is now seething around us.

The apparent question before the country is whether a measure extending the franchise to two millions of new voters shall be permitted to pass without being accompanied by another measure providing for such a reallotment of seats as shall give these new county voters a share of members proportioned to their numbers, and at the same time containing securities against the complete effacement of minorities by majorities. The real question, however, is rather this: Which party shall have the carrying of a redistribution bill? The character of such a bill may determine the balance of political power for some years to come. Hence the Tories, knowing that the framing of it will fall into the hands of the present Government if the present Parliament lasts, are eager to force a dissolution of Parliament. They wish to reject the Franchise Bill in order to provoke the Government to dissolve Parliament, considering that a new Parliament will be more favorable to them than the present. On the other hand, the Liberals, knowing that the Tories will criticise adversely, and if possible defeat, a sweeping scheme of redistribution, think that their best, if not their only, chance of getting such a scheme promptly through Parliament lies in passing the Franchise Bill first, because then the Tories will be so unwilling to face a general election, on the present allotment of seats, but with constituencies swollen by the new voters, that they will accept a redistribution scheme as the lesser of two evils.

The strong point in the Tory strategy is their command of the House of Lords, enabling them to keep off the Franchise Bill, and thereby to secure, either now or within the next eighteen months, a general election in which the present voters will be the arbiters. On the other hand, the strength of the Liberals lies in the fact that the Tories do not venture openly to oppose the extension of the franchise. That would be unpopular, and it would seem inconsistent with their conduct in lowering the borough franchise in 1867. Hence there is a certain unreality in the language held by both parties. The Liberals declare that it is impossible to pass two such great measures as a franchise bill and a redistribution bill in the same session, impossible even to keep them pending at the same time. The one train must be got well away out of the station before the other can be made up to follow it. Yet their chief real motive is the desire to have a means of compelling the Tories to accept the ministerial Redistribution Bill. The Tories complain of the unfairness of separating things so closely connected, but their real motive is to dictate a redistribution bill favorable to themselves by the threat of precipitating a dissolution on the present suffrage.

Each party all along foresaw the moves in the game which the other would make. The Government knew well enough that the Lords would

reject the Franchise Bill if they dared; and the only question was, Would they dare? It would look as if they distrusted the humbler classes of the counties, those counties in which their strength has hitherto chiefly lain, and it would bring forcibly before the nation the question of their own place in the Constitution—a question which the Radicals often tried to call attention to, but so far with little success. Lord Salisbury was known to be burning for the fray. He is discontented with his position at the head of a vast majority in the Upper House, which has repeatedly had to submit to the Liberal majority in the House of Commons. He thinks, and indeed he declares, that if the House of Lords is never to use its power, it may as well cease to exist altogether. But it was long doubtful whether the Tory Peers, who deserted him two years ago on the Irish Arrears of Rent Bill, would stand by him. Possibly they would not have done so but for the encouragement given them by several recent elections in counties, at which Tory candidates have been carried by large majorities, and for the adjurations of the Tories in the House of Commons, who are extremely hot against the Government, and anxious to see Parliament dissolved at all hazards. These influences made Lord Salisbury victorious. His majority, however, was unusually small (only fifty-nine, whereas the normal Tory majority in the Lords is much over one hundred), and many think that if Lord Granville, in closing the debate on behalf of the Ministry, had announced publicly the proposition he had privately made for a solemn declaration by both Houses that a redistribution bill should be introduced and carried at the earliest possible moment, some twenty votes would have gone over to him. This emboldened Lord Wemyss to bring the question up a second time some days later, but, having once taken up their position, the Tory Peers were not going to desert it so soon, and the majority which supported Lord Salisbury was but very little smaller.

The question now is, What will the Peers do when the bill goes up to them again in November next? They will have four months to think over the position, and they will have heard a great deal said in the country not only about the bill, but about themselves. They may then feel that they have sufficiently shown their independence, or they may fear a further outbreak of popular indignation. If thirty Peers go over, or if a somewhat larger number stay away, the bill will then be carried. This is of course the hope of the Government—a hope which they think good enough to outweigh the worry and fatigue of an extra session of Parliament, with the loss of many measures which they have had to drop in this session for the sake of closing it at a date earlier than usual. There are, however, many who doubt if the Lords will submit in November. Why should they? They will condemn their last vote, for the circumstances will not be substantially different. They will betray their own weakness and timidity. They will surrender the key of the position into the hands of the Ministry. It is, therefore, at least equally probable that instead of their passing the bill they will "hang it up"; that is to say, postpone the consideration of it until they have a redistribution bill also before them. This would leave to Mr. Gladstone his choice between an immediate dissolution or the bringing in, in February next, of a redistribution bill. Either course would be leaving the victory with the Lords, for their demand now is to have either the redistribution scheme submitted, or else an appeal to the country. If, therefore, the Lords play their game with skill, they ought, it would seem, to win.

There is, however, another element in the question — the stability of the Upper House itself. The temporary gain of forcing a general election would be slight compared with the danger of rousing the whole popular party to an attack upon the privileges of their House; yet this is no unlikely result. Between now and November there will be countless demonstrations against the Lords. After their second refusal to entertain the bill such demonstrations would be renewed, perhaps more angrily, and in the general election the Radical cry of "Down with the House of Lords!" would have a volume and exert a power never known before. These possibilities are what raise the present crisis above the level of one of those recurring conflicts between the Houses which have so often passed harmlessly away. The moment is more serious for the Upper House than any other since 1832. Yet, although many Liberals are overjoyed at the prospect of dealing in a summary way with the hereditary House, though his own more cautious followers condemn Lord Salisbury's rashness, it is not yet certain that the country is really roused or prepared to address itself to so difficult a problem as the reform or extinction of the House of Peers. If Mr. Gladstone were ten years younger, he might confront that problem. But he has now repeatedly declared that he will take up no new question, none which involves a long struggle. Nor does any among his lieutenants command such united support, or inspire such unhesitating confidence, that the Liberal party would accept the programme which he might unfold. Inconvenient as it is to have an irresponsible Upper House constantly thwarting the popular House, the practical evils have been, or at least have appeared to be, less than could have been expected, and it needs serious practical evils to induce the English people to begin to take down and rebuild an important part of their old constitution. Observers in other countries must not therefore too hastily conclude that the fall or reform of the House of Lords is at hand, nor even that it is sure to be overcome in the present contest. Here in England men dispute as to what the feeling and temper of the people are. Of this, however, and of the external phenomena of the present agitation, I must speak in another letter. Y.

Correspondence.

SILVER PAYMENTS.

To the Editor of The Nation:

Sir: There are renewed rumors of uneasiness at the Treasury about the gold reserve, and of possible measures for forcing more silver upon the public. Were it not for past blundering, one might hope that a course so injurious to the country and so full of danger for the Treasury itself would not be thought of for a moment. A serious mistake of policy has been committed already in the efforts made to push silver and silver certificates into circulation. The law requires silver to be coined; but neither the law nor the condition of the finances requires the forced issue of it. For two clear reasons it is the duty of those in authority not to go a step beyond the legal requirement in the matter. In the first place, by pushing silver into circulation, they are disguising the folly and absurdity of the act of 1878. If they would leave it to accumulate in the Treasury, except so far as there is a real demand for it, we should presently have evidence, unmistakable even by the blindest, of the foolish and expensive character of the silver law. It would be clear that we are spending $2,000,000 a month, besides losing interest on the millions of silver accumulated on hand, for no purpose except to afford a market for the silver kings. By pushing the silver into circulation, and making it seem valuable as currency, the evidence of the real state of the case is obscured, and the repeal of the act of 1878 is thereby delayed.

In the second place, the issue of silver, especially in the insidious form of silver certificates, tends, by inflating the currency, to disturb the equilibrium of our foreign trade and cause gold to be exported. Every call for gold comes eventually on the Treasury as the holder of the ultimate reserve. Every issue of silver certificates is likely to cause an equal amount of gold to be exported. Obviously, then, the only sure way for the Treasury to keep its gold is to keep its silver. If the silver were allowed to accumulate in the Treasury it would be as harmless, as regards the currency, as if it were still in the mountains of Nevada. The most that the Treasury could hope to gain by suspending gold payments in its ordinary disbursements would be the power to keep clutch, for a little while, of the gold it now owns, say, $115,000,000. In a former letter I have given reasons for believing that it could not even do this in case of a premium on gold. But granting that it could, $115,000,000 would not go far in payment of the public debt, interest and principal. Once paid out, it could not be recovered again except by paying the current premium for it, since the Treasury has now no source of gold revenue. Clearly, then, it is the interest as well as the duty of the Treasury to maintain the ordinary currency of the country on the gold basis as long as possible, since this is the only condition under which it can make sure of receiving its revenues in money of as good quality as it stands pledged to pay to the public creditors. The simple and only possible way of achieving this is to pay out fearlessly its gold on demand, leaving the silver and silver certificates for those who want such things in preference to gold.

S. M. Macvane.

Cambridge, Mass., August 4, 1884.

THE *ADVANCE* AND THE CLEVELAND SCANDAL.

To the Editor of The Nation:

Sir: In your last issue you allow a correspondent to assert that the *Advance*, "a so-called religious journal," printed a letter from a Rev. Mr. Hurst, of Buffalo, N. Y., containing the scandal about Governor Cleveland.

Allow me to inform your readers that the *Advance* has not received any letter from a Rev. Mr. Hurst in Buffalo, nor has it ever printed any charges against Governor Cleveland.

Your correspondent doubtless refers to a letter written to the *Advance* by the Rev. Dr. Ball, of Buffalo, charging Governor Cleveland with immoralities. This letter we did not print. The original letter is in my possession, though without my consent or knowledge a copy of it was telegraphed to the San Francisco *Chronicle*, July 16, 1884.—Very truly yours,

Robert West, Editor *Advance*.

Young's Hotel, Boston, August 11, 1884.

MR. BLAINE'S SPEAKERSHIP RULINGS.

To the Editor of The Nation:

Sir: Can you tell me, either through the columns of your paper or otherwise, of any cases in which Mr. Blaine, while Speaker of the House, made unfair or illegal rulings, or unjustly exercised his power as Speaker for his own ends, whether to enrich himself or to assist his friends; that is, whether his rulings, whatever their motive may have been, were not in fact correct and impartial in all cases?

By this inquiry I desire to discover whether the opposition to Mr. Blaine depends upon a belief that he was *capable* of prostituting his power as Speaker to his own private ends, and willing to do so, which is all that his opponents claim is shown by the Mulligan letters, as I understand it—not that that is not a sufficient ground for opposing him—or also upon facts, upon what he actually did as Speaker. Friends of mine who support Blaine contend that, whatever we may argue he might have been willing to be guilty of, he was in fact always impartial and upright in his official acts, and argue from this that his opponents have drawn an unfair and unjust conclusion from the Mulligan letters.

If, therefore, you can give me the facts as to Mr. Blaine's record as Speaker, you will very greatly oblige, Yours respectfully,

SAMUEL H. ORDWAY.

34 WEST THIRTY-EIGHTH ST., NEW YORK, August 9, 1884.

TO THE EDITOR OF THE NATION:

SIR: Mr. George Alfred Townsend's present unbounded admiration for Blaine may give your readers some interest in the following extracts from his book, 'Washington, Outside and Inside,' published in 1873. In chapter xxvii., which treats of the Crédit-Mobilier swindle, he says:

"It will ever be a subject of scandal to an inquiring posterity that Schuyler Colfax, as well as his successor, James G. Blaine, kept at the head of the Pacific Railroad Committee in the House of Representatives this Oakes Ames."

In chapter xxxvi, page 665, after speaking of the refusal of the Senate to concur in the House "salary grab," Mr. Townsend says:

"The bill then went, of necessity, to a conference committee. Speaker Blaine now took a hand in the game, and appointed as the House conferees Garfield, Butler, and Randall, *knowing that the two latter were in favor of a larger increase of salary than the House had at any time endorsed. They were both advocates of a beaten proposition, and it was in violation of a well-recognized principle of parliamentary practice to appoint either of them on the Committee.*"

I use italics merely to call attention to this as one of the many proofs that Mr. Blaine was not above prostituting his power as Speaker in order to aid measures which, if successful, would benefit his own pocket-book.

Again, on page 479, after mentioning the fact that many Representatives and Senators were arguing that a public man has a perfect right to own railroad stocks, etc., Mr. Townsend says:

"If this point be admitted, the tone of Congressional life would at once be set ten degrees lower than heretofore; for up to this time it has been to such an extent dishonorable to hold stock in affairs requiring recognition of any kind from Congress, that men like Mr. Colfax made a profound secret of their investments under this head."

Although this is made as a general statement, yet we can readily see that it applies to Mr. Blaine.

Mr. Townsend closes the thirty-sixth chapter of his book with an editorial article of the *Nation*, denouncing the corruption which had crept into the Government and setting forth clearly the reforms which the country was in need of. And yet to-day he is engaged in ridiculing reform, and in working hand in hand with the very element which formerly he united with the *Nation* in exposing and denouncing. But Mr. Blaine was not a candidate for the Presidency in '73. W. H. JOHNSON.

MR. BLAINE AND THE THURMAN ACT.

TO THE EDITOR OF THE NATION:

SIR: Will you either state briefly Mr. Blaine's reasons, while in the Senate, for voting against the Thurman bill, and thereby abetting the Union Pacific ring; or will you kindly refer me to the place where I can get his official word? I think it probable that he never spoke on the subject, as he was not in the habit of putting himself upon record on questions of national importance—when he could help it. But as the Union Pacific business may have interested him personally, perhaps he broke through his rule.

AN ANTI-MULLIGAN VOTER.

PHILADELPHIA, August 6.

[The debate on the Thurman act began in the Senate on March 12, 1878, and continued at intervals until April 9. The *Congressional Record* for those dates contains the official account of the long controversy. Mr. Blaine refused to support the original bill, and introduced an important amendment that "so long as the Central Pacific and Union Pacific Railroad Companies shall faithfully comply with the provisions of the said acts of 1862 and 1864, and of this act relating to payments to the United States on account of the bonds advanced, and of the sinking funds to be established as aforesaid, such compliance shall be deemed and taken as sufficient to meet the obligations of said companies on account of such bonds prior to the maturity thereof." A proviso was added that the annual payment from each company should not be less than $600,000, and that nothing should be construed as waiving any claim of the United States against either of the companies. Mr. Thurman bitterly opposed this amendment, and in explaining its full force said: "That amendment goes upon the idea that we ought to make an act that shall be unchangeable for twenty years. It goes upon the idea of repealing *pro tanto* the reserved power in these charters to alter, amend, or repeal those acts." He added: "One of the things for which these railroad companies have been striving these many long years has been to get rid of that very reserved power. . . Rather than see Congress give up that power of control over these two great corporations, I would see every dollar of the debt they owe the Government lost forever." The amendment was lost, 23 to 35, and Mr. Blaine said: "I cannot vote for the bill without it, but I should be very happy to find in the event of future years that I vote unwisely." The bill was carried, 40 to 20. Among those who voted with Mr. Blaine in the negative were Dorsey, Spencer, Kellogg, Saunders, and Stanley Matthews. "The event of future years" has at least shown that Mr. Blaine voted in very bad company.—ED. NATION.]

THE MUCK-RAKE.

TO THE EDITOR OF THE NATION:

SIR: Will you please give me authorities concerning scandals about Washington, Jefferson, Hamilton, etc., referred to in your article in defence of Cleveland; or else publish in next number of *Nation* extracts proving the assertions you have made?—Yours very truly,

THEO. W. NEVIN, Ed. *Leader*.

PITTSBURGH, PA., August 9, 1884.

[We shall, without meaning any disrespect to our correspondent, do nothing of the kind. One of the strongest objections to the introduction of these filthy charges about sexual immorality into political canvasses is, in our opinion, that it is calculated to set on foot inquiries of this kind into the lives of all manner of people, and fill the press and the public mind with what it is not too strong to call "smut." If the disgraceful precedent se in Cleveland's case were followed, people would have to exclude newspapers from their homes during every political campaign, and the authors of obscene literature would become for a brief season political personages.—ED. NATION.]

A DEMOCRATIC DUTY.

TO THE EDITOR OF THE NATION:

SIR: Why should not the Democratic Campaign Committee attend to the prosecution of their opponents who violate the law relating to collections of campaign funds from Government employees? It is clearly within the scope of their duties—as much so as in time of war it would be a commander's business to destroy an enemy's ammunition train. And their failure to do so, while crying out against the enormity of the Republican act, could only be ascribed to an intention to commit a similar offence should opportunity offer.

As one watching to bestow wisely a vote, I am interested in their action. C.

August 9, 1884.

PROHIBITION AND DEMOCRACY.

TO THE EDITOR OF THE NATION:

SIR: In an editorial paragraph in your issue of August 7th, you use the words "Democrat" and "prohibitionist" as if they were mutually exclusive. It would be interesting to some of your readers who are prohibitionists, and who yet consider themselves Democrats, to know the line of reasoning by which you convict them of political inconsistency.

Some time since the *Nation*, in speaking of the amount of distilled spirits in bond in the United States, remarked that "the amount of human misery, the murders, the fires, the suicides, the defalcations, the loss of property and health, the divorces, the family shame and sorrow stored up in this amount of liquor is simply incalculable. *In fact, it is not too much to say that every whiskey warehouse is like a little volcano, ready at a moment's warning to send little rivulets of flame and desolation over the country.*"

A prohibitionist, as I understand the term, is one who, believing the whiskey traffic to be as dangerous as the *Nation* represents it to be, maintains that the majority of the voters in the country, if they so decide, have the right to protect themselves by law, as far as may be, from such a prolific source of danger. Most civilized cities now prohibit the sale of fireworks for use within municipal limits, on account of the casualties that result from their use in crowded areas, and I have yet to learn that such prohibition has ever been considered undemocratic. Must we, then, be forced to tolerate at every corner whiskey warehouses and grog shops, which the *Nation* very aptly describes as little volcanoes sending forth rivulets of flame and desolation, because it would be considered "undemocratic" to attempt to protect ourselves?

We may be told that liquor is a legitimate article of commerce; that thousands use it innocently, without harming others; that the real criminal is the drunken man, not the seller of the whiskey. All this may be granted. But if it is found in actual experience that the evil results of the liquor traffic far outweigh the good results, and that the two cannot be separated in practice, then, without going into philosophic

refinements, the people are at liberty if they so choose to attempt to abolish the whole traffic. And this is what they seem to be slowly making up their minds to do. If this is treason to Democratic principles, an immense secession from the Democratic ranks is impending.

Respectfully, LAWRENCE TURNBULL.

BALTIMORE, August 9, 1884.

THE READING HABIT AT THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: In your issue of the 24th of July, under the head of "Notes," it is stated in substance that a "Reading Circle" had recently been formed in North Carolina; that this "circle" is the first systematic attempt to cultivate a taste for reading in the South; that a taste for reading, even among college-bred men, does not exist in the South—as had been "admirably pointed out" by Mr. Walter H. Page in the *International Review*. Southern people have been disposed to laugh at such statements as these instead of denying them, believing them to emanate from persons who, not desiring to know the truth, are incapable of receiving it. In this belief they are probably mistaken. At any rate it may be as well to continue to laugh, but not to be silent. I, therefore, beg the use of your columns to state one or two facts, and to say a few words in regard to Mr. Page's "admirable" article in the *International Review*.

First as to the facts. There are within a radius of forty miles of this little town six organizations, under the various names of "Reading Club," "Reading Circle," "Literary Club," etc., that meet at stated times for the purpose of reading and discussing literary and social questions. (I am prepared to give all particulars—localities, names of officers, and their post-office addresses—to the *Nation*, Mr. Page, and other sceptics and unbelievers.) There are many other such organizations in this State, and there always have been such organizations from an early period of the State's history to the present time. Until the statements above mentioned appeared in the *Nation*, I had not supposed that any one who pretended to the slightest knowledge of the condition of the South was ignorant of such easily ascertained and generally well known facts.

A word as to Mr. Walter H. Page's "admirable" pointing out of the fact that Southern people, even when college-bred, do not read. I have not seen Mr. Page's article, but assume that what he means to assert is, that, as compared with the people of the North of similar education and opportunities, the people of the South are small readers. In other words, I take it for granted that Mr. Page measures the Southern people by an actual, and not by an ideal standard. Now, knowing nothing of this article except that so high an authority as the *Nation* thinks it "admirable," I venture to assert that the process by which Mr. Page reaches his conclusion is a compound consisting of a "ton of inference and an ounce of fact"; that if called on to do so, Mr. Page could not name one hundred college-bred Southern men who do not read, or one hundred college-bred Northern men who do; that he has not stated, and cannot state, facts that would justify unprejudiced men, who understand the simplest principles of observation and inference, in accepting his conclusion with any degree of confidence; that such facts as he may have adduced have been "looked at through the spectacles of an hypothesis," and are almost, if not altogether, useless for the purpose for which they have been cited.

In what I have said I of course mean no disrespect to Mr. Page personally, nor to the *Nation*. And it is barely possible that in accusing Mr. Page of bad logic I am in error. If so, I tender my sincere apologies and offer two excuses: First, he has reached very definite and decided conclusions in regard to a question of which the facts are very numerous, obscure, spread over a vast territory, and exceedingly difficult to ascertain; and second, he is, like dog Tray, in bad company. The great majority of persons who write about "the South"—that prolific theme for homilies, sermons, and lamentations—show either bad temper, bad information, or bad logic, and sometimes all three at once. I am happy to say the bad temper is, I believe, rapidly passing away, and therefore a change for the better in every respect may be confidently looked for.—Very respectfully,

G. W. DARGAN.

DARLINGTON, S. C., August 2, 1884.

[Mr. Dargan's statement of facts in no wise disproves our assertion that the Reading Circle recently established in North Carolina is "the first systematic attempt to cultivate a taste for reading in the South." Such reading clubs as he mentions, it is admitted, exist in nearly every Southern town, but their aims and methods are quite different from those which, it is supposed, will mark the one noticed by the *Nation*. The object of the reading clubs to which he refers is merely to destroy the ennui of country existence and to get the young people together. Systematic, thorough, and stimulating work seems to be the aim of the North Carolina "circle."

Mr. Page considers that the greatest fault of Southern education is the lack of stimulation to reading, and maintains that the training which the "graduates" receive is not such as to encourage investigation. The result is a lack of intellectual life. Mr. Dargan seems to be convinced that the animus of Mr. Page is bad, and that his opportunity and ability for observing have been slight. In this he is mistaken. Mr. Page is now doing vigorous educational work in North Carolina—his native State—as the editor of a newspaper, and has for years shown a zeal in making manifest the wants of his people, and in urging them to recognize and supply them. His acquaintance with Southern educational methods and their defects may be inferred from his having attended during his youth Southern colleges, and from his having occasion to compare them with Johns Hopkins, at which he obtained a fellowship, and with the universities of Germany, which he subsequently visited, as we are informed. In view of this, Mr. Page's description of the methods and effects of Southern education is entitled to more credit than Mr. Dargan seems disposed to give it. At any rate, it is hard to believe that it was suggested by a carping spirit, or hastily drawn after a mere glance at the schools and colleges of the South.—ED. NATION.]

Notes.

IN connection with our recent review of the 'Life of F. D. Maurice,' we should have mentioned that the American publishers of this work are Charles Scribner's Sons.

Mr. Albert R. Frey, of the Astor Library, sends us specimen pages of a comprehensive 'Dictionary of Pseudonyms,' which he has nearly completed, and which embraces American, English, French, German, Dutch, and Spanish authors. He desires to "receive from authors who have employed pseudonyms with which he is unacquainted, both their real and false names." The title of the work will be 'Masques, a Dictionary of Literary Disguises.'

G. P. Putnam's Sons will issue at once in their Transatlantic Series 'The World We Live In,' by Oswald Crawfurd, author of 'Portugal, Old and New'; and, in the Knickerbocker Novels, 'The Bassett Claim,' by Henry R. Elliott.

'An Unfortunate Woman' and 'Assya,' two of Turgeneff's novels, will be shortly published by Funk & Wagnalls, who have also in press 'Rutherford,' by Edgar Fawcett.

Mr. Benson J. Lossing has prepared, and will shortly issue by subscription, a new 'History of New York City.'

'Great Truths by Great Authors,' a dictionary of useful quotations, and 'The Enchiridion of Wit' are among the announcements of J. B. Lippincott & Co.

Porter & Coates, Philadelphia, announce two illustrated works, 'From Greenland's Icy Mountains,' Bishop Heber's hymn, accompanied by twenty-two original drawings, by Frederick B. Schell; and Tennyson's 'Lady Clare,' with drawings by Fredericks, Church, and other artists. They also promise the fourth and concluding volume of the Comte de Paris's 'History of the Civil War in America'; a teachers' edition of Smith's 'Dictionary of the Bible,' and many other new editions of standard works.

The illustrated works undertaken by Estes & Lauriat, Boston, are Dickens's 'Ivy Green,' 'The Last Rose of Summer,' and 'Poems for Christmas, Easter, and New Year's,' by Hezekiah Butterworth. They have besides in press 'Great Events of the World,' by R. Warren Brown; 'The Land of the Incas and the City of the Sun,' by W. H. Davenport; a 'Concise History of the Netherlands,' by Alexander Young (this, too, illustrated freely); 'Three Vassar Girls in South America,' by Lizzie W. Champney; 'Young Folks' History of Edinburgh,' by Fred. H. Allen; 'Young Folks' History of the Reformation,' by the same author; and 'Young Folks' History of London,' by Wm. H. Rideing.

A volume seemingly calculated for hotel parlors and steamboat saloons, like Mr Frank P. Hill's 'Lowell Illustrated' (Lowell, Mass., 1884), still serves other than advertising purposes. Its mostly photographic views will gain value with the lapse of time, when old landmarks have been removed and changes as great as those observable in the two general views 1834 and 1883 have taken place. The business streets, the private residences, the churches, and the mills of to-day have here an immortality which is denied the real objects. The book is well supplied with statistics concerning each plate, and particularly with a chronological record of events and with a full account of the various ecclesiastical organizations. The most curious industry recorded is the very recent and very large one of the manufacture of "cash railways"—substitutes for the boy messengers commonly employed in large retail establishments. The albertype prints vary in quality, but are in the main excellent, and some are truly picturesque. The new bridge is a very graceful design.

A new biography of Samuel Johnson, under the title, 'Dr. Johnson: His Life, Works, and Table Talk,' by Dr. Macaulay, editor of the *Leisure Hour*, is announced by T. Fisher Unwin, London. It will be one hundred years in December since the great lexicographer died.

The two volumes in plain green cloth and clear soft letter-press by which Macmillan & Co. have signalized their becoming the publishers of Tennyson, are of faultless simplicity in execution, as a book of poems ought to be. These first two

of the seven volumes which are to comprise all the poet's works, contain the juvenile poems, the English idyls, and the larger part of the miscellaneous pieces which are most familiar to the people. The revision they have undergone is slight.

B. Westermann & Co. send us the new 'Annuaire Diplomatique et Consulaire des Etats des Deux Mondes,' for 1884. This is its third year of publication, and the useful little tender to the venerable 'Almanach de Gotha' now emulates the latter by beginning a series of portraits on its own account. These are naturally confined to the diplomatic corps, and Lord Lyons leads off. The plate is photographic.

From the same house we have the prospectus of a new French dictionary, which apparently will resemble Webster more than any similar work in French or German. It will be called the 'Dictionnaire français illustré des Mots et des Choses,' or, as a sub-title explains, an (illustrated) encyclopædic dictionary for schools, trades, and practical life. The editors are MM. Larive and Fleury; the publisher, G. Chamerot, Paris; the mode of publication, in weekly instalments of 16 pp., 4to, commencing in October; and the time of completion, about a year and a half. Each of the seventy to seventy-five parts will cost eighteen cents, duty included, or ten dollars paid in advance will secure the entire work. Specimen numbers may be had gratis on application to Messrs. Westermann until January 1.

The *Newport Historical Magazine*, having steadily grown in favor, size, and value, takes with the July issue the name of *Rhode Island Historical Magazine*, to which it is fairly entitled. This number is adorned with a steel portrait of Dr. Solomon Drowne, and contains, among other articles of interest, a summary view of the origins of the Perry family in this country. The kinship of Gen. Nathanael Greene and Com. Oliver H. Perry incidentally appears, through a Quaker ancestor, Edward Perry. General Greene's mother was a Quakeress, Mary Mott.

As we have frequent inquiries for the source from which we derive the evidence as to Mr. Blaine's railroad transactions, we will say here that it is House Miscellaneous Documents, 176, 44th Congress, 1st session.

We are requested to assist in making public the fact that the Toronto *Week* is now under the editorial conduct of Mr. W. Philip Robinson, formerly editor of the Hamilton *Tribune*.

We receive from J. W. Bouton the illustrated catalogue of the Luxembourg gallery, containing about 250 reproductions from drawings by the artists, "processed" in the usual manner of illustrated catalogues; also a series of numbers of *L'Art*, the illustrated journal of which, as heretofore, the illustrations are the more noteworthy portion of the contents. The faculty of sound criticism, in which French journalism so long held the easy preëminence over all European journalism, is nowadays distinctly less visible in the mass of critical effort—in *L'Art* as elsewhere. One longs for a whiff of Théophile Gautier in place of the personal adulations and studio flatteries which pervade more or less all French contemporary criticism. It is not, perhaps, that they do not know, but that *cameraderie* prevails over conscience—if there were any of the latter.

The *Art Interchange* presents in its *illustration de résistance* an allegory of Alfred Stevens's—"Le Printemps," a young lady, a triumph of fashionable millinery, growing out of the roots of a tree; blotchy, wooden, like a return of Daphne out of the laurel, which has become a dubious beech. The whim is absurd, and the print ugly—the maundering of art and the apotheosis of the ridiculous. It is possible that it libels the picture, but not probable. The art of Mr. Stevens is at its best a kind of fashion-plate work, and his imagination is a void. Of late years he does not even take the pains to do his mantua-making properly.

The *Art Union* for June-July has an unusually attractive face. The frontispiece, "The Dusty Cupid," processed from a drawing by F. S. Church, is one of the most thoroughly *Greek* designs thus far produced on this side of the Atlantic—indeed, it is rare to find anything modern of any school so antique in feeling, slight though it be. Mr. Perry's "Sower" is, with a suggestion of Millet, an admirable piece of design, full of go and good drawing; and the "Sunlight and Shadow," after Walter Shirlaw, is a broad and solemn study of white and black. An article by A. J. Conant, on the art tariff and other topics, shows a curious facility in misunderstanding some of the themes it treats of. "There was no immediately antecedent or contemporaneous Greek art for Italy to protect itself against. Greek art was dead and buried centuries before the Renaissance. Not one painting of the Golden age of Greek art was in existence then." Then, quoting Vasari and Lanzi on *Byzantine* art, Mr. Conant goes on to say: "Sufficient has been quoted from these high *authorities* [neither Vasari nor Lanzi has any authority in the teaching of art, but only in its history, not being sound at that] to show that the Renaissance, so far from receiving any beneficial impulse from *contemporary* Greek art [having just said that there was none], was rather retarded in its development by it, and protection against such art would have been a blessing." And what of the Pisani, and the Greek statues, and the frescoes of the Baths of Titus, which changed the whole aim and character of Italian art? An article on the Philadelphia Schools is interesting to intending students of art.

The first number of the new series of the *Studio*, under the editorship of Mr. Clarence Cook, opens with a salutatory in excellent taste, followed by a series of good and sound criticisms on recent statues, and sensible thoughts on our art protection.

Two heliographs from a picture called "Dakota," by Professor Carl Gutherz, of the Art School of Washington University, St. Louis, have come to us. The scene is a flat prairie, with what seems to be a ploughing match in the foreground. Of course, we cannot judge of the color and aerial qualities of the picture by the heliograph, but so far as that goes we see no special character in the picture to call for commendation. It seems a dull, matter-of-fact representation, and the size, which we are informed is fourteen by five feet, may count for something in covering walls, but has nothing to do with art, which in turn has little to do with the picture.

The Boston Public Library has lately come into possession of a manuscript copy of Joutel's narrative of La Salle's expedition of 1684–87 to the Gulf of Mexico, for the discovery of the mouth of the Mississippi, as prepared for publication by the editor Michel. In all likelihood it is the original copy submitted to the Royal Censor, as it bears the latter's approval in autograph. The printed edition which came out in 1713 shows some verbal changes from the manuscript text, which were made apparently in conformity to the requirements of the Censor, expressed in a note appended to his permission of the publication.

The Berlin *Boersen Courier* states that within four days of the announcement by Siegmund Bensinger, of Prague, of his new illustrated edition of Heine's works, no less than 100,000 copies of the first Heft were sold.

Wigand, the Leipzig publisher, has just brought out a little volume of 208 pages upon Turgeneff, by Eugen Zabel. The life and works of the great novelist are considered in the following order: Turgeneff's youthful years and first essays in poetry; the first prose stories, 'The Diary of a Sportsman'; novels dealing with serfdom; friendship with Pauline Viardot; the "Culturromane"; Turgeneff's fantastic novels; lyrical and dramatic poems; last years in Paris. The book ends with a discussion of his personality, and the purport and significance of his literary work, especially as regards Russia.

A very sane and learned article, written with a light touch, by Victor Fournel, and having for its subject "Bibliographie et Iconographie Moliéresques," introduces *Le Livre* for July. The various obscure points in the life of Molière are reviewed in order, with independent conclusions. M. Fournel favors the discreditable theory of the dramatist's second marriage. In regard to the scarcity of the latter's manuscript remains, he says: "The finding of a letter of Molière's would throw into the shade the discoveries of Livingstone and Stanley." In this particular a resemblance to Shakspere is remarked. The second paper is on the libraries of the prisons in the Department of the Seine, and is curious. "The librarian is always one of the prisoners," and "the directors require a man who not only has the necessary qualifications for the post, but whose term is comparatively long—a year at least." When these conditions are fulfilled, the man is not always willing to serve, preferring the confinement in his cell which a recent law rewards by shortening his term by one-fourth. A copy of the Vanloo portrait of Diderot is *Le Livre's* pictorial contribution to his centenary, in this number.

The Associazione Tipografico-libraria Italiana, which has already done good work for Italian bibliography in the publication of the great 'Catalogo collettivo della libreria italiana' (Milan, 1881), now brings out an 'Annuario delle librerie e tipografie e delle arti affini in Italia.' This is the first time that an annual of this kind, modelled on the German and French annuals, has been attempted in Italy. It is published on the occasion of the National Exposition, and forms a large volume of upward of 400 pages. That such a publication has become possible shows the marked advance that the book arts have made in Italy. The Italian book production now annually averages about 7,000 separate works, not counting fugitive publications, etc., the editions of which amount to nearly 20,000 volumes. The journals attain a circulation of about 100,000. These figures would indicate a great augmentation of readers in late years, as well as increased importance in the position of the book and printing industries. The first part of the 'Annuario' is devoted to the laws relating to printing associations, literary property, etc. The second contains a register of publishers, printers, etc. From this it appears that there are 1,437 printing establishments, 1,845 publishers and booksellers, 393 lithographers, 24 manufacturers of printing materials, 51 type founders, 599 binderies, 327 paper manufacturers. A list of 38 journals devoted to bibliography and typography is appended.

—We have received a circular of the Ledyard Jay Atwater Forestry Company (limited), a company organized by Mr. L. J. Atwater, of Waverly, N. Y., its secretary and general manager, for the purpose of raising forests, to replace the forests already destroyed, to save disappearing forests, and urge the importance of practical forestry upon the owners of timber lands, to "save our country by saving its cli-

mate from destruction, and to make money." The shares of the company (the amount of the capital stock is not mentioned) are one dollar each, and, moreover, each share may be owned by four persons. In twenty-five years these shares, Mr. Atwater informs the public, will sell for one hundred dollars each, and "to those who take hold of this scheme *now* there are assured enormous profits." The existing railroads of the country, we are told, require one billion acres of forest to supply their ties, and the General and State Governments "will give the company all the land it will plant trees upon." We venture to assert that the stockholders may rely on this implicitly. In connection with the prospectus of the scheme a circular letter is addressed to a number of well-known gentlemen requesting them to serve as directors of the new company. They are not asked to subscribe to the stock, and in return for the use of their names are promised the privilege of examining the books of the company—a privilege which is to last through life, without regard to the fact that they may have resigned their positions of directors in the meantime. We suggest to any of our readers who may, from patriotic or even from purely financial motives, feel inclined to intrust their money to Mr. L. J. Atwater, that they investigate the capacity of that gentleman to inaugurate and put into execution a great scheme of this nature. At the present writing his fame as a forester, tree-planter, financier, or philanthropist has not extended far beyond the shades of Waverly.

—Heine's literary remains are likely to rival Junius as the subject of endless discussion. Mr. von Gottschall aptly compares the memoirs to the sea serpent, as regards both the nature of the topic and the perennial interest which it excites. The German editor of the fragment lately published, while not denying that complete and voluminous memoirs have existed, ingeniously demonstrates that nothing except this fragment is extant. The papers which Gustav Heine possesses, and declares to be the only genuine and original memoirs, are explained away as writings, however interesting and valuable, of quite a different character. They probably consist, according to the editor, of a miscellany comprising the sixty-seven sarcastic poems addressed to Friedrich Wilhelm IV., and a prose work on Napoleon III., as well as numerous letters. The first two are known to have passed, at Heine's death, into the hands of F. Friedland, who tried to sell them to the French Government, and from whom the poet's brother is supposed to have got them. As Mr. von Gottschall remarks, all this *may* be true, yet we need not be surprised should the work in Gustav Heine's possession some day prove to be what he asserts. And all these papers, even if in existence, may never be laid before the public, Gustav Heine being the most pronounced dog-in-the-manger known in literary history. But it now appears that there is another mass of papers which, though not written by him, are certainly part of Heine's remains, and which are likely soon to delight those who enjoy familiarity with the scandalous episodes in the life of a man of genius. These papers are owned by the same person (Julia) who furnished the MS. of the published fragment, and consist of 1,150 letters, chiefly from members of the Heine family and publishers. One Cohn, well known to readers of German periodicals under the pseudonym of Paul d'Abrest, but who, according to E. Engel, the editor above mentioned, bears a not very enviable reputation, writes to the *Magazin für die Litteratur* that whoever should publish the letters would disgrace himself, as well as (probably) become involved in litigation. Commonly, however, law suits are the best advertisements in such cases.

—Spielhagen thinks he knows how to write novels, and has undertaken to teach the world how it should be done (see *Nation*, No. 914); but he is not equally proficient in playwriting, as appears from a Russian letter in the *Revue Suisse*. His "Gerettet" failed utterly in St. Petersburg last spring, notwithstanding that a great attempt was made to give it what in this country we should call a boom. A friend of Spielhagen's, Herr Michelson, who has a seat in the Municipal Council, procured a hasty vote that a deputation should be sent to receive the distinguished author. The next day reconsideration was voted, and the further consideration of the matter was adjourned to the day after Spielhagen was to enter! First check. On the night of the play the house was packed with friends bearing a silver crown for presentation. The applause was furious at the rising of the curtain, warm after each of the first few scenes, moderate at the end of the second act, confined to Herr Michelson at the end of the third, changed to yawns at the end of the fourth. When the curtain finally fell every one hurried home, and it is said that poor Herr Spielhagen had to pay for the wreath, the subscriptions having fallen short.

—If Richard Wagner could have lived to superintend this year's performances of his last work at Bayreuth, he would have been delighted to find all his hopes and desires realized in an unexpected manner. When he died, some of his best friends doubted whether without his personal "magnetism" these annual festivals at the small Bavarian town could be kept up. Instead of losing in interest, however, the performances gain in popularity every year. This year extra trains were sent not only from Munich, but all the way from Vienna, which contributed no fewer than 500 spectators to the first performance. Among the notables present on the first two nights were the Queen of Greece, Prince Wilhelm, Alexander of Hesse, Princess Wjera of Würtemberg, and many other representatives of the German aristocracy. Of artists, there were present Liszt, Joachim, Wilhelmj, Servais, d'Albert, Joseph Rubinstein; the Wagnerian critics, Porges, Tappert, Wolzogen; the Minister of Public Worship, Puttkamer, etc. The artists were the same as in 1882, including Materna, Malten, Winkelmann, Gudehes, Scaria, Fuchs, Reichmann, etc. Every seat was occupied on the first two nights, of which alone the receipts have yet been learned; but these are sufficient to cover the expenses for the whole series. Franz Liszt had appeared at Bayreuth some time before the first performance in order to superintend the rehearsals. He sat in the same seat that Wagner used to occupy, and attentively followed the score. Wagner's widow, Frau Cosima, also took part in the rehearsals. Wagner had intended to make a number of changes and improvements in matters of detail, and these she caused to be introduced this year for the first time, since last year her grief at her recent loss was too intense to allow her to undertake the task. Even now she did not intervene directly, but took her position in a secluded corner behind the scenes, and allowed her oldest daughter to give the necessary directions. Frau Cosima has remained in the strictest seclusion ever since Wagner's death. This year her father, Franz Liszt, had been in Bayreuth a week before she had the courage to see him; and when a reception was held in her house after the first performance she did not appear, leaving her daughters and Liszt to take care of the guests. In the course of the evening Joseph Rubinstein played with Liszt the Philadelphia Centennial March. One of Frau Cosima's daughters, Daniela von Bülow, will soon be married to Fritz Brandt, the famous scenic artist. She and her sisters, Eva and Isolde, and her brother, Siegfried, were all present. Siegfried, who is in delicate health, is now sixteen years old, and shows a remarkable artistic but no musical talent, which is very strange in a boy whose father was Wagner and his grandfather Liszt. When Herr Scaria was last in New York he stated that this year's festival would be the last for some time. But, owing doubtless to the fact that the attractiveness grows instead of abating, the announcement is now made that next year "Tristan und Isolde" will be given at Bayreuth, besides "Parsifal," and in 1886 the Tetralogy will be repeated. An earlier repetition of this work was impossible, because Wagner had sold his rights for ten years to Manager Neumann, who produced it in various cities of Germany, Italy, Belgium, etc.

SHERIDAN.

Sheridan. By Mrs. Oliphant. [English Men of Letters Series.] Harper & Bros.

MR. MORLEY has, on the whole, been fortunate in the selection of writers for his biographical series, but he has made two gigantic blunders. Trollope's 'Thackeray' was till very recently the poorest life of a man of genius ever composed by an author of marked talent. Mrs. Oliphant's 'Sheridan' has now proved that a writer who had attained some success in biography could sink far below the level of such an awkward biographer as Mr. Trollope, when she undertook to write the life of a dramatist and politician whose wit she apparently does not greatly relish, and of whose public life she neither knows nor cares to know more than can be gathered from any biographical dictionary. The best thing any reader of Mrs. Oliphant's 'Sheridan' can do is to forget Mrs. Oliphant altogether, and, taking the simple and best known facts of Sheridan's career, try to understand, or at any rate to perceive the difficulty of understanding, a character and position so utterly different as that of Sheridan's from the character and position of any modern statesman.

If one tries to fancy the author of the "School for Scandal" as the member of a modern English House of Commons, one feels at once that one does not know where to place him. Seated side by side with Mr. Gladstone, Mr. Chamberlain, or Mr. Fawcett, Sheridan would appear as much out of place as on the bench of Bishops. Nor would he suit the Opposition a whit better than the Government. One cannot imagine that he would tolerate for a night the dulness of Sir Stafford Northcote or the insolent brutalities of Lord Randolph Churchill. Would he find himself more at home among his own countrymen? We do not believe it. The cool argumentativeness of Mr. Parnell would seem to him a very dull form of cant, and his own liveliness and eloquence would simply disconcert the dull and pertinacious factitiousness of the Home Rulers. It may, indeed, be said, and with truth, that the whole world of politics has changed since Sheridan breathed his last just sixty-eight years ago. It may also be suggested that very few of the statesmen among whom he mingled would be able to hold their own in modern England. But the suggestion, though plausible, is false. Pitt, North, Lord Liverpool, Perceval, Peel, and a score more of less known politicians would easily enough repeat their parts could they come to life again and share the debates of 1884. These men were all of them, with all their differences, essentially persons of the received parliamentary type. There is not the least reason to suppose that the causes

which made Peel or even Perceval Prime Ministers in their own day, would not operate still so as to bring the same men (could they reappear) into the prominent positions which they held during their lifetime.

But there are men with whom it is otherwise. Sheridan would have been conspicuous by his talents in whatever age he had lived; yet one finds it impossible to believe that in the present day he could have played the same part which he performed in his own generation. To try to understand why this is so is one mode of attempting to realize peculiarities both of his character and of his age. The peculiarity of his character was, that he possessed in the highest degree all the qualities of a brilliant wit and rhetorician. There is, in fact, a great deal in common between his dramatic and his oratorical success. In both cases you have extreme brilliancy without any great depth of insight. Every personage whom he puts on the stage pours out clever dicta. Not a single one of his *dramatis personæ* is in truth a character at all. The one possible exception is *Charles Surface*, for in *Charles Surface* there is, one may believe, a touch of autobiographical truth. So, if one may judge by the effect produced, it must have been with Sheridan's oratory. That his words did produce on his audience effects such as hardly ever before or since resulted from eloquence, is established by the surest testimony. The following anecdote, given by Mrs. Oliphant, is one out of many, and is in its way absolutely decisive:

"The late Mr. Logan, . . . author of a most masterly defence of Mr. Hastings, went that day to the House of Commons prepossessed for the accused, and against the accuser. At the expiration of the first hour he said to a friend, 'All that is declamatory assertion without proof'; when the second was finished, 'This is a most wonderful oration'; at the close of the third, 'Mr. Hastings is a most atrocious criminal'; and at last, 'Of all monsters of iniquity the most enormous is Warren Hastings!'"

But the speeches which produced such startling results left no lasting impression. Sheridan, like Whitefield, was a great rhetorician, not a great orator. Yet, be it noted, it requires no small gifts to be a great rhetorician either in the House of Commons or in the pulpit. Powerful rhetoric is based on a strong appeal to real and genuine feeling, and the man who can sway genuine sentiment has, it will be found, as well as the power of expression, that capacity for sharing true feeling which is itself a mark of greatness. The sentiment, indeed, to which Sheridan appealed is one which to a certain extent has passed away; it has even been so abused as to pass into a special kind of cant. We should look nowadays, and rightly enough, with a good deal of suspicion on the man who, like *Charles Surface*, relied on a good heart to cover a multitude of indiscretions; and in like manner calm judges would shut their ears to a great deal of the declamation poured out by the prosecutors of Warren Hastings. One should, however, always remember that there are ages during which the best men of their time feel that the one thing needful is to rouse men's generous emotions. At such an era the use of rhetoric is legitimate, and a rhetorician of genius exercises of right an influence which, at other periods, can be achieved only by leaders who appeal to reason and argument. After all, neither the generation who held Carlyle a great moral teacher, nor the young men who now crowd the lectures of Mr. Ruskin, can blame their forefathers for being dazzled by the rhetorical splendors of Sheridan. Admit, however, as any candid critic must do, that Sheridan's rhetoric, employed as it was in the cause of humanity, had a special fascination for his age; the question still arises, How was it that a man of Sheridan's talents and defects could, at the end of the last century, obtain a position in public life from which he would certainly be debarred at the present moment? Suppose that an author should arise who wrote comedies which interested and amused all England. Suppose that he should become the manager of Drury Lane; suppose that he should be known in every drawing-room of London as a wit; suppose, further, that he should be absolutely without any political connection, and that his debts should be as notorious as his *bons mots*. Can any one suppose that the doors of the House of Commons would at once fly open to our hero; that he would soon take a place on the front bench of the Opposition, and be able to look forward with hope to the highest places in the state? We all know that this question must be answered in the negative. But this answer means that what was possible to Sheridan would be impossible to any modern adventurer of Sheridan's calibre.

This conclusion is merely the result of one difference, of which we are all vaguely aware, but which we all constantly forget, between the England of to-day and the England of eighty or ninety years ago. In the England of to-day there is no place for that singular product of the eighteenth century, the patriotic political adventurer. Politics has ceased to be a game, or, at any rate, it has ceased to be a game with which one may win large pecuniary prizes. Of Sheridan it is probable, of Burke it is certain, that they each entered into public life with a sincere intention of serving the public interests. There is not the least reason for thinking that they either of them intended to pursue, or did pursue, mean objects of ambition. It is, however, certain—and more certain in the case of Burke than of Sheridan—that they each looked upon politics as a career in which an honest man might honestly make a fortune, just as a modern lawyer, however high-toned, looks upon the bar as a profession which ought to pay those who serve it. Sheridan no doubt wasted his resources, just as a brilliant advocate may be so prodigal in his expenses that his fees, though they amount to thousands, will never keep him out of debt. But the fact to note is, that the mere going into politics was not, in the case either of Burke or of Sheridan, anything like the reckless act which it would be in the case of a modern author or dramatist. Burke, Sheridan, Canning, and hundreds of others whose names have been forgotten entered into public life just as naturally as young men of talent now turn to the bar or to the press; they sought for a career, for fortune and for influence, in public life, and attained such success as flowed from their different talents and characters. At the present day no Englishman of spirit who needs to make a fortune enters into politics. A modern Sheridan would never, with all his recklessness, push his way into the House of Commons; he would hardly be able to enter the House if he wished it; he would still more certainly have no wish to enter it. Sheridan's permanent claim to interest as a statesman is that he was the most brilliant, if not quite the greatest of patriotic adventurers. A biographer who is more interested in Sheridan's domestic difficulties than in his public life will never understand or teach others to understand either the times or the genius of Sheridan.

EXPENSES OF UNDERGRADUATE EDUCATION IN ENGLAND.

Where Shall I Educate My Son? By C. E. Pascoe. London: Houlston & Sons. 1884.

UNDER the tempting sub-title of "A Manual for Parents of Moderate Means," Mr. C. E. Pascoe has compiled a little volume of statistical information connected with school expenses in England, a résumé of which may prove instructive to such of our readers as would like to compare English educational expenses with American. Notions so exaggerated prevail concerning the expensiveness of insular educational institutions that a temperate discussion of the matter, shown from the abundant figures quoted by Mr. Pascoe, may remove false impressions, and enable us to form a juster estimate of the real condition of things in perfidious Albion. There is in England to-day a vast number of impecunious gentlefolk, and persons belonging to the obscure and shifting complex called the middle classes, to whom the question of educating their sons is an urgent one. How shall I get my son elected into such and such a school? Where shall I find a good school whose annual charges do not exceed twelve or fifteen guineas? Such are some of the important questions addressed to the various educational agencies by retired officers of the army and navy, professional and business men, clergymen, literary toilers, and members of the huge *mare tenebrosum* midway between the titled and landed aristocracy and people who earn a livelihood by manual labor. Doctors, clerks, widows left with children on their hands, and other persons of honorable record but slender means, are asking themselves these or similar questions constantly, and it is to answer such inquiries, in brief but comprehensive compass, that Mr. Pascoe has undertaken his self-imposed task.

The greater public schools of England have always had a mysterious attraction for cisatlantic readers of 'Tom Brown.' The wonderful beauty of many of these ancient structures, their venerable and hallowed associations, the poets, historians, and statesmen who have gone out from their precincts, the lovely verdure of their cloistered quadrangles, and the immemorial ivy that garlands their chimneys and gables, render the external shell peculiarly fascinating to the foreign visitor, who, full of the crude wine of unripe civilizations, enters one of these cloistered masses of architecture for the first time, and feels at once the spell of the spot and the eloquence of the associations. What can be the internal life of such places, he cannot but wonder; how does one get in, and—practical question—what does one pay for all this mellowness and beauty and picturesqueness when one's name is once for all put down in black and white in the great book? The answer to this is that the cost of a boy's education at an English public school of the first rank, such, for example, as Eton, Harrow, or Rugby, seldom falls short of £100 a year, and frequently considerably exceeds this sum. And so great is the heat of competition in the examinations for "elections," or special privileges, that 100 or 120 guineas per annum are sometimes paid tutors by ambitious parents in order that their boys may be coached to the point of perfection requisite to succeed brilliantly in the competition.

The most beautiful and charming spot in England is, perhaps, Eton College, with its soft suburban landscape, its great sweep of verdure and foliage in the park of Windsor, and its atmosphere of rich and cultured repose. Here there are seventy competitive foundation scholarships, twelve of which are usually vacated every year. Once elected to a foundation, or "into College," as it is termed, a boy is secured from payment of fees, and his expenses are commonly altogether personal, as he will receive free board and education within the College walls. But in a school like Eton, distinguished as the "stamping ground" of the young aristocracy, even this would probably mean an expenditure of hardly less than £60 a year on the part of the elated parent.

Winchester College and Westminster School

London, come next to Eton in the fulness and wealth of their opportunities for the aspiring bourgeoisie—Winchester possessing, like Eton, seventy foundation scholarships with eleven yearly vacancies, each scholar paying £7 per annum only; and Westminster forty foundation scholarships, which permit their incumbents to attend the school at an expense of $150 a year. For 300 years the scholastic fame of this great London school has gone on increasing, and its comparative cheapness—its "home boarders" average in their yearly expenses about £50 a year—and the many advantages it offers to parents living in or near the city, have contributed to make it very popular. To be a Queen's scholar at Westminster is a high honor indeed, and the competition is, of course, great.

Shrewsbury, Rugby, and Harrow have various methods of helping clever boys and lessening the expenses of their education and maintenance. At Shrewsbury only the sons of Shrewsbury burgesses are at present eligible to the foundations. There are nine "foundationers" at Rugby and six at Harrow, places valued variously at from £80 to £20, which, deducted from the total £120 required for a boy's annual expenses at Rugby, or the £113 required at Harrow, will show the amount of help rendered a successful competitor at these schools. At Charterhouse School the ordinary annual expenses of a boy are about £100; a "scholar's" amount to about £40. Such examples as these show that in no case can a boy be maintained and educated at an English public school of the first rank for less than from $225 to $300 a year, and this only when he is fortunate enough to succeed in a special examination in which there are three or more competitors for each vacancy, all stripped for the race, oiled, curled, and dieted.

But the bright boys who rise to the distinction of "collegers" of Eton or "scholars" of Harrow—the class over whom one is only too often called to utter the elegiac *Ah, nimium breves!*—form but a small part of those for whom opportunities are provided elsewhere. Prize scholarships, for example, are offered by several public schools to those who come out well in the Oxford and Cambridge local examinations. Seventeen schools and colleges, including Dulwich, Haileybury, Marlborough, and Wellington, offer scholarships to boys distinguished in the junior local examinations; and it is understood, unless otherwise stated, that each scholarship is of such annual value as to reduce the total school expenses to a sum of from £25 to £30 a year. The contestants for these prizes usually place themselves in the hands of "private-adventure schools," or the lesser grammar schools, to be drilled and trained for the experimental ordeal. There are certain conditions affixed, such as that the boy must be under fifteen when he competes, and must not be suspected of being in easy circumstances. The great English foundation schools were, indeed, originally intended wholly for poor scholars, and even down to recent times Charterhouse, one of the most famous, clothed as well as boarded and educated its flock. Everybody who has been much in London is acquainted with the picturesque garb, the bare heads and Tudor coats of the "blue coats" of Christ's Hospital. Now, however, this state of things has mostly passed away, and the help given is bestowed principally on the intellectual advancement of the pupil. For those who are denied access to such semi-charitable scholarships as these just referred to, the numerous older foundation schools of London, such as Merchant Taylors', the City of London, St. Paul's, King's College, and University College Schools, make liberal provision. There are various old-time formalities to go through, but, once the gauntlet of application and examination passed, help is liberally extended, and expenses are made to range from £29 to £45.

Outside of London there are numerous educational establishments which furnish advantages of a high grade to people of moderate means. Chief among these are the Bedford Schools, the King's School at Canterbury, and the Mill Hill School, Middlesex. A recapitulation of the terms advertised by these and similar schools leads to the result that a really good education for boys of the middle classes in a day school will cost not less than £16 per annum, and in a good boarding-school not less than £50 per annum. These, it will be noted, are the minimum rates.

Free education is provided under special conditions to the boys of Christ's Hospital; a "presentation to Christ's Hospital," as it is technically called, being equivalent, during the six years of its continuance, to a gift of from £300 to £400 This great school, which has existed in Newgate Street for more than three centuries, is to undergo complete reorganization: new buildings are to be erected within a convenient distance of London large enough to accommodate 1,000 boys, and the quaint dress of the blue coat and yellow stockings will be abolished. Thus will pass away, not without keen regret on the part of those attached to time-honored customs and costumes, another of the once—but now, alas! no longer—innumerable features of interest connected with the Modern Babylon. This is one more of the myriad forms of "Haussmannization" to which we are becoming gradually accustomed here and abroad.

There are five great institutions at which free maintenance and education, or a reduction in their cost, is made in special cases. These are Wellington College, near Wokingham, originated about twenty years ago in memory of the Iron Duke, and intended for the sons of deceased officers; the Royal Naval School at New Cross, Kent, an institution similar to the above; Marlborough College, which provides board and education for a certain number of sons of clergymen at a fixed charge of £50 per annum; Haileybury College, for Indian civil servants; and Epsom College, for sons of medical men. Very numerous private schools of good grade charge from £50 to £60 annually for board and tuition, and there are others adapted to people of £200 or £250 income.

From these facts and figures it may be seen that, on the whole, undergraduate education in England is not dearer than, if so dear as, undergraduate education in America. America is full of "swell" schools for boys, in which expenses run as high as at Eton, without compensating advantages; and have we anything to show equal in money value, or even number, to the countless scholarships and foundations for poor boys provided so richly at the great English schools?

RECENT EDUCATIONAL BOOKS.

Schools and Studies. By B. A. Hinsdale, A.M., Superintendent of Instruction in Cleveland, O. Boston: J. R. Osgood & Co. 1884. Pp. 362.

A Treatise on Pedagogy for Young Teachers. By E. C. Hewett, LL.D., President of the Illinois State Normal University. Cincinnati: Van Antwerp, Bragg & Co. 1884. Pp. 228.

The Mother's and Kindergartner's Friend. By Harvey Carpenter. Boston: Cupples, Upham & Co. 1884. Pp. 153.

Lectures on the Science and Art of Education, etc. By Joseph Payne. E. L. Kellogg & Co. 1884. Pp. 256.

Practical Essays. By Alexander Bain. D. Appleton & Co. 1884. Pp. 338.

Lexikon der Pädagogik: Handbuch für Volkschullehre. Von F. Sanders. Leipzig. 1883. Pp. 590.

L'Instruction Publique en France pendant la Révolution. Débats législatifs. Par C. Hippeau. Paris. 1883. Pp. 379.

Outlines of Psychology, with Special Reference to the Theory of Education. By James Sully, A.M. London: Longmans, Green & Co.; New York: D. Appleton & Co. 1884. Pp. 711.

MR. HINSDALE'S book is pleasant and instructive reading and is composed of fourteen addresses and essays written since 1876. The origin of character is heredity and free will in varying proportions. The treatment of children must be made up of both gentle and stern traits, and the absence of either imperils character. The author commends Mr. Galton's opinion that the average ability of the Athenian race was as much higher than our own as the latter is above that of the African negro. He has as strong a sense as Diesterweg of the fact that thousands of lawyers know nothing of jurisprudence, but are learned in precedents and forms; that physicians doctor the sick out of medical books and the drug shops; that ministers preach from doctrine and creed rather than from the Bible and life. Thus education, for love of the means, overlooks the end. The evils of excessive specialization of studies are made the basis of a plea for breadth. The plan of dividing school hours into two parts, one devoted to certain prescribed studies, and the other to be used at the teacher's discretion, finds a partial apology in our author. These rather mild theses are a good sample of the book, which has a thoroughly sane tone.

The second book on our list is a fair specimen of the inanity of much of the so-called philosophy taught in our normal schools, which, in seeking to be elementary, becomes often stupid and commonplace. It is perhaps as good a book of its kind for a normal school text-book as can be found in English; but it implies and imparts a very small amount of useful knowledge, while, with its tabulated schemes and verbalism, it might be made a formidable book to a class. This is the kind of work that discredits normal methods, though there are many good and few bad things scattered through the volume. "Learning is not education"; "the teacher's work is like that of a gardener"; "education requires time"; "to train the memory, the child should be made responsible for its use"; "conscience makes us feel that we ought to do what we think is right, and to let alone what we think is wrong," etc. Such is the owlish wisdom made to pass for pedagogy.

Mr. Carpenter's little volume is a well-ordered and, on the whole, pleasing mosaic of quotations from H. Grey, Henry Barnard, Doctor Guilmette, Mrs. Blow, Mrs. H. Mann, Froebel, Professor Upham, Wayland, Dr. Hopkins, Delsarte, Hickok, George Moore, Mrs. E. C. Whipple, Mme. von Bülow, and Thomson's 'Seasons,' etc., in a matrix of pedagogic insipidity. It has a goodish flavor, but seems for the most part as if it had been written about fifteen years ago. The next book is a well-chosen selection from the writings of Professor Payne, published chiefly for the benefit of teachers in this country, and sure to be of value to all who read them.

Most of the essays which compose Professor Bain's volume have been printed before, and some of them would perhaps hardly have been called educational by their author. The freshest points in the address on the university ideal are the characterization of the quadrennial arts course, conducted by the so-called regents, who each

carried the same students through all the four years, thus taking on himself the burden of all the sciences, so that there were perhaps times, before the abolition of the system near the middle of the last century, when "the student never had the relief of a second face all the four years." The three sides of education must be the abstract, the experimental, and the classifying: "A larger quantity of one will no more serve for the absence of the rest than a double covering of the body will enable another part to be left bare." The *voluntary* studies determine the university ideal, which is good or bad according to its arts (or philosophic, as opposed to professional) faculty. These are the studies to which men return in later life with joy, however much they may have been forced at first; and the compass of these studies determines the life outside the profession. In a paper on metaphysics and debating societies, an interesting attempt is made to determine what class of topics is fittest for essay writing and which for debate, a methodized form of which the Greeks were the first to apply to philosophy, thus turning their national habit of contentiousness to account as a means of advancing at least the speculative departments of knowledge. Thus the right of private judgment was established in the golden age of debate, while recluse meditation long continued is needful for most forms of originality. In the paper on the classical controversy, Bain quite fails to answer Canon Liddon's argument that the half-knowledge of the ordinary graduate is an important link through which scholars can better address the outer world. The most practical essay to most readers, though hard to sum up, is on the art of study. On the whole, the book is one that no one interested in the higher problems of education should fail to know.

This last remark may also be made of Sanders's 'Lexikon,' which is, on the whole, superior in conciseness to Lindner's just completed 'Handbuch der Erziehungskunde,' and far better than Kiddle's well-known 'American Encyclopædia.' This 'Lexikon' reveals, better than any other single book we know, the immense activity now everywhere apparent in the field of education—the innumerable periodicals, histories of education, biographies of eminent teachers, and especially the change of pedagogic base now substantially accomplished in Germany from the old abstract metaphysics to the concrete sciences of psychology and anthropology: a change which, even in our own country, is so far under way that many of the older leaders in educational matters are being slowly left behind.

M. Hippeau had previously edited a volume containing the educational reports and discussions that led up to the debates that began in the National Convention of September, 1792, with which the present volume opens. These discussions show the immense rôle which educational ideas and ideals played in the minds of the leaders of the French Revolution, are a valuable commentary on the true tendencies of a book like 'Émile,' and should be read with care by all who are now seeking to weaken the authority of the past in our schools.

A careful inventory lately made of the text-books in mental science now in use in all the collegiate institutions in this country has shown that most of them are written by men quite unacquainted with recent foreign literature on the subject, and with little or no comprehension of the epoch-making new departures which Professor Lazarus thinks will be regarded as the most important intellectual achievement of the last half of the present century. Mr. Sully's previous books have shown so much acquaintance with this literature, so much philosophic earnestness and such powers of presentation, that many teachers of philosophy in our colleges and normal schools have awaited with great interest this long-announced book, which the Messrs. Appleton have promptly republished in admirable type, with the additional title, "a Text-Book for Colleges." It occupies to some extent a new field in the English literature of this subject, and hence, as well as from the above-mentioned circumstances, will be, as it deserves, widely read and widely tried as a text-book. Its plan is very comprehensive. Though giving ample scope to the physiological side, it is strongly anti-materialistic throughout; it is well captioned and paragraphed, contains copious references to the literature of the subject, and is remarkably lucid in its expositions. Recognizing that the most important laws of the mind are those which preside over its development, the chapters end with very short applications of the topics discussed to the needs of teachers. The subjects, their arrangement, and relative emphasis show candor and good sense throughout.

We have read not only the book but a number of English and American reviews of it. The critics show much confusion respecting its scope. A writer in *Mind*, for example, discusses it at length on the merits of its views much as if it were an original contribution instead of a compilation of an avowedly popular type. No well-read psychologist will find anything whatever that is new in it, save in details of arrangement, etc., and this is all in its favor for the purpose it is designed to serve. It is as a digester and presenter of the often very numerous and widely differing views of others—a task requiring no small degree of ingenuity as well as great industry—that the author excels here as elsewhere. Regarding the book then in this pedagogical way, we are compelled to say that, excellent as it is, it has several capital faults. First, it is far too prolix. The same subject matter *could* be condensed not only without loss, but with great gain, to less than half its space. To cite one example (not the worst) of many we have marked: on page 72 a perfectly lucid statement is made in one sentence; another follows beginning, "By this is meant"; then another beginning, "In other words"; and finally another, "For example"—each sentence more obscure than the one before it. There is a good deal of this wretched padding. A great part of the second and third chapters might be omitted, as their matter is sufficiently implied elsewhere. The foot-notes and appendices also show a lack of that conciseness and compactness in the form of presentation which makes a book like Ryland's, for instance, so admirable a model, where, the details not being elaborated so that nothing is left for the teacher, examination is made so much more speedy and effective a test. On the one hand, Mr. Sully has written down to too low a level of intelligence for the average senior in our colleges, whose intuitions on many of these subjects may be safely trusted to make combinations he has tediously elaborated for him, and, on the other hand, he carries too wide a penumbra of definitions through the book, when stimulating suggestions and typical facts are the chief desiderata. In this department as in no other the tendency has always been to condense large masses of wisdom into proverbs or philosophemes. Put into the mind of youth in this form, they are germs and grow to fruitage, when, if transplanted already developed, philosophic wisdom is apt to wither and decay. That there are no summative pregnant phrases or sentences is a serious fault in a text-book of this sort, and their presence has made many worse books more serviceable in the class-room. The trouble is, we suspect, that the author's mind works on the schedule plan, writing on and on by programme, and not in the concentrative way in which Ziller used to insist that all good educational work must be done.

A second defect consists in the fact that the author has omitted important departments of his subject, not only of great scientific but also of the highest educational value. There is virtually nothing said throughout of the morbid and abnormal activities of the faculties treated. Even a very little of this material not only excites the strongest interest, but is of the very greatest practical value to every student, while the dangers of familiarity with this class of facts, which are sometimes asserted, are purely illusory. There is not only no fixed line between morbid and normal activities of the soul, but every one is constantly verging toward now one and now another type of mental disorder. Perfect sanity is as rare as perfect health, and the success of every man who leads an intellectual life very often depends on his power to foresee and know the directions of danger, and even to work out individual problems in mental hygiene. The success of books like Abercrombie's and Taine's, one-sided as they are in this direction, show what educational results may be thus produced. At the age of forty every successful man is a doctor (to himself), it is said; and no psychology is purely practical which neglects a careful and judicious use of the lessons in psychic regimen which come from this source. This is probably chiefly needed in treating of the feelings, whose sanity is so fundamental to the health of body and soul.

The vast department called in German *Völkerpsychologie*, but which has no fit name in English, is also almost entirely ignored. The new psychology to which Mr. Sully has so largely devoted himself has no more interesting or important chapters, and on it Wundt is now preparing an independent volume. This is especially valuable for education, for here the relations between anthropology and the ways and words of children, which cast so much light on each other, are best seen. Not only this, but the objective, or, as it might be called, the anthropologic, standpoint in regarding and dealing with children is of supreme importance for the teacher. This department of psychology has in recent years inspired very many painstaking observers and developed a vast mass of interesting details, and, what is still more important, it reveals the only basis on which the principles of education can ever attain that unity and completeness which deserves the name of science. Almost the same might be said of the author's treatment of the whole subject of instinct, with which heredity and intuitions are so closely bound up. What we need in this field, which is undergoing such rapid transformations in and through the practical applications to which it is being subjected, is a habit of careful observation of every manifestation of instinct, tradition, habit, memory, attention, etc., whether objective or subjective; and the larger synthesis we wait for will slowly arise of itself in thoughtful minds. This latter process cannot be forced by any deliberate schematization, but is to be of very slow growth.

It is certainly a very bold thing for any man to attempt to prepare a conspectus of the whole psychologic field. He is sure to reveal his own limitations in a way he hardly suspects. It is, however, an attempt that had to be made, and we are grateful to Mr. Sully for attempting it, but shall earnestly hope for its speedy revision in the respects indicated.

LIFE OF HANDEL.

Life of George Frederick Handel. By W. S. Rockstro. Macmillan & Co. Pp. 452.

It is hardly necessary to say that Mr. Rock-

stro's biography of Handel contains a preface by Sir George Grove, who has lately become a sort of musical high-priest, without whose approbation and signature no English work on a musical subject is considered complete. In the present case Dr. Grove expresses his astonishment that Handel, who is more popular in England than any other composer, should have been obliged to wait so long for a satisfactory biographer; and he thinks that Mr. Rockstro's work is "interesting at once to the scientific and the general reader." We cannot endorse this opinion. Handel's life does not present a great many interesting features, and such as it does present Mr. Rockstro has buried under a mass of pedantic and useless information, so that it is doubtful if one reader in a hundred will peruse more than a third part of his book. Excepting a few chapters at the beginning and at the end, it is simply a descriptive, chronological catalogue of Handel's works. Page after page is filled with microscopic details and dates concerning obsolete works that have no more interest or significance than would attach to, say, a series of accurate measurements of the proportions of the flowers and shrubs which grew in the garden of a certain king in certain years of the last century. Biographies should deal only with facts that throw some light on the man, his work or his time; and surely this is not the case with hundreds of statements like this, that on the 20th of February, 1724, was produced in London Handel's "Giulio Cesare," "in which Senesino created a profound sensation by his magnificent delivery of the Accompanied Recitative, '*Alma del gran Pompeo.*'"

Over Chrysander, the German biographer of Handel, Mr. Rockstro has one great advantage, that he has some regard for method and style, whereas Chrysander's unfinished work is in this respect one of the curiosities of literature. It might well be substituted in the tale of the man who was allowed the choice between death and the perusal of a certain work in many volumes, and who chose the latter, but in a few days changed his mind and met death like a hero. In one particular, however, Mr. Rockstro does not yield much to Chrysander—namely, in his one-sided hero worship. It is simply amusing at the present day to pretend that Handel was a greater genius than Bach, as Mr. Rockstro does implicitly whenever there is an opportunity for comparison. Look at the harmonic structure of the works of Schumann, Franz, Saint-Saëns, and almost every prominent modern composer, including Chopin and Wagner, and note what that structure is based on. It is Bach and Beethoven, and on Bach even more than on Beethoven. "Bach" means brook, and it is the mingling of this brook with the current of modern music that has colored the whole stream; whereas from Handel not a single composer has derived his inspiration, although some may have learned a lesson from his treatment of voices in choral music. Handelians never tire of referring to the high regard for Handel entertained by Gluck, Mozart, Haydn, and Beethoven; but to these composers Bach was almost unknown, whereas their successors, to whom the works of both were accessible, found Bach by far the deeper and purer stream of the two to drink from. Dr. L. Nohl wrote, a few years before Wagner's death, that "to the present day Wagner has a predeliction for playing with another person Bach's 'Well-tempered Clavichord'; and 'Tristan und Isolde' is based on no other than the eternal rock of Bach's modulations." In Handel's music there is very much more that is antiquated than in Bach's, and in originality, depth, and number of ideas the difference between the two is as great as between Mendelssohn and Schumann. Mr. Rockstro himself states that the instruments employed by Handel "are rarely, if ever, used as exponents of human passion." But it is one of the greatest achievements of modern musical genius to have taught instruments to express and arouse passion almost as definitely and even more impetuously than the voice, and Bach was in this, as in so many other respects, a modern composer. Mr. Rockstro attempts to place Handel above Bach in counterpoint by comparing the one to the spontaneous, artless growths of nature, the other to the results of "learned invention," which is about the same as the difference between genius and talent. So absurd a comparison displays all the shallowness of this writer's ideas, and it is so crushingly refuted by the preference for Bach shown by all modern composers that it is useless to dwell on the point. The case is one of those of which Schopenhauer says they call not for an argument but a cure.

So delicate was Handel's sense of euphony, we are told further,

"that he would go whole leagues out of his way to avoid the Second Inversion of the Dominant Seventh, which, treated as a chord of simple percussion, he utterly abhorred, though Bach sometimes used it with marked effect. In this he followed the tradition of the Polyphonic Masters of the sixteenth century, and the number of other points in which he assimilated his style to theirs is so great that, in the matter of counterpoint, he may be said to occupy a position midway between those held by Bach and Palestrina; tempering the freedom of the later school with the purity of the earlier one, and thus taking advantage of the most precious characteristics of both."

This passage is of such delicious naïveté that it is almost a pity to criticise it. A man of genius in a progressive art does not follow the traditions of masters who lived two centuries before him. Bach did not go leagues out of his way to avoid a discord. He showed how that discord could be used legitimately, and therefore he contributed, as Handel did not, to the evolution of music, which consists essentially in successive encroachments on the sphere of discords, and making them available by discovering their artistic relationships and uses. Owing to Handel's conservatism, his harmonies now appear to us very commonplace and monotonous, whereas Bach's modulations, as just explained, are the delight of the most "advanced" musicians of the period.

These strictures we do not make in a spirit of partisanship, but in behalf of justice. When Handel's admirers claim that he is more simple, pleasing, and taking than Bach, we readily admit this. He wrote some grand choruses and did much to educate the musical sense of the English; but as a musician he is greatly overrated, and does not for a moment deserve to be placed by the side of Bach. It is necessary to emphasize this fact because Handel is more popular than his contemporary, and many do not know how much deeper would be their enjoyment if they would take the trouble to study Bach. Handel was a man of his time; he lived and wrote for contemporary audiences, adapting his talent to the demands of the day. He was so rich that at the time of his death his savings amounted to $100,000, and his new works were generally learned and sung by the best singers of his time as soon as the ink was dry. Bach was so poor that he could get but a very few of his works printed or produced in public; but he wrote on, knowing that his day would come; and as he had no concessions to make to the fashions and mannerisms of his period, his genius chose that form of expression toward which music is now again drifting after passing through the "classical" dance-form period. Bach's originality was inexhaustible, and he seldom repeated himself; Handel, when one of his ephemeral works had withered, picked out the best blossoms, and put them into a new bouquet. Nor was he particular about taking flowers in other men's gardens. Some of his most famous numbers are now known to have been composed almost bodily by other musicians. Mr. Rockstro endeavors to invalidate the evidence for this proceeding, but in vain; and he would have done better to admit frankly, as does the writer in Grove's 'Dictionary of Music and Musicians,' that in those days originality of idea did not hold the place it now holds; that there were then permissible forms of borrowing another man's thoughts, as a preacher uses a text, or an essayist a suggestive quotation.

Lessons on Manners for School and Home Use. By Edith E. Wiggin. Boston: Lee & Shepard.

Home and School Training. By Mrs. H. E. G. Arey. Philadelphia: J. B. Lippincott & Co.

Mothers in Council. New York: Harper & Brothers.

THE little book of 'Lessons on Manners' is meant to be strictly primary, and is well arranged for its purpose, each lesson beginning with a brief synopsis to be placed on the blackboards. It is followed by a running comment of illustration and anecdote which the teacher is expected to continue or to vary according to need. There is no doubt a want of such a book as an aid to the very elementary work many teachers find themselves obliged to do for crowds of children, who come to them with no home training whatever as to the simplest courtesies of life. Its modest sense, moreover, would not be wholly superfluous in much higher circles. For instance:

"Some ladies have a habit of carrying fancy work to places of amusement. If they knit or crochet before the performance begins, it is a foolish parade of industry which is probably not carried out at home; but if they continue the occupation after one begins to sing or speak or read, it is impertinent, and extremely annoying to the speaker."

The children who might be intrusted to the author of 'Home and School Training' would, we are quite sure, be brought up well and happily, but that is not saying that she could write wisely or usefully on the subject. Many mothers, and many not mothers, who are so fortunate as to have the care of the young, seem to be guided by a happy intuition that fits individual character to circumstance with very rare mistakes. But the same persons undertaking to shape a theory will only string together platitudes, or will dauntlessly settle out of hand questions abstruse enough to have puzzled the wisest always. An intelligent affection may be trusted for individual cases, but to lay down general principles which may be safe guides is a totally different matter. Mrs. Arey thinks herself competent to pronounce a sweeping condemnation of the whole moral system of antiquity on the evidence of a single remark from Cicero. It would be great ingenuity that could make a more misleading statement than the attempt at an historical résumé on page 178. She has a good deal to say, on the authority of great names, of the value to a child's mind of original investigation, but it has never dawned upon her that for a child to divide 40,000 by 19 and prove the work, or to translate ten lines of the 'Viri Romæ,' is literally and always "original investigation," and that therein lies the reason why the world has so long agreed upon the usefulness of the two studies, language and mathematics.

A couple of dozen of papers and talks about households and children, by mothers as intelligent and as right-minded as the good ladies of Abingdon, could not fail to be of interest and

of profit. The only difficulty seems to us that they are too general, too much in the air. The conclusion is forced upon the reader that a book could be so impersonal, so uncircumstanced—to coin a word—only because it has been carefully stripped of anything like local color, to prevent identification. Though this is undoubtedly a logical argument for the genuineness of the book as an actual record, it certainly weakens the impression it ought to make. What manner of men were Mr. Sharpe and Mr. Shepard would, if we knew it, be much more helpful than such remarks as "What is more disagreeable than a selfish head of a family? Nothing earthly, and wherefore?" A perplexed mother would care far more to know how John and Harry or Annie and Mary were governed, than to be told, "Our difficulty comes not so much in the general plan as in the working out of the details from day to day." We more than suspect that the mothers of Abingdon themselves would say that the most profitable part of the afternoon was after the papers, when there was "much low conversation and so many efforts to talk in the Club that the President was forced to call us severely to order." The preface is dated in Virginia, and it should be consoling to think that there yet survives in that State "a provincial town" (so Abingdon is described) of such comfortable opulence as appears in these pages in spite of the effort to paint it in neutral tints. Still, it is clear that the chapter on servants is not calculated for any meridian that crosses the "Old Dominion."

There is an important observation to be made alike on each of these three books. No one of them does justice to the *indirect* moral influence of the schools. In this they only follow much current talk which, in a well-meant zeal for certain kinds of special instruction, ignores or underrates the work that is done every day in any school that is fit to be called a school. Every exercise which the child sees faithfully performed carries its moral lesson. Every time he sees justice done or truth honored, and, greatest of all, every time he sees he cannot have his own way, every time his will must bend to the will of a superior or to the law of the little world about him, the moral lesson is taught far more lastingly than those in the formal shape of precept for memory. Any attempt at theoretical instruction, except upon this basis, is wasteful and foolish.

Das Universitätsstudium in Deutschland während der letzten 50 Jahre. Von Dr. J. Conrad. Pp. 241, with Appendix. Jena. 1884.

Dr. J. Conrad, the well-known Professor of Political Science in the University of Halle, has made a very valuable contribution in the above monograph to the current discussion of university topics in Germany. It is a well-known fact that most of the conservative, and many of the liberal, thinkers of Germany have had their fears very seriously excited of late by the recent enormous increase in the number of students at the universities—an increase out of all proportion to the growth of population. During the quinquennium, 1856-60, for example, there were 32 students in the universities of Germany for every 100,000 inhabitants. This proportion increased gradually until it reached 43.7 for the quinquennium 1876-80, and 52.5 for the year 1882-83.

It may seem a rather absurd thing for men to get alarmed at the prospect of too many educated men. The term university-educated man has, however, in Germany a very different meaning from that term here. It means in Germany a man who has received his professional education; who has, therefore, chosen his future career, and, having prepared himself for it, is now ready to enter upon it, while with us it denotes merely one who has completed his preparatory course and is now ready to choose his profession and to begin his work of preparation. A student who has studied three or four years in a German university is either ready to practise medicine, to enter the ministry, to be admitted to the bar, to take a position as teacher in a higher school, to begin his career as a university lecturer, or to enter the civil service. His study has prepared him for one of these callings, and it is almost impossible for him to attempt anything else, because, on the one hand, social sentiment would prevent his entering commercial life, and, on the other, the long course of preparation necessary to any other learned profession would throw him so far back in the competitive race for success as to completely dishearten him. In such a country as Germany any one or all of these callings can be easily overcrowded. In the Church, for example, there is a limited number of livings, and there is room for only a definite number of new men, determined by whatever new livings may be established from time to time, and by death or retirement from the ranks. The same thing is true of the civil service and schools to almost the same degree. The openings in medicine, law, and the universities are not determined by quite so arbitrary a limit, but they are none the less firmly drawn in reality, and these professions can be as easily overcrowded as the others.

It was to ascertain, as far as possible, by a statistical inquiry whether the present large attendance at the universities is really unparalleled, and what peculiarities were noticeable in the distribution of the students among the various faculties, that Professor Conrad, with the aid of the members of his statistical seminary, undertook this investigation. The results are very interesting and striking. He finds, for example, that the proportion of 52.5 students to 100,000 inhabitants, which occurred in 1882-83, was equalled in 1830-31, and that the average of the five years 1831-35 was nearly the same as that for 1876-80, being 42.4 and 43.7 respectively. The seven old Prussian Universities—Berlin, Breslau, Halle, Greifswald, Königsberg, Bonn, and Münster—had at the beginning of the thirties, all told, in round numbers, 6,000 students—a number which they did not reach again until 1875. The same institutions had in 1830 thirty-eight out of every one hundred students in attendance at the German universities, and in 1883 forty-three out of every one hundred. The three largest universities—Berlin, Leipzig, Munich—had in 1830 thirty-five and in 1883 forty-two students out of every one hundred, *i. e.*, 35 per cent. and 42 per cent. of the total attendance at all the universities.

We have no space to follow the author into his discussion of the causes of these variations. They are, he thinks, to be found partly in the internal policy of the universities themselves (as in regard to admission on certificate from gymnasium, for instance), partly in the varying organization of the civil service, partly in the economic and material improvement of Germany, and partly in the admission of real-school graduates to the universities, which Professor Conrad thinks a mistaken policy. One fact, adduced to account for a great falling off in attendance about 1835, is worthy of notice, as illustrating the wide difference between German and American educational conditions and needs. Down to 1834 the universities in Prussia were allowed to conduct entrance examinations at the university; but the Government found itself compelled to take away this privilege, because the university authorities, in their eagerness to get students, vied with one another in giving easy examinations. From that year the examinations were conducted only at the preparatory schools, and the universities were bound to admit on certificate. College experience in this country, on the contrary, has, as a rule, been decidedly unfavorable to admissions on certificate. The reason, of course, is not far to seek.

While all the German universities have grown rapidly, the three largest have grown most rapidly, and it is becoming more and more evident that the smaller universities, not being able to vie with the largest in completeness of equipment and in the accessory advantages to be found in great cities, will have to concentrate their strength on one or two faculties, and develop their peculiar advantages, such as seminaries, etc., if they are to hold their own in the conflict for supremacy. It appears from statistics that each student spends on an average about 3.2 semesters at one university, so that each student attends at least two universities during his course. The present generation of students remain one semester longer at the university than their predecessors of fifty years ago. The average age of the students admitted to the universities has been gradually falling for the last twenty years. During the years 1859-63 30 per cent. of the entering classes were over twenty years of age; but during the years 1876-79 only 23 per cent. were over twenty, while 19 per cent. in the latter period were under 18 and only 14 per cent. in the former. The statistics of foreign students show that, while the absolute number has increased pretty regularly, though quite slowly, for the last forty years, the relative number has declined for twenty years past. In 1861 they formed 6.1 per cent. of the whole number, while in 1881 they only amounted to 5 per cent. In 1861 28 per cent. of them were studying theology, 24 per cent. law, 24 per cent. medicine, and 24 per cent. other branches included in the philosophical faculty; while in 1881 the per cents stood as follows for the respective departments: 9, 17, 27, and 47, showing a remarkable change in the subjects of study. Of these foreigners, in 1881 16 per cent. were from Austria, 19 per cent. from Switzerland, 18 per cent. from Russia, 6 per cent. from England, 15 per cent. from the United States, 2 per cent. from France, and the rest from other European and non European states. In 1835 the above-mentioned countries, in the order named, had the following representation: 9 per cent., 50 per cent., 14 per cent., 6 per cent., 1 per cent., 4.5 per cent. Switzerland and the United States thus appear remarkable, the one for the great relative decrease, the other for its increase. England is equally remarkable for its uniform relation. It appears that but few Germans go abroad to study—a fact capable of two constructions.

In 1860 Prussia was represented at the universities by 27.3 students for every 100,000 inhabitants, while the rest of Germany together had 36.7 students for the same number. By 1880 the proportion had been changed, Prussia having 48.4 students and the rest of Germany only 45.6, from which it would seem as if Prussia had been growing intellectual at a much more rapid rate than the rest of Germany. Prussian students seem to be more willing to go into the other German States to study than the inhabitants of the latter to go to Prussia. About 12 per cent. of the Prussian students on an average are at South German universities, while but very few South Germans go North. At Leipzig alone, in 1881, there were 1,200 Prussians studying, while there were only 71 Saxons in the nine Prussian universities put together. There were 674 Prussians in Bavarian universities to 37 Bavarians in Prussia. The overwhelmingly local character of most of the German universities is shown clearly

by the fact that they all draw chiefly from the immediate districts lying about them. Thus even Berlin draws 25 per cent. of its students from the province of Brandenburg and 83 per cent from Prussia, while Breslau draws 69 per cent. from the province of Silesia and 98½ per cent. from Prussia; Halle, 44 per cent. from the Prussian province of Saxony and 84 per cent. from Prussia; Bonn, 75 per cent. from the Rhine provinces and 89 per cent. from Prussia; Königsberg, 89 per cent. from East Prussia and 97 per cent. from Prussia; Rostock, 82 per cent. from Mecklenburg and 100 per cent. from Prussia.

The book is full of the most interesting matter pertaining to German universities. It is a model of painstaking and thorough statistical work, well arranged and accompanied by thoughtful and suggestive comments. The author discusses among other points the profession of the fathers of university students (from which it appears that the educated classes in Germany, at least, have not lost their power of procreation); the special faculties and the number enrolled in them from time to time, with some speculations as to the cause of certain remarkable fluctuations; students in the higher technical schools; professors; preparatory schools; economic significance of the recent development; real-school question. An appendix contains the statistical tables referred to in the text, and among others a table setting forth the attendance at the University of Halle from 1693 to 1883, from which it appears that the smallest number in attendance was 37, in the year 1813, and the largest 1,416, in 1883. A recent report shows over 1,500 students at present, making it the third Prussian university in size.

A Course of Instruction in Zoötomy: Vertebrata By T. Jeffery Parker, B.Sc. Lond., Professor of Biology in the University of Otago, New Zealand. Crown 8vo, pp. xxiii.–397. With seventy-four illustrations. London. 1884.

TWENTY-FIVE years ago, in the course of a "laboratory talk," the late Prof. Jeffries Wyman remarked: "The best thing any anatomist can do is to prepare complete accounts of the structure of a few forms, each typical of some large group. The fowl could represent the birds, and the cat the mammals." Unfortunately, the distinguished American anatomist did not carry out his own idea; and it was not until 1870, in Rolleston's 'Forms of Animal Life,' that students and teachers were enabled to compare their dissections with preparations, figures, and descriptions of fairly representative forms. But although Rolleston briefly stated the way in which each preparation was made, his elaborate treatise contained no detailed directions for dissection. This deficiency was partly supplied two years later in the comparatively little known work of his pupil, Morrell, "containing dissections of sheep's heart and brain, rat, sheep's head, and ox's eye." A more vigorous impulse to the study of methods was given by the publication, in 1874, of Huxley and Martin's 'Elementary Biology.' Since then there have appeared in rapid succession the 'Practical Physiology' of Foster and Langley, the 'Anatomical Technology' of Wilder and Gage, Martin and Moale's 'How to Dissect a Chelonian, Pigeon, and Rat,' McAlpine's 'Three Atlases: Biological, Zoölogical, and Physiological,' and last, but by no means least in value, the work before us.

The author, who is the eldest son of W. Kitchen Parker, the highest living authority on the morphology of the skull, succeeded Professor Martin (now of the Johns Hopkins University) as Huxley's laboratory assistant, and is now a university professor of biology. Nor is the triple expectation from inheritance, training, and position disappointed in the present work. The descriptions are, for the most part, accurate, the directions concise, the figures clear and mostly original, and more than ordinary attention is given to the viscera, especially the heart and brain.

The forms selected are the lamprey, skate, cod, lizard, pigeon, and rabbit. The appropriateness of the lamprey will be conceded by all; as to the rest, if many would prefer the dogfish, catfish, turtle, fowl, and cat, it must be remembered that into the selection of forms for practical instruction there enter various and sometimes conflicting considerations of typicalness, accessibility, and size, besides the inevitable personal equation determined by habit or individual preference. It is to be hoped that future editions may include the lancelet and a tailed ectobranchiate amphibian; for, notwithstanding the author's suggestion that these dissections may be regarded as a morphological sequel to the study of the frog in the 'Elementary Biology,' that work contains no figures, and the employment of the frog as a basis for an introduction to vertebrate morphology is a non-principled expedient, justified only by the widespread distribution of that extravagantly modified amphibian, and by its usefulness in physiological experimentation.

The intelligibility of the text is largely due to the consistent use of *dorsal*, *ventral*, *lateral*, etc., terms applicable to all vertebrates. The adverbial words and phrases are less commendable. Instead of adopting Barclay's *dorsad*, *distad*, etc., sanctioned as they are by Owen, Huxley, and others, our author resorts to *medianwards*, *distalwards*, *to the dorsal side of*, etc. The employment of new or unfamiliar terms like *mesorchium*, *mesohepar*, *demibranch*, *pylangium*, etc., renders a glossary desirable. The cavity of the brain is designated not by the ambiguous Latin *ventriculus* but by the Greek *cœle* (κοιλία), as proposed by Wilder in 1881, and since employed by him in publications which evidently had not reached the author up to the time of the issue of the present work. The accuracy of this antipodal coincidence extends even to the forms of two of the derivatives; Parker's *prosocœle* is practically identical with Wilder's *procœlia* or *procele*, while the mesencephalic portion of the cavity is named *mesocœlia* by both anatomists.

Most of the figures are so instructive that it seems almost ungracious to suggest an improvement in the addition of some representations of the interior of the heart, and the modification of the figures of the brain, so as to indicate the little understood manner of circumscription of the cavities by the aid of membranes even when the proper nervous tissue is absent. On most of the figures, also, there might have been printed the entire names of the parts, and at any rate the abbreviations should be uniform. The index is nearly complete, but should be in larger type. *Chiasma* and *sympathetic* should be in the major list rather than subordinated to *optic* and *nerve*. *Lamina terminalis* is ascribed only to the pigeon and rabbit, whereas it is one of the most fundamental morphological features of all known vertebrate brains. It is a little puzzling to find *inch* on p. 23 and *millimeter* on p. 26.

The most serious criticism that can be brought against the present volume applies, so far as we know, to all similar treatises in greater or less degree. Perhaps the general statement will be more intelligible if preceded by particular illustrations. The chiasma of the optic nerves is mentioned as existing in the skate, lizard, and rabbit; it is described, but not named, in the pigeon without apparently any design on the part of the author. There is just enough difference between these descriptions to confuse the beginner respecting the relations of the chiasma to the optic tracts and optic nerves. The non-crossing of the nerves in the lamprey and their non-union in the cod are mentioned, but by no means with the emphasis appropriate to such exceptional conditions. Had *chiasma* been once carefully defined, either in a glossary or in connection with one of the forms, with the rest there would have been needed only a mention of its existence, together with any peculiarities as to its prominence, form, etc. An even better illustration is furnished by the treatment of the peritoneum. Under each of the six forms this membrane is described, but in as many different ways, and with varying degrees of completeness, no distinction being made between the features which are common to all vertebrates and those which appertain only to the species, or to the class represented by it.

Stated in general terms, the two cases just mentioned are examples of (1) needless repetition of certain facts; (2) misleading omission of others equally important; (3) confusion of characters appertaining to the species, the class, and the entire vertebrate branch. This and other defects could be remedied in future editions, and even in its present shape, in the hands of competent teachers, the work cannot fail to prove of great value as a guide to the *macroscopic* dissection of half a dozen fairly representative vertebrates.

French Spare Moments in Junior and Senior Classes. By J. F. P. Massé, Principal of the London School of Commerce. London: Clarendon Press; New York: Macmillan & Co.

THIS is a small volume, which will prove more valuable to teachers and students than many a ponderous text-book now in use. It is divided into three parts. The first comprises three hundred short extracts, arranged in the order of their difficulty, which are intended to be translated extempore in spare moments; a very good course of exercises, no doubt, but which does not constitute the most important feature of the book. In the second part we find one thousand "idiomatic expressions," judiciously selected, and accompanied by their equivalent renderings *in French*—a much better plan than giving the English equivalent, which is often a proverbial saying, not applicable to all the cases in which the French idiom is used, and, consequently, apt to mislead or puzzle.

In the few pages which form the last part of the book, Mr. Massé has, with laudable industry, compiled and arranged in alphabetical order the orthographic changes adopted in the last edition of the Dictionary of the French Academy. Some of these changes affect the spelling of words, others their gender or number, and are therefore important, although in many cases the Academy has but sanctioned what was already established by usage or held by several grammarians against its former decisions. Among these changed words are many in daily use by all who write French. Thus, the old rule of placing the acute accent over a penultimate *e* followed by *ge* has been very properly done away with, and the grave accent substituted, as more in conformity with the usual pronunciation; the grave accent takes finally the place of the diæresis in *poème* and *poète*; "roide" is to be written as pronounced, *raide*; many foreign words which had hitherto remained invariable have become French, and are now subject to the rules of gender and number, and the hyphen is dropped in many compound words. In fact, the Academicians' work of reform is most sensible, although, with their characteristic caution, they have left many

vexed questions unsettled. It is now seven years since the last edition of the 'Dictionnaire de l'Académie Française' was published, and Mr. Massé is the first educator who has seen the importance of compiling these changes and presenting them in a compact form, in a text-book to be placed in the hands of students. As every student—or every Frenchman, for that matter—cannot buy the last edition of the 'Dictionnaire,' and, if he could, might not have time to hunt up these changes, the utility of Mr. Massé's work is self-evident.

Astronomy. By Simon Newcomb and Edward S. Holden. [American Science Series—Briefer Course.] Henry Holt & Co. 1884.

THIS book, already noticed in our columns in its original edition, scarcely needs remention in the present form, unless we call attention to the improvements the authors have made in the work by the omission of the larger part of what was unnecessary in a school and college text-book of popular astronomy. With the pressure of the other sciences for a place in the collegiate curriculum, the student's time is hardly proportioned with fairness if he is required to read the larger treatise entire; and the authors themselves are willing to admit that the book has not been shortened by leaving out anything that was essential. But, by omitting some of the details of practical astronomy, the descriptive portions have been given a greater relative extension. The space gained by the omission of most of the mathematical formulæ has been utilized for a fuller discussion of the elementary parts of the subject, and in treating the fundamental principles from various points of view. In its present form, this text-book of astronomy well deserves a very wide use.

FOR TEACHERS AND STUDENTS.

FRENCH AND GERMAN.

*I. A GRAMMAR OF THE GER*man Language. *For High Schools and Colleges* Designed for beginners and advanced students. By H. C. G. Brandt, Professor of German and French in Hamilton College, formerly of Johns Hopkins University. 12mo, cloth, $1.50.

The HIGH SCHOOL AND COLLEGE GRAMMAR is planned for teachers who feel the need of pursuing a more scientific method of instruction, and for pupils in grammar and high schools, academies, and colleges, who have already some knowledge of grammatical rules and terminology, classical or modern. The strict separation of Inflections and Syntax in Part I. makes the book eminently fit for the beginner, while Part II. is mainly designed for the advanced scholar.

*II. A HIGH SCHOOL AND COL*lege Reader of German Literature. By W. H. Rosenstengel, Professor of German in the University of Wisconsin. 12mo, cloth, $1.50.

Planned for the use of students in high schools, academies, colleges, and German-American schools and seminaries, who have already studied an elementary reader, who are familiar with the main points of German grammar, and who are able to use intelligently a German-English dictionary.

*III. TABLEAUX DE LA REVO*lution Française. Selections from French literature relating to the Revolution of 1789. Edited, with Notes, by Professors T. F. Crane and S. G. Brun, of Cornell University, with Introduction by Prest. A. D. White. Planned for the use of students in French.

POLITICS, ECONOMICS, AND SCIENCE.

IV. SIX CENTURIES OF WORK and Wages. The History of English Labor (1250–1883). By James E. Thorold Rogers, M.P. 1 vol., large octavo, $3.00.

Principal Contents.—Rural England, Social Life, Agriculture, Town Life, The Distribution of Wealth and Trade, Society, Wages, Profits, Discontent, Combinations, Insurrection, The Development of Taxation, Labor and Wages, Agriculture and Agricultural Wages in the Eighteenth Century, Wages in the Nineteenth Century, Present Situation, etc.

V. ELEMENTS OF POLITICAL Economy. By Emile de Laveleye, Professor of Political Economy in the University of Liege. Translated by Alfred W. Pollard, of the University of Oxford. Edited, with an Introduction and Supplementary Chapter, by F. W. Taussig, Instructor in Political Economy in Harvard University. 12mo, cloth, $1.50.

VI. POLITICS. An Introduction to the Study of Comparative Constitutional Law. By Wilson W. Crane and Bernard Moses. 8vo, cloth, $1.50.

*VII. THE AMERICAN CITI*zen's Manual. By Worthington C. Ford.

Part I.—Governments (National, State, and Local), the Electorate, and the Civil Service. "Questions of the Day," Volume IV. 8vo, cloth, 75 cents.
Part II.—The Functions of Government, considered with special reference to Taxation and Expenditure, the Regulation of Commerce and Industry, Provision for the Poor and Insane, the Management of the Public Lands, etc. "Questions of the Day," Volume V. 8vo, cloth, 75 cents.

NATURAL SCIENCE.

VIII. EASY STAR LESSONS. By R. A. Proctor. With 48 Star Maps and 35 other illustrations. Crown 8vo, cloth extra, $2.50.

*IX. HOME ATLAS OF ASTRON*omy. Comprising in 21 colored lithographic plates, a complete series of illustrations of the heavenly bodies. By Alex. Keith Johnston. New and enlarged edition, with an elementary survey of the heavens designed by Robert Grant. Royal 8vo, half mor., cloth sides, $4.50.

X. SCIENCE LADDERS. Edited by N. D'Anvers, author of 'A History of Art.' A series of readers planned to teach the great laws of nature in language simple enough to be intelligible to every child who can read. The volumes, while purely elementary, aim at awakening the powers of observation and reasoning.

I. Forms of Land and Water. II. A Story of Early Experience. III. Vegetable Life. IV. Flowerless Plants. V. Lowest Forms of Water Animals. VI. Lowly Mantle and Armor-Wearers. The set complete in 6 vols., square 16mo, illus., boards, each 50 cents; or the six volumes bound in one, cloth extra, $1.50.

XI. THE WONDERS OF PLANT Life. By Mrs. S. B. Herrick. 16mo, beautifully illustrated, $1.50.

Principal Contents: The Beginnings of Life, Single-Celled Plants, Liverworts and Lichens, Mosses and Ferns, the Microscope among the Flowers, The Pitcher Plants, The Insectivorous Plants, etc., etc.

WORKS OF REFERENCE.

XII. THE WORLD'S PROGRESS An Index to Universal History, and a Cyclopædia of Facts, Dates, and General Information. Compiled by George Palmer Putnam, A.M. Revised and extended to the present time by Frederick B. Perkins and Lynds E. Jones. Large octavo, with a fine portrait on steel of the compiler. Cloth extra, $6; half Morocco, extra, $10.

*XIII. THE HANDBOOK DIC*tionary. A Practical and Conversational Dictionary of the English, French, and German Languages in Parallel Columns. By Geo. F. Chambers, F.R.A.S. 18mo, roan, $2.

*XIV. THE GLOBE PRONOUNC*ing Gazetteer of the Word, Descriptive and Statistical. Being a Geographical Dictionary for Popular Use. 8vo, cloth extra, with 32 maps, $2.50.

*** Putnam's new Catalogues, General and Educational, sent on application.

Important Educational Works

PUBLISHED BY

A. C. Armstrong & Son

714 BROADWAY, NEW YORK.

The Principles of Written Discourse.

By T. W. HUNT, Professor of Rhetoric and English Language in Princeton College. 1 vol., 12mo, 375 pages, net price $1 00.

This work gives a full and philosophic discussion of the subject, with particular reference to *collegiate needs*. It presents in a logical and interesting manner the leading laws, qualities, and forms of written prose discourse, and aims to show the vital relation of the expression of our thought to our mental, emotional, and ethical nature. It is admirably adapted to awaken inquiry, as well as to afford instruction, and to indicate to the aspiring writer the best methods by which his thinking may be made the most lucid and telling in its outward forms.

Suplee's Trench on Words.

FROM THE LATEST REVISED ENGLISH EDITION, With an Exhaustive Analysis, Additional Words for Illustration, and Questions for Examination. By Prof. T. D. Suplée.

TRENCH "ON THE STUDY OF WORDS," originally in the shape of lectures, and retaining that form in publication, was but poorly adapted for use as a text-book. The editor has long deplored this, in common with many other teachers; hence no apology is necessary for the appearance of the present volume. The advantages claimed for it over all other editions are self-evident. 12mo, cloth, 400 pages, net. $1.

White's Student's Mythology

A Compendium of Greek, Roman, Egyptian, Assyrian, Persian, Hindoo, Chinese, Thibetan, Scandinavian, Celtic, Aztec, and Peruvian Mythologies, in accordance with Standard Authorities. Arranged for the use of Schools and Academies By C. A. White, author of "White's Classical Literature" etc.

A practical work, prepared by an experienced teacher, and designed for pupils who have not yet entered, or who, like the greater number of those attending our schools and academies, are not likely to enter, upon a regular classical course. 12mo, cloth, $1.25.

Unabridged Student's Hallam.

REVISED AND CORRECTED EDITIONS FOR USE IN COLLEGES AND SCHOOLS.

THE MIDDLE AGES. A View of the State of Europe during the Middle Ages 2 vols., cr. 8vo, price $2 50.

THE CONSTITUTIONAL HISTORY OF ENGLAND, from the Accession of Henry VIII. to the death of George II. Including Mr. Hallam's Supplemental Volume of Revision up to 1848. (Indispensable to students.) 2 vols., cr. 8vo, price $2 50.

INTRODUCTION TO THE LITERATURE OF EUROPE in the 15th, 16th, and 17th Centuries. 2 vols., cr. 8vo, price $2 50.

MAY'S CONSTITUTIONAL HISTORY OF ENGLAND, since the Accession of George III., 1760 to 1871. By T. Erskine May. 2 vols., cr. 8vo, price $2 50.

This is substantially a continuation of Hallam's great work, tracing the progress and development of the British Constitution during an entire century.

(Hallam and May—as above—furnished at reduced price, for use as text-books.)

A New and Improved Edition—Price Reduced.

Bryant and Stratton Business Arithmetic.

With Practical Problems and Valuable Tables of Reference, designed for Business Men, Commercial, Agricultural, and Scientific Colleges, Normal and High Schools, Academies, and Universities. By H. B. Bryant, President Chicago Business College; G. G. White, M.A.; and C. G. Stowell, M.A. 1 vol., 8vo, cloth, 564 pages.

Conington's Æneid of Virgil.

Translation, rendered into English Octosyllabic Verse, by John Conington, Professor in the University of Oxford. Cr. 8vo, 506 pages, cloth, *price reduced to, net*, $1.50.

This translation of the 'Æneid' has been universally admitted the most attractive. It has gained preëminence by its novelty, the singular felicity of its diction, its constant animation and great variety, united with consummate scholarship in its remarkable fidelity to the nicer shades of meaning in the original.

NOW READY, 10TH EDITION OF

Armstrong's Primer of United States History.

COPIES SENT POSTPAID ON RECEIPT OF PRICE BY PUBLISHERS.

The Nation.

NEW YORK, THURSDAY, AUGUST 21, 1884.

The Week.

THERE are good reasons for believing that the history of the "Tallapoosa Treaty," as it is given in a Boston letter to the *Herald*, is substantially correct. According to it, General Butler "happened" to be in Portsmouth, New Hampshire, on July 26, and the United States war-ship *Tallapoosa*, with Secretary Chandler on board, happened to be lying in the harbor at the same time. Mr. Chandler, who was moving about in his political capacity as "Bill" rather than in his official capacity as Secretary of the Navy, happened to run across Butler in the town. They fell into a conversation which became so interesting that they adjourned it to the cabin of the *Tallapoosa*, where two and a half hours were consumed in finishing it. On the following day Butler returned to Boston, and Chandler steamed out to sea, landing in due course of time at Bar Harbor, where Mr. Blaine happened to be resting. After a conference in Blaine's cottage, between Blaine, Chandler, Steve Elkins, and Robeson, Chandler sailed away again, and soon afterwards touched once more at Portsmouth. Curiously enough, Butler happened again to be in town, and by a mere coincidence Senator Hale and Robeson were there too. The four came together quite accidentally at a private house and held a long consultation. On the following day Butler and Chandler sailed for Gloucester together, and a day later Butler sent his letter to the editor of the *Sun* announcing his determination to run for the Presidency.

The inference which has been drawn from this series of accidental meetings is that Butler is going to run for the Presidency in the interest of Blaine, and that his reward will be the payment of his campaign expenses by the Blaine managers, and due "recognition" after election in case of Blaine's success. It is recalled that previous to his meeting with Chandler, Butler had been hanging about New York in a condition of great uncertainty about his course as a Presidential candidate, and had, report said, sent word to Governor Cleveland that he would like to meet him. The Governor's reputed reply, that he could be found at any time at the Executive Office in the Capitol at Albany, is said to have convinced Butler that Cleveland was not a true friend of the laboring man. How much of truth or fiction there is in all this we do not pretend to say. But it has been perfectly evident that Butler and Kelly have been waiting, ever since Cleveland was nominated, for offers of conciliation which have not been forthcoming. Butler has taken his goods to the other market and has found a ready purchaser. Kelly is apparently still waiting for bids, but we presume it is only a question of time when he will come to terms with the same buyers. The main object of both bargains will be to cut down Cleveland's vote, especially in this city, by turning over as much of Tammany's strength as possible to Butler. It will be transferred on the ground that Cleveland is a bogus reformer and an enemy of the workingman.

General Butler's address to his "constituents" as a letter of acceptance is a little too long, and as an autobiography a good deal too short. It gives no account of his various military exploits, of the Fort Fisher expedition, or the efficient aid he rendered the cause of labor by getting himself "bottled up" so that all his work had to be done by General Grant, nor of his rise into prominence as a repudiator at the close of the war, nor of his own career as a monopolist and attorney of monopolies, by which he has accumulated the money with which his dupes imagine that he now proposes to deal monopoly its death-blow. It has been a marvellous career altogether, and there has been nothing more buffoon-like in it than the advice he gives the laboring men now. Here it is:

"In framing your electoral ticket, make a fusion in all the States with the supposed minority, and make it upon this theory: not that you are going to vote for the electors of any candidate opposed to your interests, not that the friends of the other candidate are going to vote for yours, but agree that you will run the same electoral ticket, provided the electors who compose it are, as they ought to be, reputable men who will be bound by their honorable undertakings, which is all there is that binds the Electoral College to vote in any direction; and then have it agreed that the electoral vote of the State shall be divided in the Electoral College according to the number of votes thrown for your candidate and the number of votes thrown for the other candidate on the same ticket. The number of votes which each candidate gets will be known with substantial accuracy long before the official count is made. Therefore, you will have every incentive to vote for your candidate, because the larger number of votes you cast the more electoral votes will your candidate get, and the less will the other have. And those who are voting for the same electors with you will throw as many votes as they can for their candidate in order that he shall have as large a share of the electoral vote of the State as possible, neither, in fact, voting for the candidate of the other. Thus you will show your strength and hold the balance of power."

The result of this advice in Massachusetts and New York, the only States in which Butler is known to have a large following, would be the selection of a fusion ticket of Blaine-Butler electors. In the event of the fusion ticket carrying the day, Butler would get a number of electors proportioned to the number of votes thrown for him, and neither Blaine nor Cleveland would be elected. The "balance of power" would then be in the hands of Benjamin and his electors with a vengeance, for they might throw the election into the House, and so elect Cleveland, or they might make a deal with Blaine. The idea that electors chosen to carry out such a fusion as this will be "reputable men bound by their honorable undertakings," like the old free-soilers and abolitionists to whom Butler compares them, is a good joke. They will of course be on the make just as Ben is himself, and the question as to which particular candidate they will sell out is one which every man will decide for himself. Perhaps a better joke even than this, however, is that while he calls on his followers to "fuse," he is careful to warn them that they must expect no money from him to fuse with. "Organize," he says, "in every State." But what does the old fellow mean by "organize"?

"When the word 'organize' is used, at once spring up to the mind the political machines which have been created, caucuses, conventions, and delegates who can be bought and sold in the market like sheep; the contrivances by which the people's enemies have conspired to take away their rights. By that word I mean nothing of that sort. Organize in your workshop; agree to vote together for one ticket. *There need be no great and expensive meetings.* You can vote together *without a brass band* just as well as you can with one. *Torchlight processions are an invention of your enemies* to deceive you into following their banner and marching to their music, and into not voting for your own interests and the interests of your wives and your children."

The Reformer evidently does not mean to throw good money after bad in this campaign.

The Prohibitionists in Massachusetts have issued a call for a convention next month, at which they will nominate a full electoral and State ticket. If they endorse St. John, as we suppose is their intention, they will undoubtedly draw off a good many votes from Blaine, and these, together with those of the Independent Republicans, will be enough to give the State to the Democrats unless General Butler can counteract the effect by his appeal to the labor vote. Therefore, if there are a large number of Democratic laboring men in Massachusetts who wish to carry the State for Blaine, they can help to do it by voting for Butler. The General, with his wonderful good sense and frankness, is doing all in his power to make this perfectly plain to them.

The Massachusetts Independents are receiving information from New Hampshire and Vermont which shows that the Blaine campaign is not "rushing ahead like a prairie fire" in either State. One New Hampshire bolter says there are seventy-five Republicans in his town who will vote for Cleveland, that the State is honeycombed with the same kind of Republicans, and that with hard work it can be carried by the Democrats. In Vermont the lack of enthusiasm for Blaine is so marked that the Republican majority of 25,000 which was given to Garfield is likely to drop to 15,000 this year. The trouble in Vermont is due mainly to dissatisfaction at the way in which Mr. Blaine's friends tried to defend him by bespattering Mr. Edmunds, and to the influence of a letter which Mr. Edmunds is said to have written for private circulation among the Republican leaders of the State in 1880, in reference to Mr. Blaine's qualifications for the Presidency. In that letter, a man who read it declares that Mr. Edmunds said "Whenever Thurman and I have joined hands against Jay Gould and fel-

lows of that sort in the Senate, James G. Blaine has invariably started up from behind Gould's breastworks, musket in hand." The same authority adds: "The letter as a whole was, by declaration and unmistakable implication, an indictment of the public political integrity of Blaine, as a man who used his public trust for private profit. No man reading the letter could think otherwise." It is noticeable that Senator Edmunds is, according to recent reports, "living quietly at his home in Burlington, avoiding all publicity."

Ex-Governor Rice, of Massachusetts, says that his political barometer tells him that Blaine and Logan will be elected, and, being pressed for reasons for his belief, replies: "Say what the Democrats please, they cannot disguise the fact, nor change it, that a large class of our people are 'hero-worshippers,' having a love for the dashing, the brilliant, and the audacious. We all know that Blaine appeals largely to this class. He is a man who touches the heart of the masses, and causes quicker pulsations and more enthusiastic work.' This is all the reason Mr. Rice gives, and we may add that it is all the reason which any Blaine advocate gives. At present the Blaine canvass is precisely what we predicted it would be when he was nominated. All attempts at argument are met with "Hurrah for Jim Blaine!" All pretence of reasoning has been abandoned. Not a Blaine speaker or editor can be induced to discuss Blaine's record either as a railroad operator, Speaker, or Secretary of State. What about the Mulligan letters? "Oh, Blaine is dashing, brilliant, audacious. Hurrah for Jim Blaine!" What about the Landreau claim and his South American policy? "Oh, all the British free-traders are against Blaine and all the dynamite Irishmen are for him. Hurrah for Jim Blaine!" Whenever Blaine's name is mentioned at a Blaine meeting, no matter what the connection, there is at once a tremendous outburst of preconcerted applause. The idea seems to be that he can be yelled into the White House as he was through the Chicago Convention—that the power of clap-trap is great enough to elect a man President of the United States, even when his record is so bad that his advocates do not dare to publish their attempts to explain it.

The Blaine papers' unwillingness to discuss their candidate's railroad transactions we can understand and sympathize with; but what is the reason they have nothing to say about his "vigorous foreign policy"? When lawyers like Messrs. Evarts and Hoar, who have themselves been Cabinet officers, come out for Blaine, they must at least believe that the executive and diplomatic business of the country would be safe in his hands. Cannot the newspapers which are supporting Blaine get such defenders as these to furnish some sort of an apology for his behavior in the State Department, or some sort of reason for thinking his career as Secretary warrants them in recommending him to the votes of his fellow-citizens? We venture to suggest as good topics for such a defence the Clayton-Bulwer treaty and Mr. Blaine's management of the canal question and the Monroe doctrine; his dealings with the Irish "suspects"; his recognition of the Calderon Government in Peru; his adroit handling of the Landreau claim; his responsibility for Hurlbut's wild acts in Peru, and his intervention in the dispute between Guatemala and Mexico. These are public matters, and do not relate in any way to Mr. Blaine's "private" life. Moreover, we have always been assured that his "foreign policy" was one of his strongest claims to the title of statesman. He is spoken of as the Disraeli of America, and yet not one of his Jingo friends has the courage to explain or analyze his foreign policy at all. How is this?

The *Tribune* has committed the curious mistake of comparing the "war record" of the candidates. It reproaches Cleveland with sending a substitute to the war in the person of a "criminal," as if Blaine had been fighting away in the field himself all the time. Cleveland stayed at home to support his mother and sisters, at the age of twenty-five, while his two brothers went to the war. Blaine was thirty-one years old, and had no such claims on him, but stayed at home to lobby and make money in Washington. His defenders now say he was a rich man when he entered Congress in 1863, by way of meeting the charge that he made his fortune while in Congress. He sent a substitute to the war, but, characteristically enough, it is uncertain whether the $200 he paid him came out of his own pocket or not, and even whether he did not make money out of the transaction. Characteristically, too, he got the substitute employed in the Provost Marshal's office in Augusta, so that he never took the field. Characteristically, too, the substitute, being, like his principal, "on the make," took to selling fraudulent exemption papers, and got into jail therefor. In fact, a more thoroughly Blaineish episode than his contribution to the military service of his country, in the hour of its trial, there is not in Blaine's whole career. Their calling attention to it is another illustration of the fatuity of his advocates.

Complaints about the methods of Steve Elkins are heard very freely in Ohio and West Virginia, and surprise is rather curiously expressed that he should attempt to conduct the Blaine campaign on so low a moral level. It is our opinion that he is doing that because he was selected to conduct it so. Steve is not in the high moral business, and never has been. The peculiar methods which he used so successfully in securing Blaine's nomination, will be employed in the canvass for his election. In Steve's opinion, success in politics is "largely a question of finance." It is said in Ohio and West Virginia that he is already beginning to colonize the States with illegal negro voters, and that he will spend money freely in both. In West Virginia the hostility to him is already so great that it is said to be unsafe for him to show himself in the State. These reports may or may not be true. There is nothing in Elkins's history which makes them inherently improbable. The operations attributed to him are those which he has always believed in. That he will be able to help his candidate by them this year we do not for a moment believe. The opposition to Blaine is not of the kind which can be "bought off," and the principal effect of attempts to overcome it by colonization and other illegal methods will be to incense Republicans who are now trying to convince themselves that they ought to support Blaine.

As the Government employees usually receive payment of a half month's salary on the 14th or 15th day of each month, the faces of the members of the Republican Finance Committee in Washington are said to have borne glad smiles of expectancy on Thursday and Friday last. But a *Post* (Washington) reporter, who visited their headquarters on Friday afternoon, observed that their lean and hungry look had returned, not a contributor having visited the rooms during the day. The clerks are still receiving the circulars, which, it should be said, are directed to their residences, their office address being, upon sober second thought, cancelled. The inconvenience of discovering such addresses, to which the Committee has been subjected, is very manifest, and generally awakens inquiry upon the part of a clerk, who cannot reconcile this timidity of approach with the avowed intention of the circular to abide by the letter and spirit of the Civil-Service Act, to which it has the effrontery to refer him.

A "Buffalo Clergyman" writes to the *Sun*, controverting a statement which he says is made in "the letter missal" of the Independents of that city who examined the Cleveland scandal, that clergymen are poor investigators of charges of immorality. He thinks they are very good investigators indeed, and argues the matter through half a column of the *Sun*. The passage he quotes from "the Report of the Sixteen Independents," however, never appeared in that document at all, nor did anything like it. It is taken from an article in the *Evening Post*. This leads us to fear that the *Sun* has been surrendering its space to Mr. Ball, of whom the Buffalo *Express*, after trusting him for a few days, was compelled to say that it believed he tried to tell the truth, but did not know how; in other words, he is probably more muddleheaded than mendacious. What the Sixteen Independents did say about the scandalmongering clergymen of Buffalo was, that "the two clergymen whose profession has been invoked to give weight to these charges have no personal knowledge of the facts, and under the circumstances could not possibly have such knowledge. They have ventured to state as facts known to themselves stories which rest upon the merest hearsay, and which, when traced to their alleged sources, are in every case denied by the persons to whom they are ascribed."

Mrs. Elizabeth Cady Stanton has an extraordinary article in the *North American Review*, urging "the need of liberal divorce laws." She desires to counteract the evil effect of Judge Noah Davis's recent discussion of our divorce system and the agitation for a uniform national divorce law. She seems to be afraid that in passing a uniform divorce law we shall get a too stringent one, though how this can

be brought about in a country whose divorce system is as liberal as ours, she does not explain. The only effect of passing a national law on the subject would be to have a marriage or a divorce in one part of the United States recognized as a valid marriage or divorce anywhere. Articles like that of Mrs. Stanton make the tyrant man smile, and wonder what sort of laws we shall live under when women have a hand in making them. The women-suffragists could afford to pay Mrs. Stanton a handsome salary to stop writing.

The papers read at the Bankers' Convention at Saratoga were generally of a high character, coming from that rare order of ability in which practical experience is combined with theoretical knowledge of the principles of finance. The address of Mr. L. J. Gage, the President of the Association, was perhaps the most noticeable of the series in this regard. That of Mr. George Hague, of Montreal, on the principles of discount, was also extremely well considered, and was fully entitled to the vote of thanks accorded to it. We cannot speak so highly of Mr. John Thompson's plan for mitigating the effects of commercial crises by virtually giving to the holders of United States bonds the right to issue legal-tender notes to the extent of their holdings, not exceeding $100,000,000 in all. This is what Mr. Thompson's suggestion comes to, for it obviously makes no difference whether the bondholders issue the notes, or whether the Govment issues the notes to them on the security of the bonds. So extensive a power in the way of expansion and contraction of the currency has never been given to private individuals in any part of the world. Regarded as a permanent safety-valve for commercial crises, the remedy would be insufficient because the public debt itself is in course of rapid extinction. Most people will agree, however, with Mr. Thompson in the belief that the present commercial depression has reached low-water mark, and that the turn of the tide may be expected soon.

The Arctic cannibal sensation has done no good of any kind, so far as can now be seen, and it is difficult to make out what good it was expected to do. It has brought to light the fact that Henry was shot for disobedience of orders; but this had been reported already at Washington, and it is no part of the business of the Government to keep the newspapers informed of any punishments of this sort. The discovery of the fact of cannibalism does not increase or diminish General Hazen's responsibility, and there was no reason for supposing that Greely had ever known of anything of the kind. There are things in this world that are too horrible to be related in conversation, and the old rule in journalism was to draw the line at these, unless the public interest demanded that it should be crossed.

It is an unfortunate result of the fact that a newspaper is not only a pulpit for moral exhortation, but also a commercial venture, that where a sensation or "exposure" is concerned the question asked is, not only whether it will do any good, but also whether it will sell; and the great rivalry in exposures and sensations which have been the main feature of the news market of recent years has now brought us to a point at which a person with a delicate stomach may well hesitate before looking in the "news columns" of any newspaper—for news is news, and a sensation once started has to go through every newspaper in some form or other. When "chairs of journalism" are established in our colleges and university, the moral question relating to the treatment of exposures and sensations will form an interesting part of the course. Is the true test of an exposure the interest of the public in the matter exposed, or is it the horror and disgust that the facts properly dished up will excite? Is it the duty of an editor to publish any duly authenticated or probable story brought to his knowledge, no matter what agony and humiliation the publication must entail, provided it will sell the paper? Is the constant publication of such stories, and the consequent successful sale of large editions, the true test of eminence in the profession?

Private advices from the West confirm the published despatches as to the condition and size of the crops, and as a consequence the fear is once more expressed that we are going to suffer from "over-production" in wheat and corn—that the price per bushel will fall so low that either the railroad charges will be excessive, and make the margin of profit to the producer small, or else that the railroad charges will have to be made so light that their chance of earning dividends will be worse than ever. But then the economists who take this gloomy view of the future, should remember that there is no way of checking over-production of wheat and corn by combinations of producers like those resorted to in pig-iron and other manufacturing industries; and also that the more grain the railroads have to transport, the lower the rate at which they can afford to transport it; and also that the process of cheapening food by extensive production has been going on for many generations without doing the world any serious permanent injury.

The great political crisis in Norway, which began in 1880, has run its course slowly but completely, although the vital constitutional question which lay at the bottom of it has not been definitively settled. The termination is the triumph of the popular or peasants' party, but under circumstances which render it possible to say that the Conservatives have not surrendered their principle, and the King, though yielding, guards his prerogative intact. That the protracted and violent agitation has not led, as was often apprehended, to an armed collision between the radical democratic majority in the Storthing (which asserted the unlimited right of the people to alter the Constitution by legislative resolutions, unsanctioned by the Crown) and the Government (which maintained that the King had an implicit absolute veto in constitutional matters—unlike the explicit veto in common legislation, which the fundamental law of the kingdom made suspensive only), must be a matter of congratulation to all parties concerned. The trial of the Selmer Cabinet, impeached in the spring of last year for various unconstitutional proceedings, and chiefly for not promulgating the resolution, passed by three successive Storthings and hence overriding the royal veto, binding the Ministers (or "State Councillors") to appear at the legislative sittings, was a very slow affair. Debates on the right of those members of the Lagthing, or smaller branch of the Storthing, who had voted for the resolution, to sit as judges in the court which was to decide in their own cause against the Cabinet—a court composed of the Lagthing and the Supreme Tribunal of the realm—and long speeches and long adjournments, consumed a great deal of time, while the excitement was at fever height, and avowed or virtual Republicans were making open preparations to give force by arms to the expected condemnation, should this be disregarded by the Crown as a stretch of popular power unwarranted by the Constitution. Nor were the Conservatives inactive, and King Oscar II., addressing, in January last, a deputation of the Swedish Diet, emphatically announced his determination to stand by his rights, the threatened nullification of which would undermine the entire basis on which the union of Sweden and Norway rested.

At the close of February the condemnation of Selmer, which the composition of the tribunal (the Court of the Realm) and party pressure had rendered a foregone conclusion, was pronounced, and shortly after similar sentences were passed against several of his associates in the Cabinet. Selmer, declared deposed, ceased to appear at the sittings of the State Council, but the King announced in a so-called "Dictamen" that he could not accept a judgment of the Court of the Realm as a binding decision in constitutional questions, and was therefore resolved to continue the exercise of his powers in all their fulness. The Cabinet, however, had to be reconstructed, and the King intrusted with the task one of its members, Schweigaard, who had also been condemned, but not to the loss of his office. The new State Councillors were known for their moderation, but, as they did not attend the sittings of the Storthing in accordance with the resolution of 1880, the Left in the latter body threatened them also with impeachments. To avoid fresh trials the King, following the advice of the leaders of the Conservatives, tried the formation of a Cabinet of the Centre, under Broch, a famous ex-Councillor of State, but this and similar other attempts failed. There remained no other way out of the perplexing difficulty, short of complete surrender, but to apply to the Opposition itself to take the reins of government into its hands without demanding an avowed sacrifice of principle on the part of the ruler. The veteran chief of the Democratic party, Johan Sverdrup, consented to form a cabinet on such conditions, and, of course, there was no difficulty in doing it. This consummation, about the beginning of last month, was hailed all over Norway as a happy termination of the great conflict, and the reconciliation between Oscar II. and the nation was soon after solemnly ratified by a grand celebration in Christiania.

SUMMARY OF THE WEEK'S NEWS.

[Wednesday, August 13, to Tuesday, August 19, 1884 inclusive.]

DOMESTIC.

Governor Cleveland's letter accepting the Democratic nomination for the Presidency was given to the press on Tuesday. It is short, occupying only one newspaper column. He cordially approves the party platform, which, he suggests, needs no amplification from the standard-bearer of the party. He therefore only briefly refers to certain truths "vital to the safety and welfare of the nation." As an effective means toward purifying the suffrage, and making office-holding "a public trust" instead of a "dedication to the profession of politics," he recommends an amendment to the Constitution disqualifying the President from reëlection. He then deals with the labor question, and asserts that our workingmen should receive "their full share of the care and attention of those who make and execute the laws." He does not believe that the immigration of those intending to become citizens of this country should be discouraged, but he would make a distinction against those "who, if they come or are brought to our land, do not intend to become Americans." "Cheap and easy transportation" is advocated as a means to commercial supremacy. On the civil-service reform question he lays down the maxim that "The selection and retention of subordinates in Government employment should depend upon their ascertained fitness and the value of their work, and they should be neither expected nor allowed to do unquestionable party service." He promises, in conclusion, if called to the Presidency, to "dedicate every effort to the country's good."

Gen. B. F. Butler's address accepting the Greenback-Labor and Anti-Monopoly nominations for the Presidency of the United States was published on Tuesday. It is a very diffuse document, filling six newspaper columns, and deals with a great variety of topics in Butler's characteristic way. He urges his constituents to form a People's party, and declares that he who votes for a third party will not lose his vote. General Butler closes with distinct addresses to "the Greenback-Labor party and the Anti-Monopolist organization, and to the laboring men," and to the Democratic party of Massachusetts.

Mr. Blaine has instructed counsel to bring a libel suit for $50,000 against the Indianapolis *Sentinel* for charging him with having made a forced marriage. In his despatch directing the suit to be brought he says: "I am sure that honorable Democrats alike with honorable Republicans will justify me in defending the honor of my family, if need be with my life."

General Logan, the Republican candidate for Vice-President, has been making a political tour through the cities of central and western New York during the week.

Roscoe Conkling, having been elected an honorary member of a Blaine club at Albany, declines in a letter in which he says: "I am quite out of politics, and don't wish in any way to be drawn into the pending canvass."

Gen. Roger A. Pryor, of this city, announces that he will support Cleveland for President, and not Butler, as had been reported.

The wording of the call for the Republican State Convention of Massachusetts, issued on Monday, is accepted as indicating that the plan of shutting out anti-Blaine Republicans from the caucuses is to be carried out. It is addressed to "the Republicans and all other voters of Massachusetts who intend to support the Republican candidates, both State and national." Chairman Lodge says that it is impossible for the call to include Independent Republicans.

A large anti-Blaine meeting was held in Casino Hall, Newport, R. I., on Friday night. L. D. Davis, of the Newport *News*, presided. The majority of those present were well-known Republicans. Col. George E. Waring, a lifelong Republican, expressed his determination not to vote for Blaine, whom he held to be the very essence of official corruption. He spoke favorably of Governor Cleveland. The Chairman, the Rev. Mr. Wendte, Colonel Honey, Prof. Wolcott Gibbs, and others, all Republicans, made anti-Blaine speeches. A club was formed, with Mr. George Gordon King as President. An address was issued to the Republican and Independent voters of Newport County.

The Michigan Republicans on Wednesday nominated for Governor Gen. Russell A. Alger, of Detroit, who received 371 votes to 243 for Cyrus G. Luce, the Granger candidate. The platform takes ground against the importation of contract labor.

The Democratic and Greenback State Central Committees of Iowa on Thursday decided to make a fusion upon one electoral ticket, the Greenbackers taking six and the Democrats seven of the candidates for electors.

Thomas Boles has been nominated by the Republicans of Arkansas for Governor.

The Missouri Democrats have nominated Gen. J. S. Marmaduke for Governor. The Georgia Democrats have renominated H. D. McDaniel for Governor.

A resolution looking to the open repudiation of the Virginia debt was offered in the Senate of that State on Saturday.

Ben Butterworth, Commissioner of Patents, will resign the Commissionership and accept the nomination for Congress in the Second Ohio District made on August 7.

A call for about $10,000,000 3 per cent. bonds will probably be issued in a few days.

The American Bankers' Association met in Saratoga on Wednesday morning, many prominent financiers being present. President Lyman J. Gage, of Chicago, delivered an address in which he considered the causes and remedies for panics. He summed up the latter as follows: The maintenance of cash reserves larger than 25 per cent., a repeal of usury laws, a removal of the injurious restrictions of the National Banking Act, and the adoption of some rule to secure a uniform practice in loaning freely in times of panic out of the cash reserve. A resolution was adopted recommending discontinuance of the coinage of the standard silver dollar. A resolution was also adopted calling the attention of Congress to the necessity for legislation to continue the national banking system. Among the papers read on Thursday were those on "The London Bankers' Institute," by J. J. P. Odell, and "One-Name Paper," by George Hague.

The Grand Lodge of the Independent Order of Odd Fellows, consisting of representatives of the 510 subordinate lodges of this State, began a legislative session at Chickering Hall on Tuesday morning. Over 400 delegates were in attendance when the meeting was called to order.

Lieutenant Greely spoke on Wednesday about the reports of cannibalism among his men. He said that so far as his personal knowledge went no act of this sort had been committed by any one connected with the party, and that, if anything of the kind occurred, it was an individual act utterly unauthorized and heartily deprecated. On Thursday was published Lieutenant Greely's official report to the War Department of the military execution of Private Charles B. Henry, Fifth Cavalry, for continued thieving of provisions when his comrades were starving. Greely says: "The order was given in writing on my undivided responsibility, being deemed absolutely essential for the safety of the surviving members of the expedition." Three of the most trustworthy men were selected for the duty, and the entire party approved the action when the order was read after Henry's death. The remains of Lieutenant Kislingbury were disinterred at Rochester on Thursday in the presence of his relatives and several reporters. Two trustworthy physicians made an examination, and published an affidavit that little of the flesh remained upon the skeleton, and that it had been cut away by some sharp instrument, thus confirming the reports of cannibalism. Further confirmation of them was made on Tuesday, when Private Whistler's body was exhumed at Delphi, Ind., and was found almost fleshless.

An enthusiastic reception was given to Lieutenant Greely on Thursday at his home in Newburyport, Mass. The town was richly decorated. There was a procession, an address of welcome by the Mayor, and a short reply by Lieutenant Greely.

Captain Wilson, of the bark *Fluorine*, at Philadelphia, from Ivigtut, reported on Friday that in June, off Julianshaab, latitude 60° 36′ north, longitude 46° 07′ west, the lower part of a tent was found by an Eskimo on a piece of floe or drift ice, the ends of a store or provision cask marked *Jeannette;* contents in store also marked; charter party and check book on Bank of California, both signed by De Long; a pair of oiled trousers of Louis Noros; a bear's skin which covered something of the size and shape of a human corpse, but the Eskimo did not remove the skin to ascertain what was under it.

Mr. Vanderbilt sold Maud S., the famous trotter, to Robert Bonner of this city, on Tuesday, for $40,000. She will be retired from the track, in races for wagers.

The steamship *Lydian Monarch*, disabled in mid-ocean several weeks ago, reached her dock in Jersey City on Saturday.

Anoka, Minn., was burned for the fourth time in its history on Saturday. The loss is estimated at $1,000,000.

The Irish National League closed a very successful session at Boston on Thursday. Resolutions were adopted approving the course of Mr. Parnell. Alexander Sullivan refused the office of President, and Patrick Egan was elected.

Mr. John King, jr., has formally accepted the Presidency of the New York, Lake Erie and Western Railroad, succeeding Mr. Hugh J. Jewett, whose contract to serve as President expired last June. Mr. King is fifty-two years old. He began his career as an express and ticket agent. For fourteen years he was Vice-President of the Baltimore and Ohio Railroad. For the past three years he has been in Europe for his health.

Nathan Chandler of this city, a prominent banker, and one of the original members of the Union League Club, died, on Wednesday, in Saratoga, aged 72.

Col. Morgan L. Smith, commander of the Seventh Regiment of New York in 1835 and of the Veteran Corps of the Seventh in 1859, died at his home in Newark, N. J., at midnight on Wednesday. He was born in Dutchess County, New York, in 1801.

Colonel J. J. Woodward, surgeon in the United States Army, died on Monday near Philadelphia. He was one of the physicians in attendance on President Garfield.

Mrs. Mary Clemmer Hudson, better known as Mary Clemmer, died at her home in Washington on Monday of hemorrhage of the brain. She was born in Utica, but early in life was taken by her father to Massachusetts. Her first novel, 'Victoire,' was written while she was barely twenty years of age. Her later books were 'Poems of Life and Nature,' 'His Two Wives,' 'Outlines of Men, Women, and Things,' and 'Ten Years in Washington.' Her most important work was the 'Memorial of Alice and Phœbe Cary.' She became most widely known as a Washington correspondent.

FOREIGN.

Parliament was prorogued on Thursday with the usual ceremonies. The Queen in her

speech, said: "I sincerely regret that an important part of your labors failed of result in a legislative enactment. Friendly intercourse subsists with all foreign Powers. I have to lament the failure of the Conference to devise means to restore the finances of Egypt, which are so important to the well-being and good order of the country. I view with unabated satisfaction the mitigation and diminution of agrarian crime in Ireland, and the substantial improvement in the condition of the people. I design at an early period to call your attention to the great subject of the representation of the people. I rejoice to observe, amid numerous indications of interest in the subject, constant proofs of loyalty to the throne and respect for the law."

The British Budget shows a decrease in revenue receipts during the year of £1,439,172, and a decrease in expenditure of £2,917,688.

The Duke of Wellington, son of the "Iron Duke," dropped dead at Brighton, Eng., on Wednesday, as he was entering a train for London. He was seventy-seven years of age. He is succeeded by his nephew.

Sultan Pasha, the President of the Egyptian Legislative Council, is dead.

General Stephenson has been finally instructed to take command of the Gordon relief expedition. It is reported that King John, of Abyssinia, will assist the expedition by a flank movement. The plan of the expedition has been settled by the War Office. The expedition will leave Wady Halfa in the third week of September, in detachments, and will concentrate at Hannek, from which point it will ascend to Meraweh, where it is expected to open communication with General Gordon, for a simultaneous movement on Berber. The Egyptian Government has applied to the Alexandria banks for a temporary loan. The banks refuse to negotiate unless they have official assurances that the English Government will approve the required advances.

The Mudir of Dongola has received a letter from General Gordon, dated Khartum, July 20, in which he says that he is safe, and asks for news of the relief expedition. He also says he intends to remain at Khartum, harassing the rebels by steamers until the expedition arrives. Gordon gives warning that the Nile cataracts are very rapid and dangerous at present. He adds that the troops are well.

It was announced on Friday that the Mudir of Dongola had received another letter from General Gordon, showing that he is still safe.

The rebels have been making persistent attacks on Suakim.

The Versailles Congress on Wednesday closed its labors by adopting the entire bill for a revision of the Constitution by a vote of 509 to 172. The Extreme Left abstained from voting, declaring that the principles of democracy were violated.

The French Senate on Thursday voted a credit of 5,000,000 francs to carry on operations in Madagascar, by 179 to 1. Its Budget Committee on Saturday recommended voting the sums required for Tonquin, but advised that debate on the subject be postponed until after the recess, when the supplementary credit should be discussed. Prime Minister Ferry accepted the postponement of the debate. The Ministers' Bill was then adopted by a vote of 193 to 1. The Revision of the Constitution Bill adopted by the Versailles Congress then was passed, and the session was brought to a close.

In the French Chamber of Deputies on Thursday the Budget Committee announced that they had agreed upon a credit of $38,000,000 francs for use in Tonquin, but declined to be answerable for any further amount. Prime Minister Ferry reminded the House that the Government's action in the East had received the hearty approval of the Chambers. He willingly accepted the responsibility of the Tien-Tsin treaty, and asserted that China had shamefully violated it. The French were not blamable for acting too precipitately, but for showing too much patience. "When China finally offered an indemnity of 3,000,000 francs, our patience," M. Ferry said, "was exhausted; Admiral Lespès was ordered to destroy the forts at Kelung. This did not signify that France was at war with China. The negotiations still continued." The Government asked the consent of the Chamber before taking further steps. The vote of the House would greatly influence China's ultimate resolution. The credit was voted on Friday by 350 to 152, and the Chamber passed a vote of confidence in the Government. Chinese despatches on Friday stated that M. Patenotre, the French Minister to China, declared that the French had no intention of interfering at Shanghai.

Admiral Miot telegraphs from Madagascar that he cannot undertake offensive operations unless he is reinforced. He has only 1,500 effective troops. There was a report in Paris on Friday that Tamatave had been recaptured by the Hovas, but it was officially denied.

A French Cabinet council was held at the Élysée Palace on Saturday, the deliberation lasting seven hours. It was decided to recall General Millot, commander of the French forces in Tonquin, and to replace General Negrier at that post.

A despatch from General Millot, dated Hanoi, August 17, says: "I have published a proclamation to the people, coupled with an ultimatum regarding the Regent's pretensions. The French flag has been hoisted over the citadel at Hué, the capital of Anam."

The new King of Anam was crowned on Sunday with great pomp.

The Chinese Minister of Foreign Affairs has sent to the foreign diplomatic representatives a protest against the actions of France. It deplores the French refusal of American mediation, and denies that China is guilty of a breech of the Fournier Convention, but accuses the French of having been guilty of several breaches thereof. The protest adds that China desires to submit her case to the judgment of Europe, hoping thereby that a settlement of the pending difficulties will be discovered. Otherwise China will resist as best she can, leaving France answerable for the consequences.

The Tsung-Li-Yamen, or Chinese Council of Mandarins, has announced its decision to resist the demands of France. It has also protested to the Powers against the operations of the French fleet at Kelung, because France bombarded that place without having made a formal declaration of war.

A despatch from Foo-Choo to the London *Times* on Saturday said: "France has rejected the mediation of any Power. China refuses to pay the indemnity demanded by France and has declared war. Admiral Courbet has demanded 2,000 men from Tonquin. General Millot sent 600 men, together with two batteries of artillery, on Monday with sealed orders. The French and Chinese war ships have steam up and their decks are cleared for action. The Chinese authorities have despatched war orders to the Viceroys of the provinces." The alarming news that war had been declared was semi-officially denied in Paris later in the day. It was also denied that France had refused mediation; none had been offered.

A Shanghai despatch on Tuesday said: "Tso Tsung Tang and Shu Tseng Chen, the Chinese Plenipotentiaries, have left Shanghai in accordance with instructions from Pekin. There is no prospect of settling the difficulty with France. Thirty-five members of the Board of Censors have presented a memorial to the Empress opposing the conditions offered by the French, and strongly urging hostilities. It is reported that the Empress has decided to declare war."

All the naval officers at Toulon on a furlough have been ordered to return in anticipation of war with China. The French steamer *Rio Negro* sailed from Algiers on Monday for Tonquin with 1,300 troops and a quantity of war material on board.

There were two deaths from cholera at Toulon on Monday night, and eight at Marseilles. The report of the ravages of the cholera in several departments of Southern France for twenty-four hours ending at 9 o'clock on Tuesday morning is as follows: Hérault, fourteen deaths; Gard, six deaths; Aude, four deaths; Eastern Pyrenees, twenty deaths.

In a recent lecture at Paris, by Dr. Burg, on the cholera, he showed that persons employed in copper and bronze factories were never attacked with the disease. Dr. Burg recommends the cupric treatment of wearing flannel treated with copper salts to prevent infection.

The death of the French archæologist, M. Charles Albert Auguste Eugène Dumont, at the age of forty-two, was announced on Wednesday. He was a Chevalier of the Legion of Honor and the author of many treatises upon archæological subjects. He also wrote several books upon the manners and customs of the people of Southeastern Europe.

France has made overtures to Berlin, Vienna, and St. Petersburg for an *entente cordiale* on the subject of the limitation of the English occupation of Egypt, the neutralization of the Suez Canal, and the independent policy assumed by England. The overtures from the French Government have been well received.

The German Admiralty has authorized the German fishermen in the North Sea to use fire-arms should English fishers molest them.

In reply to a recent article in the London *Times*, which intimated that Prince Bismarck was in a fit of ill-humor with England, which would probably soon pass away, the *North German Gazette* (Bismarck's organ) says: "Germany has for years supported the English policy in the most unselfish manner. She has received no return for this except malevolence in the treatment of German interests abroad on the part of both England and her colonies. Germany has always, and especially in the Angra Pequeña matter, acted in friendship for England. Such friendships, however, when one-sided, must, of course, collapse."

A terrible plague of locusts has visited Central Spain. The damage to crops about Ciudad Real is placed at $10,000,000.

It was rumored in Madrid on Friday that a Carlist refugee circle exists at Venice, and that Don Carlos has received advices from his adherents in the north of Spain that they are ready for the signal to begin a campaign against the Alfonsists.

At a meeting of the Liberal Federation held at Brussels on Monday, it was resolved to present a protest to the Chambers against the Education Bill. If the bill is passed the Federation will summon delegates from all parts of the country to assemble in Brussels and petition the King to veto it.

The Grand Duke of Saxe-Weimar has granted the Abbé Liszt, the famous pianist, an annuity of $1,500.

A recent explosion at Kazan, Russia, by which ten persons were reported killed, and several buildings burned, is attributed to Nihilists. It is now stated that the number of killed will aggregate one hundred.

A number of persons were arrested in the City of Mexico on Friday in connection with a conspiracy to reconstruct the Government as it was in 1876. Jardon, editor of *La Opinion Nacional*, was the leader. It is said that the plot was to shoot or imprison Diaz and Gonzales. The affair was greatly exaggerated, as the conspiracy was a weak one.

The sculling match between Hanlan, the Canadian oarsman, and Beach, the Australian, for the championship of the world and £500 a side, took place on Saturday on the Parramatta River, New South Wales. Beach won the match by seven lengths.

MORE OF IT.

We have now a further illustration of the probable effect on public morals and manners of the use of indecent literature in the canvass as a weapon of party warfare. We have now another family paraded before the public under circumstances calculated to cause the keenest suffering to perfectly innocent men and women, and suffering, too, which can never wholly cease, because there are certain associations which, once formed in the popular eye, cling to people permanently, just as there are some charges which cannot be buried by disproof. The American people, with an honorable, manly, and generous sense of what is due to family life, have during the last hundred years, in spite of the savage bitterness of political contests for a prize so great as the Presidency, abstained from dragging women into the arena; and they have recognized the fact that though all "charges" of a disgraceful nature wound a man's family and friends, there is only one charge which necessarily imputes guilt to others than himself, and that no woman can either publicly defend herself against such a charge, or sit silent under it, without suffering in social estimation in a way which to most women is almost worse than death. Political managers have not the reputation of being very scrupulous, and probably are no worse in this respect now than they were eighty years ago; but they have always recoiled until now from carrying their warfare into people's homes, and making female shame or misfortune a stock topic on the stump or in the campaign documents.

They have, moreover, recognized in political warfare, as well as in private life, the fact that there are some things unfit for public discussion—things that cannot be talked about outside court-rooms, or medical lecture-rooms, without more or less defilement; that there are things in a man's life or history which no earthly tribunal is competent to investigate, and least of all a tribunal made up of excited partisan editors and prurient blackmail reporters. For the same reason that a man dislikes having minute reports of criminal proceedings and scandals laid before his family in the newspapers, he dislikes to have the quadrennial public discussion which attends the election of the first officer of his Government converted into an examination of any man's private life, and, least of all, into an examination of that portion of a man's private life which concerns his relations with the other sex. Until now politicians have respected this dislike, but it has been allowed to interfere with a decent regard for the purity of the President's morals. It has been left to nominating conventions to look after this. It has been assumed that no American convention would nominate for the Presidency a notorious evil liver, or person known to all the world to be a libertine and profligate, but it has also been assumed that more than this no convention could guard against; that if the practice were once started in politics of making a minute examination of secret sins of candidates, every man of right feeling, every man, pure or impure, with any respect for the dignity of human nature, would reject political nominations with loathing and even horror, as much on account of his family as on his own account. Nobody fit to be President of a great nation would think of undergoing it. No decent husband or father would subject himself to such a process for any office in the world without degradation. For, it must be remembered, there is no class of offences which so powerfully affect the imagination of the evil-minded and unscrupulous as offences against purity; none which so many are ready to invent, magnify, and embellish; none in which the foul fancy finds so much material to feed on. We cannot forget that strange fact of human nature, the existence of a great body of what is called "obscene literature." There are in some parts of the world large libraries entirely composed of it. There are in all countries active and energetic publishers engaged in producing it and spreading it. Every country has to have penal laws to protect the public against its pollution, and there are no laws more difficult to execute, as we all know. Yet we are now asked—and by the Republican party, of all parties that have ever existed—to fill the newspapers with this stuff once in four years in defence of "the home and the family." Even in Massachusetts, in which the traditions of decent politics have been stronger than anywhere else until now, the State Committee, whose Chairman is a gentleman and the father of a family, has been distributing in great bundles, as a means of promoting good government, a filthy story which no decent woman would like to be seen reading, and no decent man would like to let into his house, and which was taken originally from a low, venal blackmail paper, and which, to crown all, was in its worst parts utterly false. The natural result has followed. The other side has produced its filth too, and the air is now going to be full of it.

What has caused all this is plain enough, and the result was foreseen and predicted by thousands. It has all come of the nomination by the Republicans at Chicago of a candidate whose personal honesty was, whether justly or unjustly, assailed before the nomination by a considerable portion of his own party. We do not believe any convention has ever done such a thing before. It made no difference whether such charges were true or false; the fact that a considerable body of the voters believed them was certain to convert the canvass into a sort of police-court discussion of a man's private affairs. If, as in the present case, the candidate were really guilty, and had no defence, his supporters were sure to be driven in sheer desperation to assail his opponent with any weapon which came to hand. This has happened, and we have now a controversy worthy of the stairway of a tenement house, which reflects shame and disgrace on the whole country, and gives some of the greatest rascals it contains a chance to parade themselves as the champions of "purity."

AN UNFORTUNATE COMPARISON.

We presume most people would have been very glad to pass Mr. Blaine's libel suit without other notice than an expression of regret that he should have felt compelled to bring it. We certainly should. But besides being himself evasive and tricky, he has the misfortune to be surrounded by friends and admirers who, whether through moral obtuseness or simple stupidity, seem to take delight in bringing these qualities of his character out into bold relief and calling attention to them. For instance, the *Tribune* of Sunday, not content with saying what nearly every one would have forgiven it for saying—

"Mr. Blaine will have the sympathy of all honorable men in defending his home and family against foul slander. No other course was possible for a man thus assailed, and able to confront his slanderers without hesitation or fear"—

goes on to add:

"Mr. Blaine does not ask an investigation by interested friends, or by agents of journals already committed to his support; he relies upon a jury of his countrymen for that justice which is due to the greatest as well as to the humblest citizen."

This is, of course, a perfectly gratuitous comparison between Mr. Blaine's method of dealing with attacks on his character and Governor Cleveland's, and betrays a degree of fatuity on the part of the person making it which, if one had seen less of "the Blaine crowd," would be very puzzling.

As every one knows, the most extraordinary thing about Mr. Blaine's career since his character came under a cloud—that is to say, during the last eight years—is the persistence with which he has resisted all attempts at investigating any of the charges made against him. His seizure of the Mulligan letters in order to prevent their production before a Congressional committee, and his defiance of all the suspicions excited by his manner of producing them afterward, as well as his opposition at every step, so far as lay in his power, to the production of all other evidence before the Committee, except his own story, were very remarkable and very dramatic. But they were really not more remarkable than the calm with which he has treated all the suspicions excited by other transactions, such as his sale of the "interest" in the Northern Pacific Railroad, which did not come directly before the Committee, of which the Chicago *Tribune* said at the time (June 6, 1876):

"The most favorable construction that can be put on this matter leaves Mr. Blaine in the unfortunate position of a broker, offering certain railroad stocks for sale, whose value had just previously been enhanced by national legislation which he had favored while Speaker in the House of Representatives. This construction is also effected to Blaine's disadvantage by his failure to specify who was to receive the benefit of the proposed sale, and how he came to be selected as agent; and his injunction to keep his name secret, as having been connected with this transaction, seems to indicate on his part that he was not acting as he ought to act in his public position."

Now, Mr. Blaine has never on any occasion offered to clear this matter up, nor has any friend on his behalf, whether by "interested friends," or "agents of journals already enlisted in his behalf." In fact, only one authorized defence or explanation of his rail-

road transactions has ever been made—the letter of Mr. William Walter Phelps to the *Evening Post*—and the value of that may be estimated from the fact that that journal, which is bitterly opposed to Mr. Blaine, is selling it at five cents a copy. Senator Hoar, Senator Dawes, and Senator Hawley have all said in speeches that they know of a way in which an honorable construction may be put on the evidence against him, but they have thus far declined all invitations to communicate it to the public, and his organs in the press are equally reticent. The Brooklyn Young Republicans have investigated the charges against him, with an honest desire to get at the truth, but we believe we are correct in saying that not one atom of help have they received from Mr. Blaine or any of his immediate friends or supporters. They have been left to extract their conclusions as best they could from the letters he was compelled to read in the House, and the uncompleted inquiry of the Congressional Committee.

What was perhaps still more extraordinary was his conduct when the investigation of this Committee came to an end in 1876. The proceedings were stopped by his sudden illness, out of common consideration for him, as they had really taken the form of a trial of him. Before he got well, although he recovered with great rapidity, Congress had adjourned and he had been promoted from the House to the Senate. The inquiry left him lying under grave suspicion of official corruption, and much more than suspicion of public lying, in the eyes of a large body of the American people. Our belief is that there never has, in any country, been a public man of his standing who, under the circumstances, did fail or would have failed to ask for a renewal of the investigation and press it to a conclusion, and to insist on his accusers saying all they had to say either before Congress or the courts. He did nothing of the sort. He did not seek, nor did any one seek on his behalf, that the inquiry might be continued with a view to his vindication, although the larger portion of the Republican press made no secret of its belief that as matters stood he was a fatally damaged man. He, on the other hand, put his tongue in his cheek, and walked off as merrily as a bunko man who had got out of the clutches of the Court of General Sessions through a flaw in the indictment; and he has ever since refused to raise a finger before any tribunal in defence of his good name.

To cite his libel suit now as a mark of the eagerness with which he confronts accusers, is, in view of all these things, a sorry blunder. It would be so even if the bringing of a libel suit, without the smallest intention of ever trying it, was not a device of wrong-doers which is now so well known that it excites a smile in every newspaper office in the country. There is hardly one great American rascal who has not at some time or other in his career resorted to it to divert public attention from newspaper attacks on him. As the resort of a Presidential candidate in the month of August, we shall only say that it looks in the present case highly characteristic.

Mr. Blaine's competitor, whatever his faults, cannot be charged with fearing to meet the enemy in the gate. He has not, we can testify, when a charge was made against him which seemed likely to damage his Presidential prospects, hesitated for one minute as to what he should do. To the first friend who asked him what was to be done, he said, "Tell the truth"—something which Mr. Blaine has probably never said to a friend in his life. What he says, when in trouble, is what he said to Fisher on the Northern Pacific transaction: "Keep my name quiet, mentioning to no one unless to Mr. Caldwell." And Cleveland's friends at once did tell the truth. They concealed nothing, stole and secreted no letters, denounced no accusers, offered no bribes, refused no information within their reach. He determined from the first to shame the devil, and the devil is ashamed of the whole business. There is no mystery about Cleveland's official career which anybody is unable to fathom. There are no phrases of his which his friends are unable to explain or refuse to explain publicly. He did not promise to have the charge against him investigated next December or January, or as soon as the case could be reached on the calendar. He has had it investigated *now*, when everybody is talking about it and interested in it, and by anybody who chose to give himself the trouble. He has in short behaved like a man who is determined, whether he gets the Presidency or not, in trying for it to bring no discredit on the American name.

ANOTHER "FIND" IN THE MULLIGAN LETTERS.

THE Boston *Herald* has got Mr. Blaine in a fresh tangle in the meshes of the Mulligan letters. That wonderful net has evidently been explored only in part. Mr. Schurz pointed out an untruth in Mr. Blaine's statements which had, we believe, escaped the notice of previous examiners. Mr. Blaine had said, in a speech in Congress, that there had been no legislation concerning the Little Rock Railroad subsequent to the "great favor" he had rendered to the company from the Speaker's chair, except an act "merely to rectify a previous mistake in legislation." Mr. Schurz showed that this subsequent legislation was an act to repeal a proviso of a former act which limited the price of the granted lands to actual settlers to $2 50 per acre. It was not "merely to rectify a previous mistake," but to confer new value upon the land grant. Whether the act was good or bad in itself is of no importance, so far as Mr. Blaine's veracity is concerned. This was the third untruth pointed out in Mr. Blaine's statements, to which the Boston *Herald* now contributes a fourth, and promises to add still others to the collection.

The first witness before the Crédit-Mobilier investigation of 1872, which took place four years earlier than the Blaine investigation, was Mr. Blaine himself. He testified as follows:

"I wish to state, without reservation or qualification, that I never owned a share of the stock in the Crédit Mobilier in my life, either by gift, purchase, or in any way whatever. Nor did I ever receive, either directly or indirectly, a single cent derived in any manner or shape from the Crédit Mobilier or the Union Pacific Railroad Company. No person holds, or ever did hold, for me, any stock in either corporation as agent or trustee, or in any capacity whatever. I wish my testimony to be taken as exhaustive, and as intended to exclude *every form or phase of ownership in the Crédit Mobilier or the Union Pacific Railroad Company, both past and present.*"

One of the Mulligan letters, dated April 13, 1872, says:

"I left with Mr. Mulligan January, 1871, $6,000 in land-grant bonds, Union Pacific Railroad, to be exchanged for a like amount of Little Rock land bonds with Mr. Caldwell, he to change back when I desired. Mr. Caldwell declined to take them, and you took them without any negotiation with me or any authority from me in regard to the matter. You placed the Little Rock land bonds in the envelope, and I have the original envelope with Mulligan's endorsement thereon of the fact of the delivery to you. Now I do not complain of your taking the bonds, provided you hold yourself bound to replace them. The worst of the whole matter was that the bonds were only part mine, and I have had to make good the others to the original owner."

When Mr. Blaine read this letter in the House he said:

"There is mentioned in this letter $6,000 of land-grant bonds of the Union Pacific Railroad, for which I stood as only part owner; they were only in part mine. As I have started out to make a personal explanation, I want to make a full explanation in regard to this matter.

"Those bonds were not mine except in this sense. In 1869 a lady, who is a member of my family, and whose financial affairs I have looked after for many years—many gentlemen will know to whom I refer without my being more explicit—bought, on the recommendation of Mr Samuel Hooper, $6,000 in land-grant bonds of the Union Pacific Railroad as they were issued in 1869.

"She got them on what was called the stockholders' basis; I think it was a very favorable basis on which they distributed these bonds. These $6,000 of land-grant bonds were obtained in that way. In 1871 the Union Pacific Railroad Company broke down, and *these bonds fell so that they were worth about 40 cents on the dollar.* She was anxious to make herself safe, and I had so much confidence in the Fort Smith land bonds that I proposed to her to make an exchange. The six bonds were in my possession, and I had previously advanced money to her for certain purposes and held a part of those bonds as security for that advance. The bonds in that sense, and in that sense only, were mine—that they were security for the loan which I had made. They were all literally hers; *they were all sold finally on her account*—not one of them for me. I make this statement in order to be perfectly fair."

The *Herald* affirms that this exchange of Union Pacific bonds for Little Rock bonds was made on the 10th of May, 1871, and that the quoted price of Union Pacific Land Grants at the Boston Stock Exchange on that day was not 40 cents on the dollar, but 82¼, that the bonds were paying 7 per cent. interest, and that the company was not in default. The Little Rock bonds were worth at this time only 15 to 20 cents on the dollar. It says further that the $6,000 Union Pacific bonds in question were never returned to Mr. Blaine at all, and that consequently his statement that "they were all sold finally on her account" is false.

It is difficult to conceive what could have been Mr. Blaine's motive for making such misstatements. The *Herald's* conjecture is that Mr. Blaine, having in his possession $6,000 Union Pacific land-grant bonds, and perceiving that an investigation of the Crédit-Mobilier scandal was coming, desired to get rid of them for a time, but in such a way that he could get them back, in order that he might make the statement, which he did make to the Committee, that he never had "any form or phase of ownership in the Crédit Mobilier or the Union Pacific Railroad, past or present." The *Herald* adds, with considerable severity, that "if these bonds were honestly acquired, there was nothing for him to fear. If they belonged to his ward, and he held them as guardian or trustee, he had only to say so and his statement would have been accepted without question."

In conclusion, the *Herald* indicates in an ominous paragraph that there is more to come, viz.:

"The Mulligan letters contain a great deal of information. The manner in which Mr. Blaine distorted and partially suppressed those that he refused to return to Mr. Mulligan, after receiving them upon his solemn promise to do so, will be treated in another chapter. A subsequent discussion of important phases of the Mulligan letters will show still more conclusively that Mr. Blaine is the man who best appreciated the damaging disclosures their presentation and explanation would make. It is an open secret that several attempts have been made to buy these letters of Mr. Mulligan, directly or indirectly, the source of which attempts does not require a very vivid imagination to discover."

RAILWAYS, PRODUCTION, AND POPULATION.

We made reference a short time since to Mr. Edward Atkinson's paper on "The Railway, the Farmer, and the Public," which is in the nature of a supplement to a similar treatise by the same writer published about four years ago. In his former treatise Mr. Atkinson showed that the forces of competition were much more effective for the regulation of railroads and the reduction of their charges than legislative bodies or anti-monopoly conventions could possibly be—that these forces had reduced the cost of transporting the principal products of the country along the chief highways of trade about 60 per cent. in ten years, so that the astonishing result was reached that the grain and meat needed for one year's subsistence of one person were moved one thousand miles for a sum equal to one day's wages of a common laborer. In other words, the operative on the Atlantic seaboard was as well placed as regards food supply as an operative in Iowa would be who allowed himself one extra holiday in the year. It was shown, also, that if the same rates had been charged by the railroads in 1880 that were charged in 1870, their earnings would have been from $500,000,000 to $800,000,000 greater than they actually were in the year 1880.

The progress of development during the past four years has only intensified the downward course of railway charges. Railway mileage and railway service have increased during this period 40 per cent., while agricultural products have not increased more than 10 per cent., and miscellaneous merchandise not more than 15 per cent. Population during the same time has increased through immigration and natural growth perhaps 14 per cent. In the whole country the present rate of increase may be taken at 2,000,000 per annum. The average decline in rates of transportation during the four years has been about 6 per cent., or since 1869 nearly 66 per cent. Mr. Atkinson's figures per ton-mile for 1869 are 2.446, for 1883 0.875. These figures are those of all railroads in the State of Ohio for local and through traffic. The actual rates in Ohio are probably lower than the average of the whole country, but the ratio of decline in rates is presumed to be not essentially different from that of the other States and Territories where the progress of railway construction has been quite as active.

Mr. Atkinson's conclusion is that railway rates are now as low as they can be made consistently with any profit whatever on the capital invested, and that a considerable share of the mileage now in operation can yield nothing above running expenses until population shall have increased in the ratio of the increase of mileage. Construction, except in the way of cross-lines and local roads, must cease.

"From 1866 to 1880 one line after another was added to the great through lines from East to West; slowly but surely, down to 1880, the railway mileage gained a little upon the grain crop, the slight excess representing nothing more than the necessary cross-roads and side-lines. The markets of the world also kept even pace: the increasing supply of grain and meat was met by increasing demand, down to 1880 inclusive. In 1869 thirteen tons of produce, already listed, were worth in gold in the city of New York $632 68; in 1880 the same quantities were worth $631 32. But in 1880 the increase of demand culminated, exports have fallen off about as fast as the home demand has increased; yet the same quantities of the same articles are worth at this time (June 15, 1884) $621 75, or less than 2 per cent. reduction. Observe, however, with only 5 per cent. increase in the average crop of grain since 1880, we have more than 40 per cent. increase in the railway mileage in the last four years. *We have two through lines where one is needed,* and the end of speculative construction is therefore plainly to be seen. We have passed through the period of railroad inception, and of detached sections or lines, through the period of consolidation, through the period of needed extension, through the period of the speculative promotion of useless parallel lines by means of construction companies; and we have *now* at last reached the period of adjustment to wholesome conditions, and of construction limited to the necessity for cross-roads, side-lines, and special or local roads for the use of small districts. Even this latter need will probably require this year 4,000, afterward 5,000 to 6,000 miles, to be added to our mileage every year."

After making the most careful survey of the relations of the railways to agriculture and other productive industries, Mr. Atkinson proceeds to inquire when we may look for the end of the present commercial paralysis. If there is no improvement in the foreign demand for our products, we must look to our own increase of population for relief from the present apparent state of glut. All the facts within reach point to the conclusion that production, both agricultural and manufacturing, has for once got the start of population in the civilized world. But this condition can only be temporary, since population always moves upward to the means of subsistence, while the means of subsistence do not always keep pace with the increase of population. The one is a persistent and the other an intermittent force.

"Let it be assumed," he says, "that within a year, more or less, we shall have reached a state of equilibrium somewhat similar to that of 1880, when all existing railways were fairly well employed, all manufacturing establishments fairly well adjusted to the then existing demand, and all farmers of intelligence were prospering. Under such conditions, it of necessity ensues that for each child born one adult must seek a new place of shelter, and each immigrant family must be housed; for each family of five, one new cotton spindle must be set in motion; a half a ton additional of iron must be made: six or seven additional pounds of wool must be converted into cloth, and all other branches of productive industry must be increased by the addition of new capital, *i. e.*, new machinery, new tools, and new appliances. At the same time, the railway mileage must be increased in the ratio of not less than 6,000 miles a year to serve the cross-way traffic of the existing population and to open new fields for the increase."

If our numbers are increasing at the rate of 2,000,000 per year, we shall require, at the lowest calculation, $200,000,000 worth of houses per annum in addition to what is needed to keep up the existing supply. We shall require $150,000,000 worth of railways. "We may reduce, this year, to 4,000 miles, but soon the average must go up to at least 6,000 miles." We shall need a new investment of $30,000,000 per annum in manufacturing plant. Agriculture will take care of itself. Every commercial depression sends large numbers of unemployed workers to rural pursuits where they can at all events make a living from the soil. These become consumers of manufactured goods and employers of railways. "It thus happens that the more severe the shock to constructive enterprise and the greater the depression at one period, the greater must be the activity and progress a little later. Thus it has been in the past, thus it will be in the immediate future. The one point which cannot be determined is the exact date when this change will come." Mr. Atkinson adds that "this is a mental and not a material question—a question of confidence and not of capital." Here, and only here, do we fail to agree with him in his long and able dissertation. We do not believe that all the capitalists in the country could, by suddenly taking confidence, change the existing commercial relations of the various industries toward each other, so that profits should begin to be realized where at present there is no profit. We think that the door for profitable investment must be opened before confidence can exist, and that any earlier access of confidence, if it were possible, would be only spasmodic and injurious.

THE POLITICO-CLERICAL CRISIS IN BELGIUM.

M. de Laveleye, the well-known Belgian economist, has been discussing the political crisis in that country in an article in the *Contemporary*, which is full of interest as throwing light on the relations of the Catholic

Church to the State in any country in which it can command much popular support. He ascribes the great defeat the Liberals have sustained mainly to the Belgian system of general tickets in the provinces, which gives a mere majority in each the power of returning a large number of members. But as to the causes of the defeat itself, some, he says, are transitory, some permanent.

"The transitory causes are, first, the new taxes; second, the proposition to create a reserve force of 30,000 men; third, the agrarian and industrial crisis, engendering great discontent with the Government; fourth, an excellent but expensive school-law, which was forcibly imposed upon the *communes*. The lasting causes are the difficulties of the social and religious questions, which are of general importance and arouse widespread interest."

The Liberal party in Belgium, which has for the last fifty years been fighting the Clericals, has, like the Liberal party all over Europe, undergone a good deal of transformation within the last fifteen or twenty years—that s to say, there has been added on to it, or rather there has been formed within it, a party which professes weariness of all political questions properly so called, including the question of Church and State, and wishes to occupy itself entirely with social reform. This party, too, is much fiercer and more fanatical, much more opposed to compromise or "opportunism," than the Liberals, and, unlike the Liberals, it demands universal suffrage. The franchise in Belgium is now limited to taxpayers paying direct taxes annually to the amount of about $10—not far from the English borough qualification; and these comprise only about one-thirteenth of the adult male population. Universal suffrage would reinforce the extreme Radicals considerably in the large cities, but would in the country districts—and this constitutes the chief Liberal objection to it—throw the elections almost completely into the hands of the Catholic clergy. Even as matters now stand, the defection of the Radicals has given the Clericals such an advantage that in the new House the Liberals have only 52 against 86. In the old House they had 79 against 59 Clericals. In fact, taking the country as a whole, the Liberals can only hold their own against the Clericals by keeping the whole anti-Clerical vote. The fierce and deep dissensions in their own ranks now promise to give the Clericals a long period of ascendency in Parliament, because not only are the Liberals suffering from the Radical defection, but also from the defection of old Liberals, whom the Radicals are frightening about property and order.

This is not all, however. There is no Catholic country in Europe now, except Ireland, in which the Catholic clergy retain such a hold on the men. The women they have everywhere, but in Belgium they have the men also in the country districts; and in proportion to the firmness of the Clerical hold on the popular mind is the fierce and uncompromising spirit of the clergy themselves, and about nothing are they so fierce and uncompromising as about popular education. The schools they *will* control, without let or hindrance, and yet the Liberals have always felt that if they let them control the schools, they would soon absolutely control the politics of the kingdom.

The Belgian clergy, in fact, declared their hostility to Liberalism from the very foundation of the Government. In 1815 the King of the Netherlands, under whose sway Belgium was placed by the peace of Vienna, established a Constitution containing the following articles:

"Art. 190. Liberty of religion is guaranteed to all. Art. 191. Protection is equally granted to all religious communities in the kingdom. Art. 192. All loyal subjects, without distinction of religious creeds, enjoy the same civil and political rights, and can aspire to all dignities and occupations. Art 193. The public exercise of any worship cannot be hindered unless it disturbs the public peace."

The Belgian Bishops thereupon met, and jotned in the publication of what they called a Doctrinal Decree, in which they said:

"Art. 190 and 191. To swear to maintain liberty of religious opinions and equal protection of all worship means the protection of error as well as truth, the development of anti-Catholic doctrines, the blending of the tares with the wheat, and the slow but certain extinction of the true faith in these happy countries. The Catholic Church has always repulsed error and heresy; she cannot regard as her children those who dare to approve of that which she has ever rejected. Art. 192. To swear fealty to a law bestowing equal rights on loyal subjects of varied beliefs, would sanction all measures intrusting the interests of our holy religion in thoroughly Catholic provinces to Protestant functionaries."

There has never been any formal retreat from these positions. Of late they have not been maintained with such boldness, but they have never been abandoned. The bishops have, in fact, never ceased to contend for the right to treat with the state on equal terms, as an *imperium in imperio*, so that Belgian politics may be said to have, ever since the separation from Holland in 1830, consisted in a prolonged struggle for supremacy between the Liberals and the Church at every point at which the Church and State touched. In 1881 the conflict became so fierce that the Pope was obliged to interfere, and remind the Belgian clergy that in "defending the integrity of divine doctrines and the principles of equity, they should take just account of the circumstances and times and places," and often, "as will happen in human affairs, for a time tolerate certain ills which could hardly, if at all, be removed without opening the way to still graver evils and perturbations." We should probably now have some very strong reproduction of the manifesto of 1815 if Pius IX. were in the Vatican. His successor is a wiser man, and will probably again put some check on the zeal of the Belgian clergy.

OUR VACATION ARTICLE.

We had intended producing about this time an entirely original Vacation article, showing the tremendous pressure on the brain and nerves of Americans caused by the peculiar conditions of life in this country, and the exceptionally great need of vacation experienced by all Americans who are worth their salt; together with some observations on the greater fondness for vacations to be observed in Europeans, and on the difficulties which too many Americans find in taking a vacation at all, or, indeed, in enjoying any leisure, owing to their failure to cultivate a taste for anything beyond the pursuits in which they earn their daily bread. We should also have treated at some length the best modes of enjoying a vacation open to Americans, apart from a European trip, which is only within reach ot the wealthy, and should have added some valuable hints on the art of meeting the various inconveniences of summer board, concluding with a few remarks on the duty of utilizing our vacation so as to increase our stores of knowledge and deepen our sense of the responsibility imposed on us by our ability to take a vacation at all, and on the contrast presented by the lot of people who can take holidays to the lot of those who cannot. In fact, the article would have been a very good example of the way in which the descriptive, expository, didactic, and reflective may be blended in this species of composition.

We have, however been led to postpone, if not abandon, our design by the appearance of a so-called "vacation article" in the *Times* of this city, which seems to us so full of error, and likely to cause so much mischief, that we hasten to point out some of the particulars in which it may lead people astray. We may as well observe at the outset that a really good vacation article cannot be written by any one who is wedded to one kind of amusement to such a degree as to lead him to despise or depreciate others. A conscientious man, contemplating the production of a vacation article, will always ask himself before sitting down, "Do I consider anything essential to the enjoyment of a vacation but love of the open air and the sunshine?" If he cannot answer this question honestly in the negative, he should not touch the subject at all, because he is sure to treat it under the influence of a bias, and often a fatal bias. The writer of the *Times* article evidently cannot so answer it. After some glittering generalities about the value of vacation in general, and "exercise" in particular, he proceeds to review the various forms of exercise in detail (apparently in much the same spirit in which the *Sun* reviews the Democratic candidates for the Presidency), and depreciates them all one by one except boating. He pooh-poohs walking, riding, and driving and bicycling, and sitting still on the piazza, and has not a really good word for anything but what he calls "water sports," which include "rowing, sailing, steaming, and fishing." Anything more fallacious and mischievous than this we have not seen in print for a long time, except the attempts to prove that Blaine bought Little Rock bonds "on the same terms as everybody else." Of walking, and riding, and driving, it is to be said that they are medicine for the man who likes them, and misery for the man who does not, and this is true of all sports. There are some men to whom a long walk even on a high road is productive of constant mental exhilaration, and, when practised daily, of a high state of bodily health. To endeavor to induce such a man to give it up, through à priori argument based on the experience of some other man who does not like walking, and whom it fatigues and depresses, strikes us as thoroughly Satanic work; and yet of this the *Times* vacation writer has been guilty. Of his attack on riding, the same thing is to be

said. But attacks on riding ought always to be signed with the writer's name, as it is a not uncommon practice for the authors of vacation articles to condemn it without ever having tried it. Moreover, we doubt if any man fond of riding was ever induced to give it up by reading in a newspaper that he would probably get tired of it before long, or if any man who did not like it was ever induced to persist in it by anything but a doctor's prescription. It is quite plain, indeed, that the *Times* writer is a boating man simply, and uses his access to the press, in what is a very unworthy way, to deride or belittle all out-door sports which he does not care for or does not shine in.

This brings us to what we believe to be the really poisonous portion of his very shallow and crude treatise. "Whoever," says he, "can row and sail and steam and fish and swim, will surely have the elastic spirits and sturdy nerve without which high health is impossible." Swimming may be dropped out of the discussion, because no man out of his first youth, and not a professional, swims in this climate more than a few minutes at a time. "Chill," with all its serious possible consequences, forbids it. Rowing and paddling, which are both splendid exercises, ought to hold a high place in a good vacation article. But we affirm with much boldness that to a man in need of active exercise, as nearly all men under sixty-five are, sailing and steaming are, if followed too closely, positively injurious. They are, doubtless, exhilarating and amusing, but nothing in the open air continues to be exhilarating or amusing very long which does nothing for the muscles and the digestion; and sailing and steaming do little or nothing in these respects. For the large majority of those who can afford to follow it, what is called yachting, for instance, is one of the most delightful sports invented by man. To a weary worker with the brain there is no such rest and refreshment, because it supplies seclusion, silence, absolute cleanliness, and fresh air, and change of scene. But it is, for a large proportion of those who follow it, taken with so much luxury in the matter of eating and drinking and bodily inaction, that it does positive damage to heart, liver, and lungs. We believe it to be a notorious fact that most men in this country come back from "a cruise" considerably the worse for the wear, through too much food, too much wine and spirits, and too much tobacco, combined with lolling and dawdling about the deck, and have to recover on shore from the effects of their vacation.

Of course this is not a necessary consequence of sailing, but it is a very frequent one, from sheer want of occupation. There is nothing worth mention in the way of exercise to do in a small sailing craft, and nothing at all in a steamer, but talk to the engineer. The gospel of vacation to young or middle-aged men is to pass the time in some muscular work that they like, and pay no heed to the vacation writer who tells them that it will soon pall on them, and that what the preacher likes himself is better. This, we know, is serious advice to give. We know well the responsibility it involves, but we give it nevertheless. No one knows the difficulties of composing a really good vacation article better than we do—our own, had it appeared, would have made this plain. We would not, therefore, lightly depreciate the product of another worker in the same field; but the interests of weary men, seeking rest and relaxation, in our eyes, dominate all other considerations.

A FRENCHMAN ON THE AMERICAN CONSTITUTION.

THE change which the Franco-Prussian war produced in France was wonderful. Before it France was the world to Frenchmen, and Paris was France. French achievements, French ideas, French taste, French institutions, were not only the best in their estimation—every nation's ideas and institutions and achievements are the best in its opinion—but they were the only ones of which it knew anything, except in the vaguest and most inexact way. Since the war, the nation has waked up to the idea that there may be something worth knowing outside of its own boundaries, and some of its scholars have given themselves to the study of foreign nations with something of the accuracy and thoroughness of the Germans, or perhaps it would be just to say, with something of the same care and completeness with which French savants have studied classical antiquities and Oriental philology. In geography the change is most marked: Reclus's great work, for example, is the most complete collection of geographical knowledge that has yet appeared. But translations of foreign literary works seem to be a trifle more frequent. Comparative religion and comparative folk-lore have received considerable attention. The Society of Comparative Legislation has been studying the constitutions and laws of various countries. And this is done in great measure in the interest of knowledge simply, not with a view to its immediate application to French affairs—with a scientific rather than with a political aim.

Nevertheless, as there are always persons ready to invoke the example of foreign countries in domestic politics without much regard to the difference of circumstances, M. Boutmy, of the Institut, has been led to prepare an essay, "Des précautions à prendre dans l'étude des Constitutions étrangères," in which he treats entirely of the American Constitution. The knowledge of foreign languages is a recent thing in France, he says, as well as the habit of going to original sources. But his compatriots must study the Constitution of the United States in the original if they would understand it, and must consult other documents. It will not do to trust even the most respectable treatises. The 'Recueil' of Duvergier, Dufour, and Guadet, for instance, gave the old Articles of Confederation as the Constitution, and the blunder was uncorrected till 1839, when M. Conseil, in a work on Jefferson, translated the present Constitution, without, however, escaping a mistake in the very first article (a printer's error apparently), which made the House of Representatives determine not only its own powers but those of the Senate. In 1834 De Tocqueville reprinted Conseil's translation without noticing this absurd error, and as late as 1869 the 'Constitutions de l'Europe et du Nouveau Monde' reprinted it from De Tocqueville unchanged. Nor was this all. In the article on the appointment of officers the powers of the President and Senate are reversed: the Senate is made to nominate and the President to confirm them.

Equal errors, he gives warning, will come from studying the Constitution by itself without taking account of the circumstances of the country, the Constitutions of the separate States, and the parliamentary practice of Congress. The first ten Amendments, for example, seem to a Frenchman to be declarations of human rights, securing jury trial, freedom of the press, religious and other liberties throughout the land. They were really intended to maintain those rights against Congress, leaving to the State Legislatures the power to infringe them as much as they pleased, if the State Constitutions allowed it.

This want of due attention to the powers of the separate States has misled both De Tocqueville and Laboulaye, the two Frenchmen who have treated most fully of our institutions. De Tocqueville praises our decentralization and self-government, and exalts the commune, not noticing how much more power lies and must lie in the hands of our State governments than has ever been in the hands of any French commune, and not paying any attention to the character and differences of these State governments. Laboulaye, on the other hand, gives his whole attention to the working of the central Government, not noticing how very small a part of the functions of government, as understood in European countries, rests with the national legislature. Again, the Constitution, studied by itself, does not show in the least that great revolution by which the American republic has become a democracy and the democracy almost an ochlocracy. The change in the conception of the duties of the Presidential electors is one which has very seriously modified the effect of the Constitution; but it does not appear in any written law. A change in the reverse direction has come over the national Senate. The electors, who were intended to deliberate, have become mere messengers; the Senators, who at first thought of themselves as ambassadors, and voted according to the "instructions" of their States, are now members of a really legislative body that deliberates and votes independently. Neither the Constitution nor its amendments show a trace of this exceedingly important change. Nor would they give a hint of that Congressional custom by which the right of initiating money bills accorded to the House of Representatives has, by the rules of the House itself, been turned to the exaltation of the powers of the Senate. The House amendments to a money bill are discussed not only in the chamber in which the bill originates, but in the Senate to which it is sent; but the Senate amendments are not debated in the House—they are always rejected. The Senate of course insists, and the bill is referred to a committee of conference in which each body is represented by equal numbers. This committee presents a report to which amendments are out of order; it must be accepted or rejected as a whole. This is usually towards the close of the session; and rather than have the appropriation bill fall through altogether, the House accepts with its own amendments, which it has discussed and understands, the Senate amendments, which have not been discussed by it at all, but have only been considered by three of its members out of its hearing. Certainly this is not a state of things which one would ever have inferred from a study of the Constitution.

M. Boutmy is struck with the difference between the English and the American Governments in regard to the relation of the Executive to the Legislature. In England everything is done to keep the two powers in unison. The Ministry, which is the Government, belongs to the party that has a majority in Parliament. The Ministry and the House cannot be at loggerheads, because, as soon as Parliament fails to sustain it, the Ministry resigns, and a new one is chosen which has the approval and support of

the majority. In the United States there is no such provision whatever. The President holds his office for four years; the Secretaries, as long as the President chooses to retain them. There is nothing to prevent a bitter opposition lasting through a Presidential term. Moreover (here is Mr. Bradford's favorite grievance), the Executive has no power of direct appeal to the ear of the Legislature; and yet it is from the latter that the former must receive all its means to effect anything. Could there be, in the eyes of a European, a better method devised to secure a divided government and a weak executive? Another contradiction: it was evidently intended that these two departments should be parallel, neither subordinate to the other; and yet the Secretaries must be confirmed by the Senate, and the treaties negotiated by the President and the Department of State need the assent of the same body. But the House of Representatives, which according to English and French ideas ought to be the source of all power in the Government, is not even informed of the treaty unless some money is needed to carry it out, which apparently would give it then a power of veto on all such bills. How is it possible that a machine in which one might almost say that an effort had been made to make the parts interfere, could have worked at all for so long?

M. Boutmy attributes its working to the Anglo-Saxon faculty of political self-control. The House has uniformly refused to avail itself of the opportunity of hampering the treaty-making power of the Senate. The Senate has not used its veto power over the choice of Secretaries except for the most urgent reasons. Moreover—and this is the most important point—the United States, except during the civil war, has not needed a strong government. If there had been on the same continent another strong Power, or anywhere such dangers as the European states constantly fear, the need of an Executive capable of acting with decision and celerity and force would have made itself felt, and would have led to the evolution of such a government, whatever may have been the intentions of the Constitution. But, with external security, the Americans could devote themselves to guarding their internal State rights, preferring the possibly weak central Government as the least of two evils.

FENELON.

PARIS, July 31.

'FÉNELON AT CAMBRAI' is the title of a book recently published by Prince Emmanuel de Broglie, a son of the Duc de Broglie. Before speaking of the book, let us say a word of the author. The Duc de Broglie, the leader of the Conservative party in the Senate, is so well known that it is needless to speak of him; he has recently published remarkable articles on the Great Frederick and on the policy of France in the eighteenth century. He is an indefatigable worker, speaker, and writer, and he shows in the literary and in the political field the courage and activity which his ancestors showed in war. He is the father of four children, and, having lost early a charming and distinguished wife, he became almost a mother to his children. One of them, Emmanuel, has been an invalid from childhood; and nothing can be more touching than the devotion which the Duke shows to this young man, who cannot walk, who carries himself in a chair from room to room, and who never leaves his house except for a daily drive. The intellect of this young man is as sound, as healthy, as his body is helpless; and having inherited the intellectual faculties of his family, and living in a most intellectual atmosphere, it is not to be wondered at if, notwithstanding the great weakness of his eyesight, he has tried to solace himself with literature. His own turn of mind and the example of his father have directed him to subjects having more or less of the religious element in them. His first hero was the son of Louis XV., Louis the Dauphin of France, who was as religious and as serious as his father was frivolous, and who, unfortunately for France, died while he was still very young.

Emmanuel de Broglie has now taken another subject: he has tried to depict Fénelon during the years which he spent at Cambrai, in a sort of exile. And he has chosen his subject well, as there must be a natural sympathy between men who are accidentally thrown out of the career which seemed at first to be marked out for them, and who, ceasing to be actors in the great drama of the world, are reduced to the part of mere witnesses. Let us say a few words about Fénelon before he was sent to Cambrai. He was born in 1651, in the province of Périgord, at the château of Fénelon. He entered the church, and pursued his ecclesiastical studies at Saint-Sulpice. He became acquainted with Bossuet, and with the two Dukes of Beauvilliers and of Chevreuse, who had married the two daughters of Colbert. He wrote the 'Treatise on the Education of Girls' for the Duchess of Beauvilliers. In 1689 he was chosen tutor of the young Duke of Burgundy. Everybody knows how Fénelon succeeded in his delicate task.

"The Prince," says Saint-Simon, "was born terrible, and his early youth made everybody tremble; hard and angry to the last excesses of anger, even against inanimate objects; impetuous with fury—incapable of bearing the smallest opposition, even of the hours and of the elements, without falling into such a rage that people feared that every bone in his body would be broken; obstinate, passionate for every kind of pleasure . . . From this abyss emerged a Prince affable, mild, humane, moderate, patient, modest, penitent, and sometimes more than his state allowed humble and austere toward himself. Wholly devoted to his duties, and thinking his duties immense, he thought of nothing more than of conciliating his duties as son and as subject with the mission for which he was destined."

This transformation was the work of a man. Let us cite again Saint-Simon, who is always inimitable when he describes this man:

"This prelate was a tall man, thin, well-made, pale, with a high nose, eyes out of which fire and intellect ran like a torrent, and a physiognomy which was unlike any other, and which could never be forgotten when it had once been seen. It contained everything, and the contrary elements were harmonized. It had gravity and *galanterie*, seriousness and gayety; it showed equally the doctor, the bishop, and the grand seigneur. What appeared most, as well as in all his body, was refinement, grace, decency, and especially nobility. It required an effort to cease looking at him."

The miracle which Fénelon had wrought ought to have assured his position at court. The King made him Archbishop of Cambrai in 1695, but a theological war ruined his prospects—the war, now so completely forgotten, of *quietism*, which for a few years convulsed the Catholic Church. The Episcopal palace of Cambrai was a fine retreat; still, it was far from the court, and the court was everything. I forget who was the traveller who said that in France you could read on the face of people at what distance they lived from Paris. So it was with the court. Fénelon was born for Olympus. He bore his fate with much dignity, but his sufferings were acute. He was like a man who feels that his life has no further object. For sixteen years he worked and moved in his diocese like the shades along the Styx. A small group of friends, MM. de Langeron, de Beaumont, de Chanteroc, had followed him; they were the shadows of a shadow. They had ardently espoused his cause, and were in disgrace like himself. Langeron was an abbé; he was absolutely devoted to Fénelon and had never left him. He had been reader to the Duc de Bourgogne while Fénelon was educating the young Prince. M. de Beaumont was also an abbé. There were in the seventeenth century men who lost their individuality in the person of another. Lafontaine, when he wrote his fable, "The Two Friends," said:

"Deux vrais amis vivaient au Monomotapa."

He might have found such true friends in France, and not only two but three. M. de Beaumont was a nephew of Fénelon's, and his grand vicar. His name was Pantaléon, and Fénelon always called him Panta. The letters of the Bishop to his nephew are very charming. During one of his pastoral visits he writes to him: "There are under my windows four or five white rabbits which would make beautiful furs, but it would be a pity, as they are very pretty and eat like a great prelate. I see also two little cocks, one white, the other *couleur d'aurore*. They are like France and the Empire; the black one is Achilles, the *aurore* is Hector.

"Ludus enim genuit trepidum certamen et iram,
Ira truces inimicitias et funebre bellum."*

The Abbé de Chanteroc completed the trinity. He was the most remarkable of all. His letters are full of *esprit*. He had undertaken the defence of Fénelon in Rome during the great battle of "quietism" and of the "Maximes des Saints."

The father of Fénelon had had fourteen children by his first marriage, and three by a second marriage; the oldest of Fénelon's nephews had himself thirteen children. The Bishop had, when he chose, an army of nephews and grand-nephews. There were always some of them with him. He was fond of children and delighted in the details of education. He completely adopted one of them, the Marquis de Fénelon. It is curious to see what were the current ideas of the seventeenth century as to the career of a young nobleman. Fénelon writes to a cousin of his, Mme. de Laval, about her son; she did not wish young Laval to enter the army. The Bishop says: "Your son is much to be pitied, for he is between a mother who has good reasons for hindering him from going into the army, and the public, who will look on him as a dishonored man if he does not. He is in his twentieth year; the other gentlemen do not wait so long before serving in the army: they begin at fourteen or fifteen years. You will find in France no man with a well-known name who has not made some campaign in his twentieth year. The public will not understand the reason of such a singularity, which is so contrary to the prejudices of the nation." Such ideas were then universal, but it must be remembered that France was constantly at war, and the real origin of every aristocracy is the "servitium militare."

The Governor of Cambrai was a M. de Montberon, who showed much attention and regard to Fénelon, though Fénelon had fallen from favor. The correspondents of the Bishop at Versailles were the two Dukes of Chevreuse and of Beauvilliers, who had not been dismissed from court though they had been faithful to Fénelon. Beauvilliers was first gentleman of the bedchamber, Chevreuse captain of the chevau-légers of the King. In 1699 appeared the first edition of 'Télémaque.' This book was read by all Europe; it had all the flavor of the 'Odyssey' and of the 'Æneid.' The King saw in it an indirect criticism of his system of government, and was confirmed by it in his dislike of Fénelon. Fénelon made no apology. The book had been published without his permission, and the edition brought out in Belgium was not quite in conformity with the original. The authentic version was only published in 1727, after the death of Fénelon.

* Horace, Epist. I., xix.

Fénelon from time to time sent memoirs to the Dukes on public affairs. These memoirs were wasted: the King would receive no lessons, even indirectly, from the Bishop. It is curious to read them now; they are full of prudence, of caution. Fénelon always tries to preserve for France the friendship of England and of the Netherlands. As for the Duke of Burgundy, he had remained the centre, as it were, of Fénelon's intellectual life. The pupil had remained loyal to the master; he wrote to him secretly: "I will not say how revolted I am at what has been done to you. . . . We must submit to the will of God. . . . Show this letter to nobody." The Duke of Burgundy was sent to the army in 1701, but he was not successful; he showed no disposition for war, and the French arms were not fortunate during the campaigns in which he took a modest part. The war of the Spanish succession gave to Fénelon fine opportunities for showing his great qualities. The care of the sick and of the wounded became one of his occupations; he received prisoners in his palace, and his kindness to them was truly touching. He was a great patriot, but he behaved like a friend to all those whom the fortune of war brought in contact with him.

His latter years were the dark days of the reign of Louis XIV. When the Dauphin, the father of the Duke of Burgundy, died suddenly, there was a ray in his sky: he could hope that his beloved pupil would some day ascend the throne, and that with him would be inaugurated a new policy, and one of which he might become an important—perhaps the most important—instrument. But it was decreed otherwise: the Duke of Burgundy fell in his turn, and the best hopes, the deepest affections of Fénelon were frustrated. He remained, so to speak, alone; he saw his faithful followers disappear. The two Dukes of Beauvilliers and of Chevreuse died. Fénelon had no longer any ties with the court. It was all over; he had nothing to do but to wait, in the resigned and quiet accomplishment of his pastoral duties. He never complained; he bore his fate like a Christian. He had learned, by a life of disappointment, to despise what is transient and to love what is eternal.

Correspondence.

THE BLACKMAILERS AT WORK.

To the Editor of The Nation:

Sir: Please find enclosed a circular letter from the Republican National Committee, which I recently received. I believe this to be a violation of the Civil-Service Law, and I should be pleased to aid in every way possible to prosecute the guilty parties. Without fear I will give aid or testimony, if the same will be of any value, before the Civil-Service Commissioners.—Respectfully, E. S. Hill, Postmaster.

Webster Post-Office, Worcester County, Mass., August 14, 1884.

[Dictated Letter]

Headquarters Republican Nat'l Com, No. 242 Fifth Avenue, New York City, August 6, 1884.

Dear Sir: The pending Presidential campaign is of unusual importance to the country. Every Republican is deeply interested in its result. The National Committee on behalf of the Republican party desires to make it justly vigorous and effective, and success certain in November. Funds are required, however, to meet the lawful and proper expenses of the campaign; and, to provide the same, the Committee finds itself dependent upon the liberality of Republicans to make such voluntary contributions as their means will permit, and as they feel inclined to give. You are therefore respectfully invited to send, as soon as you conveniently may, by draft on New York or postal money order to the order of B. F. Jones, Chairman Republican National Committee, 242 Fifth Avenue, New York city, such sum as you may desire to contribute for the objects before mentioned. A receipt for the same will be sent by return mail.

The Committee cheerfully calls the attention of every person holding any office, place, or employment under the United States or any of the departments of the Government, to the provisions of the act of Congress entitled "An act to regulate and improve the Civil Service of the United States," approved January 16th, 1883, and states that its influence will be exerted in conformity therewith.—Respectfully,

B. F. Jones, Chairman.

B. F. Jones, Pennsylvania, Chairman.
Samuel Fessenden, Connecticut, Secretary.

VOTING FOR MORALS NOW.

[A Western clergyman writes us as follows: "Your article last week on the Cleveland harlot business meets the case well enough for me, but I find I cannot use it successfully to bring back those who had been staggered; so I send you something prepared to fit my experience of what is needed here." We append the document referred to.—Ed. Nation.]

Morality remains in the political contest even now. There have been from the first more moral considerations involved than one, though hitherto the affairs to which the Mulligan letters relate have attracted the attention of the Independents almost exclusively. It will be wise to weigh several of these considerations separately:

1. When two rival candidates solicit our votes—of whom one is clean of fleshly vices, but ten years ago abused his official position to make money; the other is identified with administrative reform, but ten years ago was unclean in private life—we may righteously decide to vote for neither of the two, if we do not know what influence the rejection of both may have upon the result. But if we can compute that influence, we are bound in the court of morals to justify ourselves for exercising it. The Republican, whose vote belongs to his party until that party by its own unworthy acts forfeits it, is not morally justifiable if he either withholds his vote from Mr. Blaine so as to give to Mr. Cleveland the advantage of having one less vote to overcome, or if he refuses to vote for Mr. Cleveland and so makes Mr. Blaine's election the more probable, unless that action, with its known influence, is in accordance with the balance of moral considerations. Of course those members of the Republican party who have concluded that the great duty of the hour is not so much to influence the result this year as to build up a Prohibition party for the future, have no interest in this reasoning. But the great body of Republican voters see plainly that in all probability either Blaine or Cleveland will be elected; that they must influence the result by voting for the first, or the second, or neither; and that they must justify the exercising of that influence or be morally condemned. The question which must be answered is, therefore, What is the relation of the offence charged against each candidate to the office, its duties and temptations, for which he is a candidate? The President of the United States will have, during the four years of his term of office, more than 90,000 different persons more or less dependent upon his good-will—for, if so inclined, he can largely avoid the restraints of the civil-service reform. These 90,000 men will handle in various ways hundreds of millions of dollars. He will also have a direct and an indirect influence in shaping, approving, or vetoing legislation appropriating scores of millions of dollars, and affecting industries aggregating hundreds of millions more. Under such circumstances, the consideration of the candidate's character as regards money is as overwhelmingly paramount as his personal chastity would be if we were electing a president of a nunnery, in which all the inmates were dependent upon the favor of the head officer for great advantages. To consider such differences in the relations of different vices to different offices with different duties and different temptations, is not mere empty casuistry: it is essential to the very life of a sound morality. There can be no such thing as an enlightened conscience in politics without it.

2. Morally speaking, the movement of a man or party is of more consequence than his present position. This principle all men freely grant and apply in the common concerns of life. It is, indeed, the basis on which the saintliest men and women receive into their fellowship those who are yet far below them. There is a great difference between the moral status of two young men, both of whom get drunk once in a month, if one was a common drunkard two years ago, but has now so overcome his appetite that he gets drunk *only* once a month, but the other took his first drink two years ago and now is drunk *as much as* once a month. The Republican party has always had a more intelligent, moral, and sober-minded following than its rival. Never till now has it been willing to trade its purest members for the very refuse of the opposite party. During the weeks immediately preceding the nomination of Mr. Blaine, it was freely asserted by well-informed Christian men that only a very few clergymen or college presidents or instructors in New England, or church members in New York or Brooklyn, would support him. Both the leaders and the mass of the delegates of the Republican party seem to have been well aware of the extent and character of the coming defection, yet they went forward prepared not only to lose them now, but to insult them so that they should never return. Whence came this courage? The platform and present management of the campaign reveal its origin. They had answered these questions numerically. How many hoodlum votes can we catch on the Pacific slope by an anti-Chinese plank? How many votes of trades-unionists and socialists in the cities by a plank against the importation of contract-labor? What sort of a trade can we make with Kelly, giving local for national power? Can we persuade Butler to run? Can we draw the Irish by putting on the airs of England-haters? They answered these questions numerically, and having concluded that the count of votes could be risked went ahead. And to this day there has been no sign that even the *Tribune* bases its hope of success on anything so much as the help of these new allies.

3. It is the fashion of the Blaine organs to assert that the real objection which the Independents feel to Blaine is to the protective policy with which he and his party are identified. They not only call the Independents hypocrites as a class, but even go so far as to single out eminent men by name and call them liars on this ground. It is a fact that a very large fraction of the Independents are also opposed to protective taxation. But a moralist ought to be able to see that a belief in free trade as a policy tends to secure a judicial frame of mind in judging the charges against Mr. Blaine. There have been so many occasions to warn old and young against the

warping influence of the expectation of personal gain that we ought to know how to apply that warning here. Surely a man who feels some anxiety for Mr. Blaine's success for the sake of putting money into his own purse by the protective tariff which Mr. Blaine advocates, is at least no more apt to judge him correctly than the man who, in studying the evidence, is not conscious that to vote for Mr. Blaine is to vote for a higher price for his own wares or labor.

COLLEGE CONTROVERSY.

To the Editor of The Nation:

Sir: During the discussions in your columns of "University Honor" and "Honorary Degrees," it was mentioned that cheating on examinations has but rarely occurred at the University of Virginia, on account of the system there pursued of trusting entirely to the honor of the students, and also that no honorary degrees have ever been conferred by the institution. Your article on "College Controversy" induces me to add that this same university has never been greatly burdened by what you call the "monarchical system" of most of our colleges. The "Board of Visitors" and the "Faculty" are separate bodies with separate duties, and are presided over respectively by a "Rector" and a "Chairman." So far as I am aware, this system has worked well, and without any "controversy" worth mentioning; but I will leave it to some alumnus or professor of the institution who is better informed than myself to discuss the inner working of the system.

The general features of this university are, as may be inferred from the character of its illustrious founder, Thomas Jefferson, eminently republican and democratic. To mention a few points: there is no curriculum, but entire freedom in the choice of studies, each subject being taught in an "independent school"; there is no compulsory attendance upon religious exercises of any kind, the chaplain (who is selected in turn from the principal denominations) being supported entirely by *voluntary* contributions of the students and professors. In general the students are treated upon the supposition that they are both responsible men and gentlemen. This is enough to show your readers that the faculty of the University of Virginia make no attempt to govern "in loco parentis."

Respectfully, R. H. Dabney.

Berlin, July 31, 1884.

ARCHÆOLOGY IN ASIA.

To the Editor of The Nation:

Sir: In your number of July 24, Mr. Duncan, answering my letter in No. 993, gives some details respecting the excavating undertaken by myself on the site of Cyme (not Cyrene, as is stated by a misprint), during the winter months of 1881. According to his view of the question, the dragoman of the United States Consulate who brought a complaint before Ali Pasha, the governor of the vilayet, acted in perfect accordance with the rights owned by Mr. Smithers, who had preceded Mr. Duncan as United States Consul in Smyrna. I regret to have stirred up that old story if it has given any annoyance to Mr. Duncan, whom I never held responsible for the dragoman's conduct nor for the consequences it involved—namely, the confiscation of all my discoveries by the Turkish officials; but I am obliged now to give your readers some additional information in order to prove the exactness of my former statements.

Mr. Smithers's firman had been obtained as early as 1879, but he had been unable to begin the excavations, the proprietors of the land at Cyme having refused to give their consent. Now, the Turkish law about antiquities, issued in 1874, enacts that a firman of which no use has been made is null and void after a year's time. On the 25th of April, 1880, the French Government obtained a firman to excavate on the whole estate of Aristides Bey Baltazzi, comprising Myrina and the greater part of Cyme. It was not till March, 1881, when my excavations at Cyme had given good results, that the aforesaid dragoman wrote a very sharp letter to the Turkish official who was superintending my work, claiming the immediate surrender of all my discoveries. Having naturally not succeeded in that way, he complained to the Pasha, and the Turkish Ministry sent an inspector to Aliaga, where I was residing, to examine the case. Finally, it was acknowledged that the American firman was of no value, but that I was guilty myself of having trespassed the boundaries of Aristides Bey's estate; and although I argued that the proprietors of the neighboring fields had authorized me by writing to consider them as belonging to the Bey, the six cases of antiquities from Cyme which I had brought to Smyrna were confiscated by order of the Council of State. The best proof that the claims of the United States dragoman were utterly destitute of foundation, is that the Consulate, after Mr. Duncan's departure, did not venture to uphold them in any manner. Mr. Duncan only did his duty in forwarding to the Pasha a complaint made by an American subject, but that complaint was mere *pettifoggery*, and, like all quarrels between civilized people in the Levant, only turned to the benefit of Turkish arbitrariness and self-conceit.—Truly yours,

Salomon Reinach.

Paris, August 5, 1884.

Notes.

Dodd, Mead & Co. will publish this fall 'The Rise of the Huguenots in France,' by the Rev. Dr. Baird, of Rye, N. Y.

Thomas Whittaker has in press 'Touchstones, or Christian Graces and Characters Tested,' by Bishop Oxenden; and 'Wanderings on Parnassus,' a volume of poems by J. Hazard Hartzell, D.D.

David McKay, Philadelphia, will issue next month 'The Confessions of Hermes, and other poems,' by Paul Hermes.

Cruikshank's 'Loving Ballad of Lord Bateman' is to be reproduced by Roberts Brothers, Boston, who also announce: 'Human Intercourse,' by Philip Gilbert Hamerton; 'Euphorion,' studies of the antique and the mediæval in the Renaissance, by Vernon Lee; and 'Days and Hours in a Garden,' by Mrs. E. V. Doyle.

The Century Co. have in hand for immediate publication a new book of stories, rhymes, and pictures for little folks, to be called 'Baby World.' It has been edited by Mary Mapes Dodge, and, like 'Baby Days,' will consist of selections from *St. Nicholas*. It will, however, be larger and finer than 'Baby Days,' or even than the most beautiful children's book that has yet been made.

Mrs. Henry Pott, with Messrs. Appleton Morgan, R. M. Theobald (a descendant of the famous Shaksperian editor), and others, took steps in London last month to organize "The Baco-Shaksperian Society," to be composed of members believing in other than Shaksperian authorship of the plays and poems. About one hundred persons were present at the preliminary meeting of the society, which proposes to hold regular meetings and print the papers read before it, on the model of Mr. Furnivall's New Shakspere Society.

The Fireside Publishing Company, of Philadelphia, have lately published 'Biographies of James G. Blaine and John A. Logan,' by Thomas V. Cooper, and 'Biographies of S. Grover Cleveland and Thomas A. Hendricks,' by Benjamin Le Fevre. Both books contain the same matter after the first ninety-six pages of biographical sketches. The remaining 400 pages in each, consisting of a "History of Politics" and "Political Platforms," are taken bodily from Thomas V. Cooper's 'American Politics,' published last year by the same firm. No mention of this fact is made in either of the books.

Daudet's 'Évangéliste,' translated (except in the title) by Mary Neal Sherwood, has been published by Funk & Wagnalls.

Mr. Nordhoff's 'Politics for Young Americans,' though addressed to minors, is valuable reading for those who have long enjoyed the full privilege of citizenship. Its publication, therefore, in a cheap popular edition by the Messrs. Harper must be considered timely.

Geo. Routledge & Sons have issued afresh in one volume the two series of Mr. W. S. Gilbert's 'Bab Ballads,' with their absurd illustrations; verse and woodcuts together being the lineal descendants of 'Hood's Own.'

The Proceedings of the American Association for the Advancement of Science at the Minneapolis meeting last year make their customary appearance in print on the eve of the next meeting. A considerable part of the contents has already seen the light in various scientific media.

No. 31 of the Proceedings of the United States Naval Institute consists wholly of an important paper, by Lieutenant W. H. Jaques, U. S. N., on "The Establishment of Steel-Gun Factories in the United States." It is needless to say that this is not an historic retrospect. The writer aims, by showing in much detail the progress of foreign countries, to promote the creation of the industry in question on this side of the Atlantic.

Another map from the hands of that eminent cartographic authority, Henry Kiepert, has just been published by Dietrich Reimer, Berlin. This is a new view of the Asiatic provinces of the Ottoman Empire, with the omission of Arabia. The scale is about twenty-four miles to the inch, and the map is divided into six sheets. A separate sheet marks as nearly as may be the administrative divisions for the whole territory. The Nile Delta and the Suez Canal, and a portion of Persia as far east as Ispahan, are embraced in the scheme. Doctor Kiepert has had the benefit of numerous unpublished plottings by explorers and railway prospectors, but to use these to the fullest extent a much larger scale will be required, and will be employed in a forthcoming map of twenty to twenty-four sheets, which will be indispensable to future archæological expeditions. A still smaller map in four sheets, including European Turkey, is being engraved as a third edition of Kiepert's 'Ottoman Empire' (1877). The mechanical execution of the map before us is clear and tasteful, while the orthography has been most scrupulously looked after.

It is said that the chair of "Science in Connection with Revelation" in the Presbyterian Theological Seminary at Columbia, S. C., occupied by the Rev. James Woodrow, will be abolished, and that it is not unlikely that the present incumbent will be disciplined or censured. Mr. Woodrow has been, in recent lectures, harmonizing the teachings of Genesis with those of science. He holds that nature's record contains a detailed history of the times merely outlined in revelation. All who are acquainted with the temper of the Presbyterian Church, and especially with that ultra-orthodox branch of it in the South, will be prepared to hear heretical charges brought against Mr. Woodrow. It is not at all improbable, however, that an attempt to

discipline him at this time may cause some opposition even in the ranks; for the offender is not a young man, nor eccentric, but an acknowledged teacher of teachers, and has temperately spoken his mature thoughts upon a subject which has been his especial study, and upon which he was expected to speak.

The faster the modern world lives the quicker the remains of the ancient world disappear. In Algeria and Tunis they are going very fast. Old buildings make a too convenient quarry in the execution of public works to be suffered to remain as they are. The Académie des Inscriptions has addressed a petition to the Minister of Public Instruction that he would take measures for the preservation of monuments in all the French colonial possessions. It is certainly to be hoped that the ancient khmer architecture will not be suffered to melt away. How much can be done by Government classification, registration, and control has been shown in both France and England, and Turkey has forbidden ancient monuments to be used for building, or worked up as lime; all excavations are to be under the charge of the authorities of the museum in the Seraglio. It will be well if France sets the example of extending such care to other countries now half civilized.

On the fourth of last November in Paris a monument was erected to Alexandre Dumas, after the design of Gustave Doré. We have now, from the Librairie des Bibliophiles (New York: F. W. Christern), a volume containing a full report of the proceedings, with a preface by M. Alexander Dumas, *fils*, and an appendix containing his speech over the grave of Doré. The two illustrations are a portrait of Doré, etched by M. L. Massard, and an etching of the monument, by M. E. Abot. The most important of the ceremonial speeches was that of M. Edmond About, as President of the Committee of the Society of Men of Letters. It contained what is the first exact and definite statement as to the aid rendered to Dumas by the cloud of collaborators who compassed him about, that we have met in the course of much reading in Dumasiana. M. About tells us that Dumas talked over and planned the novel with his collaborator, that the collaborator then wrote out the novel briefly, and that Dumas took this draft and rewrote it wholly, amplifying a little quarter page into a full large page of his own fine hand-writing. M. About recalls, what it is well to bear in mind, that none of Dumas's collaborators were ever dissatisfied with his treatment of them.

Wycherley, though the best satirist of his time, has practically dropped out of English literature, because he cannot be read *pueris virginibusque*. But the author from whom Voltaire's "La Prude" and Goldsmith's "She Stoops to Conquer" are imitated, deserves the attention of the student of literature, and has received it in Dr. Johannes Klette's monograph, 'William Wycherley: Leben and dramatische Werke, mit besonderer Berücksichtigung von Wycherley as Plagiator Molières.' Dr. Klette in four chapters discusses Wycherley's life, the chronology of the writing, representations, and editions of his plays, their literary character, and the various translations and imitations. Wycherley's own obligations to Molière and other French comedians are pointed out, but are not insisted upon too much.

A new history of Mohammed, from the pen of a most competent writer, has just appeared in Leipzig. It forms the first part of 'Das Leben und die Lehre des Muhammed, dargestellt von Ludolf Krehl.' Dr. Krehl, since 1869 Professor of Oriental Languages and Chief Librarian at the University of Leipzig, and formerly editor of the *Zeitschrift der Deutschen Morgenländischen Gesellschaft*, is already very favorably known as the author of various works on topics connected with his present subject, such as 'On the Religion of the pre-Islamic Arabs,' and 'On the Koranic Doctrine of Predestination,' as well as of editions and translations of Moslem writers. His 'Muhammed,' written in a very pleasing style, is calculated to satisfy the public at large no less than the world of scholars. The character of the Arabian prophet is drawn with great skill and discrimination. Both the sincerity of his belief in his divine mission and the hypocritical element in his public career are exhibited in a strong light.

The last Proceedings of the American Oriental Society reveal another fraud of the late dealer in Biblical antiquities, M. W. Shapira, of Deuteronomy notoriety. A number of years ago a well-known citizen of Philadelphia bought of that Christianized Hebrew, in Jerusalem, a sheepskin roll, composed of pieces of Synagogue scrolls of different hands and ages, and containing, in forty-seven columns, the whole book of Numbers. The purchase was made on the strength of a letter of the late Professor Tischendorf, written in 1870, stating the manuscripts to be more than a thousand years old. The roll was deposited in the Ridgway branch of the Philadelphia Library, and with it Tischendorf's letter. Prof. Isaac H. Hall, who examined them, suspecting the letter to be a forgery, had phototypes of it prepared, and sent them to competent judges in Germany. The letter was found to be genuine, but Professor Franz Delitzsch, who knew all about it, declared that it was written to recommend two rolls other than that sold to the Philadelphian, older and otherwise superior to it, and at the time described by Delitzsch himself in the Augsburg *Allgemeine Zeitung*. The Philadelphia roll is, however, in itself, "a curiosity worth keeping."

In a paper read before the French Society of Antiquaries, M. Gaidoz, the Secretary, has given some interesting instances of the survival of sun-worship, apropos of a small Gaulish statue of a man with a wheel, the sign of sun-worship in many countries—for example, the Buddhistic "Wheel of the Law." One of these survivals is the custom of carrying or of rolling down a high hill wheels on fire at the feast of St. John, that is, at the summer solstice. Another is the wheel carried at Douai at the feast of Gayant, the third Sunday in June. A third, the wax wheel still carried every year at Riom at the feast of Saint-Amable (June 11).

Ernest Nys, in the *Revue de Droit International*, investigates the question of the identity of Casertanus, qualified as *doctissimus*, referred to frequently by Alberico Gentili in his treatise "De jure belli" His researches have led to the discovery that it is Antonio de Bernardi, who was Bishop of Caserta from 1552 to 1554. The book cited by Gentili is 'De eversione singularis certaminis,' which Nys has been unable to get sight of.

Two German Protestant theologians of great repute and high position, though not of equal merit, closely followed each other in death in the early part of last month—J. P. Lange dying on July 8, at the age of eighty-two, and I. A. Dorner on the following day at the age of seventy-five. Both are known to the English and American public by translations, the former especially as editor of the vast 'Commentary on the Holy Scriptures; Critical, Doctrinal, and Homiletical,' reëdited in this country by Dr. Schaff. He was an indefatigable compiler and voluminous writer, his theological and Biblico-critical views being of the most conservative type. His religious songs will probably survive his learned writings. For the last thirty years he officiated as Professor and Consistorial Councillor at Bonn. Dorner held the same double position successively at Königsberg, Bonn, Göttingen, and Berlin, rising to the dignity of *Oberkonsistorialrath*. As a writer on dogmatic theology he is both more liberal and more highly esteemed than Lange. Among his most important productions are his 'Entwickelungsgeschichte der Lehre von der Person Christi' (1839), 'Geschichte der Protestantischen Theologie' (1867), and 'Christliche Glaubenslehre' (1880–81).

—The State Historical Society of Wisconsin at Madison has lately been presented with an interesting collection of all the stray circulars, handbills, pamphlets detailing the circumstances of the elections of contesting delegations, etc., etc., which were distributed at the Republican National Convention at Chicago. The collection (of some twenty-five numbers) was principally made by Mr. Talcott Williams, of the Philadelphia *Press*, and some additions were made by Prof. Edward S. Holden, of Madison. The various numbers have been mounted together in one cover, and will serve to show "our nephews," as the French say, how the mind of a delegate to a National Convention was influenced in 1884. Among the rich bits of the collection is the set of "Logan Songs," by which some enthusiasm for "Black Jack" Logan is to be excited in the rural districts. The railroads have folding advertisements with maps showing the last Presidential vote. The insurance companies have lists of the delegates, and blank tally-sheets for recording the vote as it progressed. The Baltimore and Ohio Telegraph Company is represented by the (very elaborate) bill of fare which was furnished to its special train conveying the Washington correspondents of the various papers (free) to and from the Convention. Caricatures from the illustrated papers complete the collection, which is believed to be unique.

—"Taxation in the United States 1789–1816," by Prof. Henry C. Adams, has recently appeared in the *Johns Hopkins University Studies*. The greater part of the sketch is devoted to tariff legislation, the object being to show that the early tariffs of this country were in the main for revenue only. Where there was any departure from this rule the object was political rather than industrial; as, for example, in the case of the provisions discriminating in favor of American shipping, where the motive was to compel England to modify her navigation laws. Up to 1807 American capital and energy found their best rewards in building and sailing ships. The ruin of our carrying trade by Napoleon's decrees, England's Orders in Council, and our own embargo turned capital away from shipping and into manufactures. The high tariff of 1812, imposed expressly as a means of raising revenue for war, became in its operation protective. The return of peace found industries in existence here that could not stand without the help of "fostering" legislation. They have been fostered ever since that day, and are apparently not more ready to stand alone now than they were seventy years ago.

—Dr. J. R. S. Sterrett, who was a member of the American School of Classical Studies at Athens during its first year, and is now its Secretary, is making important discoveries in the interior of Asia Minor, where he has been travelling since the 1st of June. The results of the similar journey undertaken by Doctor Sterrett in 1883, in connection with the distinguished Scotch explorer, Mr. W. M. Ramsay, under the auspices of the English Society for the Promotion of Hellenic Studies, were made known in the report of the Committee in charge of the "Asia Minor Exploration Fund" several months ago, and published in the London *Times* of March 21 and in the Boston *Daily Advertiser* of

April 8. Doctor Sterrett has continued his explorations this summer, working, as before, in concert with Mr. Ramsay, but travelling chiefly by himself. He writes from Ak Sheher, June 21, that he has been very successful in collecting inscriptions and in identifying ancient sites in important historic regions rarely visited by modern travellers. He says: "I have fixed definitely the site of Heracleia, have discovered that the Egerdir Lake is the source of the Cestrus, have surveyed the great pass of Sultan Dagh for the first time, finding the map all wrong; have corrected the nomenclature of many villages, and have added many others to the map." He visited the ruins of Antioch, which are important, seeing there "some friezes with reliefs in excellent workmanship," and having Roman coins brought him "by the double handful." There he copied more than sixty inscriptions, of which about forty are Latin; all of these are unpublished, except three or four. He adds: "I shall depart from my original plan of going direct to Cæsarea *via* Iconium, and intend to cross over to the Antioch side of the mountain and go to Iconium by that road. I have good reason to expect a harvest of inscriptions on that side, whereas this side has been travelled over frequently." At the time of writing he had already collected 145 inscriptions, "some of which are very long, and some of value." By the arrangement between Messrs. Ramsay and Sterrett, the former is to publish all the geographical discoveries made by both while they are travelling in concert, and the latter is to publish all the inscriptions. We are glad to call attention to these promising reports of an expedition which reflects great credit on American scholarship and enterprise, and which is in no small degree the result of one of the most important steps ever taken by American scholars—the founding of the School at Athens. The Managing Committee of this institution are now printing the first volume of papers of the School, in which will appear the inscriptions found at Assos by the expedition of the Archæological Institute of America, edited (chiefly at Assos itself) by Doctor Sterrett; and also the collection of inscriptions of Tralleis, made by Doctor Sterrett and Mr. Ramsay in 1883, already published in the *Mittheilungen* of the German School at Athens, and now corrected by this summer's observations. Most of the Assos inscriptions have been brought to the Museum of Fine Arts in Boston, with the other antiquities of Assos which fell to the lot of the explorers in the division with the Turks.

—Mr. Francis Galton contributes to the August *Fortnightly* a paper on the "Measurement of Character," in which he supplies some material corroborating the view that "man is little more than a conscious machine, the larger part of whose actions are predicable." He has come across instances in which a son who inherited, somewhat exclusively, his father's qualities, passed through life with all his vices and virtues; and he has collected cases of twins who always behaved as one person, so that seemingly if one were subjected to certain tests, his response would show exactly how the other would act under the same circumstances. Temper affords one of the easiest methods of testing character. Boys are constantly testing a dog's temper, and know just how far they may go with impunity. The expression of emotions by gestures and other muscular movements has been discussed in many books, but Galton mentions some new subtle tests that may yield interesting results. One is the cardiograph, which can be worn under the buttoned coat, and indicates the action of the heart of a speaker or any one subjected to the play of strong emotions. Another is a sort of pressure gauge that can be fixed to ordinary furniture, and will show how far persons have inclined when sitting together engaged in eager conversation. A "muscle-reader" would evidently have great advantages in this field of investigation. But "it is an easy vice to generalize," and Mr. Galton wants accurate, reliable facts to base further inferences on. Interesting and amusing experiments are easily devised, but it is necessary that the subject of the experiment should believe in the genuineness of the exciting cause of the emotion:

"It is not possible to sham emotion thoroughly. A good actor may move his audience as deeply as if they were witnessing a drama of real life, but the best actor cannot put himself into the exact frame of mind of a real sufferer. If he did, the reflex and automatic signs of emotion excited in his frame would be so numerous and violent that they would shatter his constitution long before he had acted a dozen tragedies."

—The venerable Lorenz von Stein, whose 'Verwaltungslehre' has been an authority since its issue, nearly twenty years ago, is publishing a revised and enlarged edition of that portion of the work which pertains to the methods and history of education. This portion of the great work (Part 5) is now to be offered separately, under the title 'Das Bildungswesen'; and of this part the first division, consisting of 455 pages, has recently been received. The volume already issued is devoted to the theories and methods of education prevalent before the downfall of the Western Roman Empire. This is to be followed by a corresponding account of educational methods and doctrines in mediæval and modern times. The first 147 pages contain a philosophical discussion not essentially different from that in the first edition; but the remaining portion, which deals with the history of education in the several countries considered, has been greatly enlarged and improved. The numerous divisions and subdivisions of the first part of the work are somewhat unattractive and confusing, but the pages devoted to the history of education in the nations of antiquity leave very little to be desired. A brief notice of the provisions made for education in the countries of the Orient is followed by a clear and sufficiently comprehensive account of the educational work done in Greece and Rome. While the author's point of view is that of the reciprocal relations of education and the public service, he does not overlook matters of detail that are of essential interest. This is especially the case in the last section, where he treats of the development of education after the introduction of Christianity; the importance, both general and special, of the Christian dogmas from an educational point of view; and the positions of the different church fathers in regard to science and education. In this presentation it was unavoidable that some names of importance should be omitted; but the work as a whole is one in the study of which every thoughtful student of educational methods may find much for his interest and advantage. The still more important portion relating to modern times will be awaited with great interest.

—Were Richard Buchta's 'Der Mahdi und der Sudan' (Stuttgart, 1884) twice as large as it is, and filled with only one-third of the names and other particulars now crammed into its eighty-odd pages, it would be an excellent book to recommend to all who want information on Sennaar and Kordofan, Darfur and Bahr el-Gazal, Khartum and El-Obeid, the Mahdi and his foes, Hicks Pasha and General Gordon, etc. Over-concise and over-laden as it is, it is good only for the particularly studious, but to such really valuable. Richard Buchta—a Galician Pole, born in 1845—knows both the Sudan and the Mahdi from personal acquaintance, and has pursued the interesting but bewildering course of events in that region with close attention. He travelled in Africa in 1878–80, ascending the White Nile beyond Gondokoro, penetrating into the equatorial land of Uganda, and returning through that of the Nyam-Nyam. A photographer by trade, he brought home a valuable collection of faithful pictures from nature of national types and landscapes, 160 of which form his pictorial work 'Die obern Nilländer' (Berlin, 1881). He saw the present Mahdi, then known only as the pious Fakir Mohammed Ahmed, in April, 1880, in his village near the Island of Aba in the White Nile. At that time his fame for sanctity was still limited to the neighborhood. He describes him as a well-built man of forty, tall and of dark brown complexion, a genuine Nubian (not of Arab blood). He is a native of Dongola, and in his younger years worked with his brothers as boat-carpenter in Khartum. His career as Mahdi dates from the summer of 1881. This name (pronounced Mähädi) Buchta explains as equivalent to God-guided (from Arabic *hada*, to guide). The story of the first fight with the fanatical followers of Mohammed Ahmed and of the later, more serious, military undertakings against him, culminating in the fatal march of Hicks Pasha's "10,000 men with more than 1,000 officers" (September–November, 1883) is a shocking recital of reckless carelessness, cowardice from superstitious terror, and heartless butchery. A chronological list of events from July, 1881, to March, 1884—including the affairs in Egypt and the neighborhood of Suakim—is added. The traveller deprecates the English Government's resolve to abandon the whole of the Sudan, the natural richness of parts of which he extols; but he acknowledges that the rising of the Sudanese is in reality a rising against distressing misrule and harrowing oppression.

—M. Ulbach continues his letters from Lisbon. He is struck with the degree of liberality of the laws in the matter of religion which coexists with the conservatism of customs. The bishop cannot issue a pastoral letter without the assent of the prefect; there are no convents, except those of French or Irish priests; the Church is decidedly subordinate, with the assent of Rome, to the State. And yet public opinion obliges the King to follow on foot the procession of Corpus Christi. The most pronounced freethinker will take the sprinkling of holy water at the church door, or offer it to his companion, and will drop on his knees in the street as the Host passes. During Holy Week a certain colossal crucifix, which has a chapel of its own with large revenues, is carried for three or four nights to a neighboring sanctuary of the Virgin—that is to say, Christ, who is then dead, returns to his mother. On the morning of the Resurrection the image is taken back to its own chapel with joyful solemnity. If it were not, or even if the return were delayed, the revenues would pass over to the Virgin's sanctuary. Of course its guardians are very desirous that this should not occur. And yet, such is the force of public opinion, which demands that the crucifix shall be carried on the left side only by three noblemen, a duke, a marquis, and a count of the purest descent, that the forfeiture is not unlikely to occur if noblemen of sufficiently unstained race could not be found or should refuse to serve. Funerals also surprised M. Ulbach. The hearses are the gayest vehicles in Lisbon, being the disused *volantes*, which went out of fashion some time ago, but still retain their painting, carving, and gilding. Those reserved for children are the most brilliant of all—red

picked out with gold, with abundance of flowers and little figures of angels. In harmony with this is the name of the cemetery—the Place of Pleasures. M. Ulbach supposes that this is not so much from any idea that all who are buried in consecrated earth are in Elysium, as because it was formerly a garden, just as the residence of the King's father opposite, formerly a convent, is called the Palace of Necessities, and the open place where the pillory used to stand is named Gayety from some older association, no doubt, than the punishment. In the operetta of "Le Jour et la Nuit" is the couplet "Les Portugais sont toujours gais." When the French company sang it at Lisbon they altered it, to gratify the national prejudice, to "Les Espagnols sont toujours fols," which was received with the applause that in any country a hit at a neighboring nation will earn. The Portuguese are not gay nor morose, but of a quiet, sober humor. One sign of this is perhaps the almost total absence of coffee-houses. A few good clubs and the tobacco shops suffice for places of social meeting.

—*Mélusine* for July 5 contains a translation of "The Oxford Solar Myth," published in 1870 in the *Kottabos*, a collection of pieces in prose and verse by students of Trinity College, Dublin, and dedicated "without permission" to Mr. G. W. Cox. The version is called "Comme quoi M. Max Müller n'a jamais existé," is dedicated, also without permission, to Signor Gubernatis, and is as laughable in the French as in the English original. The ingenious way in which Max Müller, the great grinder, is connected on the one hand with an Oxford teacher, and on the other, as Müller Germanus, with the Germanus Apollo of the Latin poets; in which his father Wilhelm Müller, that is, Will-hjaelm (or helm of force, or invisible cap) is identified with the morning mists from which the sun arises; in which Bunsen is brought in, and Taylor, at whose institution Max Müller was a teacher, is made to explain his controversy with Weber (the tailor who cuts cloth being, of course, the natural enemy of the weaver); and in which Monier Williams, who defeated Max Müller in a contest for the chair of Sanskrit at Oxford in 1860, is explained as another form of Wilhelm Müller (Monier=meunier=Müller, and Williams being as before Will-hjaelm) and as standing for the mists into which the sun disappears at night —the way, in fine, in which all these and other absurd explanations are mixed together with a pretence but not the slightest reality of reasoning, is beyond all praise. The translator, H. Gaidoz, has added a second part, in which, with numerous citations and great show of learning, he follows out the Max Müller myth in a somewhat different line, and takes occasion to laugh a little at Bréal, Darmesteter, and Arbois de Jubainville, and finally adds an appendix on the myth of Cadet Rousselle, who turns out to be Flavus Apollo, the sun being Cadet as younger than his sister Aurora. On the whole it is very gracious fooling.

—We do not have frequent occasion nowadays to record the discovery of any new fact concerning the sun's physical constitution which has been derived from the discussion of old observations; but in addition to the variation of magnetic elements, the frequency of the aurora borealis, and two or three possible fluctuations in the phenomena of terrestrial meteorology, Dr. J. Hilfiker appears to have established the dependence of another element upon the periodical waxing and waning of the solar spots. It has long been recognized that the measures of the apparent angular diameter of the sun are, when reduced to the same unit of distance, not so consistent as they should be; but the interpretation of these discordances on the basis of a long-period variation in the actual diameter of the sun itself is essentially new. In a late number of the "Memorie della Società degli Spettroscopisti Italiani," Dr. Hilfiker tests this theory by the investigation of observations of the solar diameter made at Neuchâtel, Switzerland, during the last twenty-two years—or about two spot-periods—with the interesting result that the sun's diameter is larger than its average value at the times of minimum spots, and smaller at the maximum. It will be curious to ascertain whether the series of measures at other observatories may be properly interpreted as corroborating this very remarkable result.

COLUMBUS—A PORTRAIT RESET.

Christophe Colomb, son origine, sa vie, ses voyages, sa famille et ses descendants, d'après des documents inédits tirés des Archives de Gènes, de Savone, de Séville et de Madrid: Études d'histoire critique, par Henry Harrisse. Tome 1er. Paris. 1884. 8vo, pp. xii.-458.

THIS book is essentially a revolutionary one. If we accept the results which are reached, we must rewrite in much of its detail the history of Columbus. Of a large number of the essential points of that story, at least as far down as the end of his first voyage—for the present volume comes no further—the truth which has been accepted is boldly challenged, and either pronounced untrue or replaced in other connections of date and circumstances, so as to alter the bearing of the incident. The author is on familiar ground, and few have studied the era of the early discoveries more effectively. We have had the results in the best bibliography of their earliest literature which exists, and in a number of monographs, in which he has shown his research and acumen. His results have not always been accepted, and his views in some respects have been controverted by others quite as competent in this field as himself. There is no better ground for critical historical study than this of the early American voyages. Nothing is more common in the accounts which have come down to us than conflicting and incomplete evidence. Columbus's own narratives, as we gather them here and there, are singularly full of indirectness and confusion—the effect of an imagination that was apt to distort truths and confound the lines of moral perspicacity. What was true of Columbus was characteristic of some other chroniclers of his time; and they have left many a riddle for later historians to solve.

Accordingly, in settling upon what should be considered fact, the critical student has to make much use of inference, and to decide as best he can amid the conflict or absence of testimony. The cautious scholar finds it hard to be sure. Mr. Harrisse is not always troubled with that reserve, and there is a certain air of disdain which sometimes pervades his writing, when he refers disapprovingly to the views of others, or to those which have long prevailed, as he supposes, without warrant. It must be confessed that his temper seems once in a while to incline him to be revolutionary or iconoclastic for the sake of opposition. It is a spirit which renders him acute, and sustains him in laborious search, but it is one which also imperils sometimes his judgment.

The story of Columbus's life has been based by all historians since 1571 upon a 'Historie' which was published in that year as the work of Ferdinand, the son of the Admiral, commemorating the career of the discoverer. In 1871, after it had been accepted for three centuries, Mr. Harrisse attacked the credit of this book, in a work which was printed in Spanish at Madrid, under the patronage of a society of Andalusian antiquaries, and the next year in French at Paris, as originally written. He renews the attack in the present work. His position regarding the 'Historie' is in brief this: We know from Ferdinand Columbus's catalogue of his own library that a manuscript life of his father, by one Ferdinand Perez de Oliva, existed in it, which was written about 1525, and in which it may be fair to presume Ferdinand, the son, had a hand. It seems probable that Las Casas used it, and that the 'Historie' of 1571 was based on it. A sensational and irresponsible editor of the latter, however, engrafted upon it so many extraneous matters, drawn from one knows not what sources, that the 'Historie,' as we have it, is utterly devoid of authority, except so far as its statements are confirmed in other and better directions. It is Mr. Harrisse's further belief that for the true prototype we must search rather in Las Casas's 'Historia General' than in the 'Historie' of 1571. We do not find, however, that he hesitates sometimes to involve Las Casas in the same condemnation with the 'Historie,' and it is not uncommon for him to get rid of conflicts by declaring occasionally a sentence of Las Casas to be an insertion of his own in the narrative, which he seems to borrow from the alleged prototype. With this spirit and in this belief, Mr. Harrisse is not impeded in his revolutionary progress by any regard for what has been esteemed the main source of our knowledge of Columbus, and the so-called life of the Admiral by his son becomes with him a distinct object of scoff.

It has not been held in the past, indeed, that Ferdinand was without his weaknesses, and not the least conspicuous of them was his effort to make it appear that the Admiral came of noble stock. About ten years ago Mr. Harrisse, in his book on the Columbus family of France and Italy, sufficiently dispelled this pretension; and he seems now to show conclusively that the Colombos of Italy were weavers, kith and kin, and that their social standing in the dependencies of Genoa was precisely what that implied—nothing better. He finds that the statements of Gallo, as first printed for our generation in Muratori, were the main source of the imputation of Columbus's mean birth, which it has been usual to ascribe to the marginal note in the famous Psalter of Giustiniani.

A good deal of the light which Mr. Harrisse now throws for the first time upon the family of Columbus, comes from the inquisitive use which he has made of the notarial and similar archives of the places in Italy where the Colombos have lived. The dull stores of depositions, defining actions and agreements long passed out of memory and beyond practical use, have yielded under his search not a little of value in tracing the migrations of the family. There is always the danger of incomplete identification in such kinds of testimony, particularly where a family is so numerous as the Colombos seem to have been, and where there is great repetition of Christian names; and one cannot avoid the feeling that Mr. Harrisse has not been as cautious here as he might have been. On the vexed question of the date and place of Columbus's birth, he prefers to depend on certain notarial evidences, rather than to weigh the probabilities which the Admiral's loose way of speaking allows to be deduced in more ways than one. The date he finds to be approximately 1445, and the place Genoa, but he would take the Admiral's own assertion of his natal place to admit of being extended to the dependencies of that town, rather than to be confined to its municipal limits.

The story of Columbus's stay at the University of Pavia, originating in the 'Historie,' does not, of course, find favor with him, and he keeps him in Italy as late as 1473, when the future dis-

coverer is usually supposed to have gone to Portugal in 1470; but there is the same possibility of want of identity in the record which is followed here, as in other cases. In this new chronology the first positive knowledge of Columbus in Portugal is deduced from the Toscanelli letter, if we place it, as is usual, in 1474; but Harrisse ventures to believe that Columbus's communication with the Italian savant may have been as late even as 1482.

The 'Historie' and all since have made Columbus marry the daughter of Bartholomew Perestrello, who had been Governor at Porto Santo; but if Mr. Harrisse is to be believed, there is better evidence for his marrying a daughter of Vasco Gil Moniz. There is no evidence, as he contends, that Columbus ever went to live at Porto Santo with his wife's mother; so the whole story of the aid he got from Perestrello's charts vanishes. Again, the received opinion is that it was the death of his wife, severing his ties with Portugal, which partly conduced to his leaving that kingdom. This, too, is an error, in Harrisse's opinion, for his wife survived, as he finds, his going to Spain, which in the 'Historie' is fixed in 1484. This evidence apart, Mr. Harrisse cannot carry him into Spain earlier than the summer of 1484, when he was still in Lisbon, or later than May, 1487, when it is recorded that a largess was granted to him by the Spanish monarchs. Columbus's own statements are at variance with each other: one at least would make him in Spain when documents show him to have been in Portugal. The celebrated Junto of Salamanca, with all its pomp and circumstance, which Las Casas and Oviedo seem to have known nothing of, and in respect to which the archives of the University are silent, grew, in Harrisse's opinion, out of a natural conference held at Salamanca, when the court was there in the winter of 1486-87. This meeting was conducted by Talavera, while a later one was held at Santa Fé, in 1491, at which the Cardinal Mendoza was conspicuous.

Columbus tells us that his firm reliance was upon two monks, who believed him when others were reviling him. The friar Juan Perez, who figures in the Rabida story, was one certainly; and Alexander Geraldinus, who was also Columbus's friend, as early as 1522 made this Juan Perez identical with Antonio de Marchena, and later writers have trusted him. Oviedo calls this friar Juan Perez, and Gomara, abridging Oviedo, and before Geraldinus's book was printed, converted the name into Peres de Marchena, so that there seems here to be the evidence of another witness of the earlier time. It is not sufficient, however, for our new chronicler, and having to make a second monk somewhere, to answer Columbus's number, and finding Diego de Deza, usually considered the other, a bishop and not a monk, he resorts to the expedient of considering Juan Perez and Marchena not one, as Geraldinus had said, but two distinct persons, and constituting the two monks required.

The first serious interposition in Columbus's favor, like that made by Mendoza, has usually been placed in 1486; but Mr. Harrisse moves this and other events, usually placed earlier, well into 1491. He also defends Fonseca from the aspersions which the luckless 'Historie' has told posterity to put upon him. Indeed, it is not alone the 'Historie' which casts so much of gloom about this period of suspense in Columbus's life: the Admiral himself tells a doleful story, while his own admissions of sympathy in high places give Mr. Harrisse fair opportunities to set Columbus off against himself.

It has been usually said that the money advanced for the first voyage by Santangel was drawn from the treasury of Aragon. Harrisse denies the evidence, and says the advance was from his (Santangel's) private purse. The common belief rests in part upon the evidence of a document which Argensola in 1630 said was preserved in the Archives of the Treasury of Aragon. Harrisse characteristically rejects this evidence because a friend of his in 1871 searched at Barcelona in the Aragon Archives and could not find it! Las Casas had first told, guardedly, to be sure, the story of the Pinzons advancing the money which enabled Columbus to assume one-eighth part of the expense of the first voyage. In Harrisse's opinion the aid which the Pinzons offered was entirely in finding Columbus a crew, his argument being that if they had offered money it would have been mentioned in the royal grant respecting their arms, since similar pecuniary assistance from them in 1499 was mentioned in that grant. But while rejecting the received opinion on such a ground as this, Harrisse does not seem to be able to suggest the source from which the money did come. The 'Historie' of 1571 had also said that the Queen pledged her jewels to assist in the equipment of Columbus's fleet. It is enough for Harrisse to reject this story, that Peter Martyr and other admirers of Isabella make no mention of it. Indeed, the costly wars with the Moors may well have forced the crown to every resort in its power long before this new demand arose.

The closing chapter of this first volume deals with the question of Columbus's landfall; and his method of solving the problem is all Mr. Harrisse's own. The essential clue which has been usually followed in the endeavors to find a satisfactory solution has been Columbus's log-book, as we find it set forth in what is called his Journal. Several experienced sailors have scanned it attentively to make out his track. Navarrete, Mackenzie, Becher, and Fox, and more recently Murdoch, have brought their professional training to bear. It is something in favor of the discredit which Harrisse puts upon this method, that the results in these cases have been so diverse. Harrisse attempts to solve the problem almost entirely on the strength of the physical descriptions in Columbus and Las Casas, and on the evidence of the early maps. The name which Las Casas says the island of the landfall bore in his day was "Triango"; but Harrisse does not find this name in any earlier map than that which was published in the Cartas de Indias in 1877, which could not have been made earlier than 1541. An island with a name differently spelled but resembling this appears on sundry other later maps, and on some of the same is another island called Guanahani, which Columbus says was its name. One such instance is in the well-known Weimar map of 1527, where "Triango" is a little island just east of "Guanahani." This helps settle the question in Harrisse's opinion. Just this relative position, one to the other, is borne on modern maps by Acklin Island and the Plana cays. Columbus, with that confusion characteristic of him, tells us in one place that this island of his landfall was an "isleta" or an islet, and in another that it was a large island, "isla grande." This suggests to Harrisse that Columbus was not referring to the same island in the two cases—as indeed it is difficult to see how he could, but no one has ever before supposed he could mean but one—and that accordingly Las Casas may have been right in naming the islet which he first saw "Triango," while the one on which he disembarked was Guanahani. The theory is certainly novel, and it does not commend itself sufficiently to Mr. Harrisse even to relieve him of all doubt in the matter; and next to his own theory, he would favor that of Captain Fox in selecting Samana.

There has not been space for more than a hint of the reasons which have governed this new biographer in making so many departures from long-established views regarding much in the career of Columbus. If Mr. Harrisse has shown that he can be untrammelled by the traditions of the story, he has also shown that he possesses the material for a more critical examination of the subject than has ever been given to it before. The critical spirit readily skips into the sceptical; and a desire to unsettle is not always the same as the power to rehabilitate.

MORE SOUTH SEA ISLANDS.

Samoa, a Hundred Years Ago and Long Before. Together with Notes on the Cults and Customs of Twenty-three other Islands in the Pacific. By George Turner, LL.D., of the London Missionary Society. With a Preface by E. B. Tylor, F.R.S. London and New York: Macmillan & Co. 1884.

SAMOA is the native name of the Polynesian group more familiarly known to English-speaking people as the Navigators' Islands. They lie between the 13th and 15th parallels of south latitude, and trend from the 168th to the 173d meridian of west longitude. The principal islands of the group are Savaii, Upolu, and Tutuila. The first-named is the largest, being about 150 miles in circumference, with its western extremity touching the 173d meridian; the second, lying further to the southeast and separated from the first by ten miles of sea, is about fifty miles long by ten to fifteen wide; and the third, forty miles more to the southeast, has a circumference of about eighty miles. Their highest points are from 2,000 to 4,000 feet above the sea. They are of volcanic origin, but their shores are surrounded by fringing and barrier reefs of coral. The aspect of the islands to an approaching voyager is one of great beauty. They stand clothed in verdure from shore to summit. Here and there a shining stream of water may be seen falling down the mountain side in beautiful cascades. The lower lands abound with vegetation and spread out in fertile fields, dotted with native villages and plantations. Along the coast, between the inner shore-line and the outer barrier reef, which breaks the violence of the sea, is a broad belt of smooth water, in which the natives are almost constantly moving hither and thither in their canoes. It is to this feature that the group owes the name by which it is commonly known to the rest of the world; for it was upon seeing the Samoans moving about so much in their canoes that Bougainville, the French voyager who visited the islands in 1768, called them "The Isles of the Navigators." But it is said that the sea-going propensity of the islanders is not so strong as the name implies, as they rarely go beyond the sight of land. The Dutch navigator, Roggeween, seems to have been the first to notice these islands in 1722. He was followed by Bougainville in 1768, and La Perouse in 1787. Captain Cook heard of them in 1773 from the Tongans, and in 1791 they were visited by H. B. M. ship *Pandora*. In 1830 the agents of the London Missionary Society established a mission there, since which time there has been a gradual though very slow development of intercourse between the islands and the rest of the world. Their present population is about 35,000.

Mr. Turner's Samoan life began in 1840. He published in 1861 a work entitled 'Nineteen Years in Polynesia,' in which he narrated his personal experiences and the history and results of missionary work there. His recently-published volume, 'Samoa,' has a somewhat more scientific purpose, and is, in effect, an interesting and valuable collection of notes and observations relating to the archæology of Polynesia. It is the result of more than forty years of at

tentive study and careful accumulation of facts, and, in the judgment of an authority so well known as Mr. E. B. Tylor, is an important contribution to ethnological knowledge. Mr. Turner's opportunities for inquiry in this field of research must have been exceptionally favorable during his long stay in Samoa; and his volume, of nearly 400 pages, gives abundant evidence of much industry in obtaining and recording a vast amount of material relating to the early history of the Polynesian islanders, their manners, customs, social relations, language, traditions, myths, and superstitions, and the development of religious ideas. The early Samoans had much to say upon the subjects of Cosmogony and Man. The following are a few specimen notions:

"There was first of all Leai, *nothing*. Thence sprung Nanamu, *fragrance*. Then Efuefu, *dust*. Then Iloa, *perceivable*. Then Maua, *obtainable*. Then Eleele, *earth*. Then Papatu, *high rocks*. Then Maataanoa, *small stones*. Then Maunga, *mountains*. Then Maunga married Malaeliua, or changeable meeting place, and had a daughter called Fasiefu, *piece of dust*. She married Lave i fulufulu tolo, or down of the sugar-cane flower, and to her were born three sons: Mua, *first;* Uso, *brother;* Talu, and their sister Sulitonu, or true heir. And then follows a story as to Mua and Talu originating the names of two districts on the island of Upolu."

"Fire and water married, and from them sprung the earth, rocks, trees, and everything. The cuttlefish fought with the fire, and was beaten. The fire fought with the rocks, and the rocks conquered. The large stones fought with the small ones; the small conquered. The small stones fought with the grass, and the grass conquered. The grass fought with the trees; the grass was beaten and the trees conquered. The trees fought with the creepers, and the creepers conquered. The creepers rotted, swarmed with maggots, and from maggots they grew to be men."

"The soul of man is called his angānga, or that which goes and comes. It is said to be the daughter of Taufanuu, or *vapor of lands*, which forms clouds; and as the dark, cloudy covering of night comes on, man feels sleepy, because his soul wishes to go and visit its mother."

"All the gods had a meeting at a public place on Upolu, to decide what was to be the end of the life of man. One god made a speech, and proposed that it should be like the extinction of the cocoanut-leaf torch, which, when it goes out, can be shaken, blown, and blaze up again; so that man, after sickness and death, might rise again in all the vigor of youth. Another god, called the Supa, or *paralysis*, rose and proposed that the life of man should be like the extinction of the candle-nut torch, which, when once out, cannot be blown in again. Then followed a number of speeches, some for the one proposal and some for the other. While the discussion was proceeding, a pouring rain came on and broke up the meeting. The gods ran to the houses for shelter, and as they were dispersing they called out, 'Let the proposal of Paralysis be carried, and let man's life go out like the candle-nut torch.' And hence the proverb, 'It is as Paralysis said.' Man dies and does not return."

In his chapter on "Government and Laws," Mr. Turner shows that the Samoan system was and still is patriarchal and democratic, rather than monarchical. In a village of three to five hundred people there may be from ten to twenty titled heads of families, and one of the higher rank called chiefs. The former are not hereditary titles, but the chiefs are a select class, whose pedigree is traced most carefully in the traditional genealogies to the ancient head of some particular clan. The chief of a village community is regarded as its political head and protector. It is interesting to observe that in the courtesies of common conversation it is usual for all to address each other as chiefs; and this is carried to such an extent that chiefs seem to be as common in Samoa as colonels in Texas. The real Samoan chief, however, is not without well-defined marks and privileges of chieftainship. In public meetings he is addressed in terms translatable into earl, duke, prince, or king; and instead of *you*, it is your Highness, your Grace, Lordship, or Majesty. When the ava-bowl goes round he drinks first, and the best of the turtle, joint, or anything choice is laid before him. The chief and heads of families form the legislative body of the village and the common court of appeal in all cases of difficulty; and as far back as can be known, although without a written code, having no written language, they had well-understood laws for the prevention of theft, adultery, assault, and murder, together with many other minor things, such as disrespectful language to a chief (calling him a pig, for instance), rude behavior to strangers, pulling down a fence, or maliciously cutting a fruit tree. Many of the penalties for violation of law were severe, and death was the usual punishment for murder and adultery. Fines payable in food, sometimes providing a feast for the entire village, were not uncommon.

Village communities acted independently in their own affairs, but united by common consent, in numbers of eight or ten, to form a district, of which one particular village was the capital; and one chief, head of that village, was superior to the others and known as king. When war was threatened, no single village acted alone: the whole district assembled and held council. These meetings were out of doors. Sometimes more than two thousand people gathered together. The speaker stood up when he addressed the assembly, laid over his shoulder his fly-flapper, or badge of office, held before him a staff six feet long, and leaned forward on it as he delivered his speech. The proceedings were conducted with dignity and much etiquette and formality.

The land in Samoa is owned alike by chiefs and heads of families. The land belonging to each family is well known, and the head of a family has the right to dispose of it, though in common usage all parties interested are consulted in such matters. Members of a family who are dissatisfied may by agreement depose their head and give the title to another; and heads of families can also unite to take the title from their chief and give it to his brother, uncle, or some other relative. Notwithstanding the well-defined interest of families in the ownership of land, there seems to be a decidedly communistic practice in the use of all sorts of property. Houses, canoes, tools, garments, and money are used by all in common, or freely lent by one to another of the same tribe or clan. One may go and take up his abode in a friend's house and stay as long as he likes without charge. A Samoan cannot bear to be called stingy or disobliging. The system is a serious obstacle in the way of individual or national progress, since the thrifty are much too heavily taxed for the support of the idle, and the wise virgins are compelled to share their oil with the foolish. But there are no "poor laws." The sick, the aged, the blind, the lame, and even the vagrant have always house and home, food, and as much raiment as necessary. They cannot be made to understand the meaning of the word poverty in its European sense. "How is it?" they will ask. "*No food?* Has he no friends? *No house to live in?* Where *did* he grow? Are there no houses belonging to his friends? Have the people there no love for each other?"

Other chapters contain interesting and entertaining details concerning the domestic life of the islanders both past and present, their industries, amusements, clothing, houses, canoes, etc. The Samoans are noted for making fine mats, which they prize highly. Some of these involve months and even years of labor; they are preserved with great care, and frequently pass from generation to generation with a steadily increasing value. They also build good houses in their way; but the skill displayed in the construction of canoes is especially remarkable. These are from twenty-five to fifty feet long, and the larger can carry a hundred people. The boards or pieces of which they are made are from eighteen inches to five feet long, and are put together by *sewing* each close to its fellow. Each piece is dressed with a rim or ledge along its edges; holes are bored through the ledges and the pieces tightly joined and sewed with cinnet, and, by the help of a little gum of the bread-fruit tree for pitch, made perfectly water-tight. The ledges and the sewing are on the inside, and on the outside all is smooth and neat and the joining is hardly visible. From stem to stern there is not a nail; everything is fastened with cinnet plaited from the fibre of the cocoanut husk. This is durable, and does not rot the wood as iron nails do. With care and one or two renewals of the sewing, a Samoan canoe lasts ten or twenty years.

The final chapter of the book is especially valuable for the many notes it contains concerning twenty-three other islands of the Southwestern Pacific, some of them far remote from Samoa. Mr. Turner found occasion to visit many of these in his missionary voyages; concerning others he obtained information from natives. Among them are some which are rarely visited and consequently very little known to the rest of the world. Referring to these, Mr. Turner's notes touch upon a great variety of subjects, mainly the manners and customs of their inhabitants. At Manihiki, a small coral lagoon, remote from other land (excepting one adjacent island like itself), and containing about 1,800 inhabitants, it is said that the sixty-seventh king was reigning in 1850—a dynasty of respectable age for coral-islanders, allowing an average reign of only a few years. The writer of these lines was personally entertained there in 1860 by the then reigning monarch, but without the means of learning, or the occasion to suspect, that his host was one of a line of rulers outnumbering, by ten or more, all the kings and queens of England from Egbert, A. D. 827, to Her Gracious Majesty, the present reigning sovereign.

At Funafuti some of the native pastors had devised an ocean postal service between islands sixty miles apart by using petted frigate birds as carriers. A letter, dated on Friday, written on a page of foolscap, done up inside a light piece of reed, plugged with a bit of cloth and attached to the wing of the bird, was received at its destination the following Sunday. At the Loyalty Islands, a little to the east of New Caledonia, the people are very warlike, and idolatry, cannibalism, and polygamy are flourishing vices. One chief had forty wives. Native doctors are employed in sickness whose principal remedies are herbs and salt water. On the island of Uea they seem to have applied local treatment of a very vigorous sort in some instances, judging from the reported cure for headache, which was to slit the scalp up and fold it over, and then to scrape the cranial bone with a fine-edged shell until reaching the outer membrane of the brain, allowing very little blood to escape. Sometimes the incised scalp was replaced; sometimes a thin piece of cocoanut shell was used to cover the aperture. In cases of extreme difficulty a sharp-pointed club, made especially for the purpose, was used to strike the weak part on the crown of the head, causing instant death. The motto of the medical profession at this island was "no cure, no pay." The dead of this tribe were buried; and departed spirits were supposed to "go west," to a place called "Loeha." A milder remedy for headache, in vogue at Manihiki, is to drink all the cocoa-nut juice you can and then stand on your head.

A native pastor at New Guinea, where he has

been upwards of seven years, gives, in a late letter to Mr. Turner, some notes of information concerning the natives in the neighborhood of Port Moresby, among which are the following items:

"13. We made repeated search far inland among the villages said to be populated by people who have tails like the kangaroo, but we could not find any. The people there say that such stories are lies, and that none of their folk have tails like kangaroos.

"14. Many of the people inland, and also along the coast, eat human flesh, and are difficult to deal with, but the Lord has watched over us, and saved us from their teeth."

A Treatise on the Law of the Statute of Frauds and other like Enactments in force in the United States of America and in the British Empire. By Henry Reed, of the Philadelphia Bar. 3 vols. Vol. I. Philadelphia: Kay & Brother. 1884.

Fraudulent Conveyances and Creditors' Bills. With a Discussion of Void and Voidable Acts. By Frederick S. Wait, of the New York Bar. Baker, Voorhis & Co. 1884.

Mr. Henry Reed has undertaken a very laborious work. In his preface he says: "Of the case-law of the American and British courts the writer has sought to supply a thorough digest." He "has thought his office to be neither that of a mere scribe, nor, on the other hand, that of a person speaking with authority; the nearest illustration, perhaps, is to suppose him one who is charging a jury of judges called to decide a question of law, or as junior counsel instructing his senior," giving the foundation of doctrine, and actual examples to make this clear, gathering the cases on each side and letting them speak for themselves; criticising them when they are opposed to each other or to some governing principle, but offering his own opinion "only when he can make his readers' task easier by so doing."

This is not, then, a book for law students, nor is it, like Blackburn's lucid and powerful little treatise, an attempt to present to the profession a condensed view of the principles of the subject, illustrated by a few selected cases, and these arranged in chronological order. The book is a great magazine of cases (not following the order of time), in which it is sought to make "the arrangement of the collated adjudications such that the place in which a case is ranged shall form a point in the logical statement of the determining principle. . . . All that is left over of the actual decisions can be grouped as being so many applications of the general rule." The author has a valuable chapter on the history of the Statute of Frauds, and he makes frequent and intelligent use of the Scotch law and the peculiar law of Louisiana and Canada. His statement of the cases is full and yet well condensed. In this part of his work he has had in mind the wants of those who have scant access to libraries. His collation of authorities upon certain points, arranged according to States, as in a note to Sec. 427; his grouping and discussion of cases in single jurisdictions, as in the case of New York, in Sec. 434; and his summaries of the law, sometimes put at the end of the chapters, as in ch. vi., are among the things that will be found very useful to the practitioner.

It is to be regretted that so careful and accomplished a writer has, by the very nature of his undertaking, largely cut himself off from the office of sifting and passing judgment on the cases. A great number of the adjudications are poisoned, as careful students soon discover, by the vice of blindly following some old and demonstrable error. But still these cases do stand in the books, and the practitioner who is searching for an "authority," and perhaps cares little for the opinion of any text writer, will find great help from Mr. Reed's diligent and careful work. It seems to be an error, in chapter x., to speak of "delivery"; the phrase of the statute is "actual receipt," and the difference is important.

The old statutes of Elizabeth against fraudulent conveyances have furnished the model in our States for legislation to enable creditors to reach equitable assets, or property fraudulently transferred or held under a secret trust for the debtor. So uniform is the local legislation, that it produces almost the same results as a Federal enactment upon the subject. A general treatise upon fraudulent conveyances is for this reason especially valuable: the decisions rendered in any one State are, as a rule, authority in a sister State. Mr. Wait's book is designed as a practical guide for the legal profession, and seems to be very complete in all the details of court procedure. The nature of the property and interests available to complainants, the creditor's status, and questions of parties, pleading, and provisional relief are exhaustively discussed. The evidence and defences in this class of litigation are considered at length, including a very important discussion of the law of notice. The author cites with hesitation and reluctance the New York cases, holding that "constructive notice" has no application to fraudulent alienations, and presents with much vigor the opposite view of the question. The present time of financial misfortune seems to be opportune for the appearance of a book of this character, and we believe that the profession will find it highly serviceable.

A Practical Treatise on Electric Lighting. By J. E. H. Gordon, Member of the Paris Congress of Electricians, 1881. D. Appleton & Co.

The Electric Light: its History, Production, and Applications. By Ém. Alglave and J. Boulard. Translated from the French by T. O'Conor Sloane, E.M., Ph.D. Edited, with Notes and Additions, by C. M. Lungren, C.E. D. Appleton & Co. 1884.

Mr. Gordon is already known in the rapidly increasing literature of electricity by his treatise on 'Electricity and Magnetism.' The investigator in physical science, with his more or less ascetic and materialistic tendencies, could not help viewing Mr. Gordon's large text, with liberal spacing between the headings and full-page illustrations of the French type, as hardly an equivalent for the price of the book. Still there were those who greeted the appearance of the book with enthusiasm. The new treatise of Mr. Gordon is also a veritable *édition de luxe*. We have again the fine paper, large print, spacious headings, and full-page illustrations. If we had lost money in some one of the many doubtful electric-light enterprises of the day, we should be tempted to be cynical, and say that the appearance of the book was in keeping with the expensive outlay of certain offices where the fabulous profits of electrical enterprises are shown to the unlearned. We nevertheless regard this treatise as the best that has appeared from the hand of its author. In it the reader will find a description of the later instruments of Ayrton and Perry and of Sir William Thomson for measuring strong electrical currents. The details of the manufacture of incandescent lights are also dwelt upon more fully than in any other treatise. If one's imagination is defective, it will be amply stimulated by the illustrations. Even a simple wire gauge has the honor of appearing in life-size—an honor which, we believe, was never before granted it. Mr. Gordon enters somewhat minutely upon the subject of dynamo electric machines. He has invented such a machine, and he gives some data in regard to its construction. It is very large, and expresses his conviction that for extended electric lighting the dynamo machine must be massive, just as the production of large horse-power requires large steam engines. It is well known that Sir William Thomson, in connection with Mr. Ferranti, has perfected a dynamo machine, which is of interest since it is the fruit of Sir William Thomson's remarkable knowledge. Mr. Gordon says of this machine: "The design is, however, essentially an electrician's design as opposed to an engineer's design; electrically the machine is admirable, mechanically I venture to think that it is impracticable."

Mr. Gordon also expresses his views upon the so-called storage of electricity. They coincide with the views of those who have most thoroughly examined this new development of the subject of electricity, and are as follows:

"The potential energy in a battery rapidly leaks out. Boilers do not leak at all. Engines are comparatively cheap, and last indefinitely; batteries are dear, and wear out rapidly. The only storage apparatus which is worthy of the name is a spare boiler full of steam with a banked fire, and a spare engine and dynamo kept warm, well oiled, and ready to start at a moment's notice."

Certain tables are appended to the treatise, giving the areas of circles advancing by tenths, and also the strength and weight of metals.

The second work on our list is an excellent treatise upon the history and present condition of the electric light. Although the authors begin with an account of the lamps of the ancients, thus following the precedent set in 'Knickerbocker's History of New York,' and although the book contains peculiarly French pictures of the lighting of the port of Havre and of a street in New York by electricity, and a view of the dramatic attitude of Franklin at the moment his finger felt the spark from his kite, still these illustrations help to tide one over the dry chapters on the absolute electrical units. Books of travel have vignettes of the modern explorer receiving savage chiefs in the centre of Africa, and why should not the effect of the advent of the electric light on the dazed humanity of Broadway be handed down to posterity in a full-page illustration? Notwithstanding these illustrations and the large print, the book contains a great deal of information due to the skilful intermingling of fine-print paragraphs and notes. The reader will find full information upon Edison's electric-light system and also upon those of other prominent inventors. The details of the many different forms of lights and dynamo-electric machines are also very well given. We learn in this treatise that to Mr. J. W. Starr, of Cincinnati, belongs the honor of being the inventor of the carbon filament lamp. It is interesting to follow the history given by the editor of the incandescent carbon lamp through its various vicissitudes; and the more purely scientific reader will be gratified by the chapter on the conditions of efficiency of this lamp.

Manual of the Mosses of North America. By Leo Lesquereux and Thomas P. James. With Six Plates Illustrating the Genera. Boston: Cassino & Co. 1884. Post 8vo, pp. 447.

The botanical student or amateur, having mastered the ferns which grow within his reach, as is easily done, longs to undertake the mosses, which are much more difficult—difficult by nature, inasmuch as nothing can be done without a fairly good microscope and considerable expertness in manipulation, and difficult also by scientific art, the moss-botanists having refined their genera unreasonably, and made much

of differences which are not distinctions. A contribution by the late Mr. Sullivant to the first edition of Gray's 'Manual,' fully thirty-five years ago, made the attainment of an elementary knowledge of our common mosses easy to the learner; the second edition gave further help to a more considerable knowledge. Afterward, when this liberal-hearted master in bryology proposed an independent volume to include all North American mosses, the subject was dropped from the 'Manual.' Mr. Sullivant died before he had completed his preparations for the work, which now devolved upon his associate, Lesquereux. But he, overcharged with palæobotany, called to his aid his equally venerable associate, and the two bryologists gave themselves most assiduously and disinterestedly to the task, until the sudden death of Mr. James, just when the investigations were nearly completed, cast the whole editorial burden upon Mr. Lesquereux. With some timely assistance (which the preface gratefully and gracefully acknowledges), the long-expected work has at length been brought out. A handsome volume it is, made somewhat more bulky than need be by the size of the type; and with it the study of mosses in this country will be vigorously renewed. There is reason to hope that the bryologist of the next generation may revert to the older idea of genera, and by reducing their number increase their weight and value. We judge that the present authors would have taken steps in this direction if they had followed their own judgment instead of deferring to their model, Schimper.

The Orchids of New England: a Popular Monograph. By Henry Baldwin. John Wiley & Sons. 1884. Pp. 158, 8vo.

AN orchid-book for popular use was a happy thought, but the idea of discoursing of these plants in the order of time of flowering seems fitter for magazine articles than for a "monograph," however popular. The author has assiduously and lovingly studied the forty-seven New England orchids, especially those of Vermont, in their native haunts, has brought together a large store of information regarding them from Darwin and others, has illustrated some of them with fairly good figures as to general appearance, and has prefixed to his popular dissertations a brief and clear botanical synopsis of the genera. If, in another edition, he can see his way to throw out a deal of padding from cheap sources, will rely more upon himself, and will make and record his own observations upon the relations and particular adaptations of the various orchid flowers to their insect visitors (much of which still waits for investigation), he will greatly improve upon his first and praiseworthy attempt.

BOOKS OF THE WEEK.

Hanson, W. The Fallacies in 'Progress and Poverty,' in Henry Dunning MacLeod's 'Economics,' and in 'Social Problems.' Fowler & Wells Co. $1.
Norris, W. E. Matrimony: a Novel. Franklin Square Library. Harper & Brothers. 20 cents.
Scott, Sir W. The Lay of the Last Minstrel. With Notes and an Appendix. Thomas Y. Crowell & Co.
Smith, Julia B. One Little Rebel. Phillips & Hunt. $1.
Stories by American Authors. No. V. Charles Scribner's Sons. 50 cents.
Taylor, Ida Ashworth. Venus's Doves. A Novel. Harper's Franklin Square Library. 20 cents.
Temple, George. Lancelot Ward, M.P. A Love Story. Harper's Franklin Square Library. 20 cents.
The General Statutes of the State of New York relating to the Formation, Regulation, etc., of Corporations, etc., etc. Banks & Bros. 1884.
The Miz Maze. A Story by Nine Authors. New York: Harper and Brothers. 1884.
The Shadow of the War: a Story of the South in Reconstruction Times. Chicago: Jansen, McClurg & Co. 1884.
The White Mountains: a Handbook for Travellers. With six maps and six panoramas. Fifth Edition, revised and enlarged. Boston: J. R. Osgood & Co.
Thompson, Prof. S. P. Recent Progress in Dynamo-Electric Machines. D. Van Nostrand 50 cents.
Tracy, Dr. R. S. The Essentials of Anatomy, Physiology, and Hygiene. A Text-book for Schools and Academies. D. Appleton & Co. $1.25.
Walford, L. B. The Baby's Grandmother. A Novel. New York: Henry Holt & Co. 1884. $1; paper, 30 cents.
White, R. G. The Fate of Mansfield Humphries: with the Episode of Mr. Washington Adams in England, and an Apology. Boston: Houghton, Mifflin & Co. $1.25.
Whitmore, Rev. F. W. Infidel Objections to the Scriptures Considered and Refuted. New York: Thomas Nelson & Sons. 1884. $1.25.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & Co., N. Y.

Teachers of Mathematics, Science, History, Belles-Lettres, German and French are invited to send for the Catalogue of HENRY HOLT & CO., 29 West 23d St., New York.

Thought-Transference, Apparitions, &c.

The Society for Psychical Research

Will be grateful for any good evidence bearing on such phenomena as thought-reading, clairvoyance, presentiments and dreams, noted at the time of occurrence and afterwards confirmed; unexplained disturbances in places supposed to be haunted; apparitions at the moment of death or otherwise; and of such other abnormal events as may seem to fall under somewhat the same categories. Communications to be addressed to the Hon. Sec. E. Gurney, 14 Dean's Yard, London, S. W., England, or (up to the end of August) to Prof. W. F. Barrett, Reception Rooms, British Association, Montreal. The Society's Proceedings (Parts I.-VI.) can be obtained from Messrs. E. & J. B. Young & Co., Cooper Union, 4th Avenue, New York; Messrs. Colby & Rich, 9 Montgomery Place, boston; and Messrs. Dawson Brothers, Montreal.

Zell's Encyclopædia.

NEW EDITION.

AGENTS WANTED for this work in different parts of the U. S.

A thorough and complete revision has just been made, and many additions inserted, bringing the work up to *date*. Good chance for Agents.
Correspondence from TEACHERS and others requested.

T. ELLWOOD ZELL, Publisher,
47 N. 13th St., Philadelphia.

Johns Hopkins University,

BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

NEW CATALOGUE OF BOOKS ON History, Philosophy, Politics, Social Sciences, Religions, Travels, etc., Old and New, in English and Foreign Languages, will be sent on application, as well as separate catalogues on AMERICANA and SCIENCES. Address,
LEON & BROTHER, Booksellers,
5th Avenue Hotel, Place 3,
Corner 5th Ave. and 23d St., N. Y. City.

THE LATEST ISSUE.

"*A bright, original, deeply interesting story.*"

JOHN THORN'S FOLKS. A Novel of Western Life. By Angeline Teal. Cloth, $1.

Powerful in plot, admirable in description, crisp and bright in dialogue, vivid and natural in character painting, 'John Thorn's Folks' possesses all the elements of a deeply interesting story. The lives and loves of John Thorn and his wife in the divorce-bearing State of Indiana open a new vein of deep interest to the novel reader. The story is not too long for summer reading; its plot, though strong, never harrowing; its incidents are by turns thrilling, amusing, and interesting, so that the reader who opens the book will not be bored by any portion of its contents. It is above all original in its conception and presentation of a story of decidedly dramatic interest, that deals with the slipshod marriage custom of the day, and gives without preaching a moral tone to its dealing with the always interesting theme, divorce, which is a powerful factor in the dénouement of the story. Look it up at the bookstore, the news stand, or the library, and you will be at once entertained.

The Nation.

NEW YORK, THURSDAY, AUGUST 28, 1884.

The Week.

We observe with considerable amusement that the *Tribune* is very indignant because Governor Cleveland's letter of acceptance contains no views upon the tariff question. Has the *Tribune* forgotten what its editor and founder said about the same question when he accepted a nomination for the Presidency only twelve years ago? We have not, if the *Tribune* has. Here is the passage as it stood in the summary of its platform which Mr. Greeley presented to his party, and which he said he "joyfully" adopted:

"V. That the raising of revenue, whether by tariff or otherwise, shall be recognized and treated as the people's immediate business, to be shaped and directed by them through their Representatives in Congress, *whose action thereon the President must neither overrule by his veto, attempt to dictate*, nor presume to punish by bestowing office on those who agree with him, or withdrawing it from those who do not."

That is much more dreadful than Mr. Cleveland's simple statement that the "Presidency is an executive office." Mr. Greeley not only took that position, but he went far beyond it, and said that the Executive "must neither overrule by his veto nor attempt to dictate" the action of Congress. What he, as the High Priest of Protection, meant when he said that, was, that if elected President he would not veto any tariff legislation, free-trade or otherwise, which a Democratic Congress might enact. Suppose Mr. Cleveland had said such a thing as that, what would be the emotions of the *Tribune* at this moment? It is our opinion that they would take the form of a convulsion.

General Butler's reputation as the friend of the laboring man is being violently assailed. The Treasurer of the United Hatters of America declares that while Butler was Governor of Massachusetts he not only declined to sign a bill which passed the Legislature to protect the hat manufacturers from the ruinous competition of convict labor, but, while the bill was pending, went to work on the sly and signed a new contract which made the bill of no value for another year, signed or unsigned. The Treasurer says that as a friend of labor Butler is the "latest and greatest humbug in American politics." Another charge is embodied in a suit in the courts against Butler, to the effect that he demanded $30,000 for inducing the Government to compromise suits against clients of his who had been found guilty of defrauding the Government through violations of the revenue laws. Butler appeared as counsel for these criminals while he was Governor, and his conduct in doing so attracted much attention at the time. It now appears that he received $30,000 for his services, while the Government received only $20,000. In other words, the Government must have lost much more than $30,000 through his efforts, for his clients could only pay him that sum if by so doing they could escape paying a much larger sum into the National Treasury, where it would have lightened the burdens of the laboring man by lessening taxation. There is nothing new in these revelations so far as they affect Butler's character. He has been working in that way all his life.

It is very evident that the Blaine managers have overestimated the usefulness of Butler's candidacy to their cause. There are no signs that he is going to hurt Cleveland any more than he will Blaine, and there is a chance that he will not hurt him so much. The chief advantage of Butler's candidacy will be in affording papers like the *Sun*, which are really working in the interest of Blaine, a chance to do so more on the sly than they would otherwise be able to do. That the *Sun* has no faith whatever in Butler, and no respect for him as a statesman, is easily proved by quotations from its past utterances. It is only a very few years since it denounced him as the representative and exponent of everything which was worst in American politics, and its analysis of his character was so searching and comprehensive that it could have been made only by somebody who thoroughly understood him.

It is impossible to judge how much significance is to be attached to the Prohibition movement this year, but it seems to be greater than in any former Presidential campaign, and especially at the West, where prohibition has lately been made a part of the practical politics of the day. In Iowa, Kansas, Illinois, and Ohio, St. John and Daniel seem destined to be a very "disturbing element." A disturbing element in politics is anything which draws votes away from the old parties. It is of no consequence whether the old parties have any principles left which are worth voting for. In such a case the disturbance becomes all the more disturbing, because it is likely to reach and affect a greater number of voters than usual. Governor St. John was not far wrong when he said that "there are more political parties in the field than there are political issues." This is quite true. The only political issue worth any solemn consideration is that which arises from Mr. Blaine's personal character as disclosed in his own letters. If such a man can be elected President of the United States after the production and discussion of evidence showing that he used his public position to promote his private interests, the Ship of State will have taken a lurch downward the consequences of which no man can foretell.

Reflection upon this has penetrated the Republican party deeply. The outward manifestations of discontent show only a small part of the trouble going on within. Every letter received by the Independent organizations tells the same story of silent disaffection, and gives the names of men who will not vote for Mr. Blaine, although they are not willing to give their support to the Democratic party. To all of this class who look upon intemperance as one of the greatest evils that afflict the human race, the St. John ticket will be a natural refuge. Heretofore the Prohibition party have been met in national elections with appeals for the preservation of the fruits of the war. The interests of the freedmen have been set in opposition to those of the drunkard and the drunkard's family. They have been told that now or never is the time to reconstruct the South. King Alcohol can wait—no danger that he will not be found when wanted. The appeal has always been successful, and thus it has happened over and over again that the Prohibition party, although strong enough to carry such States as Iowa and Kansas, Maine, Vermont, and Massachusetts in State elections, has dwindled into insignificance in national campaigns. No overmastering issue holds thoughtful Republicans to their customary allegiance this year. The only important issue is Mr. Blaine's fitness to be President, and the more this question is examined the weaker will be the ties which bind Republicans to their own party. Conditions of growth in the temperance cause as a political power are present now as they never have been before. If the results of the election do not exhibit such growth, it may well be concluded that it has little inherent strength or cohesion, and that it need not be regarded even as a disturbing element hereafter.

Mr. Murat Halstead, in addition to his arduous task of editing a Blaine evening paper in this city for a cent, sends a column or two a day by telegraph to his other daily paper in Cincinnati. His despatches are mainly devoted to views on the political situation, and are noticeable for their fine contempt of dudes and Pharisees. In a despatch which he sent on Wednesday week he made this observation:

"The Independents are especially solicitous about the Mulligan letters. If it were not for their favorite texts from those letters, the Independent Republicans would cease to exist. They rest upon Mulligan exclusively. We do not mean to treat the Independent Republicans with cruelty. We would not inflict the horrors of insomnia upon those of this political persuasion not already subject to it. We admit Blaine never was a deadhead in any enterprise to which he gave his attention. The statement to that effect we endorse as a fact. Mr. Cleveland seems to be very much of a deadhead in his Presidential candidacy."

The Cincinnati *Enquirer* makes a curious collection of estimates of Mr. Blaine from the columns of the *Commercial* and the *Gazette* of that city in the year 1876, by way of ascertaining the net value of the support now extended to Mr. Blaine by the united *Commercial-Gazette*. The Chicago *Tribune's* articles at the same period are quite distanced in point of moral grandeur by those of the two Cincinnati papers. The *Commercial*, after reviewing the Mulligan letters, said: "It would be the very madness of the moon for the Republican party to go to the country under his (Blaine's) leadership." The *Gazette* went further, and declared

that after such disclosures as were made in the investigation it would not support Mr. Blaine even if he were nominated. The *Commercial* predicted that if Blaine were nominated, Ohio would go Democratic by 10,000 to 15,000 majority. The *Commercial-Gazette* is edited by the same persons who edited the *Commercial* and the *Gazette* in 1876. This proves that in some cases two negatives may make an affirmative.

Will the Blaine managers permit us to give them a little valuable information and accompany it with a suggestion? It is within our knowledge that the array of evidence against Mr. Blaine's political morality, as it is being presented to Republican voters in Mr. Schurz's speech, the *Evening Post* pamphlet, and other documents, is producing a profound effect. It is changing votes from Blaine to Cleveland every day. A common remark of Republicans who are so changing is: "We have been waiting for some refutation of these charges, but none has come; we have been waiting for some other reason for voting for Blaine than that the 'Republican party has a glorious record,' but we have heard none. Therefore, we conclude there is none, and we do not think the one given sufficient to counterbalance Blaine's bad record." Our suggestion, accordingly, is that the plan of the Blaine campaign, so far as speakers are concerned, be changed. Thus far men have been selected as orators who have some faith in public morality, and too much reputation for acting in accordance with such a faith to jeopard it by defending their candidate as he must be defended if he is to be elected. Messrs. Evarts, Hoar, Hawley, Dawes, Woodford, Foraker, and men of this sort are not equal to the demands of the occasion. They have injured the candidate by very brief and very inadequate defences. They ought to be withdrawn, and their places at the front filled with men who have full faith in Blaine and are not ashamed to give their reasons for it. The only men of this kind whose names occur to us at this moment are Steve Elkins, Pow Clayton, Dorsey, William Pitt Kellogg, and John A. Joyce. They would defend Blaine in a whole-souled way, and put some spirit into the campaign. The grand-old-party argument has been tried and has failed. Blaine must run on his merits.

Another week has ended, and we have not heard from either Mr. Phelps or Senator Dawes upon subjects which are deeply interesting to both them and us. Lest our previous invitations to them may not have been fully understood, we will repeat them as plainly as language will permit. Mr. Dawes will remember that in a speech which he made at Englewood, he said that he had in his pocket all the Mulligan letters, that there were in them two sentences which were capable of being turned against a man of perfect probity, but that he had an "honorable construction" of them which he preferred to apply. Strangely enough, he did not apply it then and there, and strangely enough he declines to accept our repeated solicitations to send it to us for publication. The sentences which we assume that he referred to were those in Blaine's first letter to Fisher about the Little Rock Road, in which he remarked that he would not be a "deadhead in the enterprise," and that he "saw various channels in which he knew he could be useful." There are other sentences in the other letters of the same series which need a similar construction very badly, but we are willing that Mr. Dawes should explain these two first. He must have seen what a mess Senator Hawley has made of it, and that the demand for his own "honorable construction" is now greater than ever.

A most dreadful indictment is brought against Mr. Deming, a former President of the Young Republican Club of Brooklyn, by the *Tribune*. It is that he has in his possession a list of the members of the club, and has sent to each member, first, a ticket to the meeting at which Mr. Schurz spoke, and, secondly, a printed copy of Mr. Schurz's speech. The *Tribune* says this is a "betrayal of official trust." We infer from this that Mr. Schurz's speech is looked upon with considerable fear in the *Tribune* office. If the charges against Mr. Blaine are such "thoroughly exploded slanders," why be so alarmed because the Young Republicans of Brooklyn, who are said to be a very intelligent body of men, are allowed to see them? Why not counteract the effect of Mr. Schurz's speech by sending after it a copy of Senator Hawley's? We presume that Mr. Deming would be willing to do that. Senator Hawley's statement of the case against Mr. Blaine was as mild as inaccuracy and partisanship could well make it, yet the Senator was obliged to say of it, after he had framed it, that he wished Blaine had not reminded Fisher of his ruling, and that "it would have been better if he had not mixed up his private business with his public business." That is what we think, and what a great many other Republicans are thinking. The *Tribune's* notion that the Young Republicans of Brooklyn will not think so unless somebody sends them a copy of Mr. Schurz's speech, is exceedingly funny.

A beautiful biographical sketch of Steve Elkins has been published by the *Tribune*, in which it is shown beyond a doubt that he is an A. B. and an A. M., a statesman of wide experience, a trained lawyer, an accomplished financier, and a pious churchman. He became a member of the Christian Church, the same to which Garfield belonged, at the age of seventeen, and though he has lived for some years in New Mexico, where society at the time of his arrival "was crude, and there was little moral restraint, and vice was common," nobody "has ever seen him take a drink in a bar-room or heard him utter an oath." While in Washington, "he regularly attended the Presbyterian Church," and in New York he is a "vestryman of Dr. Heber Newton's church, and a devoted attendant upon its services." It will be seen that there is nothing narrow about Steve's church "record." He is a member of the Christian Church, but he goes to a Presbyterian church when in Washington, to an Episcopal church when in New York, and to the noble old South Church, Congregational, where he helps fill the two Blaine pews, when in Augusta. Nothing is said in the *Tribune's* sketch about Steve's theory of politics, probably because his famous declaration, that "it is largely a question of finance," is so generally known. We notice also another omission, which should be added to the sketch to make it complete. S. W. Dorsey said in a letter written last June: "S. B. Elkins has probably a larger knowledge than any other person of all the Star-route matters and the money paid."

The sinking of the *Tallapoosa*, through the somewhat ignominious instrumentality of collision with a common schooner, must be regarded as a bad omen for the Blaine canvass. This celebrated naval vessel has occupied in the campaign a position second in importance only to that of the National Republican Committee Headquarters. Indeed, we are not certain that it can be said to have been even second. It was on board the *Tallapoosa* that Secretary Chandler and General Butler were said to have arranged the "dicker" in accordance with which Butler is running as a tender to Blaine. This was a task which was too delicate for Elkins, and too momentous to be undertaken anywhere on land. When Secretary Chandler left Washington to meet Senator Mahone in New York only a few days ago, he was borne, we believe, by the *Tallapoosa*. The vessel had indeed become the ark of the Blaine cause, and if it had been spared for two months longer there is no telling what feats of strategy and audacity it might have accomplished. Mulligan and Fisher might have been enticed on board and taken so far out to sea that they could not get back till after election. Chandler will of course at once provide himself with another war-ship at the Government expense, but she cannot be to him and the "cause" what the *Tallapoosa* was. As he contemplates her wreck, and his own narrow escape from a wetting, he must feel a good deal as Steve Elkins would if a thunderbolt were to shoot suddenly from a clear sky and demolish his headquarters.

The West End Blaine and Logan Club of Washington proves an excellent instrument in the hands of the Clapp Committee for terrifying the Government clerks. Last Friday it passed a resolution that it was the sense of the club that "*each* Government employee should contribute toward the legitimate expenses of the campaign; and any person who shall, *under the guise of civil-service reform*, refuse or *neglect* to perform a plain duty, should be regarded as simply a pretender and as disloyal to the party." The indirect manner in which the clerks are "labored with," and the ingenuity displayed by the almost baffled Republican National Committee to secure their contributions in spite of the legal barriers set in their way, are comically shown by their recent circular, soliciting subscriptions for an illustrated campaign paper. This circular was received last Saturday by the clerks at their offices. "Below," they read, "is a blank form to be filled out with your reply, which should be sent to Frank A. Munsey, No. 81 Warren Street, New York. The nature of these replies will determine whether or not the paper can be started."

This sounds more like an order than a request, and the clerks must feel that it is their loyal duty to fill up the blank. If Mr. Thoman is correct in his construction, every member of the Committee, whether an office-holder or not, has violated Section 12 of the Civil-Service Act by sending, through its officers, this circular into the departments. The National Committee would do well in this respect to imitate the timid caution of the Clapp Committee.

A letter is published from Theodore Roosevelt, dated Chimney Butte Ranche, Little Missouri, Dakota, in which he says that he has read Governor Cleveland's reasons for vetoing the Tenure of Office Bill, and that they seem to him "frivolous." He considers it "sheer nonsense" to say that the Dayton amendment hurt the bill, because in his opinion it improved it. These are Mr. Roosevelt's opinions and should be taken for what they are worth. He does not seem to have read the correspondence which followed the Governor's veto, or the conclusive demonstration by the author of the bill, Mr. Francis M. Scott, that the Dayton amendment "hopelessly and fatally muddled and ruined" the act. Unless Mr. Roosevelt can do what nobody else has been able to do—answer Mr. Scott's reasoning—his bare opinion that the Governor's objections are "frivolous" can have little weight. It should not be forgotten that when the Five-Cent-Fare Bill was before the Legislature, Mr. Roosevelt differed with the Governor about its wisdom, and was finally convinced by the Governor's reasoning that he had been led astray by specious arguments which had not deceived the Governor for a moment.

The September number of the *North American Review* has a series of short articles on the "Evils of the Tariff System," by David A. Wells, Thos. G. Shearman, J. B. Sargent, and Prof. W. G. Sumner. Mr. Wells calls renewed attention to the fact that our manufacturing industry has outgrown the demands of the home market and is now stifling for want of an outlet, which can be obtained only on the terms under which British manufacturing industry finds its outlet—that is, free raw materials. He analyzes the daring remedy proposed by Judge Foraker, of Ohio, last year, for the commercial evils under which we are laboring. Said Mr. Foraker: "If we cannot go into the markets of the world without being subjected to degrading competition, we will make ourselves independent of these markets by making markets of our own. Instead of sending our raw cotton across the ocean to be there manufactured and sent back to us, *we will have cotton mills here.*" Wonderful suggestion this, when we have more cotton mills already than we can find work for! At the time when this weighty secret was communicated to the people of Ohio, American cotton goods were selling at auction in New York for less than cost, and mills were piling up their unsalable goods in warehouses. Since that time matters have gone from bad to worse. Mr. Wells shows that the present commercial depression has been most severe upon countries where the protective policy prevails—the United States, France, and Germany; and the least so upon the free-trade countries—England, Belgium, and Switzerland.

Professor Sumner touches upon one of the profounder questions of the tariff system. If the protective policy is bringing forth evil fruits, what is the best way of treating it? Shall we reduce the tariff by little and little, or shall we make one job of it and cut off all that is not needed for revenue—that is, all that is imposed for protection—at a single blow? Mr. Sumner favors the latter remedy as the soundest economical wisdom. Under our political system such heroic treatment is not to be looked for, but it is, in his opinion, the right treatment. Piecemeal reduction will merely create a new set of difficulties at each stage by making new adjustments of industries in respect of each other which will have to be forcibly separated. Consequently the turmoil will be continuous, and the suffering greater in the aggregate than if all the tariff reform intended were accomplished in one act. "If, however, it is necessary, as it probably is, to do what is less wise but more in conformity with prejudice, the reform of the system should begin with the abolition of taxes on primary products of the soil, and advance by rapid stages to reduce and abolish taxes on the more advanced products."

There is no way of ascertaining how much or how little of truth there may be in the published rumors that Ferdinand Ward is threatening to make damaging disclosures of his business transactions with Messrs. Tappan, Bingham, and others, who have brought suits against him, in case those suits are not withdrawn. We have no doubt, however, that Ward is getting tired of Ludlow Street Jail, and is beginning to look about for ways to get out of it. If he thinks he can get out by giving a full and accurate account of all his operations, with the names of all those who shared in any way in them and their profits, we think it would be in the interest of business morals to have him make the attempt. That he is the only guilty person in the affair we have never believed. Enormous sums of money were obtained by his firm, and were disposed of somewhere. He could not have spent all of it, and it did not vanish in the air. Somebody got it, and it is our belief that most of the persons receiving it knew perfectly well that it came by swindling. These persons are as deserving of punishment as Ward is, and we trust that sooner or later they will have their share of it. Ward is undoubtedly the only man who knows the whole story. He had his own system of keeping his accounts, and he alone can unravel them.

The request for contributions to the Bartholdi statue from the public at large will, we trust, meet with a generous response. More than half the sum required for its completion has been contributed by New York and its immediate neighborhood. The rest of the country has done substantially nothing. About $125,000 is needed to complete the pedestal preparatory to its inauguration. As the address says, there has been a great deal of misrepresentation and misunderstanding connected with this statue; but for our part we should be willing to grant most of what its detractors say—that it is in part an advertisement of M. Bartholdi, and that it has been written about in the newspapers a great deal. But all great statues are monuments of their designers, and we have not such a glut of good statues of American make in New York that we can afford for such reasons to neglect this opportunity. But the main reason for doing something is one of national pride—or rather of national shame. The gift is one from France—not from the Government, but from the people, the money having been contributed in small sums from nearly two hundred cities, towns, and precincts in France. Congress has done its share by giving a site for the statue, and authorizing the President to make suitable regulations for its maintenance and preservation as a beacon and as a work of art. If the money is not subscribed, however, the statue, after being accepted, cannot be erected, and we presume will have to be returned. Considering our constant expressions of good-will and amity and gratitude to France for the last hundred years, a failure to subscribe the money would place us in a humiliating position.

Mt. Desert is agitated by a railroad project which bids fair to impair seriously the attractiveness of that island as a summer resort. The plan is to build a railroad from Bar Harbor to Green Mountain, a distance by the highway of three or four miles. The residents and visitors are loud in their protests against it. They say, what is undoubtedly true, that the distance is not great enough to make a railroad a needed public improvement, and the real object is merely to transfer to a railroad company the profits hitherto enjoyed by the owners of buck-boards and wagons; and that the mere transfer of profits from the pocket of one set of common carriers to another is not a sufficient public reason to justify a change which would infallibly entail a great number of inconveniences and even positive danger to life and property. This would come in two ways, from the railroad crossing the streets of a populous village at grade, as it would have to do, and from the forest fires the locomotives would cause. The virgin forests of the island, which are one of its greatest attractions, would probably be destroyed in a few years, at least at some of their most picturesque points.

The attempt of some of the French papers to make out that the bombardment of Foo-Choo was not the beginning of a war but a "form of negotiation," is somewhat difficult to understand. Cities are not generally bombarded by civilized nations except as an act of war, and if there is no war between the two countries, the act is one of piracy. As a general rule, belligerents notify neutrals of a state of war; but a notification is not, we suppose, necessary. A state of war exists or does not exist; the question is not one of announcement, but of fact, as we learned to our cost during the rebellion. Other nations will of course recognize the fact if it exists, no matter what France may say.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 20, to TUESDAY, August 26, 1884, inclusive.]

DOMESTIC.

Ex-Gov. HENDRICKS's letter of acceptance was published on Wednesday. It is unusually brief. He acknowledges the honor done him by the nomination, accepts the trust, and approves in sum and substance the declarations of the platform.

Ex-Governor St. John, the Prohibition candidate for President, was notified of his nomination on Monday afternoon at Cuba, N. Y. He made a speech in accord with his well-known sentiments on Prohibition.

The Connecticut Republican State Convention met on Wednesday at New Haven. The names of Gen. W. H. Bulkeley, P. C. Lounsbury, and Henry B. Harrison were presented for Governor. The informal ballot resulted as follows: Whole number of votes, 483; Lounsbury, 184; Harrison, 184; Bulkeley, 114; Merwin, 1. Bulkeley's supporters gave their strength to Harrison, and he was nominated on the first formal ballot by a majority of about 40. It is considered a strong nomination. Lorrin D. Cooke was nominated for Lieutenant-Governor. Ex-President Woolsey and Charles A. Williams were selected as Presidential Electors-at-Large.

The New Jersey Democrats on Wednesday met at Trenton and selected as Electors-at-Large Edward Balbock and Thomas Kays. General McClellan was temporary Chairman

The Michigan Greenbackers on Wednesday nominated J. W. Begole for Governor, candidates for Land Commissioner, Attorney-General, and Superintendent of Public Instruction, and seven Presidential Electors. They coalesced with the Democrats on the electorial ticket on this plan: Six of thirteen Electors shall be named by the Greenbackers and six by the Democrats, and each party shall nominate a candidate for the thirteenth Elector. If the fusionists carry the State, the electoral vote is to be divided between Cleveland and Butler in proportion to the vote on the thirteenth Elector. The Democrats, on the same day, nominated their share of the State ticket—Matthew Maynard for Lieutenant-Governor, and also candidates for Secretary of State, Auditor-General, and Member of the State Board of Education. They endorsed six Greenback Electors and nominated seven of their own.

The Iowa Republicans on Wednesday nominated F. D. Jackson for Secretary of State and V. P. Twombly for Treasurer.

A Convention of Resubmission Republicans was held at Topeka, Kan., on Wednesday. They protested against the alliance of the Republicans in that State with the Prohibitionists. They endorsed the candidates and platform of the National Republican Convention. A Conference Committee was appointed to consult with the Democratic State Convention which was in session at the same time in Topeka. The result was that on Thursday it was agreed that the Resubmissionists should have one place on the Democratic ticket. The Democrats renominated Governor Glick, who made a speech in favor of resubmitting the Prohibition amendment. The Resubmissionists were then invited into the Convention, and C. K. Halliday, of their creed, was nominated for Lieutenant-Governor. The ticket was completed with Democrats.

At the State Convention of the Missouri Greenback Labor party on Wednesday a resolution was adopted, after a long discussion, arraigning the Democratic party for its failure to recognize the question of prohibition, and declaring that a prohibitory amendment should be submitted to the popular vote.

Frank Hurd was renominated for Congress in the Tenth Ohio District on Wednesday. The Erie County delegates bolted and said they would support the Republican candidate.

Governor Ireland has been renominated by the Texas Democratic State Convention.

The Vermont Independents have decided to hold a conference on August 26 with a view to nominating a State ticket.

Sidney Clark, for three terms a Republican member of Congress, and in 1879 Speaker of the Kansas House of Representatives, has announced his intention of coming out for Cleveland. He says that, after being for six years in close connection with Blaine as a colaborer in the House, and knowing him as he does, he cannot consistently vote for him.

Ex-Senator Thos. F. Grady (Tammany) has tendered his resignation as a member of the New York Democratic State Committee in a letter to Chairman Manning. He says: "It is but fair that I should add that this action is entirely personal on my part, and does not in any way involve the organization to whose representatives I am indebted for membership in the Committee."

Dorman B. Eaton, of the Civil-Service Commission, has written a letter of advice to Government employees as to the payment by them of assessments for political purposes. He points to the civil-service law of 1883, enacted by the coöperation of both parties, and which was intended to secure, and if enforced, as he says he believes it will be, will secure, as absolute a freedom and safety to every person in the public service in contributing or not contributing for a political purpose as attaches to any private citizen.

The United States steamer *Tallapoosa* was sunk off Cottage City, Mass., on Thursday night, by collision with a large three-masted schooner. The *Tallapoosa* was bound to Newport, with 140 men and officers, to take on board Secretary Chandler. At 11:15 P. M., when about five miles east of Vineyard Haven, the night being clear but dark, she was struck on her starboard fore-rigging, and cut through to amidships by the schooner *James S. Lowell*, laden with coal. The *Tallapoosa* went down in five minutes. The schooner was badly damaged. As the steamer went down she blew her whistle as a signal of distress. The *Gate City*, from Boston for Savannah, and a schooner came to the rescue and saved all but Passed Assistant Surgeon Clarence E. Black and George A. Foster, landsman. The Captain of the schooner put the entire blame upon the steamer. He says the lights of his vessel were burning brightly and he had the right of way. The steamer did absolutely nothing to avoid a collision. The *Tallapoosa* was a wooden side-wheel double-ender steamer of 650 tons, carrying two guns, and used principally as a despatch boat and pleasure yacht by the Navy Department. Her chief officer was Commander Merry. Two men besides those mentioned were missing, but one of them turned up at Savannah when the *Gate City* arrived there.

The following is an extract from the official report of Commander Schley, of the Greely relief expedition: "In preparing the bodies of the dead for transportation in alcohol to St. Johns it was found that the bodies of six of them (Lieutenant Kislingbury, Sergeant Jewell, Private Whistler, Private Henry, Private Ellis, and Sergeant Ralston) had been cut and the fleshy parts removed to a greater or less extent. All the other bodies were intact."

Lieutenant Greely will attend the British Association meeting at Montreal. He has received a letter of congratulations on his work and rescue from the French Geographical Society, signed by Ferdinand de Lesseps.

Louis Noros, one of the *Jeannette* survivors, is unable to explain the recent finding of certain supposed relics of that party on an ice-floe. He says: "I know that there was but one bear-skin in the party, and that was left in the cache on the Siberian coast. I cannot tell whether or not the articles found are genuine without seeing them, and my theory is that the articles found, if any have been found, were taken by natives from this cache and by some means (how I cannot conceive) have gradually worked their way to civilization."

An official report has been published by the Agricultural Department at Washington, showing that pleuro-pneumonia has broken out among the Jersey cattle in Illinois.

A call for $10,000,000 three per cent. bonds was issued by the Treasury Department on Monday.

The seventh annual session of the American Bar Association was convened at Saratoga on Wednesday, a large number of distinguished lawyers being present. President Cortland Parker, of New Jersey, delivered the opening address. The Secretary's report showed a gain of fifty-five in membership over last year. Judge J. F. Dillon, of this city, delivered the annual address on Thursday. His subject was the general character of American laws and institutions, accompanied with some observations upon their present and some speculations concerning their future condition.

The First National Bank of Albion, N. Y., closed its doors on Thursday, owing to the disappearance of its President, A. S. Warner. He was the managing executor of the estate of R. S. Burrows, valued at more than $2,000,000, and it is feared that he has been a defaulter. He has lost considerable money in Wall Street.

General Leroy Pope Walker, one of the most prominent lawyers in Alabama, died on Friday. He was a Confederate Secretary of War, and gave the order for firing on Fort Sumter.

Ex-Judge John Leisenring, of Mauch Chunk, Pa., died on Friday at the age of sixty-five. He was one of the most active coal and railroad operators in Northern Pennsylvania, and was worth $3,000,000. He was one of the Republican Presidential Electors for Pennsylvania in the present campaign.

Stephen Salisbury, LL.D., died on Sunday night at his residence at Worcester, Mass., aged eighty-six years. He was State Senator in 1846 and 1847, a Presidential Elector in 1860 and 1872, and a Harvard Overseer from 1871 to 1883.

FOREIGN.

The affair between France and China reached a crisis on Thursday. The following is a French official résumé of the situation made public on that day: "Notwithstanding the successive respites granted China by France, and the moderation of the French officials having the negotiations in charge, China has finally refused all satisfaction for the Langson treachery and recalled its plenipotentiaries to Shanghai. France is, therefore, compelled to present China with a last summons. M. Patenctre, the French Minister to China, has been instructed to acquaint the Tsung-li Yamen with the vote of Parliament, and also with the fact that the indemnity has been definitely fixed at 80,000,000f., payable in ten years. Unless the demand should be complied with within forty-eight hours Admiral Courbet would take the necessary steps forthwith to secure the reparation due France." The term of grace expired at 1 o'clock on Thursday afternoon. The French Chargé d'Affaires was ordered to quit Pekin immediately and join M. Patenotre at Shanghai, and the French flag on the Consulate there was lowered. Li Fong Pao during the day asked for an audience with M. Ferry in Paris, and announced to him that he had been ordered to return to his post at Berlin. The Chinese Minister bade M. Ferry farewell and received his passports. China absolutely refused to admit the French claims.

It was reported from Pekin on Friday that the Governors of Yunnan and Quangsi had received imperial orders to march with their

forces into Tonquin. A Hong Kong despatch on Saturday said: "The French residents are leaving the city. Two thousand French soldiers are momentarily expected to arrive here from Tonquin."

Chang Pei Lun will lead the Chinese troops against the French in Tonquin.

Admiral Courbet was on Friday instructed to bombard the arsenal at Foo-Choo and to land a detachment of troops and destroy the war material and stores accumulated there, which were of immense value. This action was intended as a reprisal for the action of the Chinese at Langson. At the same time the French off Kelung were ordered to occupy the port and the coal mines as security for the indemnity demanded by France.

The bombardment of Foo-Choo was begun by Admiral Courbet on Saturday afternoon at two o'clock.

The French went into the fight with eight heavily-armed ships. The Chinese had eleven light river and coast transports. When Admiral Courbet opened fire at 2 P.M. the Chinese immediately replied, and several of the gunboats kept up a desultory fire for a quarter of an hour. But it was a one-sided fight. The combat was practically finished in seven minutes. The superior French artillery made the contest, after disabling the Chinese vessels, no fight. It was a massacre. This is the opinion of English spectators. Two eighteen-ton gunboats of the Chinese fleet fought well, one sinking near the English man-of-war *Champion*, while the other made a good stand. The rest of the fleet was blotted out. No surrender was allowed. The French kept up the fire on the arsenal, neighboring buildings, forts, barracks, and villages until five o'clock in the afternoon, although resistance from the shore batteries ceased about three o'clock. Some French and Chinese ships were engaged in close proximity to the English men-of-war *Vigilant* and *Champion*. At six o'clock on Sunday evening three burning gunboats floated down the stream, one carrying French colors. Numerous fire-junks blazing in a dangerous manner imperilled the English men-of-war, but were fended off. The French renewed the firing on Sunday, directing their shots at the Pagoda and the villages in the heights around the arsenal.

It was rumored in Paris on Monday, that China had made a formal declaration of war, and had notified the Powers to that effect. The arsenal at Foo-Choo is in ruins. Eighteen hundred workmen are out of employment. The arsenal cost 42,000,000 francs, and the arms and ammunition destroyed were valued at 140,000,000 francs. One of the French iron-clads on Monday was struck and badly damaged. It is said that a French officer of high rank has been killed.

The French iron-clads entered the mouth of the Min River on Monday afternoon at 2 o'clock. The White Fort opened fire with Krupp cannon while the ships were three miles away. After an hour's engagement the French retired. The Chinese fire was good.

Late reports from Shanghai on Tuesday confirmed the reported destruction of the whole Chinese fleet. The French lost five men, including an American pilot, who was killed on board the heavily armed French war-ship *Volta*.

It was reported on Tuesday that the French Ambassador at Berlin had gone to Varzin to confer with Bismarck, probably on the Franco-Chinese difficulty.

The Paris papers indignantly repel the charges made by the London *Times* that cruelty was exercised by Admiral Courbet at Foo-Choo, and indulge in violent abuse of England.

The *Figaro* says General Millot will be recalled from Tonquin because he is considered responsible for the difficulties which have arisen since the Tien-Tsin treaty was made.

The merchants and underwriters of London held a meeting on Saturday, to consider the bearing of the Franco-Chinese difficulty on neutrals, as Prime-Minister Ferry had announced that the bombardment of Kelung would not create a state of war, but was simply a means of furthering the French negotiations with China. The inquiry was raised in the meeting, whether Admiral Courbet would admit English or German vessels loaded with arms into Foo-Choo. The meeting resolved to urge Earl Granville, Secretary of State for Foreign Affairs, to press France to define her intention regarding neutrals. It was semi-officially asserted in Paris, that inasmuch as France had not declared war, neutral vessels going to China are not subject to the restriction which would be imposed in a state of actual war.

The difficulty between France and Morocco has been amicably settled. Prime-Minister Ferry disavows M. Ordega, the French Minister to Morocco.

The cholera is reviving. There were two deaths from the disease at Marseilles on Sunday night and five at Toulon. In the latter city the panic has revived and the return of fugitives has been checked.

There were three deaths at Marseilles on Monday night, and two at Toulon. The disease is increasing at Corsica. At Spezia, Italy, there is a panic. More than 6,000 people have left the city.

The authorities in the War Office at London insist upon the Nile route for the autumn expedition for the relief of General Gordon. They state that rowboats will reach Wady Halfa on November 1, when the expedition will start from that point. It is suggested that the Egyptian troops should be employed for continuing the railway sixty miles beyond Wady Halfa, so as to avoid the rapids.

The Governor-General of Canada has received instructions from the Imperial War Office to raise a contingent of 600 Canadian boatmen to accompany the Gordon relief expedition. Their services have been called for by Lord Wolseley, who became acquainted with their capabilities in the Red River expedition to suppress Riel's Northwest rebellion in 1870.

Col. Colville left Wady Halfa some time ago for Dongola with a body of Bedouins. On Wednesday a letter was received from him stating that the Bedouins refused to proceed, and that his condition was critical. On Saturday it was reported that he left a small detachment of Bedouins at Selimah, and had started to descend the Nile cataracts.

Colonel Kitchener telegraphed to Cairo on Wednesday that the Mahdi's Lieutenant, El Hoda, had attacked and defeated the friendly tribes at Meraweh; and that El Hoda is advancing to Ambukol to effect a junction with other rebels. The despatch says that El Hoda is only three days distant from Debbeh.

Soldiers from Berber report that 636 Egyptian officers and soldiers are in the hands of the rebels, who treat them as slaves. The rebels pray for the Mahdi instead of for the Sultan, and declare the Turks heathen who are to be killed or expelled.

Doctor Nachtigal, the special German Commissioner, who is passing south along the west coast of Africa to Angra Pequeña on board the German man-of-war *Moewe*, has hoisted the German flag over the territory south of the Congo which belongs to the Hamburg merchants named Woermann. These merchants had concluded treaties with the inland chiefs, who ceded to them all their sovereign rights. The country is about equal in extent to New York State.

The Berlin *North German Gazette* (Bismarck's organ) holds that the British Government is responsible for the attempts which have been made to hamper and seal up the German colony at Angra Pequeña, and says it is displaying a spirit of mean unfriendliness toward a friendly nation.

An ultimatum has been sent to the Rajah of Tenom demanding the release within a fortnight of the crew of the British steamship *Nisero*, whom the Rajah has held in captivity ever since the vessel was wrecked on his coast last November.

The claims for damages by the September riots of 1883 at Port-au-Prince, Hayti, have been agreed upon in readiness for the action of the Chambers. The Spanish claims, amounting to $10,378, have been reduced to $7,850, and the English claims, $226,490, reduced to $87,403. The figures of the claims of the other nations are not known. Some of the British losers, especially, are not satisfied and have applied to the Home Government for redress.

Lord Odo Russell, Baron Ampthill, the British Ambassador at Berlin, died on Monday, aged fifty-five. He entered the diplomatic service when only twenty, and has served in it ever since. At one time he was attached to the British Legation at Washington. In October 1871, he was made Ambassador at Berlin. In February, 1881, he was raised to the peerage.

The tenth annual Conference of the Young Men's Christian Associations of the world convened in Berlin on Wednesday evening. The opening religious exercises lasted two hours, after which Count A. Bernstorff, President of the Berlin Committee of the Young Men's Christian Association, delivered an address of welcome. Emperor William wrote regretting that he could not be present. Mr. Burney, of New York, is on the Managing Committee. The Conference was brought to a close on Saturday. Doctor Schaff, of New York, made one of the addresses.

Henry George Bohn, the noted English publisher, is dead at the age of eighty-eight. His father was a bookseller of German descent, and the son learned the same business, beginning business for himself in 1831. He published in 1841 the celebrated 'Guinea Catalogue,' comprising the largest stock of books ever offered for sale by a single bookseller. He was well acquainted with ancient and modern languages, from which he personally made many translations. His various libraries, historical, scientific, classical, antiquarian, illustrated, and ecclesiastical, amounted in all to several hundred volumes, which were well selected. Mr. Bohn was a distinguished antiquarian and literary critic.

Alexandre Francia, a well-known marine painter, died in Brussels on Sunday aged seventy-one. Among his principal pictures is "The Wreck of the *Amphitrite*," which had considerable success.

The International Agricultural Exhibition was opened in Amsterdam on Tuesday with imposing ceremonies.

Mme. Patti has signed a contract with Colonel Mapleson to sing in America the coming winter, and next summer in England

Eight hundred members of the British Association for the Advancement of Science have arrived in Montreal. The proceedings will be formally opened on the evening of August 27 with an address by Lord Rayleigh, the incoming President.

Mr. Clements R. Markham, the Secretary of the British Royal Geographical Society, who served in the Arctic expedition of 1850 in search of Sir John Franklin, has published a letter in London apropos of the recent charges made against the Greely party. In this he says: "The accusation of murder and cannibalism made against the Greely party is a disgrace to American journals. Decency would have suggested silence until Lieutenant Greely had submitted his report to the Government. There may be a remnant of truth in the charge." Mr. Markham says the party should never have been left without a depot ship wintering within an accessible distance of them.

MORE CHAPTERS IN MR. BLAINE'S RAILROAD TRANSACTIONS.

I.—A MISSING LINK.

It will be remembered by those who were familiar with the Blaine investigation of 1876, that Mr. Blaine himself made it an important point in his defence that the $75,000 of Little Rock bonds for which the Union Pacific Railroad Company paid the sum of $64,000, and which Mr. Rollins, the Secretary of the latter company, understood came from Mr. Blaine, were *land-grant* bonds, and not first-mortgage bonds; whereas the bonds which he sold to the Maine parties, and which he afterwards took back from them, were first-mortgage, and not land-grant bonds. The accusation was, that when it became necessary or highly expedient for Mr. Blaine to take back those bonds, he simply turned them over to Tom Scott, who was then President of the Union Pacific, for $64,000, and paid the money "within forty-eight hours" to the Maine parties. The fact that the bonds in the Union Pacific treasury were of a different kind from those sold to the Maine people, was insisted upon by Mr. Blaine in his speech of June 5, 1876, in the House, with much vehemence. He said:

"It is in evidence that with the exception of a small fraction, the bonds which were sold to parties in Maine were first-mortgage bonds. It is in evidence over and over again that the bonds which went to the Union Pacific Road were land-grant bonds. Therefore it is a moral impossibility that the bonds taken up to Maine should have gone to the Union Pacific Railroad. They were of different series, different kinds, different colors, everything different, as different as if not issued within a thousand miles of each other. So, on its face, it is shown it could not be so."

A writer in the Boston *Globe* undertakes to account for the $75,000 *land-grant* bonds by the Mulligan letters and the Mulligan memorandum. Incidentally he furnishes strong evidence for the belief that the Mulligan letters were not printed as they were written, and he affirms that such is the fact, or rather he asks Mr. Blaine, or Mr. William Walter Phelps, or anybody else, to say explicitly that the letters which were read by Mr. Blaine in the House were printed in the *Congressional Record* as they were written, and without any alteration. The charge is, that the letter of October 4, 1871, to Warren Fisher, jr., was altered in two particulars. The letter as printed in the *Congressional Record* reads as follows:

"I have your positive written contract to deliver me $125,000 land bonds and $32,500 first-mortgage bonds. . . . Of this whole amount of bonds due me I have received but $50,000 land-grant, leaving me but $75,000 of those and $32,500 first-mortgage still due. . . . Mr. Caldwell has repeatedly assured me that I should be paid all the bonds due me under contracts with you, and outside of that $20,000 *due me* from him."

The Mulligan memorandum corresponding to this letter, as printed, reads as follows:

"No. 9, October 4, '71. Blaine admits that there was $6,000 paid on the $25,000 loan, and to have received $50,000 from Fisher."

The writer in the Boston *Globe* says that this memorandum was prepared by Mr. Mulligan and Mr. Fisher together at the Hoffman House in New York, while they were en route to Washington to obey the summons of the Committee, and that this portion (No. 9) was written as follows:

"October 4, '71. Blaine admits that there was $6,000 paid on the $25,000 loan, and to have received $55,000 from Fisher, *and* $20,000 *from Caldwell on an outside matter.*"

The discrepancy consists in the change of $55,000 to $50,000, referring to the number of *land-grant* bonds received from Fisher, and in the omission of the words "and $20,000 from Caldwell on an outside matter." If Blaine received $55,000 land-grant bonds from Fisher and $20,000 from Caldwell, the two amounts would together make $75,000—the same amount and the same kind of bonds that turned up in the Union Pacific treasury. The writer says further that the words "due me" in the letter of October 4, 1871, were not in the letter as written, but were added after the letters passed out of the hands of Mulligan into those of Blaine. It makes a material difference, in view of the stress which Mr. Blaine puts on the fact that these were land-grant bonds, whether $75,000 of such bonds are traced into his possession, or only $50,000.

Corroborative evidence that $75,000 was the true amount is found in the testimony of Mulligan, and in a subsequent letter of Blaine to Fisher dated April 13, 1872:

"Question—Is there anything else in these fourteen letters of Mr. Blaine to Mr. Fisher which bears upon the subject-matter of this inquiry, to wit, the Little Rock and Fort Smith bonds which went afterward into the hands of the Union Pacific Railroad Company?

"Answer—Mind you, sir, I do not know about what particular bonds went into the Union Pacific Railroad Company. There are bonds that Mr. Blaine got from Mr. Fisher. Whether those were the particular bonds or not I don't know. Mr. Blaine himself said, or I understood from his letters, that these bonds that went in there were the bonds that came from these parties named. Whether they were his own bonds that he got this commission on, I do not know. There was one letter in the package where he told Mr. Fisher how much was due on these bonds. He told him he had *received* $55,000 *of bonds from him and* $20,000 *from Caldwell on an outside matter;* that is, $55,000 *of bonds on Mr. Fisher's account* (as percentage that he was to get upon those sales of bonds to which I testified yesterday), and *the* $20,000 *of bonds which he got from Mr. Caldwell.*"

Mr. Mulligan had, a few moments before, remarked: "Mr. Blaine is here and listening to what I say: I consider my word as good as [that of] any man that ever lived." Mr. Blaine did not offer any objection to this testimony.

The letter of April 13, 1872, says, "There is still due to me (Blaine), on articles of agreement between us, $70,000 in land bonds and $31,000 in first-mortgage bonds, making $101,000 in all." As the whole amount of land bonds due to Mr. Blaine under his contract with Fisher (after deducting the $5,000 not paid for by Joseph H. Williams) was $125,000, it follows that if $70,000 was still due, $55,000 had been paid. This corresponds with Mulligan's testimony, to which Mr. Blaine made no objection when it was delivered. The letter of April 13, 1872, and that of October 4, 1871, differ by the amount of $5,000 in the number of land-grant bonds due from Fisher to Blaine. Both letters cover the same subject-matter. There is no evidence that after October 4, 1871, Blaine handed back $5,000 of these bonds to Fisher, so that the amount due from the latter should have been augmented. The writer in the *Globe* asks Mr. Blaine to answer the question whether the words "due me" were not interpolated in the letter of October 4, 1871, when he speaks of "$20,000 due me from Mr. Caldwell." In the one case the meaning would be that he had received $20,000 of these dreadful land-grant bonds from Caldwell, which, added to the $55,000 received from Fisher, made up the sum of $75,000. In the other case, the meaning would be that he had never received more than $50,000 or $55,000 of this description of bonds from all sources.

II.—THE MULLIGAN MEMORANDUM.

The writer in the Boston *Globe* has directed his attention also to the Mulligan memorandum, concerning which our esteemed contemporaries the *Times* and the *Sun* recently had a dispute. The Mulligan memorandum called for twelve letters from Blaine to Fisher, one letter from Fisher to Blaine, and two separate pieces of paper marked "contracts"—in all, fifteen documents. Mr. Mulligan, in his testimony, said that there were "about four more" which he had not numbered in the memorandum, making eighteen or nineteen in all. Mr. Blaine read fifteen letters, three of which were not embraced in the memorandum. That is, he read twelve letters embraced in the memorandum, three not embraced in it, and wholly omitted one, if not more. The letters were read in the following order:

Dates read by Blaine.		No. by Mulligan's mem.
August 31, 1872.		No. 14
August 9, 1872.		13
*July 3, 1872.	Not on mem.	—
*April 26, 1872.	Not on mem.	—
*April 22, 1872.	Not on mem.	—
May 26, 1864.		15
April 18, 1872.		12
October 4, 1869.		1
October 4, 1869.		2
July 2, 1869.		4
June 29, 1869.		3
May 14, 1870.		7
October 1, 1871.		10
October 4, 1871.		9
April 13, 1872.		11

The papers appended, which appear in the *Congressional Record* as foot-notes, *which Mr. Blaine did not read*, were marked: J, No. 6; K, No. 5

No. 8 was not read by Mr Blaine.

The letters marked with an *—viz., July 3, 1872; April 26, 1872; and April 22, 1872—were not called for by the Mulligan memorandum.

No. 8 was described in the memorandum: "October 24, 1871, Fisher to Blaine urging settlement of Northern Pacific Railroad account, $25,000." When the memorandum was read at the clerk's desk, Mr. Blaine said: "There was no such letter in the package, and the numbers he gives do not call for it. There are fifteen letters." The writer in the *Globe* affirms that the letter *was* in the package, and shows that if it were not there Mr. Blaine was only called upon to account for twelve letters, whereas he read fifteen. The fair presumption is, that he substituted one of the three extra letters in place of the letter from Fisher to himself. But why were two more letters put in which were not in the memorandum? This question still remains to be answered.

The same writer brings out another fact, viz., that the daily *Congressional Record* of

June 6, 1876, does not contain the whole of the letter of October 4, 1869, the following paragraph being omitted:

"I beg you to understand that I thoroughly appreciate the courtesy with which you have treated me in this railroad matter, but your conduct toward me in business matters has always been marked by unbounded liberality in past years, and of course I have naturally come to the conclusion to expect the same of you now. You urge me to make as much as I fairly can out of the arrangement into which we have entered. It is natural that I should do my utmost to this end. *I am bothered by only one thing, and that is definite and expressed arrangements with Mr. Caldwell. I am anxious to acquire the interest he has promised me, but I do not get a definite understanding with him as I have with you.* I shall be in Boston in a few days, and shall then have an opportunity to talk matters over fully with you. *I am disposed to think that whatever I do with Mr. Caldwell must really be done through you.* Kind regards to Mrs. Fisher."

The stereotyped edition of the *Record* contains this paragraph. The bound volumes contain it. The stereotyped edition is not printed until some days later than the daily edition, in order to give opportunity for corrections. The inference drawn from this is, that as Mr. Blaine alone had possession of the letters, and as the Cincinnati Convention was then assembling and Mr. Blaine was the most prominent candidate for the nomination, he omitted this damaging part of the letter in order that it might not be seen by the public until after the Convention was over, and that he then inserted it *nunc pro tunc*.

The Boston *Journal* speaks of the Mulligan letters as "Burnt Campaign Powder." Evidently there is considerable explosive material left in them.

III.—THE CALDWELL TELEGRAM.

We have received from a correspondent the following suggestion:

To the Editor of The Nation:

Sir: That defence of Blaine which General Hawley vouchsafed to an anxious audience on Thursday evening, is about as good as one can expect. We know that General Hawley's heart is not in the work, and the pity of it is that he should willingly sacrifice his own good name for the sake of the man whom he does not like, and cannot successfully defend.

There is one point, however, to which I would call the attention of those who have read General Hawley's speech. The Connecticut Senator claims that Proctor Knott was cornered by Blaine, and forced to acknowledge that he had received a letter exonerating Blaine from all blame in the matter of his railroad transactions. Now the chivalrous Hawley surely does not intend any injustice to Proctor Knott, whom by implication he charges with concealment of a document which would have benefited Mr. Blaine. Still the facts show that he does him this injustice, whether he intended it or not.

Proctor Knott did his best to produce all the evidence which could possibly benefit Blaine. He hunted high and low for Caldwell, whose presence at the investigation would have been plainly in Blaine's interest. Europe and the United States were ransacked for Caldwell without finding him. Some claimed he was in Arkansas. Others claimed he was in Europe. None *knew* where he was; least of all Blaine, who certainly was most deeply interested in his whereabouts.

Now, at this juncture Proctor Knott received a telegram signed Caldwell and dated London. This despatch bore none of the marks of genuineness, and Proctor Knott, thinking that it was the "put-up job" of parties interested, put the despatch in his pocket and told no living man that he had received it. When Mr. Blaine charged Proctor Knott with having received this despatch, how, in the name of truth, did he know that Knott had received it? How could he suspect it after the well-known failure of Knott's committee to discover Caldwell's whereabouts—on what supposition or theory, save that of Proctor Knott himself, that the letter emanated from Blaine himself or some of his friends? Otherwise there was no way of knowing that the despatch had been sent.

Will General Hawley undertake to explain this? The matter certainly needs clearing up. Or does General Hawley intend to leave Mr. Blaine in the position of a conspirator manufacturing evidence in his own favor? At all events General Hawley owes an apology to Proctor Knott. VERITAS.

New York, August 23, 1884.

During the progress of the Blaine investigation of 1876 a telegram was received by the Chairman of the Committee in Washington, purporting to come from Josiah Caldwell, in London, of the following tenor:

"To Chairman House Judiciary Committee, Washington, D. C.—Have just read in New York papers Scott's evidence about our bond transaction, and can fully corroborate it. I never gave Blaine any Fort Smith Railway bonds, directly or indirectly. I have three foreign railway contracts on my hands, which make it impossible for me to leave without great pecuniary loss, or would gladly voluntarily come home and so testify. Can make affidavit to that effect and mail it if desired.

"(Signed) JOSIAH CALDWELL."

Mr. Blaine's failure to secure in some way Caldwell's sworn evidence for use at the time of the investigation was always, to those who followed it carefully, one of the most damaging omissions in his case. According to the evidence of Scott, who did what he could to exonerate Blaine, the explanation of the purchase by the Union Pacific of the $75,000 Little Rock bonds for $64,000 when they were worth about 25 cents on the dollar, was that he (Scott) had got the bonds from Caldwell and his associates, who had the contract to build the road, more than a year before, and had paid Caldwell 80 cents on the dollar for them, and that the Union Pacific Road took them off his hands.

How did they get into Caldwell's hands? Here is a gap—we might rather say a yawning gulf—in the testimony, which is fatally significant. Proctor Knott undoubtedly did his best to find all the evidence he could. Caldwell might have told the whole story. Worse than all, Blaine knew where Caldwell was. Caldwell was the assignee of the Warren Fisher contract for building the road, but, as the assignment was not approved and recorded by the company, Fisher appeared on the books as holding the contract. Notwithstanding this, we find seventy-five of these bonds suddenly passing from Caldwell to Scott, and from him to the Union Pacific, and we know that Blaine was the selling agent of the securities of the road in Maine. Finally, we have a telegram purporting to come from Caldwell in London, fully "corroborating" Scott's evidence; that is, fully corroborating, not Scott's story of the reasons which led the Union Pacific to take the bonds off his hands (of which Caldwell could in the nature of things know nothing), but corroborating his story that Scott got the bonds from him (Caldwell).

More remarkable than all, the telegram intended to exonerate Blaine *did not do it*. Caldwell says: "I never gave Blaine any Fort Smith bonds," when, to clear Blaine, he should have said: "*Blaine never gave me any Fort Smith bonds.*" If he gave the bonds to Scott, where did he get them from? There is nothing in the story of the bonds to render improbable the inference that the telegram had been cabled to Caldwell and by him cabled back. Was it a cleverly concocted device to make Caldwell appear to exonerate Blaine without saying a single word in point? The question remains unanswered, Where did Caldwell get the bonds?

The story as it stands, therefore, is this: Blaine was accused of having "unloaded" $75,000 in comparatively worthless Little Rock bonds upon the Union Pacific Railroad. He denied being connected with the transaction in any way. It was proved by documentary evidence that he was the selling agent of the road in Maine; that a large number of the bonds—the exact number not ascertained—were thrown back on to his hands by the Maine purchasers, so that he had a very plain motive for desiring to "work them off" on somebody else. Seventy-five bonds were actually worked off upon the Union Pacific Railroad by Caldwell, the contractor for the road, the associate of Fisher, who built it, the man to whom Blaine did a "great favor" by his celebrated ruling. This is all *corroborated* by Caldwell himself; and *Caldwell* is the man who knows where the bonds came from. It is vitally important, has been vitally important for eight long years, to the honor of Mr. Blaine, which he prates about so much, that this man should be produced, and that he should simply prove that he did not get those bonds from James G. Blaine.

IV.—DEALINGS WITH JOSEPH B. STEWART.

The *Herald* publishes at considerable length the narrative of Mr. Blaine's supposed acquisition of $15,000 of Union Pacific (Eastern Division) Railroad bonds from Joseph B. Stewart, the lobbyist who had charge of the legislation by which the company obtained the subordination of the Government's first-mortgage to another issue of bonds to be sold to the public. This transaction first came to light through a law-suit instituted by Stewart against the company, to recover money for services claimed to have been rendered and expenditures made by him. It is one of the numerous mysteries with which Mr. Blaine's career is studded, having many points of resemblance to the $64,000 transaction with Tom Scott and the Northern Pacific dicker with Warren Fisher, jr. The similarity consists in the fact that portable property was moving about in a clandestine manner for a corrupt purpose, that Mr. Blaine's name got connected with it, that public records were altered and falsified in order to cover up something, and that no satisfactory reason was ever given either for the use of his name in connection with it, or for the subsequent attempts at concealment.

Stewart commenced a suit to recover the value of 100 bonds of $1,000 each of the Union Pacific Railway, Eastern Division. In the record of the case, as sent up to the Supreme Court, was a long letter from Stewart to John D. Perry, President of the company, of which the following paragraphs are the essential parts:

NEW YORK, April 23, 1868.

John D. Perry, Esq., President Union Pacific Railroad Company:

DEAR SIR: In compliance with your request I will state that the total claims on me for any portion of the Union Pacific Railroad (Eastern Division) construction bonds are as follows:

Thomas Ewing, jr.	10
—— Blaine	15
C. T. Sherman	20
H. G. Fant	4
J. P. Usher	5
W. J. Keeler	5
Total	59

I have settled with all the other parties. The three last named (that is, H. G. Fant, 4 bonds; J. P. Usher, 5 bonds, and W. J. Keeler, 5 bonds—total 14 bonds) are to be paid in full as per orders. These were stipulated to be paid since the agreement of the 6th of January, 1866, and are for distinct and specific considerations—Fant's for money, Usher's for some railroad stock I purchased of him, and Keeler for a private contract between him and myself. But the Ewing 10, Blaine 15, and Sherman 20, are all subject to the amount of deduction (about 20 per cent.) agreed on between Mr. Durant and myself before, and at the time he ratified the settlement of the 6th of January, 1866; which deductions, applying to the whole 174 bonds then outstanding, make the difference between the whole amount (174) series B construction bonds outstanding and the lesser amount in your hands to be exchanged.

. . . . . .

Or I will say, give me 100 of the bonds, less the 5 sold to Usher, 4 to Fant and the 5 to Keeler, leaving 86 to be delivered to me. I will settle with Blaine, Ewing, and Sherman, and give the company a full release.

. . . . . .

I know of nothing further I could say, and, begging your immediate consideration of my request, I am your obedient servant,

JOS. B. STEWART.

Indorsed, Statement Jos. B. Stewart, April 23, 1868.

Exhibits of written testimony proposed by the defendant to be submitted to the Master or to the Court as it shall be ordered.

A. S. THOMAS, Clerk.

Filed December 3, 1873.

When this letter was first put on the files of the court the name of Mr. Blaine was written "James Blaine." When the case was appealed to the Supreme Court it had been altered to "—— Blaine," and no explanation of the change was ever given, although an ineffectual attempt was made to show that John E. Blaine had some kind of a claim on the company, and that he was the person referred to. It was shown that in Stewart's sworn testimony he had mentioned Mr. Blaine's name in another place, calling him "the Hon. James Blaine," not James G. Blaine. In other words, it was proved to be Mr. Stewart's custom in using Mr. Blaine's name to use the same words that were used in the letter to Perry before the alteration in the record was made. It was shown also by undeniable testimony that if John E. Blaine ever had any claim against the company, it was totally different from that which Stewart set up, and could have had no relation to the $15,000 of bonds which were set opposite the name of James Blaine. Mr. Thomas A. Greene, an attorney in the case, when called as a witness before the Investigating Committee, swore that John E. Blaine never had any claims whatever against the Union Pacific Eastern Division Railway, and he produced an official statement of the liabilities of the company to prove it, and this notwithstanding the fact that there appeared on the record an authorization from John E. Blaine to Stewart "to settle my [his] claims against the Leavenworth, Pawnee and Western Railroad Company"—the predecessor of the Union Pacific Eastern Division—and a stipulation filed by Stewart in person that John E. Blaine, and not James Blaine, was the person entitled to the fifteen bonds in question. Mr. Greene testified that his conduct of the case and his conferences with Stewart always went on the presumption that "Congressman Blaine" was the person referred to, and that this fact gave him a great deal of uneasiness because it looked like an immoral contract, and that he called Stewart's attention to this feature of the litigation. On cross-examination he said that Stewart neither affirmed nor denied that "Congressman Blaine" was the person referred to, but merely said that a large portion of the bonds were used as "attorney's fees," and that he thought they should make out a good case.

At this point in the investigation Mr. Lawrence, of Ohio, interjected the query: "Do you not know that Mr. Blaine was not in Congress when this claim for bonds originated?" To which the witness answered: "The conversation took place while Mr. Blaine was in Congress." Mr. Lawrence's inquiry throws a side light on the mystery. It implies that James G. Blaine was the person referred to, but that he was acting at the time as a lobbyist and not as a Congressman. This is probably the true explanation, and it would answer very well but for Mr. Blaine's explicit denial that he ever had anything to do with it in any shape or form, and but for the clumsy attempts at concealment made after the case got into the courts.

THE KEY TO MR. BLAINE'S FOREIGN POLICY.

THERE is nothing more significant about the management of Mr. Blaine's canvass than the absolute silence of his supporters with regard to what they originally insisted was one of his chief claims to their support—his statesmanlike foreign policy. Their refusal to discuss his railroad transactions we can understand, and it would only be natural to seek to turn public attention away from these by making as attractive a parade as possible of his positive merits. But they do not. It is nearly impossible to get them to discuss anything private or public relating to Mr. Blaine's standing—a fact which we venture to say is without a parallel in the history of American campaigns.

The Boston *Advertiser* has been trying to get them to discuss his policy while Secretary of State, and has succeeded in shaming the Boston *Journal* into an attempt to come to its candidate's defence, which it does, not by showing that what he did while at Washington (when, during the summer of 1881, he had all the foreign affairs of the country in his hands exactly as if he had been President as well as Secretary of State) was wise or statesmanlike, but by accusing the *Advertiser* of misstating the facts. Now, the controversy turns on a single point, which involves Mr. Blaine's capacity for the office of either President or Secretary of State. Moreover, it is one which anybody can understand, and the facts are undisputed, for they are all recorded in the official Chili-Peruvian correspondence submitted to the Senate January 26, 1882.

The point is this: Why did Mr. Blaine recognize the Calderon Government? And in what we have to say on the subject we shall take our facts entirely from the official volume just named.

When Mr. Blaine took possession of the State Department he found Peru crippled by a long and disastrous war, and totally without a government. Chili was in possession of the country, and was ready to dictate terms of peace. Mr. Christiancy, a competent man, was then our Minister at Lima, and, according to his reports forwarded to Washington, the political machinery of the country was wholly paralyzed. There were not even any regular courts open for the administration of justice (despatch No. 341 of June 21, 1881). Under these circumstances one Calderon, a politician having some backing in Peru, undertook to organize a government, and sent J. F. Elmore to Washington as his representative to request recognition. Another government, under Pierola, disputed Calderon's rights. On May 5, 1881, Mr. Blaine received from Mr. Christiancy a despatch dated April 13, 1881 (No. 325), referring to the provisional Government in the following memorable words: "Upon the whole, the evidence as yet is quite clear that the overwhelming majority of the people of Peru are opposed to the provisional Government, and still adhere to Pierola, and, at present, if the Chilian army should leave to-morrow, the only safety of the members of the provisional Government would be to leave with them."

On the receipt of this despatch Mr. Blaine sat down and wrote to Mr. Christiancy (No. 333 of May 9): "If the Calderon Government is supported by the character and intelligence of Peru, and is really endeavoring to restore constitutional government with a view both to order within and negotiations with Chili for peace, you may recognize it as the existing provisional Government, and render what aid you can, by advice and good offices, to that end." Mr. Christiancy, who was a lawyer and familiar with the practice of nations in such matters, was completely staggered by this despatch. On June 16 he wrote to Mr. Blaine (No. 340) in reply, that the provisional Government had "not yet succeeded in getting the attendance of a quorum of Congress," that it was not "a government *de facto* in any part of Peru, except in a little hamlet of Magdalena"; that as to whether it represented the character and intelligence (or "influence," as he appears to have read the despatch), the matter was doubtful; and that the Chilians, who were in control of the coun-

try, did not want the provisional Government recognized "until they had recognized it."

On the 21st of June (No. 341) Mr. Christiancy again reported, that Calderon was not "in the exercise of the functions of government anywhere," except "so far as the Chilian authorities choose to allow it"; that "no other foreign Minister here is willing yet to recognize this Calderon Government," and that he did not think it advisable under these circumstances to depart "from the safe and generally approved rule of recognizing a new government, that it should appear to be a government *de facto*." He wrote thus without waiting for the arrival of another mail, in order that Mr. Blaine might not decide on this important step until he had received his earlier despatches.

He waited, it is needless to say, in vain, and on June 28 he wrote to Washington that, having received nothing by the last mail modifying his earlier orders, and knowing that he had kept Mr. Blaine "fully informed of all the facts necessary to a decision," he felt constrained, though against his own judgment, to recognize Calderon. This despatch was received at Washington, July 18. On August 4 Mr. Blaine first wrote to Mr. Hurlbut, who immediately succeeded Mr. Christiancy, telling him that in case of a treaty between Chili and Peru the treaty must provide for an adjudication of the Landreau claim, and "for the preservation and payment to Landreau of the amount due under his contract." This claim was against the Government of Peru, and could not have been pressed without a government to press it on.

The rule governing the recognition of foreign governments ought to be tolerably well known to an American statesman of Mr. Blaine's standing. A new government is never recognized by any foreign government except as *a fact*. It is not whether it represents "character," or "influence," or "intelligence," or whether it is trying to promote constitutional government, or any other good end; but whether it exists. With the morality of the matter foreign nations have nothing to do. They recognize such a change in the internal economy of a state as the English succession of 1688, the Swedish of 1818, the disruption of Holland and Belgium in 1830, even such rascalities as the partition of Poland, when they are once facts. The Calderon Government was recognized by us, however, when it did not exist except by favor of the Chilians, and against the formal warning that it did not exist, by our Ministers, and notwithstanding the fact that no other government ever recognized it. What the act led to was the direct insult to the United States of arresting the Government—or in other words Calderon—and carrying it off to Santiago. The whole proceeding covered the country with shame and humiliation, and Mr. Blaine has to choose between two explanations of his course—either that the recognition of Calderon was a mere lever for operations favorable to the Landreau claim, or that he was so grossly incompetent and ignorant of the law and the practice of nations that he did not really know what ridicule and contempt his South American diplomacy was to heap up for him. But we have no wish to confine him to these alternatives. Why did he recognize Calderon? If any of his friends can, even at this day, invent a plausible reason, we will examine it in the light of the despatches, and see how it bears the test.

THE NEW SLAUGHTER-HOUSE CASE.

THE Supreme Court of the United States has just made a new "anti-monopoly" decision, which is of a good deal of importance in its bearing on rights of property and contracts under the Constitution.

The plaintiff, a company carrying on the business of slaughtering animals in Louisiana, brought a suit against the defendant, a company of the same kind, for an injunction forbidding the latter to carry on the business of butchering, or receiving and handling live stock intended for butchering, within certain limits in the parishes of Orleans, Jefferson, and St. Bernard, and obtained the injunction by a final decree in the Circuit Court.

The ground on which the suit was brought and sustained was, that the plaintiffs had the exclusive right to have all such stock landed at their stock-landing place and butchered at their slaughter-house, by virtue of an act of the General Assembly of Louisiana, approved March 8, 1869, "An Act to protect the health of the city of New Orleans, to locate the stock-landing and slaughter-houses, and to incorporate the Crescent City Live-Stock Landing and Slaughter-house Company." An examination of that statute, especially of its fourth and fifth sections, left no doubt that it did grant such an exclusive right. This fact was the basis of the contest in the Supreme Court in the slaughter-house cases, 16 Wall., 36, in which the law was assailed as a monopoly forbidden by the thirteenth and fourteenth amendments to the Constitution of the United States; and these amendments, as well as the fifteenth, came for the first time before the judges for construction. The power of the State to enact the statute was upheld, and it was decided that under the "police power," that is, the power to provide for the public health and the preservation of life and limb, and the general security of person and property, a monopoly of this sort could be created by any State. Judge Bradley, in the court below, indeed, held that the monopoly was unconstitutional under the fourteenth amendment, which declares that all persons born or naturalized in the United States, and subject to its jurisdiction, are citizens of the United States, and of the State wherein they reside, and that *no State shall make or enforce any law which shall abridge the privileges or immunities of the citizens of the United States, nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.* The Supreme Court did not sustain the Judge, but held the act, as we have said, constitutional under the "police power."

In the year 1879 the State of Louisiana, for the purpose of getting over this decision, adopted a new Constitution, which contained the following articles:

"Article 248. The police juries of the several parishes, and the constituted authorities of all incorporated municipalities of the State, shall alone have the power of regulating the slaughtering of cattle and other live stock within their respective limits; provided no monopoly or exclusive privilege shall exist in this State, nor such business be restricted to the land or houses of any individual or corporation; provided, the ordinances designating places for slaughtering shall obtain the concurrent approval of the Board of Health or other sanitary organization."

"Article 258. . . . The monopoly features in the charter of any corporation now existing in the State, save such as may be obtained in the charters of railroad companies, are hereby abolished."

Under the authority of these articles of the Constitution the municipal authorities of the city of New Orleans enacted ordinances which opened to general competition the right to build slaughter-houses, establish stock-landings, and engage in the business of butchering in that city under regulations established by those ordinances, but which were in utter disregard of the monopoly granted to the Crescent City Company, and which in effect repealed the exclusive grant made to that company by the act of 1869.

Under these provisions the plaintiff in the present case established its business within the limits of the grant of the act of 1869 to the Crescent City Company, taking away from it, of course, so much of its business or of the value of the franchise. The Crescent City Company brought the action, therefore, to have it determined whether the new legislation was not a violation of the grant and contract made by the act of 1869, which was by its terms to continue for twenty-five years, and under which, the Court expressly says, "a very large amount of money" had been expended.

The Court decides that there is no question as to the existence of the contract or the impairment of its obligation. But, they say, the contract may be impaired under the very same power by which it was created—that is, the "police power." They concede "that such a law, so long as it remains on the statute book as the latest expression of the legislative will, is a valid law and must be obeyed, which is all that was decided by this court in the slaughter-house cases." But they insist upon "the right of the Legislature to repeal such a law, or to make a new one inconsistent with it, whenever in the wisdom of such Legislature it is for the good of the public it should be done":

"Nor does this proposition contravene the established principle that the Legislature of a State may make contracts on many subjects which will bind it, and will bind succeeding Legislatures for the time the contract has to run, so that its provisions can neither be repealed nor its obligation impaired. The examples are numerous where this has been done and the contract upheld.

"The denial of this power in the present instance rests upon the ground that the power of the Legislature intended to be suspended is one so indispensable to the public welfare that it cannot be bargained away by contract. It is that well-known but undefined power called the police power. We have not found a better definition of it for our present purpose than the extract from Kent's Commentaries in the earlier part of this opinion. 'The power to regulate unwholesome trades, slaughter-houses, operations offensive to the senses,' there mention-

ed, points unmistakably to the powers exercised by the act of 1869 and the ordinances of the city under the Constitution of 1879. While we are not prepared to say that the Legislature can make valid contracts on no subject embraced in the largest definition of the police power, we think that in regard to two subjects so embraced it cannot by any contract limit the exercise of those powers to the prejudice of the general welfare. These are the public health and public morals."

The curious thing in this case is, that there is nothing on the face of the opinion to show that the public health in New Orleans would be at all safer with the slaughter-house business in the hands of several companies than in the hands of one. The constitutional amendment, moreover, is distinctly directed at the "monopoly" feature of the contract; and, as far as we can see, the only effect of the case is to give any State the right to destroy the obligation of the most solemn contracts, provided the judges at Washington can extract from its action some shadow of a reason growing out of what they regard as the cause of "health" or "morals." This is a wide definition of the police power, and gives the Supreme Court and the State Legislatures a power of interference with contracts and property such as nobody ever dreamed they possessed. Take this decision in connection with that on the legal-tender question, and compare the two. Is it not plain that the judges have adopted a latitudinarian system of construction which may make lawyers and laymen alike look forward with less apprehension than they otherwise would to the infusion of some new blood into the court, as the consequence of a change of parties?

A NEW KIND OF COPYRIGHT.

THE 'Chatterbox' case, so called, has been decided by Judge Wheeler in the Circuit Court in favor of the plaintiffs. The case was as follows:

Mr. James Johnston, of London, published a regular series of juvenile books, of uniform appearance and in a style of peculiar attractiveness, and called them the 'Chatterbox,' until they became widely known and popular in that country and in this. He assigned the exclusive right to use and protect that name in this country to the plaintiffs for ten years from January 1, 1880.

The defendants (a Boston publishing house) have, since that time, commenced the publication of a series of books and called them by the same name, and made them so similar in appearance and style to those of Johnston as to lead purchasers to think they are the same. As a matter of fact, they intended to make the books appear to be the same, and to avail themselves of the popularity which the books had attained by the labor and skill bestowed upon them by and at the expense of Johnston. There being no copyright law or treaty to prevent, the defendants claimed the right to so print and publish the series of books in this country, and that if they had not the right, the plaintiff, at least, had no right to prevent them.

We can only make the decision of the Court intelligible by giving its exact language:

"There is no question but that the defendants have the right to reprint the compositions and illustrations contained in these books, including the titles of the several pieces and pictures (Jollie vs. Jaques, 1 Blatch., 618). That does not settle the question as to the right claimed here. There is work in these publications, aside from the ideas and conceptions. Johnston was not the writer of the articles, nor the designer of the pictures, composing the books, but he brought them out in this form. The name indicates this work. The defendants, by putting this name to their work, in bringing out the same style of book, indicate that their work is his. This renders his work less remunerative, and, while continued, is a continuous injury, which it is the peculiar province of a Court of Equity to prevent.

"These principles are discussed, settled, and applied in McLean vs. Fleming, 96 U. S., 245. It has been argued that there have been various publications from earlier times by the same name, so that no new right to the use of the name could be acquired. This would be true, doubtless, as to all such publications as those to which the name was applied, but not as to those essentially different. The fact of these other publications bears only upon the question of fact, as to whether Johnston's work had come to be known by this name, and the defendants, by using this name, represent that their work is the same. The conclusion stated, as to the fact, has been reached after consideration of what is shown as to their other publications. Johnston had the exclusive right to put his own work as his own upon the market of the world. No one else had the right to represent that other work was his. Not the right to prevent the copying of his and putting the work upon the markets, but the right to be free from untrue representations that this other work was his when put upon the markets. This gives him nothing but the fair enjoyment of the past reputation of his own work, which fully belongs to him. It deprives others of nothing that belongs to them. The question then arises whether Johnston could transfer his right, or any part of it, to the orators, so that the defendants, in what they have done, and are about to do, trespass upon the orators' rights, and not upon Johnston's. He could not do all this himself, he must act by and through others. No reason is apparent why he could not give them the exclusive right to put his work on the market as his, as he had that right. This seems to be what he undertook to do. They had that right, and the profits of its enjoyment would belong to them. The defendants would deprive them and not Johnston of the profits. The injury would be to them and not to him, and they are in this view entitled to the remedy. It is objected that they also trespassed upon Johnston's rights before they acquired them. This may be true; and if so, they may be liable for the damages. Such a trespass would not prevent them from acquiring a lawful right in a lawful manner. Had trespasses been so frequent and long-continued that the work had come to be known to be the work of others, or had lost identification as the work of Johnston, the course of the defendants might not amount to any representation that their work was his; but the evidence does not show this."

This decision, although formally guarded against the implication, gives the English inventor of 'Chatterbox' and his American assignee what amounts to a copyright in the form of the book. It is, of course, a compilation, and the compiler is protected, while the original authors are not. This is a curious illustration of the injustice to which the absence of international copyright leads. The laws of the United States, which patriotically foster the pillage of Tennyson, or Macaulay, or Dickens, can yet protect the inventor of a 'Chatterbox' series. What is the meaning of this? We always supposed that what was good law for Tennyson and Macaulay and Dickens was good for foreign devils who tried to flood the American market with 'Chatterboxes.' Is Judge Wheeler a member of the Cobden Club? The decision appears to be put on impregnable grounds of protection to property in general; but if this is so, what becomes of our national copyright system? It often looks as if the judges did not understand it, or else were trying to break it down by exposing what they evidently think is its absurdity.

EMMANUEL COLLEGE.

THE recent commemoration of the three-hundredth anniversary of the foundation of Emmanuel College, Cambridge, possessed properly a greater interest for America than for England, and so many of the speakers on the occasion recognized this fact as to lead the *Saturday Review* to express the wish that more had been heard about Emmanuel and less about Harvard. For Englishmen it brought back to memory chiefly the departure of a handful of men whose obstinacy almost neutralized their virtues, and the origin and development of an interesting movement within the walls of the Church during the last century. Many other colleges in England far outweigh Emmanuel in historic interest. But for Americans it is the one English college—

> "The altar whence the sacred fires
> Have leapt to us across the sea."

It stands to them for the gain of the noble souls who brought the acorn of freedom, as the brave founder of Emmanuel called his young college, and who laid the foundations upon which the structure of a new nation has been worthily erected.

Sacræ theologiæ studiosis posuerit Gualterus Mildmaius, A. D. 1584, is the inscription over the gateway of Emmanuel, which bears, however, no testimony to the courage of its founder, a virtue of which not a little was required to establish a Puritan college at that time. It was the year of the assassination of William of Orange, and that in which the ships of the Spanish Armada began to gather in the Tagus. The Acts of Supremacy and of Conformity, and the royal proclamation enforcing the latter, were of recent date. The previous year had been marked by the accession of Whitgift to the archbishopric of Canterbury, and his earliest duties were the despotic and inquisitorial ones of the Court of High Commission; and in 1584 itself ministers were suspended by hundreds, many persons imprisoned, and some hanged. So it is not surprising that Elizabeth looked with disfavor upon the direction which her Chancellor's bounty had taken, and that when he next presented himself at court she said to him with severity, "So, Sir Walter, I hear you have erected a foundation for Puritans." The mingled loyalty and independence of the reply were thoroughly characteristic of an age in which a man whose right hand had been cut off for some supposed disaffection waved the stump above his head and cried, "God save Queen Elizabeth!" "No, madam," said Sir Walter Mildmay, "far be it from me to countenance anything contrary to your established laws; but I have set an acorn which, when it becomes an oak, God alone knows what will be the fruit thereof." As a good beginning, however, and a hint of what was to follow, the chapel of the new college was built north and south, instead of

east and west, upon the site of the kitchen of a house of Dominican Black Friars; and many other matters of "idolatrous gear" were similarly overlooked.

The fruit of the acorn, to use Sir Walter Mildmay's rather mixed metaphor, quickly appeared, and of unmistakable quality; for, according to Cole, "on the total destruction of Church and State, about fifty years after this foundation—the nursery of disaffection and puritanism—on the turning out the heads of the several colleges for loyalty and decorum, no less than twelve or thirteen out of the sixteen colleges of our University had their headships supplied from this sink of faction and nest of sedition." And with the stream of Puritan emigration to New England, an equal proportion of Emmanuel men was found among the fathers. Simon Bradstreet, Francis Higginson (M.A.), Maude, of Dover; Whitney, of Lynn; Nathaniel Ward, of Ipswich; Hooker (fellow), Stone and Shepard, of Cambridge; Wilson, Rogers, Fisk, Whitney, John Cotton (fellow), "the father and glory of Boston"; Henry Dunster, the first President of Harvard; and John Harvard himself, were all members of Emmanuel. The last-mentioned appears to have stayed at the college about a year; there is a note of his entry and another of his M.A. in 1635, and his name occurs twice in the *exeat* book. From these entries it has recently been discovered that he was of Middlesex, and not of Southwark, as had previously been supposed. A memorial window to him has just been placed in the college chapel. After the Puritan fathers, the most interesting feature of the history of Emmanuel is its connection with the "Latitudinarians," or "Cambridge Platonists," in the seventeenth century—the men who "brought the Church back to her old loving nurse, the Platonick philosophy." With the one exception of Henry More, all the chief representatives of this movement were educated at Emmanuel, viz.: Benjamin Whichcote, John Smith, Ralph Cudworth, and Nathaniel Culverwell.

The chief event of the recent celebration was the banquet given in the Hall of Emmanuel by the master and fellows to a number of graduates and distinguished guests, and by far the most striking feature of the banquet was the speech of Professor Norton, who was present as the delegate of Harvard. With obvious and characteristic delicacy, Mr. Lowell, from whom a long speech was expected and who proposed the health of the College, confined himself to a few humorous remarks. Professor Norton, responding to the toast of Harvard College, delivered a very eloquent speech of more than half an hour, dwelling chiefly upon the lessons of the lives of John Harvard and the Puritan fathers, the relation between English and American learning, the influence of the Puritans in America, and the past and future of Harvard University. His speech had evidently been prepared with great care and was most effectively delivered. Although the guests numbered 200, who were partaking of dessert after sitting at table for several hours, they gave Professor Norton entire attention. He was repeatedly and loudly cheered, but perhaps the best of the compliment to an American ear was the amusing and undisguised tone of astonishment in the "bravos" that ran up and down the tables. It was very flattering to the national pride to find so many learned Englishmen taken by surprise by an American after-dinner speech. The opinion was freely expressed that Harvard could not have been better represented. The text of the Public Orator's Latin speech in presenting Professor Norton next day for his LL.D., with its special complimentary allusion to *eloquentiam ejus hesternam*, we have already published.

ENGLAND: AGITATION AND COUNTER-AGITATION.

London, August 13.

The last month of the Parliamentary session and first month of the long vacation are usually in England a season of political lassitude and repose. This year it is otherwise. For five weeks or so, ever since the House of Lords refused to entertain the Franchise Bill, we have had a tempest of public meetings and demonstrations intended to stimulate the nation and terrify the Peers. The primary and immediate issue was of course the extension of the county franchise, which the Commons had passed by very large majorities, and which the Lords refuse to pass unless it be accompanied by a measure for the reallotment of seats. But it was plain from the first that the agitation could not be worked upon this issue alone, or even chiefly, because the Lords had declared themselves in favor of an extension of the franchise, as, indeed, the leaders of the Tory party in the House of Commons had done already. What use, therefore, in arguing an unopposed case? The issue which the Lords sought to present was that of the separation of franchise proposals from redistribution proposals—that is to say, the necessity of securing that the enlarged county constituencies should forthwith return a number of members proportioned to their increased size. But this also was not a good battle-ground, both because it is a somewhat narrow and technical one, and also because the Liberals themselves admit that seats ought to be immediately reallotted, and only differ from the Tories in refusing to postpone the effect of what both parties are agreed on till other points are settled on which they may not agree. Hence the agitation very soon passed, and could not help passing, into one against the House of Lords itself.

This House claims its undoubted constitutional right to differ from the Commons, and declines to pass a bill which the Commons have passed. The Liberals in the Commons insist that, whatever the technical right of the Peers may be, they ought to yield to the will of the decided majority of the people, expressed through a decided majority of their representatives. The Peers answer that they are prepared to yield to the people, but not to a majority of the House of Commons, which may not represent a majority of the people, and challenge the Ministry to use the only means of determining whether they have the people behind them, viz.: by summoning a new Parliament. The Ministry reply by denying that the Peers have any right to force a dissolution. "There can be no doubt," say they, "that the nation is with us. It desires the Franchise Bill to be passed. It does not think that a Redistribution Bill must necessarily be passed at the same time. Parliament has still nearly three years of its legal period to run, and we are not going to dissolve to please you." The Liberals throughout the country respond to the appeal. "Let us show the Lords," they cry, "that the people support the House of Commons and the Ministry. The bill is to go up to the Lords a second time in November. Let us evoke before then such expressions of popular feeling as will force the Lords to submit. Let us warn the Lords that if they persist in exercising their rights to oppose the will of the nation, those rights will not be left to them any longer." So far the Liberals in general. Then the Radicals take up the song. They have long held the House of Lords to be a mischievous encumbrance, spoiling, delaying, frustrating the reforms on which the House of Commons and the bulk of the people are set. Hitherto the Lords, while showing their power in small things, have mostly submitted in great ones, so that it has been hard to fix public attention on what did not seem to cause practical evils. But when they opposed the Franchise Bill, Radical newspapers and speakers ejaculated, "The Lord hath delivered them into our hands." They have got their opportunity, and are resolved to use it. They have transformed the agitation for the Franchise Bill into an agitation against the House of Lords. Within the last four weeks hundreds of Liberal meetings have been held in the towns of England and Scotland, and at all these meetings resolutions were passed not only condemning the conduct of the Peers in this instance, but demanding the extinction or limitation of their legislative power.

Among these meetings three have stood out by their vast dimensions. The first was the London demonstration of July 21, when more than 30,000 people marched in procession to Hyde Park and there held six meetings in different parts of that ample space, at which the Lords were heartily denounced. There were probably 100,000 people in the Park that afternoon, and more than as many more in the streets leading toward it. Moving about among the crowds one perceived that there was no hostility to the demonstrators—on the contrary, a general sympathy. But, on the other hand, there was no enthusiasm. The processionists and those who cheered them were not merely good-humored but unimpassioned. They were rather curious to see how it would all go off. They enjoyed the crowd, the novelty, the sense of their own good behavior in respecting the flower-beds; but they were more like holiday-makers than politicians. It was amusing to perceive how French or German observers thought the gathering dangerous, and condemned the recklessness of the Ministry in having (as they supposed) secretly organized it; how the French in particular were amazed at the cheers which greeted the Princess and Prince of Wales when they appeared at a window on the route of the procession. Nothing could in reality have been less revolutionary than this tremendous crowd, which looked upon the few police who were seen as its friends, directing it where to go and keeping the route clear for the procession. The demonstration was a satisfactory proof of the good feeling which animates the English masses. But it proved very little as to the ardor of the people in the cause of franchise extension or reform of the House of Lords, because everybody was aware before that the bulk of the humbler classes of London desire both, and those who know them best knew that they are not eagerly interested in these (or in any other) political questions. Lord Salisbury was not frightened, and in his next speech declared that he did not think the Lords need regard "legislation by picnic."

The following Saturday saw a second great demonstration at Manchester, when Lord Hartington and Mr. Bright made speeches, the former, of course, avoiding the question of altering the House of Lords, and leaving the meeting before a resolution on that subject was submitted. On Monday, August 4, Birmingham turned out in an even larger gathering, which, though it did not reach the prodigious dimensions of the London demonstration, rose much above it in earnestness. There is at present a keener political life in the west midland capital than anywhere else in the south or centre of England; nor were Mr. Bright and Mr. Chamberlain unequal to the occasion. Their speeches and the warmth of the meeting produced some impression, but as everybody knew beforehand that Birmingham was Radical, Pharaoh's heart has not been sensibly softened.

Meantime it has struck the Tories that they also might demonstrate. At first they confined themselves to holding ticket meetings of Conserv-

ative associations, at which resolutions commending the Lords were passed. Then they came down into the open field. Some public meetings, though none on a large scale, were held. A Liberal meeting at Bournemouth in Hampshire was disturbed by drunken roughs, whom the local Conservatives were accused (with what foundation has not been proved) of having suborned for the purpose, so that the speakers had to adjourn to the seashore and hold their meeting on the sands. In one Lancashire town, Stalybridge, a town's meeting, convened by the Mayor, approved the action of the Lords. Finally, on Saturday, August 9, an immense Tory demonstration was held in the Pomona Gardens, at Manchester, and harangued by Lord Salisbury, Sir Michael Beach (whom it is proposed to raise to the Tory leadership in the House of Commons when Sir S. Northcote retires), and Lord R. Churchill. More than 20,000 persons, at least as many as the Liberals had collected a fortnight earlier, assembled to hear the haughty leader of the Peers defend his conduct, and appeal to the Tory democracy of Lancashire for its support. There was nothing surprising in this event either, for everybody who knows Lancashire knows that the Tories are very strong among the workmen, and could easily collect 20,000 listeners out of the million and a half of people who live within fifteen miles of Manchester Exchange. However, it has modified the confidence of simple-minded Radicals in the significance of big meetings, and it has revived Pharaoh's spirits.

The leaders of the Tory party perceive, and impartial observers admit, two facts of great moment for a comprehension of the present crisis. The first is that the feeling against the House of Lords, although genuine, is not passionate. The mischief it causes in its ordinary working, its failure to discharge the functions of a revising chamber, have not been realized by the people, who have disliked it only on the basis of general principles. Its action in this particular instance displeases not only the Liberals but even many moderate Conservatives. But one instance is not enough to excite strong feeling. The nation is like a large kettleful of water, which needs the flame to play beneath it for a good while before it is heated through. Moreover, our people pride themselves on being practical. They ask what is to be done with the House of Lords. To abolish it, as some Radicals propose, seems to them an extreme course. They are willing to reform it, but how? Different advisers have different schemes of reform to propose, but these schemes jostle one another so that none can even gain a full and patient hearing. The only man who commands the confidence of the country, whose counsel will be taken simply because it is his, is seventy-five years of age, and has often declared that he will not take up new questions. Hence, just when the attacking force is ready to march, it pauses, missing the leader's voice, and not knowing how to use whatever victory over the Peers it may gain.

The second feature of importance in the position is the silent dislike of a large section of quiet, easy-going men, in whose minds the enjoyment of their own property is associated with the general stability of English institutions, to any proposal of sweeping change. Such men have no particular fondness for the House of Lords, though full of social deference to a lord when they meet him, but have grown so accustomed to that House that they recoil from destroying it. They may probably be irritated, may possibly be driven, into the Tory camp, by such indiscreet abuse of the Peers as some of our popular speakers indulge in. Lord Salisbury counts upon these men to support him against the Radicals; and no one can say that, what with their timidity and what with the uncertainty which damps more pronounced Liberals, the position of the Upper House may not prove stronger than a French or American republican who sees how theoretically indefensible it is, would be disposed to believe it. Y.

Correspondence.

GOVERNOR CLEVELAND'S LETTER.

To the Editor of The Nation:

Sir: I am surprised that the press, as a rule, does not make more account of Mr. Cleveland's letter. After the catch-vote quackery of Blaine and the reckless demagogism of Butler, a touch of manliness and simplicity is truly refreshing. I have waited with anxiety for this letter, and it has settled the case for me. The only drawback in it as regards success is, that it is a little too dignified and too careful to avoid the appearance of bidding for votes. May I venture to analyze it a little?

First, as to the platform. Since the custom prevails of leaving to an anonymous and irresponsible committee to declare the policy of the party, a candidate of that party must accept the declaration, which is the less difficult as it is carefully arranged to mean nothing. There is a delicate shade of irony in saying, that as the business of the President is only to execute such laws as Congress may choose to pass, and as the wisdom of the party has outlined its policy and declared principles, nothing more can be required of a candidate than the suggestion of certain well-known truths, which cannot too often be recalled or enforced. Compare this with Blaine's declaration on the tariff, when everybody knows that the President has little more influence upon or responsibility for the tariff than an average citizen.

Governor Cleveland next proposes as a safe guard against official corruption the ineligibility of the President for reëlection. I do not agree with the conclusion. I have no sympathy even with the third-term superstition, having always believed that the best thing which could happen to the country would be to find a President so satisfactory that he could be reëlected by a free popular vote for half-a-dozen terms. Still, the reasoning by which the conclusion is arrived at shows the keenest sense of the danger of corruption in office, and the proposal is absolutely against the personal interest of the candidate if elected. It will be a long time before we get any such doctrine from Blaine or Butler.

As Governor Cleveland has been reproached with hostility to labor, it was natural he should issue a general disclaimer. But it is shrewd common sense which points out that the danger to labor is not in the reduction of duties on imports, but in direct competition. The reason why wages are lower in Great Britain, if they are practically lower, is that two-thirds of the amount of the population of the United States is crowded into those little islands. Nor does it appear that wages are any higher in France, where high protective duties prevail. Whether it is wise or practical to keep out immigrants accustomed to lower remuneration and a poorer scale of living, may be a question; but to my mind there can be none that this is what really threatens the relative material condition of the laboring classes.

It is a direct and sharp home-thrust which says, that "no class of our citizens is more interested in guarding against any corrupting influences which seek to pervert the beneficent purposes of our Government, and none should be more watchful of the artful machinations of those who allure them to self-inflicted injury."

The clause relating to the liquor question will not satisfy those who are engaged in ardent combat with this terrible scourge of the world, but it is impossible to refute its inexorable logic, especially as regards the General Government; and it has at any rate the merit of not shrinking from a delicate issue.

The clause as to the civil service is perfectly simple and straightforward, dwelling more upon the duties than the rights of office. Could there be any better statement of general principle than the following?

"I believe that the public temper is such that the voters of the land are prepared to support the party which gives the best promise of administering the Government in the honest, simple, and plain manner which is consistent with its character and purposes. They have learned that mystery and concealment in the management of their affairs cover tricks and betrayal."

Which of the other candidates dares to set his name to sentences like these?

I know but little of Governor Cleveland's past, and cannot, of course, forecast his future; but it is a comfort to find a leader under whose inscribed banner at least one can take a firm stand.

G. B.

North Elba, N. Y., August 23, 1884.

MR. BLAINE AND THE McSWEENEY CASE.

To the Editor of The Nation:

Sir: Your very pertinent comments, in your last issue (No. 998), on Mr. Blaine's failure while at the head of the Department of State to protect American citizens abroad, as illustrated in O'Connor's case, call to mind the still more aggravated case of Daniel McSweeney.

Mr. Blaine was Secretary of State for nine months from March 4, 1881. On the 2d of June, 1881, Daniel McSweeney was arrested in Ireland as a "suspect." He was a naturalized citizen of the United States, and had been a resident of San Francisco for twenty-five years. At the time of his arrest he was sojourning in Ireland, partially for his health and partially on account of business. Immediately on his arrest he forwarded his naturalization papers and other evidences of his American citizenship to Mr. Lowell, our Minister at London. Mr. Lowell replied that the British Government refused to give him any information, and "snubbed" him. He immediately notified Mr. Blaine of McSweeney's arrest. During the succeeding ten months, through six of which Mr. Blaine was Secretary of State, McSweeney, his devoted wife, and his friends labored unremittingly to reach the ear of Mr. Blaine and the Government, but in vain. McSweeney did not ask to be released; he only asked to be tried. He and his friends begged and petitioned for what Mr. Blaine now claims every American citizen has a right to demand, viz., the interposition of his Government to procure him a speedy trial.

On the 12th of December, 1881, McSweeney writes from "Dundalk Jail" to his daughter Mamie, in California, as follows:

"Your mother wrote to Mr. Blaine about my case, but that gentleman did not deign even a reply. I heard nothing whatever from him. . . . I am now in jail going on seven months, charged with no crime, and not even a shadow of suspicion that I violated any law; and when our American Minister asks a civil question about me he is snubbed, insulted, and his flag trampled on; but he does not appear to make much fuss about it, and the American Government takes no notice of the question any more than the King of the Sandwich Islands would."

And yet Mr. Blaine says, "Citizenship of the Republic must be the panoply and safeguard of him who wears it."

In thus, while Secretary of State, allowing McSweeney to remain for six months in an Irish jail untried, without stirring hand or foot

in his behalf, Mr. Blaine wilfully and grossly violated the statute law (Sec. 2,001 R. S.), which makes it the duty of the Government, on the arrest of an American citizen by a foreign Government, to *forthwith* "demand of that Government the reason of such imprisonment, etc."

I have not time, nor have I a right to command sufficient of your space, to go further into the details of this case, but I advise every Irish-American who feels that in Mr. Blaine as President Ireland will have a friend and Americans abroad a special protector, to read the *Congressional Record* on the McSweeney case, and especially the speech of Senator Voorhees delivered on the floor of the Senate, April 14, 1882. —Very respectfully,

BRADLEY G. SCHLEY.

MILWAUKEE, WIS., August 17, 1884.

MINISTERIAL POLITICS.

TO THE EDITOR OF THE NATION:

SIR: Is there not a striking likeness between ministerial and feminine politics? The feminine point of view is a very familiar one. It has often been noticed in the *Nation*, and your presentation of woman's somewhat peculiar estimate of the elements of character and of character itself is generally received as substantially correct. The ministerial view is quite as peculiar, and not unlike. It may be partly accounted for by the fact that the average minister is largely limited to women in his daily walk and conversation; hence social and personal topics, social virtues and vices, must of necessity form the basis of his conversation. His mind and views are naturally in harmony with the minds and views of the women of his flock, so that when he attempts to look upon the broader and higher relations of life (broader and higher because they bind together and build up the political and commercial interests of the world), he is essentially feminine—that is, blind to that honor, honesty, and integrity which right-minded men regard as essential elements of character and manhood. A minister might read the Mulligan letters, for example, to the sewing society of his church, and be in little danger of failing to have their author declared to be a "Christian gentleman," and the letters to have nothing sinful or wicked about them. They merely reveal dishonor and dishonesty in character—a record full of shame, but in a form too impersonal and abstract to affect ministerial and feminine minds. I venture the opinion that the average minister regards Hamilton's course in clearing his record as Secretary of the Treasury as inexplicable. The Republican press has put forth, under ministerial sanction, the indecencies of the past few weeks. It is warranted in assuming such sanction by the number of reverend writers who have published their predilections for unclean subjects. I have heard sermons preached against the theatre and its immoralities, against social abominations of various descriptions, which almost rivalled the subjects treated of in their shocking allusions and improprieties of language.

The office of the ministry is still a very important one, full of dignity and noble doing on the part of many; but, as a body, ministers need a broader comprehension of the dangers which really threaten society. In our day and country these are not social in their nature, but political and commercial—defalcations and theft in positions of trust, and corruption and jobbery in public life. Upon these the average minister scarcely looks at all; but his unwise and willing attention is riveted by some world-old weakness and wickedness of human nature. He can be likened unto one criticising the interior decorations of a dwelling, while a worldly-minded architect and builder are anxiously devising means of saving the structure from tumbling into a ruin. J.

CHICAGO, August 20.

[We think the writer of the above greatly exaggerates both the ministerial and feminine indifference to dishonesty in public men. It is not true, by any means, that either women or ministers are "blind to that honor and honesty and integrity which right-minded men regard as essentials of character and manhood"—on the contrary, they are keenly alive to them. But we agree that these defects in a public man need to be presented to them in a very palpable and obvious form to affect their imagination. One great advantage a tricky, ingenious man like Blaine has, therefore, in dealing with them is, that he finds little difficulty in disguising his operations so that they shall not shock at first sight, but shall need a little study to be understood; and this study in too many cases both ministers and women are unable to give, from simple want of the right kind of experience of life and affairs. It goes some way to confirm "J.'s" view that nearly all the political women—that is, the advocates of the suffrage—are hammering away for Blaine, to all outward appearance as if entirely unconscious that there is anything wrong with him, while they are full of horror of Cleveland's offence. Blaine's long and evil years of scheming, jobbing, and trading make little impression on them, because he was nowhere caught walking off with a piece of property, and lies himself out of all scrapes with a cheerful, bluff air; while Cleveland's one fault, instantly confessed and atoned for as far as it could be, but palpable and distinct, is rank and smells to heaven as soon as seen. We publish the letter chiefly for the words of wisdom contained in the last paragraph. The first is too extravagant to be damaging either to women or ministers, and is, indeed, somewhat insulting to both.—ED. NATION.]

A FAULTY DATE.

TO THE EDITOR OF THE NATION:

SIR: In your issue of August 14, 1884, on page 127, you stated that the Washington despatch to the *Inter-Ocean*, in which certain editors were accused of a conspiracy to injure Mr. Blaine, was dated July 12, 1876. Later in the same article you quote from the Cincinnati *Gazette* of May 3, 1876, a paragraph referring to this despatch. The mistake is obviously a typographical one. Will you kindly correct it?—Very truly, JAMES A. HAIGHT.

BISMARCK, D. T., August 18, 1884.

[The former date should have been April 12, 1876.—ED. NATION.]

Notes.

MR. EDWARD MCPHERSON'S 'Handbook of Politics for 1884' (Washington: J. J. Chapman) continues an indispensable series, the most valuable of all our political books of reference. It exhibits, side by side, the party platforms and the Congressional observance or non-observance of them, with the coördinate action of the Executive and of the Supreme Court. The finished and the unfinished legislation; the multitudinous proposals to amend the Federal and State Constitutions; financial and electoral statistics, and much other information, make the customary contents of this Handbook. It is necessary to study such a compendium in order to realize the course of our political development in what we are apt to regard as a period of functional paralysis. For good or for evil, we have, in the past two years, been mending our tariff, our civil service, our shipping and immigration laws, and the Supreme Court has confirmed the Federal powers over the civil service, the currency, and the ballot-stuffer and terrorist. The unsuccessful strivings of demagogues and statesmen are equally suggestive subjects of reflection.

To meet the wants of members of the British Association for the Advancement of Science, Dawson Brothers, Montreal, have published a 'Handbook for the Dominion of Canada.' This tasteful little work is the product of many hands, but is exceptional for the excellence of its composition throughout. Seldom is the literary quality of guide-books so high as in the present instance. The tone, of course, is intensely "national" and "imperial," and the historical retrospect would not be accepted without protest by Canada's bigger neighbor; nor should we forecast the future of the Dominion with such rosy optimism. But it was most natural to greet the British Association with the best possible face, and a little exuberance on the part of the hosts can do no harm to the guests. There are three maps, showing the railroad systems and the steamship relations of the Dominion to the mother country.

Professor Baird's Smithsonian Report for 1882 notices the inadequacy already of the new National Museum Building for the accumulated collections clamoring for display in it. One of these, the outgrowth of the last census, exhibits specimens from every working quarry in the United States, and is capable of furnishing the Federal or any State Government with all needful particulars in regard to the quality of stone in the neighborhood of any proposed public building. Among the interesting features of the Museum are to be windows filled with enlarged photographs of the scenery and aborigines of the West—an idea of which the germ was seen in the Government building at the Centennial. The brilliant success of the fish department of the Smithsonian is well known. In addition to the three bequests which are all the Institution has ever attracted, and which amount to only $1,500, the late Rev. Dr. Mercer, of Newport, left a property which Harvard, Yale, and the Smithsonian will ultimately administer together for the establishment of scholarships. The general appendix to the report consists of the usual valuable summaries of the year's scientific progress, with bibliographical indications.

Harper & Bros. adapt their Franklin Square Library to a new but very natural use in making it the mode of publishing a dictionary in parts. By arrangement they print from the British plates 'Stormonth's English Dictionary,' and the twenty-three numbers will be sold at twenty-five cents each. The work is of a popular character, being extremely condensed, and going to the other extreme from the encyclopædic tendency of recent dictionaries. Space is saved by grouping under a leading word its derivatives or compounds, and by totally discarding illustrative extracts. The etymology, however, is sufficiently full, and has had the benefit of the latest researches in this field. The pronunciation, too, is carefully provided for. The vocabulary is as extensive as the needs of the general public call for. There are, finally, no illustrations.

The seventh instalment of his 'Diccionario Tecnológico,' has just been issued by Mr. N. Ponce de Leon, 40 Broadway. The letter F is disposed of, and G begun (Fall to Gagging). The word *frame*, in its various relations and compounds, is a good example of the copiousness and utility of this English-Spanish vocabulary. It fills nearly two pages or four columns; and *Brunton frame* and *Danforth frame* occur among terms whose significance might generally be guessed with the aid of a common dictionary.

Part 140 of Brehm's 'Thierleben' (Westermann & Co.) completed the eight volumes of this standard work in the "Chromo edition." Neither the colored plates nor the woodcuts in the concluding portion (Fishes) quite equalled those of the Mammals and of some of the other kingdoms; and for another issue of this standard work the great plaster collections of our National Museum might well be studied, and perhaps intrusted to American engravers and color-printers. The inequalities of draughtsmanship could be avoided by the aid of photography. That we shall soon have a popular "Brehm" produced by American zoölogists is not to be anticipated; yet a combination of the necessary talent seems possible, and the enterprise ought to be remunerative.

A supplement to the 'Thierleben' is promised by the Bibliographisches Institut of Leipzig. It will consist of a volume on Man by Dr. Friedrich Ratzel; two on Plant Life, by Dr. Kerner von Marilaun; and two on the Physical History of the Globe, by Dr. Melchior Neumayr. The illustrations, as in the elder work, will be both in color and in black and white.

Parts 106–113 of the new 'Brockhaus Conversations-Lexikon' (New York: L. W. Schmidt) carry the work on to the article Great Britain, which is very full and of which the end is not yet. Goethe receives the largest measure of attention (8 pp.), and Gladstone comes next (3 pp.), finding an appreciative biographer. Gortchakoff, on the other hand, is dismissed in a column—the space in which Chinese Gordon is described. Horace Greeley gets but half a column, while General Grant has two pages of not very cordial praise. Whether by an actual error, or in severe adhesion to the truth of history, Grant's second term is said to have led to a Democratic victory in 1876. This is the well-known view taken by the *Sun*. We miss among the biographies the late John Richard Green's. Glass and Gold are the chief miscellaneous articles, and are both illustrated, as are also Bats, Firearms, Glaciers, Poisonous Plants, the Lemuridæ, etc. Greece rivals Great Britain as a leading geographical article. Colored maps of the former country and of Hanover and Schleswig-Holstein, and a wood-cut map of Gibraltar in the text, are the sole illustrations of this kind.

Harper & Bros. announce a new and complete edition of Tennyson's poems, with a chronological index; a 'History of the Four Georges,' by Justin McCarthy; and Ranke's 'The Oldest Historical Group of Nations, and the Greeks.'

Fowler & Wells Co. have in press 'The Man Wonderful in the House Beautiful,' by Chilion B. Allen, M.D., and Mary A. Allen, M.D.; 'Three Visits to America,' by Emily Faithfull; and a 'Catechism of Phrenology.'

A new novel by Mr. F. Marion Crawford is ready for the press and will be published immediately in London by Chapman & Hall. The title of it is 'A Heartless Politician,' and it deals with subjects quite different from those of Mr. Crawford's previous works, being a story of American political life.

Of Mr. Axel Gustafson, whose work on the 'Drink Question' has just been published in an American copyrighted edition by Ginn, Heath & Co., we are told that, a Swede by birth, he is a graduate of Harvard University, and has written many articles for the American press.

We had occasion, some years ago, when the city authorities of Boston accepted the charge of printing the old records of the town and its churches, to notice that the favorable report of their committee was signed first by a Mr. O'Brien. In the current report of the trustees of the Boston Public Library we find a hearty acknowledgment of "the valuable aid rendered by Mr. James J. Flynn in securing the success of the vital project of a new library building, to front on Copley Square." These names are not exactly Puritan, but they have been pressed into the service of the Puritan traditions of Massachusetts. The report hardly calls for other remark, except so far as it shows that the criticism of the fiction purchases has been effective.

A curious map of Costa Rica, dating from 1620, accompanies an article on the Spanish conquest of that country which is concluded in No. 111 of the Berlin Geographical Society's *Zeitschrift*.

In a volume entitled 'Arte, Storia e Filosofia: Saggi critici' (Florence) have been brought together the numerous essays by Pasquale Villari, the eminent biographer of Savonarola and Machiavelli, which have been published from time to time in the *Nuova Antologia*, the *Rassegna Settimanale*, and other Italian periodicals. Some of the more important studies are Modern Painting in Italy and France; the Literature of the Renaissance; sundry lives of Savonarola; the Borgias, etc.

Mr. Christern has received one of the weapons in the existing politico-religious controversy now raging in Belgium, namely, Professor Philippson's 'Les Origines du Catholicisme Moderne: La Contre-Révolution Religieuse au 16e Siècle,' a volume of some five hundred pages. The creation of the order of the Jesuits, the reëstablishment of the Roman Inquisition, and the Council of Trent are the main topics of this historical retrospect.

From the same source come to us the opening parts of a new Dictionary of Greek and Roman Antiquities, on an essentially pictorial basis—'Denkmäler des Classischen Alterthums,' edited by A. Baumeister (Munich and Leipzig). This work selects its titles according as they relate to the history of art, to mythology in connection with art, to domestic antiquities, to eminent personages of whom more or less authentic representations have come down to us, to numismatics, to topography, to things military and naval, to the art of writing. The illustrations are remarkably numerous, and nearly as fresh as they are numerous, and the processes employed in copying from the natural object—vases, basreliefs, statues, etc.—are among the most satisfactory we have ever seen. The needs of teachers in provincial gymnasia have been especially consulted in this publication, which cannot fail, however, to find a general acceptance. The print is in the Roman character.

An international acquisition is the catalogue entitled 'Les Portraits aux crayons des 16e et 17e siècles,' by Henri Bouchot. These inexpensive portraits, which M. Bouchot calls the photographs of their day, are in the collection of the Bibliothèque Nationale, and are now made accessible to the curious of all countries. They represent monarchs, courtiers, statesmen, generals, authors, and provincial celebrities, as well as many private persons whose names cannot be determined. An early portrait of Henri IV. is reproduced with this catalogue, which we ought to say contains also a list of crayons in various parts of France, and even in some neighboring countries. We commend this work as a rich treasure-house to the enterprising editors of our illustrated magazines.

The recent events in Tonquin have turned the attention of the French to Anamitic literature. M. Abel des Michels has read a memoir before the Académie des Inscriptions, from which it appears that this literature consists chiefly of poetry and that it has been very little influenced by the Chinese, from which it is very different; Chinese poems being generally short and prosaic, the Anamese, on the contrary, having many long narrative poems, displaying great fertility of imagination, and excelling in the description of the beauties of nature and in satiric poetry.

—*Harper's* for September, although marked by the customary variety of contemporary interest and widely separated localities, offers little for special remark. In Mr. Curtis's "Easy Chair" discourse on Charles Fenno Hoffman, alluding to "the felicitous phrase Knickerbocker literature," he attributes its earliest use, in the *Nation*, to "Mr. Denny, an admirably accomplished writer." We have a double interest in pointing out the distortion which the printer has here given to the name of the late John Richard Dennett. For the rest we confine ourselves to the reminiscences of Charles Reade, by Robert Buchanan. The young poet became acquainted with the novelist on occasion of the latter's desiring to meet the authoress of 'The Queen of Connaught,' an English girl, of whom some idea is given by his remark to her when she once complained that the sun was spoiling her complexion—"'Not at all, my dear,' he answered, 'you look like *a nice ripe pear*.'" After the first meeting the new friends soon became old ones, and Buchanan's sketch of the surroundings of the novelist, his house, study, and friends, as well as of his whims, traits, and adventures, has the softening and harmonizing effect that intimacy so imperceptibly gives to the words of a sincere man writing of his friend. He traces the benevolence of Reade in his later years to the long influence of his housekeeper, Mrs. Seymour, of whom he gives by a few strokes a charming portrait; "but be that as it may," he adds, "he was when I knew him the gentlest of men—like our friend Boanerges, all fire and thunder in the pulpit, all kindliness and sweetness at his own fireside." Like many literary men, he did not like the society of the craft, and he had the proper contempt of the original writer for the critic, since he quoted with approval the extreme opinion of Lewes—"The good effected by criticism is infinitesimal, the evil incalculable." Doubtless Lewes got tired of his task of reading the reviews of George Eliot's novels before they were submitted to her sensitive mind; but Reade's hatred of the parasites of literature was merely the intolerance of the strong man who aims at something done, for the weak man who looks only to the method of the doing. He, however, could do some effective criticism in his turn, if need were. "He was the Boythorn of literature, only the big speeches and terrible invectives were not spoken but set down on paper." A man of many contradictions he plainly was, and known otherwise to his friends than to the world. Buchanan has made his article not so much a criticism of Reade's critics or a protest against the hasty censure that has been passed upon him, as an effective petition for a suspension of judgment until more of the facts are in.

—In *Lippincott's* the same subject is continued at greater length in the second paper by John Coleman (the series, by the way, is also being printed in *Temple Bar*), whose theatrical associations with Reade were very close. Dramatic writing was the *ignis fatuus* of the novelist: he would rather have written a successful play than a great romance; and theat-

rical management, which he undertook in order to bring out his own plays, was the extravagance in which he threw away his money. Coleman's anecdotes are very detailed and illustrative, and incidentally one or two honorable facts come out. For example, it appears that when Reade dramatized Trollope's 'Ralph the Heir,' without obtaining permission, he thought himself justified by their friendship, and secondly by the difficulty of communicating with Trollope, who was in Australia, and thirdly by his avowed intention to share the profits. Reade "persistently" urged Trollope to receive the half-profits, but Mr. Coleman believes that Trollope never would accept them, and reports that when the two had to play cards together at the club they never spoke. Some details are also given regarding Reade's misunderstandings with Mrs. Burnett when he dramatized 'That Lass o' Lowrie's,' but not enough to clear up the matter at all. It is stated, too, that when he used the writings of Macquet and Zola to shape his own works out of, he obtained the consent of the authors and paid them for the privilege; and the fault for the plagiarism in the drama "Foul Play" is laid wholly on Boucicault's shoulders, who was his collaborator. Besides these theatrical matters, we learn of Reade's literary tastes so far as Coleman knew them. Dickens was the only contemporary writer to whom he yielded the palm. Next came Bulwer for "variety and scope." Disraeli was "the most airy and vivacious of literary coxcombs, . . . the most lovable of men (when you got on his weak side)." Thackeray was "an elegant and accomplished writer." For ingenious plot and mystery, "dear old Wilkie Collins against the world!" Victor Hugo was the "one great genius of the century," and old Sir Walter "one of the world's benefactors." The only piece of wit reported is on the production of Tennyson's "The Cup," at the Lyceum: "It might have proved an interesting spectacle if the words had been left out." Of the poets, he always "harked back to Byron, Shelley, and Scott," the last being his favorite. Perhaps the most instructive passage as to character, however, is the paragraph regarding the "outing" of the two at York one summer, when they played the truant schoolboy together with more success than seems to have attended their business ventures.

—The *Atlantic* for September is an undistinguished number. The old ghost story, "A Legend of Inverawe," about the Highlander who made a Philippi of Ticonderoga, is told with skill, and has some timeliness if it interests any one to send similar legends of the soil, of a fresher kind, to the approaching session of the British Association at Montreal, as has been requested; but we fear that the Society for Psychical Research will find that second-sight does not flourish in the dry air of our country so vigorously as in the mists of Scotch bogs. Francis Parkman contributes a chapter on "Wolfe on the Plains of Abraham," marked by his familiar exhaustiveness and lucidity, with the personal interest in Wolfe's heroic character skilfully made the centre of the varied and confusing details. With the present number the magazine ceases to become the dissecting table for Mr. White's "Anatomizing of William Shakespeare," but the series seems likely to be continued in book form. This month the writer informs us that his "own individual opinion, slowly formed through some years of study, is that if he [Shakspere] had been sitting with 'King Lear,' 'Hamlet,' and 'Othello' before him in manuscript, unacted, and unread but by him, and Southampton had offered him a hundred pounds [nearly $15,000 now] each to destroy them and never rewrite them, the tragedies would have flitted into the fire, and the money have been gleefully locked up in the poet's strong-box." We are also told as the summary of the whole matter that Shakspere's genius "was an intuitive, inborn knowledge of men and things in their elemental, eternal nature, and of their consequent relations, combined," etc., etc.—a statement which, perhaps, some despised metaphysical German Schmidt may some day fancy himself able to elucidate, and so enlighten us as to the question "What, then, was Shakespeare?" to which the above, with its pendant, is given as an answer. The reviews of recent novels are done with admirable grace and taste.

—We have long noticed an apparent incompatibility, so far as sketches of travel in the magazines are concerned, between quick perception and careful writing, on the one hand, and the presence of illustrations on the other. It is not so much that the text is written to suit the illustrations, as that the value of these is so great as often to make both editor and public quite indifferent to the literary worth of the letter-press. We do not, of course, assert that this is always the case, but merely mention the tendency, apropos of the appearance in the September *Atlantic* of the first of a series of articles on the Italian lakes, which, though we do not altogether sympathize with the writer's point of view, seems to us to belong to the best variety of a very attractive form of literature. The article is anonymous, and is perhaps even more subjective than is common in a kind of writing in which pure objectiveness inevitably descends to the level of the guide-book. It is the work of a literary impressionist; but as impressions correspond with facts only incidentally, there is no cause for surprise that those of many travellers on Lago Maggiore should vary decidedly from those of the *Atlantic* writer. The article begins with the rhythmical statement that "they lie in the lap of the mountains like jewels dropped from the sky, and Nature has lavished her love and man his labor on the setting." All travellers would agree with the first statement, but many think that the Italian lakes are an epitome of what Heber describes the world at large to be—a place where "every prospect pleases, and only man is vile." Something, at least, may be said in support of the view that the Swiss lakes are superior in natural beauty; they certainly are free from the filth, decay, ruin, shiftlessness, and abominable intrusiveness which distinguish man or his works on Lago Maggiore. But most of the Swiss lakes are, by this writer's standard, German; and things German are not admirable, inasmuch as "central Europe swarms with them [Germans] in summer, and Christendom does not produce a more obnoxious, offensive race. . . . The true Teuton, to be seen in full odiousness, must be met in Switzerland or Italy. The coarseness of his habits, the loudness of his voice, the aggressiveness of his demeanor, his rudeness and churlishness make him the most undesirable of fellow-travellers"—and so on for half a column more.

—In the *Century*, Mr. Charles G. Leland returns to the subject of the Indian legends collected by him, which he treated of in a late *Atlantic;* but in this instance, instead of theorizing as to their ethnical relations, he gives a few illustrative tales of the Passamaquoddy—charming animal fables and finely told, the longest and best of them being one of the adventures of "Brudder Rabbit," of admirable invention and full of fancy. He announces at the end that he has persuaded two persons, whom he seems to think competent, to collect the legends of the far northern tribes, where presumably the original Indian folk-lore exists in its purest form. Mr. W. J. Stillman continues his voyage "On the Track of Ulysses," but in this issue it is almost wholly by land, in Ithaca, where he identifies the site of the Homeric city with a desert place called "Polis," and gives an entertaining sketch of the present features of the island which illustrate its history from the period of Pelasgic walls to that of the cast-off petroleum oil-can. Of especial interest is the inscription which he found and photographed, and which Signor Comparetti deciphered, since it is the oldest known in the Ithacan alphabet. Mr. Stillman concludes, after a careful topographical examination, that the site called Polis and all the others mentioned in the 'Odyssey' were known by the author of it from personal inspection. The prime article of this number, however, is the first paper of the series "The New Astronomy," by Professor Langley, which deals with the sun, and more particularly with its spots and the theories that attempt to account for them. The paper is written in a very clear style, and its more difficult statements are made easily apprehensible by the very careful engravings, of which there are a large number, all technically excellent. The illustrations to Mr. Stillman's article also deserve particular mention, both for drawing and execution.

—The August number of *Macmillan's Magazine* contains an account of Carlyle's relations with Joseph Neuberg, including numerous letters, prepared, apparently, by a member of the latter's family. Neuberg was a German settled in Nottingham, where he had acquired a small fortune, without neglecting what Mr. Arnold calls the things of the mind. In 1847, as chairman of a lecture committee, he entertained Emerson, and the latter was so struck by his admiration for Carlyle that he assured Neuberg he should not fail to bring them together. Two years later Neuberg proposed to Carlyle to leave Nottingham, and to devote himself to "the master" as a literary helper. The parallel is not here suggested, but he seems to have had in mind the part of Eckermann rather than that of Boswell, though he resisted the temptation to leave behind him any "conversations." Carlyle accepted the offer, "for there needs not only a copyist, . . . but there needs also a man of decisive judgment and insight. . . . Copyists I have had of the required kind; . . . but a copying *editor*, of that kind, I should in vain apply for by aid of money and the labor market." In 1852, Neuberg served as Carlyle's guide in his first German tour (that of 1858 being his second, not first, as recently asserted by a correspondent of the *Nation*). When separated, as they often were, the friends wrote occasionally, and the letters of Carlyle here reproduced seem as good as any we have seen. We have little room to quote, but must include this remark on Thiers: "After all, his notions are hopelessly commonplace, his talent a *beaver* one, out and out; of things higher he has never had a tone of intimation. Nothing of the hypocrite in poor Thiers." Included in the *Macmillan* paper, without explanation, is a long letter "to an American gentleman" on copyright, which is very good. "Mr. ——'s similitude of the big 'flower-garden,' from which the author makes a bouquet, big 'store of bricks,' from which the author builds a house, halts fatally in one leg (if not in both). . . . No author *takes away* the least 'flower' or fraction of a 'brick' by making his bouquet or house. . . . As to the other leg of the similitude, I should like to ask Mr. —— where he supposes those flowers, bricks, etc., all come from; and whether it has not fallen within his experience as an extensive publisher to see such a thing as a brick that was *not* there before?" Neuberg afterward translated the first four volumes

of 'Friedrich II.,' but died, while at work on the fifth volume, in 1867.

— A private letter from Mr. Henry F. Waters, in London, is printed in the July number of the *New England Historical and Genealogical Register*. "It is just a year," says Colonel Chester's successor, "since I came here, and I have already accumulated about 600 abstracts of wills which surely relate to the first settlers [of the United States], . . . besides many hundred other references which may be of use eventually." Mr. Waters expresses the hope that the fund for his maintenance may be made adequate to release him altogether from the necessity of undertaking private researches. His aim is to prevent hereafter, as far as possible, all blind groping for the English connection, by amassing such a collection of facts as will "serve all individual explorers as a firm and sure basis or starting-point from which to begin their search in England." No one who has examined the first results of his inquiries "in the gloomy cellar of Somerset House," as published from time to time in the *Register*, will doubt the great importance and solid character of Mr. Waters's work. In the number before us is the latest instalment of his "Genealogical Gleanings," which possesses, like many of its predecessors, both a literary and an historical interest. We have here the will of the Puritan Archbishop Grindall, with bequests to his kinsmen, the Woodalls; the will of James Woodall, of Walden, Essex, and of his son-in-law, William Woodall (nephew to the Archbishop); of the Rev. William Wilson, Canon of St. George's Chapel, Windsor Castle, whose wife was a niece of the Archbishop. The eldest son of this clergyman gave a thousand pounds to Massachusetts in 1633. His second son, John Wilson (whose wife was a sister of the Captain Robert Keayne to whom Boston owes her Old State House, and probably her Public Latin School), became the first minister of the First Church in that city, and his daughter became the mother of Edward Rawson, Secretary of the Massachusetts Colony from 1650 to 1686. The wills of the father and grandfather of Edward Rawson are also given, showing his descent for the first time, and in short a very important family group is brought to light in an ever-widening circle of relationship. A Hopkins connection is likewise opened up, involving the Yale family, and confirming the line of the founder of Yale College. Mr. Waters promises, by the way, some very important disclosures as to the parentage and ancestry of John Harvard. The Perkins family is embraced in the will of Samuel Purchas, the author of 'Purchas his Pilgrims,' here printed; and the Greenleaf family, with which the poet Whittier is connected, in the will of Mary Godwyn, of Lyme Regis, Dorset. This is but a glimpse of what Mr. Waters and his colaborers in the *Register* are preparing for the future historian of New England.

— Mr. Henry J. Morgan's *Dominion Annual Register* for 1883 contains all the valuable features of former years, and adds to them a list of Canadian "Men of the Time," with the briefest data. The political movement across the border last year was not remarkable, yet is worth a moment's attention. The National Policy, as protection is called, was seemingly triumphant over the economic opposition, and a surplus of $6,000,000 proved a knock-down argument to the free-trader. Mr. Morgan is firmly convinced of the great increase in prosperity caused by the new policy. Nevertheless, as a candid chronicler, he reports the lavish railroad subsidizing which this surplus has stimulated, and is obliged to notice, along with the liberalizing of the homestead laws, the increase of duties on United States agricultural implements in response to the manufacturers' clamor. As we read of his honest joy over the 133,303 immigrants who have come to stay and to reconcile this inconsistency as best they can, we find in the current Canadian press "unfortunate tidings of trade depression," and it is notorious that the cotton manufacturers and the sugar refiners have illustrated for the thousandth time the effect of high tariffs in causing overproduction. Nine hundred and eighteen miles were added to the Canadian Pacific during the year, and as the Chinese are still needed (as they were in the case of the Northern Pacific) to complete the building of the road, the Government pays no heed to the outcry against the "barbarians." Boundary squabbles and questions of Federal jurisdiction (as to railroad regulation and liquor licenses) were rife, as usual. An extension of the franchise that would have included unmarried women had to be postponed; nor was an effort to secure female suffrage in Ontario successful. The literature of the year was hardly up to the level of Canadian aspiration. Perhaps nothing was better in its way than Hatton and Harvey's 'Newfoundland,' which we duly reviewed. We remark also a 'History of Fall River,' by M. Dubuque. The school-book publishers have had a lively tussle for the Government supply. In the matter of the adoption of "standard time," Mr. Morgan gives the impression that it was Canada that took the initiative, whereas the plan which was carried out was emphatically a Yankee notion.

—Some of the German papers have lately been discussing what they call the Laube burial scandal. This famous author, dramaturgist, and theatre manager went to his grave a few weeks ago, attended by only a handful of people; and even the members of the Burg Theatre, to whose interests he had devoted his life, were absent. The Viennese feel rather ashamed of it now, and a local paper, the *Deutsche Zeitung*, shows in detail that Laube simply experienced the fate of most great Germans. When poor Schubert died, his effects were valued at about $12, and had it not been for his brother, the great musician's grave would now perhaps be unknown, like Mozart's. The funeral of Schiller was as mean as that of Lessing; and in Goethe's case the honors were intended rather for the Prime Minister than the poet. When Richard Wagner died, the Kaiser and the Reichstag did not pay the slightest attention to his funeral, and the King of Bavaria alone was represented by an adjutant. How different this, exclaims the writer, from the way in which England and France treat their great men during life and at their funerals! We are not aware that the cause of this German trait has ever been satisfactorily explained. Perhaps that national disease, *Grössenwahn*, accounts for it to some extent. Schopenhauer's remarks, too, on the official Philosophie-Professoren go far toward explaining the phenomenon. In his case they tried the method of *Todschweigen* (ignoring), with remarkable success for several decades.

—The Cossæans lived in the hilly or mountainous country to the north of the Mesopotamian plain. It is pleasant to see history repeating itself in the account which Professor Delitzsch gives (in his 'Die Sprache der Kossæer') of their swooping down on the Babylonians and Assyrians and lifting their cattle as the Highlanders raided the Lowland villages, and of Nebuchadnezzar, Sennacherib, and Alexander the Great sending troops to punish them, just as if they were characters in Scott's novels. The Cossæans even got a foothold in eastern Babylonia, and had nine kings of their race, and Professor Delitzsch thinks that Cush in the Bible means Babylonia, by reason of the Cossæans that were there. So far all is plain sailing, and the conclusions of Professor Delitzsch, though drawn from the merest hints of scattered and half-effaced evidence, may be accepted by scholars generally. But when he comes to the main question, the title question of his book, to borrow a phrase from the stage—when, on the basis of the fifty-four words which are all that is known of their language, he attributes to his hill-tribes a speech of their own unlike the Sumerian, the Susian, the Median, or the early Armenian—he runs against the theories of M. Halévy (*Revue Critique*, June 16), who will not allow that there was any language in Babylonia but the Babylonian, scoffing for years at the Sumerian and now doubting the Cossæan. M. Halévy's own theory is not one that at first sight recommends itself to the reader not versed in this special study. There was only one language in the country, he thinks, and the apparent existence of two or three arises from the priests' practice of using the characters in which it was written to signify different sounds at different times. The sign *ud*, for instance, under certain circumstances, was pronounced *lah*, and the sign *sal* stood for *ash*, somewhat as notes in music, when one changes the clef, take on an altogether different value. Thus the signs which are *tig-gab*, *id-pa*, *sak-kal*, *gan-ik* in the Babylonian key, became in the Sumerian key *gu-du*, *a-sak*, *rish-tan*, *hi-gal*. But unfortunately the use of clefs did not occur to the priests, and there are no primers left explaining this sort of linguistic transposition, nor is the motive of it obvious. It is easy to call such baffling writing hieratic. The hasty and incautious reader may accept that as an explanation, but it is not, and the incredulous still doubt whether the whole theory is not a creation of M. Halévy's ingenuity. Let the learned settle the question, if it can be settled, by further discoveries; the British Museum has many undeciphered inscriptions. The unlearned will regard it, for the present, as they regard the geometry of four dimensions, wondering that any brain can unravel such puzzling problems.

MIRACLES.

A Dictionary of Miracles, Imitative, Realistic, and Dogmatic. With Illustrations. By the Rev. E. Cobham Brewer, LL.D. (The fiftieth or Golden Year of his authorship, 1884.) Philadelphia: J. B. Lippincott & Co.

The Rev. Mr. Brewer informs us on his title-page that he is the author of a number of popular volumes which have reached a fabulous circulation—his 'Guide to Science,' for instance, being now in its three hundred and eightieth thousand. Whatever he may give to the public has therefore a certain factitious importance, as it presumably will find many readers; and on this account the present book may claim more attention than it would otherwise deserve. The subject is a good one, although we can scarce assent to his exaggerated estimate of its importance when he says, in his own choice language: "Although, therefore, there may be some who will dislike to see the subject so anatomized and laid bare, it cannot be disputed that the subject is pathologically, theologically, socially, and morally one of the most important and interesting that can be ventilated" (p. xvi). Without conceding this much, yet any one who would, in a scientific spirit, analyze the immense literature of the marvels recorded as wrought by God through the agency of man, examining the motives which have led to the fabrication and transmission of the legends, the mental tendencies which have given implicit credence to them through so many centuries, and the influence

which they have exercised over the development of faith and the progress of civilization, would render a real service to the student. The materials for such a work exist in profusion—indeed, their immensity is appalling, and much beyond the range of Mr. Brewer, though he boasts of "the 101 other works consulted in Greek, Latin, French, and English, from Alban Butler to Baring-Gould" (p. xxv), a list of which he had prepared, but "suppressed its publication at the last moment, fearing it would savor of vanity." The suppression is to be regretted, for at least it would have given a handy measure of the extent of Mr. Brewer's research, and might have had some bibliographical interest greater than the information that he had paid £3 for a copy of Harsnet's 'Declaration of Egregious Popish Impostures' (p. xxv)—that is, provided its statements were more accurate than the assertion that the 'Acta Sanctorum' of the Bollandists "has been nearly five hundred years in hand" (p. xxiv).

This is a sample of the looseness of assertion and inaccuracy which pervade the whole volume. In the miscellaneous farrago of facts which forms the introduction there is, for instance, a list of Thaumaturgists in which Jannes and Jambres constitute with Moses and Elisha the "greatest wonder workers" of the Old Testament; Apollonius of Tyana is apparently presented as a Christian, together with "St." Plotinus and "St." Proclus, the neo-Platonic philosophers, who would doubtless feel as indignant at being thus classified with their enemies as Blaise Pascal, who unaccountably occupies a place in the same list, would be in finding himself here in company with St. Francis Xavier. St. Linus, moreover, who owes his standing in the Church to his being the immediate successor of St. Peter, would protest at being relegated to the sixth century (p. xxxi). This queer selection of Thaumaturgists is rivalled by a list of the Fathers of the Church, where Tertullian and Origen might wonder at finding their heresies condoned, and at seeing that St. Clement of Rome, St. Ignatius, St. Ephraem, St. Epiphanius, St. Isidor of Seville, St. Bernard, and a score of others were not deemed worthy of their company (pp. xxxiv, xxxv). So, in a list of monastic orders, St. Francis might complain of the statement that the Cordeliers were founded by St. Louis in 1215; Paul IV. might grumble at finding that his Theatine children were ascribed to Ursula Benincasa, and St. Bernard feel wronged at the total omission of the Cistercians (pp. xxxvii, xxxviii); and in a catalogue of the canonizations made during the present century (p. xxxiii) St. Pedro Arbues and the Japanese martyrs might legitimately object to being passed over. In fact, the blunders of every kind with which the book fairly bristles deprive it of all claim to confidence. The date of the Fourth Council of Lateran is given (p. xxxv) as A D. 1000; the Sibylline prophecies are stated (p. 182) to be "a mere monkish invention of the sixteenth century"; Charles II. of Anjou is placed (p. 184) in 1036, and Leo IX. (p. 176) in 1150. The False Decretals, which are conjectured to have been produced in Mainz, are stated (p. 183) to have been composed by "a man named Mentz." On p. 185, "ceux de l'Occident" is rendered the Eastern Church; and p. xxxviii, the Hospitallers or Knights of St. John are said to have been founded by "St. John of Jerusalem, in 1099." For variety of miscellaneous misinformation the book need fear no rival.

Even with this capital drawback the volume might have value if it showed any philosophical insight into the motives and objects and influence of the miracles which the author has industriously collected. He remarks very truly (p. ix) that "it can matter very little whether the authors quoted from are good or bad historians, if the matter to be obtained from them is opinion and not history. An historian has to sift out facts, . . . but the interpreter of public opinion has no such task before him, and the very worst historian may be the best exponent of popular belief." This passage had led us to hope that the work would manifest a sense of the real significance of the beliefs thus brought into view, but one may search through it in vain for any comments of greater profundity than "Discreet almsgiving, no doubt, is an admirable Christian work, beyond all praise; but the indiscreet giving of money or alms to beggars is much to be reprehended" (p. xix); or, in considering the liquefaction of the blood of St. Januarius, "The show may bring money to the church of St. Gennaro, but surely imposture is very short-sight policy, especially in these days of free investigation" (p. 184). When, moreover, Mr. Brewer quotes Mr. Froude for St. Patrick's floating on a stone and lighting a fire with an icicle (p. 164), or Bayley's 'Family Biblical Instructor' for an account of a Spanish priest shot in 1824 while personating a devil (p. 182), or 'The World of Moral and Religious Anecdote' for a somewhat similar imposture in France (p. 182) he surely illustrates no phase of belief except his own extraordinary illusion that such authorities and such stories have any scientific value.

It is to be regretted that the work has been attempted by one in every way so incompetent, for there are many aspects of the subject which have a permanent and living interest. The age of miracles is by no means past. In a large portion of Christendom the enlightenment of the nineteenth century is as fertile in the superstition which gives birth to these wonders as was the darkness of the ninth. It is not merely the pyramids of canes and crutches at Lourdes, or the wonders seen at Knock, or the performances of Louise Lateau: in the faith of many among the most civilized peoples, the invisible powers are everywhere around us—the evil ones ready to mislead and destroy, the good to aid the believer who will use the proper means to obtain their assistance in the commonest material interests of daily life. If Mr. Brewer's researches had led him to consult such periodicals as *Le Pèlerin* and *Les Échos du Purgatoire*, which are issued in Paris *cum permissu*, he might have found an ample store of miracles far more significant than forgotten legends about St. Gudule and St. Prisca. A well-authenticated case, for instance, of a man who won a law-suit on which his fortune depended by the simple expedient of vowing, in case of success, to expend two francs and fifty centimes on a mass for the benefit of the "Bonnes Âmes" in purgatory, throws more light on a whole ecclesiastical system than a dozen stories of saints who, after decapitation, wandered around with their heads in their arms. These are precisely the points of interest which Mr. Brewer has missed in his amorphous mass of marvels.

Nor has he possessed the insight to divine that a very large portion of the mediæval stories of wonders wrought by saints and relics and images are really, in their nature, merely apologues or parables—stories conveying, in a form to attract popular attention, some moral, often, it must be admitted, important only to the selfish interests of the ecclesiastics who invented them. In the tendencies of thought which ruled the Middle Ages, it was inevitable that popular instruction should assume this form. The 'Dialogues' of Cæsarius of Heisterbach are a mine of such teaching, and the 'Gesta Romanorum' and 'Legenda Aurea' grew up as the counterparts of the 'Hitopadesa,' the 'Panchatantra,' and 'Sindibad,' which filtered through so many channels into Western folk-lore.

There is another interesting phase of the subject, which Mr. Brewer has overlooked, illustrating the facility of belief which presented a temptation so irresistible to the fabricator of miracles. A very curious chapter in a philosophical work on this theme might be devoted to the saints who have failed of canonization—who had won the devotion of whole communities by working miracles, but who yet missed the Papal sanction, which, since the time of Saint Ulric of Augsburg, has been essential to the recognition of their claims to sanctity. Henry VI. of England, for instance, would have been enrolled in the calendar had not the Papal curia, seeing clearly the advantages thence accruing to the House of Lancaster, charged fees so heavy as to deter the English court from pushing the claim. In a different way, there is instruction from the case in which, about 1220, some Albigensian heretics caused the city of Leon to venerate for a year the bones of a criminal buried in a dunghill as those of a saint of authentic miraculous powers; and the illusion would have been permanent but for the self-devotion of an orthodox deacon who saw through the deception and exposed it at the risk of his life. The case of Guglielma la Boema of Milan, about the year 1300, is in point; but still more instructive is that of Armanno Pongilupo, who died at Ferrara in 1269 in the odor of sanctity, was buried in the cathedral, where many miracles were wrought at his tomb, and was venerated by both people and clergy as a saint of undoubted power for thirty years, until, after unceasing efforts, the Inquisition succeeded in proving that he had secretly been a heresiarch of the Paterins or Albigenses, when his bones were exhumed and burnt, and the altar and images erected in his honor were destroyed.

All these are matters for which we may vainly look in Mr. Brewer's book, yet it may possibly be of service if, by calling attention to the subject, it should lead some competent scholar to treat it in a manner which will show the evolution of belief in miracles, and the influence which that belief has had upon the successive stages of social organization.

RECENT NOVELS.

Lal. By William A. Hammond. D. Appleton & Co.

Jackanapes. By Juliana Horatia Ewing. With Illustrations by Randolph Caldecott. Boston: Roberts Brothers.

Stories by American Authors. Part IV. Charles Scribner's Sons.

Miss Ludington's Sister: a Romance of Immortality. By E. W. Bellamy. Boston: J. R. Osgood & Co.

A Fair Maid. By F. W. Robinson. Harper's Franklin Square Library.

The Baby's Grandmother. By L. B. Walford. [Leisure Hour Series.] Henry Holt & Co.

Le Secret de Berthe. Par Fortuné de Boisgobey. 2 vols. Paris: Dentu; New York: F. W. Christern.

Babiole. Par Fortuné de Boisgobey. 2 vols. Paris: Plon; New York: F. W. Christern.

Le Prince Zilah. Roman Parisien. Par Jules Claretie. Paris: Dentu; New York: F. W. Christern.

THOUGH "Lal" is the heroine of Dr. Hammond's novel, she has so small a part in the direct action of the story that we begin with the hero. John Tyscovus is a Pole of noble birth, a whi-

lom prisoner in Siberia for some student pranks, who has devoted his life to an abstruse work on "ethnology and sociology." Not finding success so easy as he had expected, he concludes that his nature requires a complete regeneration to fit it for his purpose. While considering "under a polar bearskin" how to accomplish this radical change, there appears to him, in the guise of an Aulic councillor, "Solitude" Zimmermann, who informs him that at the point where the meridian 105° 27′ 16″ west crosses the parallel of 37° 19′ 21″ north he will find "a spot all the features of which are in consonance with his spiritual needs." Accordingly he sets forth, and in due time finds that the two lines meet at the crazy old cabin of Jim Bosler, the worst rascal even in a community where a man had been killed every day for a month, the thirty-first being the eleventh victim of Jim's own cruelty. Bill Dodd's Cañon and Hellbender, each an extreme type of the wild lawlessness of border life, seem a queer neighborhood for scholarly seclusion, but the commands were absolute, so Tyscovus buys out Bosler and takes possession of the cabin at once. In the dead of the first night he receives a visit from the vigilance committee in search of Jim, who, luckily for himself, had departed with wife and daughter, this latter, of course, the heroine of the tale. Punishment if not justice overtakes him at last, but in the intervening month he makes the most of the chance to murder his wife and to sell his daughter for so much money down. Driven to confession, he owns that Lal is not his daughter, but that having killed his own child he had stolen her from an officer in a distant garrison, the poor mother dying of fright. This officer turns up at the right moment to own Lal, and to disclose that she is the daughter of a Polish mother, the Princess Lalage.

Tyscovus has seen her but three times, but his passion for her is so intense that it is "impossible, now that he knows that she is not the daughter of a horse-thief and a murderer, but of a gentleman, that his love for her could be strengthened." Of the girl herself, after her appropriation by her own father, when "all the resources of Hellbender in the way of dressmaking and millinery had been drawn upon for her adornment," the author thinks it necessary to say that "her hands and face were clean." A foreigner's ear might well be unconscious of the barbarous speech of the girl, but no reader can get over the shock of her first appearance—"an untidy and scantily-clad girl, . . . her hair in long frowsy masses over her naked shoulders. . . . A single garment, much the worse for dirt and wear, covered a portion of her body. . . . She had very much to learn and scarcely less to unlearn, but there was certainly no lack of mental potentiality." She steals from Tyscovus a vellum-covered copy of the life of one of his ancestors, and, finding there the story of a Saint Hedwiges, is so far civilized in a month's time that when Tyscovus declares his love she answers: "Onst I'd a' said yes, but now I knows what a ignorant and rough gal I am!" He tells her he perceived at the first she had "that power of self-examination without which no one can be either good or great, unless it is the negative goodness of the idiot or the unavoidable greatness of the sovereign."

Lal has had a rival, however—the doctor's daughter, who later becomes her stepmother. This lady is "mind personified." Her father, in open town-meeting, proposes her for a member of the Legislature. "The facial characteristics of Theodora Willis" are a mouth more beautiful than the Sistine Madonna's, and a nose more perfect than that of the Venus de Médicis. She has dissected everything "from man to insects," and now, in the wilds of Colorado, in "a well-equipped chemical, physical, and physiological laboratory," she has brought about what Tyscovus pronounces "the greatest event in connection with life that has ever occurred within the knowledge of man"—the development in a couple of black snakes "of a pair of well-defined legs, with feet and claws." Not to follow this fantastic rigmarole further, we may add that Lal has a hundred thousand left her by a Spanish lover, who is shot. She devotes it all to the education of poor girls in the Cañon, and comes East to be educated, while Tyscovus, having sold his Polish mines for a hundred thousand a year, builds a house on the site of Jim Bosler's cabin to receive her as his bride. Of his great work nothing more is said, though a political career seems opening to him. But all the tale of the elections, the first of which comes to naught through the trifling accident of the lynching of one of the candidates, Bosler's pal, must be left untouched.

We have permitted ourselves this lengthy sketch, for it is a case in which the reviewer must prefer to summon his readers to pass judgment upon the evidence rather than to give a verdict of his own. It would have been incredible beforehand that a mind trained to any scientific pursuit, or accustomed to the balancing of chances, could be so blind to probabilities, so bereft of the sense of proportion, not to add so devoid of taste. Perhaps it is as well that the extravagance should be so absurd, the failure so complete, in order that it may be a more impressive testimony to the truth of the oft-repeated assertion that fiction is as much an art to be studied as painting and sculpture. A tyro may write a dime novel, but nothing better.

'Jackanapes' is a most beautiful little story. Its literary art is as perfect as its moral lesson is ennobling. The skill and taste which framed for its humor and pathos so appropriate a setting will rarely be surpassed.

The fourth volume of "Stories by American Authors" falls no whit below its predecessors. The last of the six, 'Lost in a Fog,' is one of the best sketches that ever came from the Pacific coast. In a little nook south of the Farallones, "in a certain sort of dreamless sleep," lies San Ildefonso waiting for the courier that went fifty years ago to the Mission del Carmelo at Monterey. The cactus flag floats over it still, and the little church bell tinkles the morning angelus. Mr. Brooks has told his story and made no comment, but under all its quaint humor there lies a suggestion of an ever-recurring human experience—a lost chord, a lost bower, or a quiet haven, some vision of beauty or peace, the memory of which brightens a whole lifetime.

'Dissolving Views' is one of the best of that kind of story which finds its appropriate place in the society magazines, a lady's book for ladies. The author doubtless had herself in mind when she makes her heroine say, "Any book I wrote would inevitably be for women. The moment a man took it up he would drop it. I know a man drops a woman's book as if he had taken up a jelly-fish." Still, the story is quite worth while as a lively picture of a London season. A good deal of the talk is evidently borrowed, not made, and the diversions of the moment—Greek plays, cricket, æsthetic teas, and all the rest—are well set forth. The heroine is engaged to the wrong man, but marries the right one. The promise as to study of character of the opening chapters is hardly fulfilled, but the writer on occasion can catch and put on paper very deftly the spirit of a scene, that of "the Oban gathering," for instance. No loyal American will see in it any application to his own sea-side resorts. "The chiefs with pipers don't know the lairds without pipers. The lairds don't know the people who came in after the Forty-five, and whose ancestors are not mentioned in Johnson's 'Tour in the Hebrides.' The people who came in after the Forty five don't know the fellows like me, who rent shootings, and we don't know the tourists. We must draw the line somewhere. Just look! there's a tourist—a solicitor, I dare say—in the Macnab tartan. How contemptible!" It hardly needs to be added that the heroine went in the "tail" of a chief with a piper, and so had a right to know everybody, or nobody if she preferred it.

The story of 'Miss Ludington's Sister' divides into two parts as distinctly as if written by two different hands. The first has been deservedly praised for the vigor with which theories and hallucinations are treated as logically as if they were the most solid realities. Unfortunately, though the law of mechanics that the strength of a combination is only the strength of the weakest point, does not fully apply to literary work, it is inevitable that when the conclusion sinks to a plane far below the level of the beginning, it drags the latter down with it. At the outset the romance is based upon a definite thesis: our dead selves are not stepping-stones merely, but separate entities, as capable of independent existence as that last self which is freed of mortality at the end of the earthly life. With this is interwoven a vivid hallucination as to the possibility of the materialization of spirit, and up to the hour when the beautiful figure of Miss Ludington's lost youth appears upon the scene, the attention of the reader is so closely held that he never permits himself to think of the absurdities that lie each side the narrow path along which he is led so boldly. From that moment, however, all falls to pieces, or sinks to trite commonplaces. It does not help the failure to account for it by the necessity which the writer feels to explain all his story. The supernatural does not need explaining. The nerves believe in it if the reason does not. 'Rappacini's Daughter' is perhaps the finest example of perfectly fearless handling, in which the author never betrays an instant's question of the truth of his tale. So it never ceases to haunt us. But suppose the mystery unravelled by a theory of personal magnetism, of typhoid fever, or of cholera: where would be the fascination?

It is no answer to this criticism to say that Mr. Bellamy must work out a plot. The argument points the other way. The situation to which the first half of the book leads up is not compatible with the ordinary novel, for the conditions of the ordinary novel provide no way out of it that does not spoil it. It is all very well to put "romance" on the title-page, but beyond the point we have already mentioned the construction of the story is of the most conventional type. Even so, it has not been worked out with anything like sufficient care. The humbug need not have been so gross. Had the medium died outright, as she very well might, there would have been a gain in dignity. The letter in which the grief-stricken girl is supposed to tell her story is as well-balanced and minutely detailed a narrative as if intended for presentation to a jury. A half-dozen broken, despairing sentences to move at once the lover's heart and the reader's pity, were what was needed, and, moreover, were the only thing that would have been natural. We commend the reader to turn again to 'The Undiscovered Country' of Mr. Howells, and measure by contrast the careful, skilful use of many of the same elements which Mr. Bellamy has tried to combine. If nothing startles, if there is no daring flight, there is what is far better, a picture of life that, though darkened by shadows, and almost lost in the hidden ways of spiritual mysteries, is still the warm, throbbing life that we all of us live.

Wilkie Collins is the easy leader in the class of novels to which 'The Fair Maid' belongs. His last, 'I Say No,' was tame only as compared with its predecessors, and there was something original in the chase after a criminal through a whole book to find that after all there had been no crime. Mr. Robinson has likewise given a new turn to an old situation when he brings home the wandering son, not as a repentant prodigal but as the amateur detective tracking his own father. The threads of the plot are duly entangled, but the reader is rather balked of his expected excitement, apparently, by the reluctance of the author to make out anybody very bad. You cannot have genuine blood-curdling horror without guilt somewhere. "They're a queer lot in Goldingbury," said the critical young Mayson. It is far worse to be dull than queer in a novel.

Nothing can be less like Wilkie Collins than 'The Baby's Grandmother,' in the absence of incident. We can even understand the feeling that may call it tedious, for the movement is certainly slow almost to the last. But the very slowness is a part of the truth. English country life, or, to speak more exactly, the ordinary life of English country-houses, goes on in a soft, uneventful monotony, to which nothing in our society offers any parallel. We have comforts and we have luxuries, but they are associated with the press and hurry of the city or with the brilliancy of summer festivity. The combination of perfect household comfort with unbroken, boundless leisure might seem blissful rest to some Americans, but the most—certainly most women—would find it dull. This is not saying that the English themselves do not find it dull sometimes, but only that the slowness of this book is drawn from life. It may stand as an almost typical modern novel, the novel where neither scenery, costume, nor event is of any consequence except as it serves to complete or define the men and women of the story. Nor should these be of an exceptional sort, but every-day people in every-day life.

No one is more successful than Mrs. Walford in gathering together a dozen people and making them as interesting as our own friends. She has grouped this set about a beautiful woman, whose charm there can be no denying. It is her method to make people talk, and thereby show the development of character. This accounts for the length of the book in proportion to the number of incidents. To work out character and plot in such a way requires space and time. The situation to which all leads up is like several of Trollope's. How the author could work out of it anything like a happy issue was an anxious question while the story was running in *Blackwood*. It may be said that the knot is cut, not untied. Still, it is as true to human experience that death should sometimes make a way out as that it should often stop the path. There will be two sides taken as to whether Lady Matilda should have forgiven Challoner, yet that is only a proof of the reality of the creation, for life is seldom so convincing as to make all judgments agree. At least the author has shown great skill in enlisting the reader's sympathy. He, too, resents the assumptions of the Hanwells, and he feels that the punishment has been severe enough for the almost unconscious sin of too easy compliance with the sister's ambitious schemes. Mrs. Walford's work needs no praise for any one who knows 'Mr. Smith.' To her new readers this book is a better token of her powers than anything since that first. She not only succeeds in making her heroine worthy a man's despair: she makes in Teddy a perfectly new figure in fiction; and by that one trait of high-minded reticence which she bestows on poor Mary Tufnell, she wins for her what would have seemed impossible—our respect and our regret.

M. Boisgobey is at his best when he is secret, dark, and midnight, and in 'Babiole' he tells us the secret at the beginning: we see all the springs of action, and we find them wholly inadequate. Only a born fool could put himself into difficulty as the hero of 'Babiole' does, almost of malice prepense; and a born fool is not an interesting hero. The 'Secret de Berthe,' however, opens admirably with one of the most novel and ingenious situations in the whole realm of sensational fiction, as different as possible from the forced and ineffective opening of 'Babiole.' There is more character and more comedy in it than in any of the other of this author's many tales which it has been our fortune to read. Although M. Boisgobey is not quite the consummate artist in the construction of plots and in the weaving of mysteries that the late lamented Gaboriau was universally acknowledged to be, he generally avoids the great fault which Gaboriau as generally fell into—the presentation of the mystery to be solved, and then, when the reader was on the verge of discovering the clue, going back to the deluge to explain all the causes and circumstances which brought about the mystery with which the book opened. It is this error which makes so many of Gaboriau's books broken-backed. In the 'Secret de Berthe,' M. de Boisgobey manages to avoid it and to carry on the interest to the end, although he cannot maintain it at quite the same tension all the time. But there is a delightful duel, almost at the very end, and this is well worth waiting for.

American readers of 'Monsieur le Ministre,' and of 'Le Million' will be greatly disappointed in 'Le Prince Zilah,' which M. Jules Claretie has just published and which is almost altogether lacking in the qualities that made its predecessors acceptable. If the date, "Buda-Pest.—Maisons-Lafitte, 1880-1881," which M. Claretie puts at the end of the book had been put at the beginning, we should have been warned that the 'Prince Zilah,' although only just published, was written three or four years ago, and before the author discovered the value of his new method—the method which made 'Monsieur le Ministre' popular enough to sell more than 60,000 copies, and which made 'Noris' and 'Le Million' only a little less popular. Although we find now and again in 'Le Prince Zilah' the picturesque tableaux of Parisian life to which M. Claretie had accustomed us in the other novels, the story itself is unworthy of him. It is a story of the super-sentimental and hysterico-emotional order—much the sort of stuff we are accustomed to get from M. Octave Feuillet. There is an Hungarian Prince of high birth and great wealth, who marries a gypsy girl, but she has loved before not wisely but too well, and there is a parting and much sorrow and many tears, followed by a reconciliation, and then she dies in the odor of sanctity.

Day-Dawn in Dark Places: a Story of Wanderings and Work in Bechwanaland. By Rev. John Mackensie, British Resident Commissioner in Bechwanaland. Cassell & Co.

It is not a little strange that Mr. Mackensie, with such a story to deliver, should have kept it to himself so long. The experiences which he relates began in 1858 and ended in 1867; for, although he remained at Shoshong several years after the latter date, he gives only the most summary account of that period in his concluding chapter. When Mr. Mackensie went to South Africa in 1858 he was a young man, with a young wife. He had had no experience of missionary work, but it is evident that he possessed for it a very special fitness—not only for its offices of preaching and teaching, but for its ruder tasks, its various self-help and strange adventure. If he has more to say of lion-hunting and such things than of Bible-reading and preaching, it must not be inferred that the former were more to him than the latter. His book is written with an eye to popular effect, and not without the hope of enlisting the sympathy and awakening the interest of youthful readers. It is defective in its presentation of the geographical situation of the various tribes of which it speaks and their relation to each other, for which not even the aid of a map is furnished. Those who have read 'Ten Years North of the Orange River' will, no doubt, as he says in his preface, find themselves at home in his pages, but it was hardly wise to take for granted that all his readers had done so. The illustrations, finally, are not so closely related to the text as one could wish, and excite a grave suspicion that they were not prepared for this volume.

The earlier chapters deal for the most part with an expedition headed by Mr. Mackensie, which had for its objective point the country of the Makololo tribe, to which a missionary party had gone some months before, hoping to induce the tribe to migrate to the northern bank of the Zambese (a more healthy region), as an initial step toward their conversion to the Christian faith. The result was the finding of Mr. Price and two of Mr. Helmore's children, the only survivors of the original party, the others having perished at Linyanti by fever or poisoning. Mr. Price was on the way back, having reached the Zouga, and no attempt was made to carry out the Makololo scheme. Mr. Mackensie's work after his return was first among the Bamangwata, then for a little while among the Matabele; finally he settled down among the Bechwanas. The conversion of the sons of Sekhome, the chief at Shoshong, while Sekhome himself remained intractable, placed Mr. Mackensie in a most difficult and perilous position, but in the end proved him entirely equal to the situation. The differences of Sekhome and his sons soon came to open war, and in the end the missionary was the only person who succeeded in keeping his place in the midst of all the plots and counterplots. He secured the confidence of the people. He came to be recognized as their friend. Even the heart of Sekhome grew "white" to him as time went on. The narrative reaches its natural climax with the building of a mission church in 1867. The celebration of its opening with a roast ox, sour milk, and tea was a remarkable occasion. We read of one head man who got no ox or milk, but was fain to content himself with a camp-kettle of tea, of which he left not a drop. Several of the costumes worn by the natives on this occasion are described with some particularity. The most striking must have been that of the man whose only garment was an English "swallow-tail," close-buttoned to his chin. The closing chapter recounts the successes of the mission from 1867 down to the present time.

England and Canada. A Summer Tour between Old and New Westminster, with Historical Notes. By Sandford Fleming, C.E. Montreal: Dawson Brothers. 1884.

In the summer of 1883 Mr. Sandford Fleming was sent to examine the proposed route of the Canadian Pacific Railway through British Columbia. As he chanced to have just arrived in England when the summons to make the journey reached him, he takes advantage of this fact to devote the first part of his book to a description of his two voyages across the Atlantic and his doings in England, together with some

rather crude chapters on the history of Nova Scotia, the Hudson's Bay Company, and the settlement of the northwest. In fact, it is only when he gets to the foot of the Rocky Mountains that his story has any interest for the general reader. At the time of his visit the rails were laid as far as Calgary, 840 miles west of Winnipeg. From this point in a direct line the terminus of that part of the railway which has been built from the Pacific coast is about 300 miles distant, and three mountain ranges are to be crossed. The summit of the first, the Rocky Mountains, though the highest, was easily reached by a wagon road, but the descent by a horse trail was more difficult, and at times dangerous. The trail passes for six miles along a series of sheer precipices, "from five to eight hundred feet high, on a path from ten to fifteen inches wide, and at some points almost obliterated, with slopes above and below us so steep that a stone would roll into the torrent in the abyss below. There are no trees or branches or twigs which we can grip to aid us in our advance on the narrow, precarious footing." There was no serious mishap, however, either to men or horses, and the descent was safely made. The western slope of this part of the Rocky Mountain range is drained by the Columbia River, which is flanked upon the west by another range called the Selkirk, but little lower than that upon the east. This range, however, is still comparatively unknown, no exploring party, if we rightly understand Mr. Fleming's somewhat confused statements, having at this time crossed it from the east. The alternative was to go down the Columbia—a route which the railway may possibly take—seventy miles to the point where it abruptly changes its course to the south. From information given by one of the company's engineers in camp at this spot, Mr. Fleming hoped that it might be possible to cross the mountains by following up one of the numerous glacier-fed streams to its source, and determined at least to make the attempt. The climb proved difficult but practicable, even for horses. On the other side of the summit the head waters of the river Ille-celle-waet, a tributary of the Columbia, were struck, and the descent was safely made along its banks to the Columbia, which has at this place become a noble stream 1,200 feet wide. A third mountain range, the Gold range, still lay between the travellers and the Pacific coast. The difficulty of crossing this was increased by a scarcity of provisions, the supplies which should have been brought to this point having been cached at a place five days' journey to the west. The range was, however, crossed with the aid of an Indian guide, and all the adventurous part of Mr. Fleming's journey came to an end.

He is naturally very enthusiastic as to the magnificence of the scenery of British Columbia, going so far as to assert with respect to the Yosemite Valley, "that there are scores of places in the mountain zone to be made accessible by the Canadian Pacific equally as striking and marked by as much beauty." The country to the east of the mountains he considers to be more fertile than that through which the Northern Pacific runs. Mr. Fleming would have been wise had he confined himself to a description of the comparatively unknown country through which he passed. As it is, he gives us his opinion on a multitude of subjects, including the study of the classics, and indulges in digressions without number. We have not endeavored to verify the accuracy of his "historical notes," which have the appearance of being drawn from the nearest encyclopædia; but to quote from General Grant's "annual message of 1880" involves an obvious error and implies the possibility of others.

The Evolution of a Life, described in the Memoirs of Major Seth Eyland, late of the Mounted Rifles. S. W. Green's Son. 12mo, pp. 336.

MAJOR EYLAND'S story of his own life describes the career of a genuine Vermonter, shrewd but notional, energetic, and aspiring to something better than money, but with more of zeal than sweetness and light. With a restless Yankee readiness for anything promising, he tried art, law, war, journalism, and railroad organization. His reminiscences of the war and of his after-experiences in Texas are the most interesting. He saw a good deal of Butler's energetic administration in camp and indolence in the field, and he describes the bloody but little-known battle of Darbytown, in October, 1864, when Lee strove hard, though unsuccessfully, to drive the Army of the James back across the river, and relieve Richmond from so dangerous a neighbor. There does not seem to have been much manœuvring, but the carnage from the repeating rifles was frightful, notwithstanding the care with which the Confederates intrenched even their skirmish line, with a caution which our commanders made too little attempt to imitate. Of Stonewall Jackson, Major Eyland tells several anecdotes, and among them one of his sending off a small detachment at the battle of Chancellorsville to make what looked like a foolhardy night attack on the Federal force at United States Ford. The Confederate colonel in command objected, but Jackson snapped his fingers and threatened to send some one else, and the attack was made. It was not until long afterwards that the colonel learned from the United States officer who had been opposed to him that the attack had prevented the corps (apparently Reynolds's) from crossing in time to take part in the next day's decisive battle, by making them think that Jackson's line reached round to the ford in front of them.

There is little else that deserves remark in this book, unless we except what is at least a well-invented story of a fellow-Vermonter. Jim Fisk once received by telegraph the details of a dangerous bill introduced in one of the State Legislatures. He telegraphed in reply to his informant to come on at once, received him at his sumptuous quarters at the Grand Opera-house, and inquired if his visitor could kill the bill. The Judge thought he might. Fisk drew a check for $5,000. The Judge agreed to do what he could for so small an amount, but never took checks. Fisk smiled and got the cash, which the Judge pocketed and shook hands to go, when Fisk suddenly asked, "By the way, who is the author of that bill?" The Judge replied, without hesitation, "I am." "Oh!" said Fisk, with a beaming look of admiration, "I thought so. Good day."

Mrs. Lincoln's Boston Cook-Book. By Mrs. D. A. Lincoln. Boston: Roberts Brothers.

IN answer to the question, "What does cookery mean?" Mr. Ruskin says: "It means the knowledge of Circe and Medea, and of Calypso and of Helen, and of Rebekah and of all the Queens of Sheba. It means knowledge of all fruits and balms and spices, and of all that is healing and sweet in fields and groves, and savory to meals; it means carefulness and inventiveness and readiness of appliances; it means the economy of your great grandmothers and the science of modern chemistry; it means much tasting and no wasting; it means English thoroughness and French art and American hospitality." It is not extravagant to say that, as far as these mythological, Biblical, and practical requirements can be met by one weak woman they are met by Mrs. Lincoln. And to the varied and extensive range of knowledge she adds an acquaintance with Milton and with Confucius, as shown by the apt quotations on her title-page. The book is intended to satisfy the needs and wants of the experienced housekeeper, of the tyro, and of the teacher in a cooking school. In its receipts, in its tables of time and proportion, in its clear and minute directions about every detail of the kitchen and dining-room, it has left unanswered few questions which may suggest themselves to the most or the least intelligent. The omission of a set of bills of fare, or of tables of combinations suited to the seasons and the markets, seems to us the only serious imperfection. Many women not lacking in ingenuity are driven almost distracted by the effort to make daily combinations which by their novelty shall tickle the family palate, and so keep the family temper in good condition. Valuable hints on this point, however, are scattered throughout. On the whole, the woman who has merely to superintend servants, or the woman upon whom the burden of domestic duty chiefly falls, cannot do better than buy the book and study it, from the first line of the preface to the last line of the short essays which give "all the chemical and physiological information that is necessary for a clear understanding of the laws of health, so far as they are involved in the science of cooking."

The Isle of Wight: Its History, Topography and Antiquities. With notes, etc. By W. H. Davenport Adams. London and New York: T. Nelson & Sons.

THIS convenient hand-book, to one of the most lovely districts of England, belongs among those exhaustive local commentaries which the limited space and indefatigable antiquarianism involved make so characteristic of English guide-book literature. The Isle of Wight is especially attractive to Americans who love England and need a mild and equal temperature and tranquil surroundings; and for all such to whom its relaxing climate is no objection, there is no part of the motherland so delightful unless it be South Devonshire, which is so far removed from the centre of English civilization as to be hardly considered with the Isle of Wight in respect to desirability for more or less permanent residence. The old churches and manor houses of the island are of great architectural interest, and the scenery, if not striking, is full of that peculiar rural charm which is the most English of all English topical characteristics. Of the hand-book it is only necessary to say that nothing that can interest the American visitor is omitted, 319 octavo pages being devoted to this insular satellite, whose dimensions are 22½x13 miles—hardly enough to give a good day's walk in one direction.

BOOKS OF THE WEEK.

Johns Hopkins University,

BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

THE BUREAU OF REVISION EDITS authors' MSS. for the press. Compilations made for publishers. Dr. TITUS M. COAN, 110 E. 56th St., N. Y

THE LOMBARD INVESTMENT COMpany, 13 Sears Building, Boston, Mass., offers to trustees, guardians, and conservative investors, Western Farm and City Mortgages, in denominations of $200 to $10,000, completed for sale and delivery, yielding 6 per cent. interest, payable semi-annually. The collection of principal and prompt payment of interest guaranteed. These loans are carefully selected by the Company's Vice-President and Western Manager, resident in the West, who has loaned to the eminent satisfaction of over 2,000 investors more than $6,000,000, mostly for parties occupying fiducial positions, Savings Banks, Insurance and Trust Companies.
Being based on actual values, free from speculative influences and the fluctuations of the stock market, they are particularly recommended to investors with whom *safety* is the first consideration.

Le Français.

REVUE MENSUELLE DE GRAMMAIRE ET DE LITTÉRATURE.

THE FIRST NUMBER OF THE FIFTH YEAR WILL BE READY SEPT. 15.

All communications should be directed to the editor, JULES LÉVY, Lock Box 3, Roxbury, Mass.
Specimen copies sent *free* on application until September 15.

WHAT THE NATION SAYS:

"*Le Français*, published monthly at Roxbury, Mass., by M. Jules Lévy, is by all odds the best educational French journal ever attempted in this country. We cannot too strongly recommend it as an adjunct wherever French is taught. Not less than one copy should be taken in every school having classes in the language. *Le Français* will not only assist in mastering idioms and pronunciation, but, thanks to the editor's cultivated sense for selection, in forming the taste of the learner."

THE SECOND COMING OF CHRIST at hand.—We live in those days wherein the Lord will gather His Israel out of both Jew and Christian Churches, that their spirit, soul, and body may be preserved blameless to receive the Lord at His coming. Rom. ix, 4; Isa. xi, 11, 12; Rev. vii, 4; Rom. viii, 29; Rev. xiv, 1; 1 Thess. v, 20, 21, 23; 1 Cor. xv, 52, 53; Phil. iii, 21; Mark xiii, 20; Math. xxiv, 14; Rom. viii, 11, 22, 23; Rev. xxi, 1, 4, 5; John xiv, 16, 17: 26. Further information can be obtained in two different books at 12 cents each. Mention this paper. Address J. WIELE, 143 N. Sixth St., Brooklyn, N. Y.

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, post-paid, on receipt of price.
HENRY HOLT & CO., New York.

Valuable Text Books FOR Schools and Colleges.

AN ELEMENTARY TREATISE ON Analytic Geometry, embracing Plane Geometry and an introduction to Geometry of Three Dimensions. By Edward A. Bowser, Prof. in Rutger's College, New Brunswick, N. J. 12mo, cloth, $1.75.

AN ELEMENTARY TREATISE ON the Differential and Integral Calculus. With numerous examples. By Edward A. Bowser, author of Treatise on Analytic Geometry. 12mo, cloth, $2.25.

AN ELEMENTARY TREATISE ON Analytic Mechanics. With numerous examples. By Prof. E. A. Bowser. 12mo, $3.00.

A TEXT BOOK OF MECHANICAL Drawing, for the use of mechanics and schools. With illustrations for drawing plans, sections, and Elevations of buildings and machinery; an introduction to isometrical drawing, and an essay on linear perspective and shadows. With over 200 diagrams on steel. By William Minifie, architect. With an appendix on the Theory and Application of Colors. Ninth edition. Royal 8vo, cloth, $4.00.

MINIFIE'S GEOMETRICAL DRAWing. Abridged from the octavo edition, for the use of schools. Illustrated with 48 steel plates. New edition, enlarged, 12mo, cloth, $2.00.

A MANUAL OF THEORETICAL MEchanics. By Julius Weisbach, Ph. D. Translated by Eckley B. Coxe, A. M., Mining Engineer, 1,100 pages and 902 wood-cut illustrations. Fourth edition, revised, 8vo, cloth, $10.00.

PLATTNER'S MANUAL OF QUALItative and Quantitative Analysis with the Blow-Pipe. By Prof. Th. Richter. Translated by Prof. H. B. Cornwall; assisted by John H. Caswell. With eighty-seven wood-cuts and lithographic plate. Third edition, revised, 568 pages, 8vo, cloth, $5.00.

THE BLOW-PIPE: A Guide to its use in the determination of salts and minerals. Compiled from various sources by George W. Plympton, C. E., A. M., Prof. in the Polytechnic Institute, Brooklyn, N. Y. 12mo, cloth, $1.50.

INTRODUCTION TO CHEMICAL PHYsics. Designed for the use of academies, colleges, and high schools. By Thomas Ruggles Pynchon, M. A., President of Trinity College, Hartford. New edition, revised and enlarged, crown, 8vo, cloth $3.00.

A COMPENDIOUS MANUAL OF QUAlitative Chemical Analysis. By Charles W. Eliot and Frank H. Storer. Revised, with the coöperation of the authors, by William Ripley Nichols, Professor of Chemistry in the Massachusetts Institute of Technology. New Edition. Revised. 12mo, Illustrated, cloth, $1.50.

EXPERIMENTAL ORGANIC CHEMIStry. For Students. By H. Chapman Jones. 16mo, cloth, $1.00.

OUTLINES OF PROXIMATE ORGANIC Analysis, for the Identification, Separation, and Quantitative Determination of the more commonly occurring Organic Compounds. By Albert B. Prescott, Prof. in the University of Mich. 12mo, cloth $1.75.

A GUIDE IN THE PRACTICAL STUDY of Chemistry and in the Work of Analysis. By Silas H. Douglas, M.A., and Albert B. Prescott, M.D. Third Edition. Wholly Revised. With a Study of Oxidization and Reduction. By Otis Coe Johnson, M.A. 8vo, cloth, $3.50.

A PRACTICAL TREATISE ON CHEMIStry (Qualitative and Quantitative Analysis), Stoichiometry, Blow-pipe Analysis, Mineralogy, Assaying, Pharmaceutical Preparations, Human Secretions, Specific Gravities, Weights and Measures, etc., etc. By Henry A. Mott, Jr., E.M., Ph.D. 8vo, 650 pages, cloth, $6.00.

AN INTRODUCTION TO QUALITAtive Chemical Analysis. By F. Beilstein. Third Edition. Translated by I. J. Osbun. 12mo, cloth, 75c.

MANUAL OF INTRODUCTORY CHEmical Practice, for the Use of Students in Colleges and Normal and High schools. By Prof. Geo. C. Caldwell and A. A. Breneman, of Cornell University. Second Edition. Revised and Corrected. 8vo, cloth, 188 pages, illustrated. $1.50.

FIRST BOOK IN QUALITATIVE CHEmistry. By Albert B. Prescott, Prof. in Univ. of Michigan. 12mo, cloth, $1.50.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 4, 1884.

The Week.

We find in the Boston *Advertiser* a very interesting letter from Vermont concerning Senator Edmunds and his attitude toward the Presidential campaign. The Republicans of the State are showing no enthusiasm for Blaine and Logan, and the reason given for their coolness is part of political history. In 1876 the State sent a Blaine delegation to Cincinnati. After it arrived on the ground, Judge Poland turned it around so that it did not vote for Blaine. After he had returned home, the Judge gave an explanation of his conduct which was pronounced satisfactory by his constituents. It is noticeable that in the present canvass the Judge is "indisposed" and is taking no part. In 1880 there was danger of another Blaine delegation being chosen, and to ward it off Senator Edmunds wrote a letter to be shown privately to the party leaders, in which he is said, by many who read it, to have used words like the following: "Whenever Thurman and I have joined hands against Jay Gould and fellows of that sort in the Senate, James G. Blaine has invariably started up from behind Gould's breastworks, musket in hand." The names of two men are published who vouch for these words as being in spirit and substance those contained in the letter, and though some of the Blaine papers have denied that the Senator ever wrote such a letter, it is noticeable that he has made no denial.

When the campaign opened this year, the attention of all Vermont Republicans was directed to Mr. Edmunds to see what course he would follow. Besides this letter of 1880, he had so often in conversation expressed his opinion of Blaine, as a man unfit to be President, that nearly every Republican voter in the State was aware of it. When the party leaders called upon him and asked him to do something, he said that his health was poor, that if he once began to speak, he would have a great number of applications, and he did not wish to undertake the burden. He gave the Committee a check of $200, and plunged into his law business. The demands from the voters to hear from him became so imperative that the managers waited upon him again and begged for just one speech. He declined. Then they asked for a letter commending Blaine and Logan, and he refused to write it, saying that after what he had said and written of Mr. Blaine he could not say anything in his behalf without crossing his own record; that he still believed all that he had ever said; and that he now preferred to keep still. But the demands continued to increase in volume, and the managers became so alarmed that they went again and begged him to preside at a mass meeting. He reluctantly consented, and the fact of his promised appearance was telegraphed far and wide, and the Associated Press gave orders to have every word sent to all parts of the country. He did preside, but made a very brief speech, putting into it some words of sympathy for the "kickers," but not one word for Blaine and Logan. The effect was not at all stimu lating to the spiritless Blaine canvass, and the managers are convinced that they would have been wiser to let the Senator alone.

Senator Sherman has "opened fire" for Blaine in the Ohio campaign in a speech which fills about four ordinary newspaper columns. We have read it with considerable interest in the hope of finding there what we have searched for in vain in all other quarters—some good, sound reason for voting for Blaine and Logan; but we have been disappointed. The first column is entirely occupied with a very commonplace summary of the virtues of the grand old Republican party, together with a list of its triumphs from the abolition of slavery down to the resumption of specie payments. Then follows in a brief space a dreadful picture of the irredeemable badness of the Democratic party. Then follows more than a column about the blessings of the protective tariff, and the need of keeping the Republican party in power in order to preserve them. Then there is a passage, which the Senator ought to be ashamed of, calling attention to the "liberal pension" policy of the Republican party. There is no mention in this of his own action in refusing to support in the Senate one of the most outrageous of these "liberal pension" schemes, or of his publicly spurning the plank of the national Republican platform which approves the same scheme.

Away down at the end of the Senator's speech we find the following reference to the candidate in whose support he was speaking:

"Our candidate for President is a man of the most brilliant qualities, who has been several times Speaker of the House of Representatives, once a Senator and Secretary of State, and has been conspicuous in every position occupied by him. I have known him during all the years of his public service, and I believe him to be an able and honest and true Republican, faithful to the principles of our party, with a mind of the highest order, with experience and executive capacity to perform with great credit the high duties of the great office of Chief Magistrate of the Republic. Such is my opinion of James G. Blaine. I shall vote for him as the chosen representative of the Republican party, fairly nominated by public opinion in the Republican States, and by delegates who fairly represented the opinion of their constituents."

That is all there is about Blaine in the whole speech. There is no allusion either to the bad spots in his record, or to those feats of statesmanship in which his advocates are said to take such pride. Being a shrewd man, and having had the benefit of the experience of Messrs. Hawley and Hoar, the Senator has adopted the only safe course for a Blaine orator to follow, namely, to attempt no defence of his candidate's public record. He gives Mr. Blaine as handsome a certificate of character as he can, says that in his opinion he is an honest Republican, and lets it go at that. Was there ever a campaign before when the advocates of a candidate felt called upon, one and all, to vouch for his personal honesty?

Mr. Thaddeus C. Pound, an ex-Republican Congressman of Wisconsin, who has been an honored leader of his party in that State for many years, declines to support Mr. Blaine, and he gives his reasons for his course in language which everybody can understand. "Mr. Blaine," he says, "in my opinion embodies most in American politics that is menacing to public morals and integrity in government. With a long public career, mainly distinguished by a *sort of declamatory and pugilistic statecraft*, he is not the inspiration of a single valuable policy or the author of an important statute; but on the contrary has often suggested and supported unwise and bad, and opposed good, legislation." That is the whole of Mr. Blaine's record, aside from the Mulligan letters. "Declamatory and pugilistic statecraft" is as happy a definition of Blaineism as has ever been given.

Mr. S. M. Taylor sends to the *Tribune* a letter, which he says he sent first to the *Times*, asking this question: "Will you please inform me in what records I can find the proof that Mr. Blaine never bought any of those bonds, but received $100,000 of them and $15,000 in cash commissions for loading up his friends, etc.?" He adds that the *Times* made no response of any kind, and he infers that it had not the proof demanded. We cannot understand the silence of the *Times* on any other ground than its failure to receive the letter, for certainly the proof desired is easily furnished. Mr. Warren Fisher testified before the Investigating Committee that he never "sold to James G. Blaine any bonds of the Little Rock and Fort Smith Railroad"; that the bonds he gave Mr. Blaine were for other parties, and the sale of them was negotiated through Mr. Blaine. Subsequently Mr. Mulligan, Fisher's bookkeeper, produced Fisher's account with Mr. Blaine, together with the contract under which Blaine was acting, and showed by entries in a memorandum book the cash amounts which Blaine had received as commissions. It was shown beyond question that Mr. Blaine had received more than $100,000 worth of bonds and $15,150 in money as a reward for his services. The text of this contract with Fisher has been frequently published in full, for example in the *Evening Post* of Sept. 1, in Mr. Schurz's response to Senator Hoar's defence.

When the schedule of assets and liabilities of Jay Cooke & Co. in bankruptcy was published, Mr. James G. Blaine figured as a debtor to the amount of $33,333 33, which was secured by mortgage on real estate in Washington, dated April 4, 1870. This was an odd sum of money, and it is very odd that it should coincide with another sum, derivable from Mr. Blaine's transaction in Northern Pacific

stock with Warren Fisher, jr. One of the documents which Mr. Blaine got away from Mulligan on promise of returning them, and which were subsequently dragged out of him, was a memorandum printed as "Exhibit I" on page 3608 of the *Congressional Record* (June 6, 1876). This memorandum, which refers to the Northern Pacific interest, has the following entry in the first line: "Cost of ⅛ of 1 share $466,667 is—$58,333." If the division were carried out to cents, the amount would be $58,333 33. Mr. Blaine sold this one-eighth of one share to Fisher for $25,000, but afterward took it back. If we subtract this sum from $58,333 33, we have for remainder $33,333 33, which is the amount of the indebtedness of Blaine to Jay Cooke & Co., as shown in the schedule of the bankrupt estate. The connection between the two amounts we do not undertake to trace, but the coincidence is very remarkable, especially when examined in the light of Mr. Blaine's statement to Fisher, that he (Blaine) "could not touch it."

It is curious but not surprising to see the way in which "supporting Blaine" affects the character in the matter of truthfulness and candor. A real Blaine man—that is, one who admires the candidate—can hardly help lying, out of unconscious imitation, and a hypocritical Blaine man, who supports him "for the sake of the party," finds himself involved in so many moral tangles that he has to lie in order to extricate himself. A striking illustration of the weaknesses of the first of these varieties appeared in the *Tribune* of Saturday. The greatest difficulty this class has to contend with is the difficulty of quoting correctly. It is like the effort of an old toper to pass a liquor store without going in. The *Evening Post* had said some time ago that "Cleveland's virtues are those which bind human society together." The *Tribune* quotes this as, "his sins are of the sort that bind society together." We must not, however, be too hard on a Blaine writer who does this sort of thing. Blaine writers are doing it all over the country so generally that one can hardly help feeling that it is done in obedience to a law of their being. Asking why they do it is like asking why a horse loves clover.

General Butler's endeavors to draw the proper distinction between a rich man and a "capitalist" in his Saturday evening speech, so that he should not fall into the latter category, and thus disqualify himself as the candidate of the "anti-monopolists," were almost pathetic. "By capitalist," he says, "I mean a man who, having inherited or acquired large wealth, lives on the interest of it, or dividends or profit accruing from its use, without doing anything himself to use it in production." The despicable character thus described, he adds, "sometimes permits his capital to aid in production, but never unless he means to absorb the largest portion of the profits thereof for his own selfish purposes." The ideal capitalist is evidently one who establishes a bunting factory under a protective duty of one hundred per cent., or a house-owner who does not absorb the proceeds of his rents for his own selfish purposes. Butler is a house-owner and a bunting producer on a large scale. We have never heard of his setting aside the resulting income from either source of profit and applying it to the general use of mankind; but since his definition of a good rich man as distinguished from a guilty capitalist was cheering to Mr. John Swinton, we cannot see that Mr. Vanderbilt or Mr. Astor stands in any immediate danger from a communistic outbreak.

Some time since the Boston *Herald* called the attention of President Arthur to the fact that Clapp, "a duly commissioned extortioner of the Republican National Committee," was assuming to have it in his power to punish Government employees for refusing to contribute to a political fund. Clapp's "organ," the *Evening Critic*, of Washington, contained last Saturday a most cheerful account of the activity of the Finance Committee's "receiving clerk," caused by the liberality of the Department officials, and a vehement assault upon Mr. Curtis for having committed "such a preposterous piece of asinine mendacity and stupidity" as to distribute circulars meant "to intimidate the clerks from contributing." Clapp is represented as saying to the reporter who witnessed the rush of the "receiving clerk" and the rage of the Chairman, in reply to the query, "What effect will the Curtis circular have upon the contributions of the Federal officials?" "None whatever, except with those who seek a pretext for non-contributions, for the reason that they are indisposed to contribute from the start, and there are but few of that class, and they are mainly Democrats who have been appointed under a spirit of tolerance, and who should be rooted out for their ingratitude and disloyalty to the party that is putting daily bread into their mouths."

The new civil-service regulations for this city went into force on Saturday. They are novel and important inasmuch as, unlike the regulations of last year, they apply to the Police, Fire, Law, and Health Departments, which last year were exempted. In fact, they apply to all officers of the city government except those elected by the people, and their subordinates for whose errors or violations of duty they are financially responsible, the officers of the Board of Education, and any subordinate officer who by virtue of his office has the personal custody of the public moneys or public securities, for the safe keeping of which the head of the office is under official bonds. Moreover, the application of the old rules was left optional with the Mayor, while these are obligatory. It must be said for Mayor Edson, however, that he did not wait for compulsion before bringing the city under the State civil-service law. He acted promptly in the matter, as soon as the power was given him, and brought every department of the city government which he was permitted to bring under the operation of the new rules. As matters now stand, nobody can obtain a place under the city government, with the exceptions above noted, without proving himself one of the best three answerers under a competitive examination open to everybody who can show that he is a citizen of the United States and a person of good character. The examination in all cases is to be such as will fairly test the relative capacity and fitness of the persons examined to discharge the duties of the service to which they seek to be appointed. For most of the subordinate positions in the departments the subjects of examination are handwriting, writing from dictation, elementary arithmetic, summary writing, and information relating to the city of New York. Persons who choose may, in addition to this, offer themselves for examination on subjects likely to fit them for special positions, such as higher arithmetic, letter-writing, book-keeping, expert penmanship, shorthand, and type-writing.

The regulations applicable to the Police and Fire Departments are perhaps the most important of all. It is true that both these departments had already pretty good rules both for admission and promotion, and in the Fire Department they have been fairly carried out. Of the Police Department, as most of our readers now know, the same thing cannot be said. Politics has had too much to do with both the discipline and organization of the force. Hereafter politicians will not control either. No man will be able to enter it without passing an examination, both physical and educational, before examiners appointed by the Mayor, who will be in their turn supervised by an Advisory Board of citizens, appointed also by the Mayor, so that no commissioner will have any power to "let down the bars" for him in any way whatever. Mayor Edson and the city are to be heartily congratulated on the initiation of this great reform. If supported by the Mayor to be elected in January, it will be the greatest step toward good government ever made in this city, and will have effects, too, on local politics and education which will be far-reaching as well as beneficial.

The performances of the striking miners in Ohio do not give one a cheerful view of the condition either of the laborer or of the laborer's mind in that part of the country. They are now in arms defying the power of the State, and have committed at least one cowardly murder. And this is not the first outbreak of this kind, or the second either. They all clearly show profound discontent among the laboring classes. We would respectfully ask, therefore, why the model tariff so often described in party platforms was not passed by the Republicans during the many years they were in possession of Congress. Why, for instance, did they not years ago levy duties in such manner "as to afford security to our diversified industries and protection to the rights and wages of the laborer, to the end that active and intelligent labor, as well as capital, may have its just reward, and the laboring man his full share in the national prosperity"? The party has been promising this kind of tariff for nearly twenty years, but somehow has neglected to produce it. And yet if produced it would confer a greater benefit on the civilized world than anything that has occurred since the birth of Christianity. If it was adopted in America, of course all the

other nations would copy it, and thus the most serious problem of modern society would be solved. Then indeed would the words of the Protectionist hymn have real force and meaning in them:

"Protection, oh, Protection,
The joyful sound proclaim,
Till each remotest nation
Hath learned the Tariff's name."

"A Kentucky woman" writes to the Governor, suggesting some very drastic remedies for the present overcrowding of the prisons of that State. In the first place she would pardon everybody now in jail under sentence for "killing, wounding, or assaulting any other man in defence of the honor of his family." Then she would change the law so as to give every man the "legal right, under license, if you will, and bond, only to use in self defence or defence of those under his protection, to carry such weapons as may be necessary for the purpose in view." This done, she would pardon out all defaulters, forgers, and petty-larceny people on condition that they would leave the State. This would leave, however, a small remnant of indescribable persons who, she says, "are not entitled to the name of men, nor to the mercy of either God or man." This unfortunate class she would allow to "howl out the rest of their miserable existence." With all deference, however, we think the establishment of killing licenses unnecessary. Every man in Kentucky now carries arms and kills at discretion, at the risk of occasional confinement in jail. All the license would do for him would be to release him from this risk, which, small as it may be, does give innocent and inoffensive people some little protection. Armed with a killing license, any bloodthirsty ruffian could go about with a worthless wife or sister, and slay for insulting her anybody he did not like, though it were a man who had never gazed on her except with loathing. At this distance from Kentucky, we do not hesitate to say that this gentle lady's plan would not work, or would be attended, if she prefers the phrase, with great inconvenience.

The passengers who have protested against the use of the library in the *City of Rome* steamer for smoking and gambling, will have the sympathy of those who know to what an extent gambling goes on in nearly all the steamers, and the amount of fleecing of young men starting for Europe by professionals, which is successfully concealed, owing to the shame of the victims. For the surrender of the library to card playing and smoking there can be no excuse as long as there is a pretence of having such a thing as a library on board. No lady likes to enter a room crowded with card-players and filled with tobacco smoke for any purpose, and especially for one which takes time, like the choice of a book, or the search for one.

The recent sinking of the *Tallapoosa* has prompted Commander Gorringe to give to the public some important considerations on the subject of collisions at sea. In his view the rules now in force for avoiding collision are primarily responsible for most of the disasters of this kind which occur. These rules give directions to be followed in certain prescribed "situations," seven in number, which are assumed to be all the situations that two vessels can get into in any state of weather. Commander Gorringe says that most of the collisions which happen at sea are caused by the endeavors of captains to get into one of these situations, so that they may know how to act according to law. As there are always two captains manœuvring to get into a "situation," each ignorant of the other's intention, the chances of collision are multiplied. The prescribed system for placing the lights is faulty, since a ship's course may be changed as much as sixty degrees before it is seen by the other ship. These are technical matters which only nautical men can properly comprehend. We trust that Commander Gorringe's letter may have the effect of bringing on a general discussion of the subject by those who are competent to take part in it.

If the destruction of Chinese ships and stores at Foo-Choo be not exaggerated, it will probably have a serious effect on the politics of the Empire, by the discouragement it will give to the party of progress. The failure of the European armaments to make any fair return for the money spent on them will probably strengthen the conservative and reactionary faction at Pekin. Not that the ships and gunboats destroyed are particularly valuable, but they were foreign and new-fangled. The great difficulty with the Chinese, as with all Oriental powers to-day, is want of officers. There is not one which does not possess excellent material for the rank and file, but the class from which good officers can be drawn seems to be extinct all over the Eastern world—in Turkey, in Persia, in the Indian States, and in China and Morocco.

What the French have gained from the peaceful dissolution of the Constitutional Congress is really simply the consciousness that they can have a Constitutional Congress when they please without danger to the Government—a luxury they have never enjoyed before. In spite of the violence which marked some of the proceedings, the majority adhered faithfully to the Ministerial programme, and did nothing but bring the mode of electing the Senate within the domain of ordinary legislation, and declare the princes of various houses incapable of holding any office, civil or military. The Republic is clearly the stronger for the convention. Moreover, it is becoming plain that it is taking hold of French imagination as the only possible government. The chiefs of the old monarchist parties are gradually disappearing. All the Bonapartists of note are gone; the Royalists of note are nearly gone, and France is in the hands of absolutely new and plain men, and the public is getting used to be governed by plain men in black coats.

The Czar's long-expected visit to Warsaw, which some weeks ago was asserted to have been given up in consequence of the discovery of the Bardovski plot, is now again announced as soon to take place. The most extraordinary precautions are being taken all along the route to be traversed through Poland, to guard against an attempt on his life. That such an attempt was matured in Warsaw by the Russian official Bardovski has been generally believed, as well as that his fellow-conspirators were chiefly, if not exclusively, Russian Nihilists. But the semi-official *Journal de Saint-Pétersbourg* asserts that the thirty-six persons arrested as conspirators were almost all Polish Catholics or Jews. The Nihilists, however, are now again showing signs of considerable activity, and arrests of conspirators, male and female, civil and military, are of daily occurrence. That Degayeff, the murderer of Lieutenant-Colonel Sudeikin, the chief of the St. Petersburg gendarmerie, has been caught, is probably only a rumor unofficially circulated by the police; but the girl Maria Kalinskaya, who a few days ago fired a revolver at Colonel Katanski, chief of the gendarmerie in Odessa, was seized by her intended victim. A late explosion in Kazan, which destroyed many buildings and more lives, is also attributed to Nihilist plottings, and it is not improbable that some of the renewed attacks on Jews proceed from the same source, with a view to forcing the loyal but superstitious and impetuous peasantry into serious collisions with the soldiery. In every such riot the protection of the civil authorities and police proves powerless, as in the Kunawino suburb of Nizhni-Novgorod in June last, more recently at Yekaterinoslav, where the Jews fiercely defended themselves, and last week in the Lithuanian town of Dubrovitza.

Mr. Arthur T. Hadley has contributed two papers to the *Railroad Gazette* on "Railroad Legislation in Italy," setting forth in detail the steps taken by the Government of that country to determine the advantages and disadvantages of state management, as opposed to private management, of railways. The investigation was begun in 1878. It was continued during three successive ministries, and embraced every branch of the railroad problem. It ended in the conclusion that state management is more expensive and less satisfactory to the public than private management, and in the recommendation that the policy of absorption by the state of railways under private or corporate management be abandoned, and that all the state railways be leased at fixed rentals, or placed under corporate management with participation of earnings. But abandonment of management and operation does not imply abandonment of control. The bill in which the new policy and its details of execution are embodied is now under discussion in the Italian Parliament, and it is likely to pass. Charges for transportation cannot be increased above the present rates. They may be reduced in certain cases, and must be reduced if the earnings exceed a certain figure. Substantially the Government has adopted the English railway system of private ownership under public supervision, exercised through a permanent commission. This is also the Massachusetts system, and is the one which has given the best results in this country. The only differences are such as arise from the fact that Italy is encumbered by an ownership and an investment of capital from which she must derive a portion of her income. Her decision to divest herself of the encumbrance as far as possible is an epoch in her career as a free government.

SUMMARY OF THE WEEK'S NEWS.

[Wednesday, August 27, to Tuesday, September 2, 1884, inclusive.]

DOMESTIC.

President Arthur was present on Wednesday, Thursday, and Friday at the manœuvres of the North Atlantic Squadron at Newport.

During the month of August the public debt reduction was $8,542,852 26.

Ex-Senator S. C. Pomeroy, who was nominated for President at the Convention of the American Prohibition party (anti-secret) held in Chicago on June 20 and 21, will withdraw in favor of St. John, the regular Prohibition candidate.

Governor Waller was on Tuesday renominated by the Connecticut Democrats. Moody Currier was on the same day nominated for Governor by the Republicans of New Hampshire.

Colonel W. L. Utley has been nominated for Governor by the Wisconsin Greenbackers and Anti-Monopolists.

The Iowa Greenbackers completed the Greenback-Democratic fusion in that State on Thursday, so far as they are concerned, by nominating six of the thirteen electors and two candidates on the State ticket.

The Prohibitionists of Michigan on Wednesday put a full ticket in nomination, headed by David Preston, of Detroit, for Governor. Mr. Preston is the head of the banking house bearing his name in Detroit. He is one of the most prominent laymen connected with the Methodist Church in Michigan. The Nebraska Republicans nominated their State ticket on Wednesday, with J. W. Dawes (renominated) for Governor. The Anti-Monopoly-Greenback-Labor party of Illinois nominated a full State ticket, with Jesse Harper for Governor.

Reports received from all parts of Virginia indicate that the revolt of the Cameron faction against Mahone is widespread. Governor Cameron and Riddleberger have been quietly operating for the overthrow of Mahone for months past, and they now feel encouraged to hope that these efforts are about to be successful. Governor Cameron is young, ambitious, and just now highly indignant at Mahone's machine methods.

The Independents of New Jersey organized a State Committee at Newark on Wednesday. W. G. Peckham is Chairman, and among the members is Dr. W. Hayes Ward, one of the editors of the New York *Independent*.

An Irish-American meeting in the Academy of Music on Thursday night in support of Cleveland and Hendricks was a complete success. The building was crowded to the roof, and there was great enthusiasm. Eugene Kelly presided, and the stage was filled with prominent citizens of Irish descent. Speeches were delivered by Senator Jones, of Florida; Congressman Patrick A. Collins, of Boston; Gen. Thomas F. Bourke, and ex-Congressman William J. Hynes.

Mr. Thomas A. Hendricks, the Democratic candidate for Vice-President, made his first address in the present campaign on Saturday evening before a large assemblage at Indianapolis.

Thaddeus C. Pound, a leading Republican of Wisconsin, who was a member of the State Legislature in 1864, 1866, 1867, and 1869, was elected Lieutenant-Governor in 1869, and was in 1876 elected to Congress from the Eighth District, then embracing more than half the area of Wisconsin, and served three terms in Congress, has written a letter declaring that he cannot support Blaine and shall vote for Cleveland.

Col. S. B. Boynton, a life-long Republican and a prominent citizen of Milwaukee, Wis., has bolted Blaine and Logan, and will take the stump for Cleveland. John H. McGregor, another prominent Republican of that city, refuses to support Blaine, and will probably support Cleveland. One hundred and fifty Republicans of Brattleborough, Vt., have signed a pledge not to aid in the election of James G. Blaine.

General Butler made an address on Friday at a large Grangers' picnic, at Williams's Grove, Pa.

About seventy-five striking miners at Snake Hollow, Hocking Valley, Ohio, at 2 o'clock on Sunday morning, made an attack on the guards at the mines. One of the guard, William O'Hara, was shot dead without provocation, and while pleading for mercy, and two others were wounded. Until recently Snake Hollow has been guarded by thirty-five Pinkerton guards, but a few days ago they were transferred to other points and their places filled by guards from Logan, twenty-two in number, armed with breechloading shot guns and a brace of revolvers apiece. At the time of the attack but seven guards were on duty. They gave the alarm and opened fire. The rest of the guards rallied, and for ten minutes a continuous fire was kept up. More than one thousand shots were exchanged, and the strikers were driven back. The trouble grew out of the employment of Italian and other miners at lower rates than the regular miners would accept. The situation is rendered very serious from the fact that about 10,000 idle miners are in that region. The strikers kept up a continual firing all Sunday night on the guards at Longstreth, Sand Run, and other mines. Two or three men were wounded.

At 1:30 o'clock on Monday morning Sheriff McCarty, of Hocking County, telegraphed to Governor Hoadly, of Ohio, from Logan that there were five points in his county where the riot was beyond control, and he was unable to get at them so as to give definite information in regard to what was being done. The Governor replied that 350 troops were on the way, and that more were under marching orders if needed. He then immediately started for the seat of disturbance, arriving at Logan at 4 A. M. He spent all day in consultation with mine owners, leading citizens, and strikers, and visited the mines, in order to get a thorough knowledge of the situation. He assured the people that not a soldier should fire a shot until he (the Governor) was convinced of its necessity.

Quiet was preserved at the Hocking Valley mines on Tuesday, though there were apprehensions of a speedy outbreak. Governor Hoadly has sent troops to the most critical points.

The Second National Bank of Xenia, Ohio, closed its doors on Wednesday morning. The Cashier, John S. Ankeney, had been engaged in heavy grain transactions with R. M. Smart, to whom the bank made large advances. The directors were not satisfied with the mortgage given, and demanded the resignation of the cashier. He "went West," and a run on the bank ensued. It has a paid-up capital of $150,000. The Bank Examiner reported on Thursday that it would probably be able to meet all of its obligations, and it will resume.

The Adrian, Mich., Savings Bank suspended on Wednesday, owing to the fact that several days before it had been unable to cash a check for $1,500, and a run ensued. About $80,000 are due depositors, which will probably be paid.

Reports from two hundred hop-growing towns in New York, Maine, and the province of Quebec indicate that the crop is at least one-fourth short of the average, but this is believed to be an underestimate. The averages are as follows: Maine, 78; Vermont, 80; Quebec, 70, and New York, 70. Buyers are offering 25 to 30 cents a pound.

A tornado in Dakota and throughout the Northwest on Thursday destroyed a great deal of property and some life.

Evansville, Ind., was visited on Friday with a destructive hurricane, doing damage of not less than $250,000 in the city and vicinity. Houses were blown down, roofs carried away, and three or four steamers badly injured. One of the terrible incidents of the storm was the sinking of the transfer steamer *Belmont*. It had a barge in tow with two passenger coaches for the Louisville and Nashville Railroad, containing sixty persons. When about five miles below Evansville the storm swept over the river. The pilot was able to manage his boat for four or five miles, but the fury of the storm increased, and three miles from Henderson, Ky., she was capsized. She broke loose from the barge, was blown clear over, and went down in two minutes. All in her cabin were drowned, including the captain and six ladies. The steamer was insured for $15,000. It is estimated that sixteen lives were lost in all.

The International Electrical Exhibition was successfully opened on Tuesday in Philadelphia. President Tatham, of the Franklin Institute, delivered the opening address.

There was a death from genuine yellow fever in this city on Friday. The man was a sailor who had recently landed.

The jury in the case of Wilbur F. Storey, of the Chicago *Times*, has found him insane. A. L. Patterson, the business manager of the paper, has been appointed his conservator.

On Saturday morning eighteen of the Board of Aldermen of this city met and passed, over the Mayor's veto, the Broadway Surface Railroad Franchise and the grant to the Commercial Cable Company to lay their wires underground. An injunction to restrain the Aldermen from such action was granted, on Monday, on the assumption that Saturday's meeting had been illegal.

Richard Tweed, the eldest son of William M. Tweed, died on Wednesday in a madhouse near Paris, aged about forty-three years.

Rear-Admiral Andrew Allan Harwood, U. S. N., died in Marion, Mass., on Thursday night, at the age of eighty-two. He was appointed midshipman in 1818 from his native State, Pennsylvania. He was in charge of the Navy-yard at Washington and the Potomac flotilla in 1862. From 1864 to 1869 he was Secretary of the Lighthouse Board, and on February 16, 1869, was commissioned Rear Admiral, made a member of the Retiring Board, and placed on special duty at Washington. Rear-Admiral Harwood was a great-grandson of Benjamin Franklin.

Senator Henry B. Anthony, of Rhode Island, died suddenly at Providence on Tuesday, at 1:45 P. M. He had been affected with a chronic disease for several years, but recently has been in moderate health. He was seized with an uræmic convulsion on Tuesday morning. Senator Anthony was born in 1815 and was graduated at Brown University in 1833. Five years later he became editor of the Providence *Journal* and made it a power in the State. In 1849 he was elected Governor of Rhode Island, was reëlected in 1850, and would have been in the following year had he not peremptorily declined a renomination. He was elected to the United States Senate in 1859, and has been a continuous member from that time to the present.

FOREIGN.

A despatch from Foo-Choo received on Wednesday announced that the French had bombarded the Mingan forts all of the previous day, and that they had been silenced. On Wednesday and Thursday the fleet kept up a heavy fire on the Kinpai forts, which are situated at the northern mouth of the Min River. At 2 P. M. they were silenced, being the last of the defences along the river. The Chinese troops bolted. The fleet then sailed away. The Chinese then looted and set fire to the foreigners' quarter of the city near the arsenal. Much indignation was expressed at the action of the French in bombarding the city without landing troops for the protection of foreigners. The Chinese complain that English pilots guided the French fleets during the engagements.

Admiral Courbet on Friday at six P. M. sent an official report to the French Minister of Marine, in which he said: "The operations in the Min River have been concluded. They were attended with complete success. All the batteries along the river have been destroyed and the most of the cannon exploded with gun cotton. We were obliged to leave some intact, because the men in order to reach them would have been exposed to a heavy musketry fire, to which no reply would have been possible. All our ships left the Min River to-day and several of them have already reached the Matson anchorage. I shall arrive there to-morrow with the *Duguay-Trouin*. It has served as my flagship since Monday. Our losses during the week are ten killed, including one officer, and thirteen seriously and twenty-eight slightly wounded."

Admiral Courbet, in his official report of the bombardment on August 23d, said: "In four hours nine Chinese men-of-war and twelve junks were sunk, and the Krupp battery commanding the arsenal was silenced. Our loss was six killed and twenty-seven wounded. The fleet suffered no serious damage except that the boiler of a torpedo-boat was burst. The Chinese losses were heavy." These are unofficially estimated at 1,000 killed and 3,000 wounded.

Admiral Courbet announced on Monday that he had completed operations in the Min River, and that it is now safe for merchant vessels to ascend to Foo-Choo.

Admiral Courbet has been ordered to occupy Hainan after taking Kelung.

A mob at Canton invaded the Catholic Cathedral on Wednesday. The building was cleared by the efforts of the foreign consuls, who induced the French Bishop and missionaries to leave Canton. The Viceroy has ordered all Frenchmen to leave the province immediately.

It was rumored in Shanghai on Sunday that China had formally declared war against France and informed Japan of the fact, but this was subsequently denied. It was reported in Paris on Sunday that M. Ferry had instructed M. Patenotre, the French Minister to China, to resume negotiations at Pekin, pending the result of which Admiral Courbet's squadron will remain at anchorage off the Isle of Matson.

The operations against Langson have been suspended on account of the intense heat. General Negrier will retire to Bacninh. It is stated that the Delta is in no danger. General Millot telegraphed on Thursday from Tonquin that he lost four men while repulsing pirates and Black Flags, who pillaged villages along the Red River and massacred the inhabitants. The French garrisons at Sontay and Honghao, with the aid of the gunboats, General Millot states, succeeded in driving them into the mountains.

An official report concerning the Langson affair has been received from General Millot, the commander of the French forces in Tonquin. General Millot praises the valor of Colonel Degenne, who was in command of the detachment sent to occupy Langson, but says he acted too precipitately. Colonel Degenne was under orders to occupy Langson peacefully. When he found himself confronted by an opposing force of Chinese, the general of which said he had received no orders to surrender, Colonel Degenne ought to have asked further orders from General Millot by means of the heliograph.

General Millot telegraphed to Paris on Friday that the Chinese were making preparations to invade Tonquin. On Saturday it was announced in Paris that General Millot had asked to be relieved of the command of the French forces in Tonquin, on the ground of ill-health. The Government consented to this and appointed General Delisle to succeed him.

It was positively announced in Paris on Saturday that General Millot's recall was not due to any desire or request on his part to return to France on account of ill-health, but that he had been recalled in disgrace, after having been discharged from his post of command in China because of incompetency and wrong-headedness. A prominent French military official says that the French Ministry were highly exasperated over the Langson affair. "Secretly," said the officer, "the Cabinet are compelled to admit that the Chinese were bound to resist the French advance on Langson. The advance in itself was proper, but as the Chinese in occupation had not yet been officially advised of the Tien-Tsin treaty, they could not properly be asked to evacuate. Warring upon them under the circumstances was unjustifiable."

Recent advices from Madagascar say it is reported that General Miot and Colonel Leguerre have had a serious disagreement with regard to the mode of attack upon the Hovas, and that Leguerre refused to march his troops under Miot's orders.

The trial of the directors and managers of the Banque de Lyon et Loire, of Paris, which failed two or three years ago, has been concluded, and M. Savary, an ex-Deputy, and at one time Under-Secretary of State, was sentenced to five years in prison, to pay a fine of 20,000 francs, and to suffer for ten years a suspension of his civil and political rights. M. Zielinski, the manager, was sentenced to five months in prison and to pay a fine of 8,000 francs; M. Bellantan, sub-manager, four months in prison, with a fine of 5,000 francs.

The encyclical letter of the Pope directed against the action of the French Government in adopting the new divorce law is ready for promulgation. The Pope instructs the bishops of the various dioceses as to the course they should pursue in order to maintain the principles of the Church in regard to the sacrament of marriage.

The Spanish clergy have started a monster demonstration in every church throughout the country in favor of the temporal power of the Pope. The first signatures to an address on this subject include the leading prelates and nobles of Spain.

The *Herald* correspondent in Berlin asserts, "with almost absolute certainty," that the object of the coming interview of the three Emperors, of Germany, Russia, and Austria, is, first, severe measures to suppress anarchists; second, the solution of the Egyptian question; third, the settlement of the Congo question.

Emperor William was thrown from his horse while riding in the Babelsberg Palace Park on Thursday. The horse stumbled over a wire fence. The Emperor was only slightly hurt, his muscles being strained. He was able to ride back to the castle.

A veritable panic prevails among the populace in some of the Italian districts infected with the cholera. The desire of the populace to prevent the spread of the infection has led them in some instances to offer armed opposition to railway traffic.

King Humbert, of Italy, visited recently Busca, a city of 10,000 people infected with cholera, went to the hospital and viewed the patients, and left $2,000 for the relief of the sufferers.

General Sir Evelyn Wood, Colonel Duncan, and Major Sandwith, with two companies of Egyptian troops, have arrived at Wady Halfa. The Staffordshire and Berkshire regiments are being pushed after the Sussex regiment, which has arrived at Wady Halfa, as rapidly as possible. Boats are passing the Semneh Cataract, and are greatly helping the transportation of troops. The Nile is rapidly rising.

The rebels attempted to capture Khartum on August 12 and continued the attack until August 14, when General Gordon cleverly outflanked them. Many of the rebels were killed during the engagement. It is reported that the Fagallah tribes have again defeated the Mahdi. The rebels are again very aggressive at Suakim, and the British man-of-war *Condor* has been ordered to proceed to that place.

The Mudir of Dongola reports that he has received a message from General Gordon to the effect that Khartum has only provisions enough to last till the first of November.

Major Kitchener telegraphed from Dongola on Wednesday that a spy had brought in the report that General Gordon gained a great victory over the rebels August 11, and that two of the rebel leaders were killed in the engagement. There is some reason to hope that Major Kitchener's mission to Dongola will soon afford the means of opening communications with General Gordon again. But the Government are of the opinion, having regard for the approach of the cool season, that no time should be lost in proceeding to Major Kitchener's assistance in case his mission should fail.

General Lord Wolseley and Lord Northbrook, High Commissioner to Egypt, took farewell of the Queen at Osborne House on Saturday, before starting for Egypt. They set out from London Sunday afternoon. Certain particulars with reference to the relief expedition up the Nile have been finally arranged. The force which will proceed south of Assuan will be composed of 8,000 British troops, 2,500 Egyptians, and a flotilla of 950 river boats. The boats will be manned by 400 Canadians, 300 Kroomen, and about 2,000 Egyptian and Nubian boatmen. The cost of the campaign is estimated at £8,000,000.

Frauds amounting to £80,000 have been discovered in the Egyptian Ministry of Finance. Foreign officials of high standing are implicated in them.
